RTI Connext Java API

Version 7.7.0

1 RTI Connext **1**

1.1 Available Documentation. . . . 1

1.1.1 The documents for the Core Libraries and Utilities are: . . . 2

1.1.2 The API Reference HTML documentation contains: . . . 2

1.2 Feedback and Support for this Release. . . . 2

2 Module Index **3**

2.1 Modules . . . 3

3 Namespace Index **9**

3.1 Packages . . . 9

4 Hierarchical Index **11**

4.1 Class Hierarchy . . . 11

5 Class Index **21**

5.1 Class List . . . 21

6 Module Documentation **41**

6.1 RTI Connext Exceptions . . . 41

6.2 Clock Selection . . . 41

6.2.1 Available Clocks . . . 42

6.2.2 Clock Selection Strategy . . . 42

6.2.3 Configuring Clock Selection . . . 42

6.3 Domain Module . . . 43

6.3.1 Detailed Description . . . 43

6.4 DomainParticipantFactory . . . 43

6.4.1 Detailed Description . . . 44

6.4.2 Variable Documentation . . . 44

6.4.2.1 PARTICIPANT_QOS_DEFAULT . . . 44

6.4.2.2 TheParticipantFactory . . . 45

6.4.2.3 PARTICIPANT_CONFIG_PARAMS_DEFAULT . . . 45

6.5 DomainParticipants . . . 45

6.5.1 Detailed Description . . . 47

6.5.2 Variable Documentation . . . 47

6.5.2.1 TOPIC_QOS_DEFAULT . . . 47

6.5.2.2 TOPIC_QOS_PRINT_ALL . . . 48

6.5.2.3 PUBLISHER_QOS_DEFAULT . . . 48

6.5.2.4 PUBLISHER_QOS_PRINT_ALL . . . 49

6.5.2.5 SUBSCRIBER_QOS_PRINT_ALL . . . 49

6.5.2.6 SUBSCRIBER_QOS_DEFAULT . . . 50

6.5.2.7 DOMAINPARTICIPANT_QOS_PRINT_ALL . . . 50
6.5.2.8 DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL . . . 51
6.5.2.9 FLOW_CONTROLLER_PROPERTY_DEFAULT . . . 52
6.5.2.10 SQLFILTER_NAME . . . 52
6.5.2.11 STRINGMATCHFILTER_NAME . . . 53
6.6 Built-in Topics . . . 53
6.6.1 Detailed Description . . . 53
6.7 Topic Module . . . 55
6.7.1 Detailed Description . . . 56
6.8 Topics . . . 56
6.8.1 Detailed Description . . . 57
6.9 FlatData Topic-Types . . . 57
6.10 Zero Copy Transfer Over Shared Memory . . . 58
6.11 User Data Type Support . . . 58
6.11.1 Detailed Description . . . 58
6.12 Type Code Support . . . 59
6.12.1 Detailed Description . . . 60
6.12.2 Accessing a Local com.rti.dds.typecode.TypeCode . . . 60
6.12.3 Accessing a Remote com.rti.dds.typecode.TypeCode . . . 61
6.12.4 Variable Documentation . . . 61
6.12.4.1 FINAL_EXTENSIBILITY . . . 61
6.12.4.2 EXTENSIBLE_EXTENSIBILITY . . . 62
6.12.4.3 MUTABLE_EXTENSIBILITY . . . 62
6.13 Built-in Types . . . 62
6.13.1 Detailed Description . . . 63
6.13.2 Managing Memory for Builtin Types . . . 63
6.13.3 Typecodes for Builtin Types . . . 64
6.14 Built-in Topic's Trust Types . . . 66
6.14.1 Detailed Description . . . 66
6.15 Dynamic Data . . . 67
6.15.1 Detailed Description . . . 68
6.15.2 Function Documentation . . . 69
6.15.2.1 DynamicDataInfo() [1/2] . . . 69
6.15.2.2 DynamicDataInfo() [2/2] . . . 69
6.15.2.3 DynamicDataMemberInfo() [1/2] . . . 69
6.15.2.4 DynamicDataMemberInfo() [2/2] . . . 70
6.15.3 Variable Documentation . . . 70
6.15.3.1 PROPERTY_DEFAULT . . . 70
6.15.3.2 TYPE_PROPERTY_DEFAULT . . . 71

6.16 Publication Module . . . 71
6.16.1 Detailed Description . . . 71
6.17 Publishers . . . 72
6.17.1 Detailed Description . . . 72
6.17.2 Variable Documentation . . . 72
6.17.2.1 DATAWRITER_QOS_DEFAULT . . . 73
6.17.2.2 DATAWRITER_QOS_USE_TOPIC_QOS . . . 73
6.17.2.3 DATAWRITER_QOS_PRINT_ALL . . . 74
6.18 Data Writers . . . 74
6.18.1 Detailed Description . . . 75
6.19 Flow Controllers . . . 75
6.19.1 Detailed Description . . . 76
6.19.2 Variable Documentation . . . 76
6.19.2.1 DEFAULT_FLOW_CONTROLLER_NAME . . . 76
6.19.2.2 FIXED_RATE_FLOW_CONTROLLER_NAME . . . 77
6.19.2.3 ON_DEMAND_FLOW_CONTROLLER_NAME . . . 78
6.20 Subscription Module . . . 79
6.20.1 Detailed Description . . . 80
6.20.2 Access to data samples . . . 80
6.20.2.1 Data access patterns . . . 80
6.21 Subscribers . . . 81
6.21.1 Detailed Description . . . 82
6.21.2 Variable Documentation . . . 82
6.21.2.1 DATAREADER_QOS_DEFAULT . . . 82
6.21.2.2 DATAREADER_QOS_USE_TOPIC_QOS . . . 83
6.21.2.3 DATAREADER_QOS_PRINT_ALL . . . 83
6.22 DataReaders . . . 84
6.22.1 Detailed Description . . . 85
6.23 Read Conditions . . . 85
6.23.1 Detailed Description . . . 85
6.24 Query Conditions . . . 85
6.24.1 Detailed Description . . . 85
6.25 Data Samples . . . 86
6.25.1 Detailed Description . . . 86
6.26 Topic Queries . . . 86
6.26.1 Detailed Description . . . 87
6.26.2 Snapshot TopicQueries . . . 88
6.26.3 Reading TopicQuery Samples . . . 89
6.26.4 Debugging Topic Queries . . . 89

6.26.4.1 The Built-in ServiceRequest DataReader . . . 89
6.26.4.2 The on_service_request_accepted DataWriter Listener Callback . . . 90
6.26.5 Variable Documentation . . . 90
6.26.5.1 TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER . . . 90
6.26.5.2 TOPIC_QUERY_SELECTION_SELECT_ALL . . . 91
6.27 Sample States . . . 91
6.27.1 Detailed Description . . . 91
6.27.2 Variable Documentation . . . 91
6.27.2.1 ANY_SAMPLE_STATE . . . 91
6.28 View States . . . 92
6.28.1 Detailed Description . . . 92
6.28.2 Variable Documentation . . . 92
6.28.2.1 ANY_VIEW_STATE . . . 92
6.29 Instance States . . . 92
6.29.1 Detailed Description . . . 93
6.29.2 Variable Documentation . . . 93
6.29.2.1 ANY_INSTANCE_STATE . . . 93
6.29.2.2 NOT_ALIVE_INSTANCE_STATE . . . 93
6.30 Stream Kinds . . . 93
6.30.1 Detailed Description . . . 94
6.30.2 Variable Documentation . . . 94
6.30.2.1 ANY_STREAM . . . 94
6.31 Infrastructure Module . . . 94
6.31.1 Detailed Description . . . 95
6.32 Built-in Sequences . . . 95
6.32.1 Detailed Description . . . 96
6.33 Multi-channel DataWriters . . . 96
6.33.1 What is a Multi-channel DataWriter? . . . 96
6.33.2 Configuration on the Writer Side . . . 96
6.33.3 Configuration on the Reader Side . . . 97
6.33.4 Reliability with Multi-Channel DataWriters . . . 97
6.33.4.1 Reliable Delivery . . . 97
6.33.4.2 Reliable Protocol Considerations . . . 97
6.34 Transports . . . 98
6.34.1 Detailed Description . . . 98
6.34.2 Overview . . . 98
6.34.3 Transport Aliases . . . 98
6.34.4 Transport Lifecycle . . . 99
6.34.5 Transport Class Attributes . . . 100

6.34.6 Transport Instance Attributes . . . 101
6.34.7 Transport Network Address . . . 102
6.34.8 Transport Send Route . . . 102
6.34.9 Transport Receive Route . . . 102
6.35 Installing Transport Plugins . . . 103
6.35.1 Detailed Description . . . 103
6.35.2 Loading Transport Plugins through Property QoS Policy of Domain Participant . . . 104
6.36 Built-in Transport Plugins . . . 106
6.36.1 Detailed Description . . . 106
6.37 Creating New Transport Plugins . . . 107
6.37.1 Detailed Description . . . 107
6.38 Queries and Filters Syntax . . . 108
6.38.1 Syntax for DDS Queries and Filters . . . 108
6.38.2 SQL grammar in BNF . . . 108
6.38.3 Token expression . . . 109
6.38.4 String Parameters . . . 111
6.38.5 Type compatability in Predicate . . . 111
6.38.6 SQL Extension: Regular Expression Matching . . . 111
6.38.7 Character Encoding . . . 112
6.38.8 Unicode Normalization . . . 112
6.38.9 Examples . . . 113
6.39 Logging and Version . . . 113
6.39.1 Detailed Description . . . 114
6.40 General Utilities and Compliance Configuration . . . 114
6.40.1 Detailed Description . . . 114
6.41 Observability Framework . . . 114
6.41.1 Detailed Description . . . 114
6.42 Request-Reply Pattern . . . 115
6.42.1 Detailed Description . . . 115
6.43 Requester . . . 115
6.43.1 Detailed Description . . . 116
6.44 Replier . . . 116
6.44.1 Detailed Description . . . 116
6.45 Infrastructure . . . 116
6.45.1 Detailed Description . . . 117
6.46 Utilities . . . 117
6.47 Durability and Persistence . . . 117
6.47.1 Durable Writer History . . . 118
6.47.2 Durable Reader State . . . 118

6.47.3 Data Durability . . . 118
6.47.4 Durability and Persistence Based on Virtual GUID . . . 118
6.47.5 Configuring Durable Writer History . . . 119
6.47.6 Configuring Durable Reader State . . . 121
6.47.7 Configuring Data Durability . . . 123
6.48 Basic QoS . . . 123
6.49 DDS Specification QoS . . . 132
6.50 DDS Extension QoS . . . 138
6.51 Functional Categories . . . 188
6.51.1 Detailed Description . . . 189
6.52 Application Acknowledgement . . . 190
6.53 Application-Defined Metadata . . . 191
6.54 Application Startup . . . 193
6.55 Batching . . . 194
6.56 Concurrency . . . 195
6.57 Content Filtering . . . 198
6.58 Data Availability . . . 200
6.59 Debuggability . . . 205
6.60 Discovery . . . 212
6.61 Discovery Isolation . . . 220
6.62 Durability . . . 221
6.63 Flow Control . . . 226
6.64 Fragmentation . . . 229
6.65 Instance Lifecycle . . . 232
6.66 Sending Large Data . . . 237
6.67 Liveliness . . . 239
6.68 Logging . . . 242
6.69 Middleware Memory Management . . . 244
6.70 QoS Profile Management . . . 264
6.71 Reliability QoS . . . 266
6.72 Sample Memory Management QoS . . . 276
6.73 Sample Ordering . . . 280
6.74 Security . . . 283
6.75 Throughput . . . 284
6.76 Transports . . . 285
6.77 Topic Queries . . . 288
6.78 Type System . . . 289
6.79 QoS Mutability . . . 291
6.79.1 Detailed Description . . . 292

6.80 Immutable QoS . . . 292
6.81 Mutable QoS . . . 338
6.82 Other QoS Attributes . . . 346
6.82.1 Detailed Description . . . 346
6.83 Applied Per-Instance . . . 346
6.84 Discovery Metadata . . . 348
6.85 Matching . . . 355
6.86 Deprecated QoS . . . 358
6.87 System Properties . . . 364
6.87.1 System Properties List . . . 364
6.87.2 System Resource Consideration . . . 365
6.88 Configuring QoS Profiles with XML . . . 365
6.88.1 Loading QoS Profiles from XML Resources . . . 365
6.88.2 URL . . . 367
6.88.2.1 URL groups . . . 367
6.88.2.2 NDDS_QOS_PROFILES environment variable . . . 367
6.88.2.3 Built-In QoS Profiles . . . 367
6.89 Publication Example . . . 367
6.89.1 A typical publication example . . . 368
6.90 Subscription Example . . . 368
6.90.1 A typical subscription example . . . 369
6.91 Participant Use Cases . . . 369
6.91.1 Turning off auto-enable of newly created participant(s) . . . 370
6.91.2 Getting the factory . . . 370
6.91.3 Setting up a participant . . . 370
6.91.4 Tearing down a participant . . . 371
6.92 Topic Use Cases . . . 371
6.92.1 Registering a user data type . . . 371
6.92.2 Setting up a topic . . . 371
6.92.3 Tearing down a topic . . . 371
6.93 FlowController Use Cases . . . 372
6.93.1 Creating a flow controller . . . 372
6.93.2 Flow controlling a data writer . . . 372
6.93.3 Using the built-in flow controllers . . . 372
6.93.4 Shaping the network traffic for a particular transport . . . 373
6.93.5 Coalescing multiple samples in a single network packet . . . 374
6.94 Publisher Use Cases . . . 374
6.94.1 Setting up a publisher . . . 374
6.94.2 Tearing down a publisher . . . 374

6.95 DataWriter Use Cases . . . 374
6.95.1 Setting up a data writer . . . 375
6.95.2 Managing instances . . . 375
6.95.3 Sending data . . . 375
6.95.4 Tearing down a data writer . . . 376
6.96 Subscriber Use Cases . . . 376
6.96.1 Setting up a subscriber . . . 376
6.96.2 Set up subscriber to access received data . . . 376
6.96.3 Access received data via a subscriber . . . 377
6.96.4 Access received data coherently and/or in order . . . 377
6.96.5 Tearing down a subscriber . . . 377
6.97 DataReader Use Cases . . . 378
6.97.1 Setting up a data reader . . . 378
6.97.2 Managing instances . . . 378
6.97.3 Set up reader to access received data . . . 378
6.97.4 Access received data via a reader . . . 379
6.97.5 Taking data . . . 379
6.97.6 Reading data . . . 379
6.97.7 Tearing down a data reader . . . 380
6.98 Entity Use Cases . . . 380
6.98.1 Enabling an entity . . . 380
6.98.2 Checking if a status changed on an entity. . . . 380
6.98.3 Changing the QoS for an entity . . . 381
6.98.4 Changing the listener and enabling/disabling statuses associated with it . . . 381
6.98.5 Enabling/Disabling statuses associated with a status condition . . . 382
6.99 Waitset Use Cases . . . 382
6.99.1 Setting up a wait-set . . . 382
6.99.2 Waiting for condition(s) to trigger . . . 383
6.99.3 Tearing down a wait-set . . . 383
6.100 Transport Use Cases . . . 383
6.100.1 Changing the automatically registered built-in transports . . . 383
6.100.2 Changing the properties of the automatically registered builtin transports . . . 384
6.101 Filter Use Cases . . . 384
6.101.1 Introduction . . . 384
6.101.1.1 Overview of ContentFilteredTopic . . . 385
6.101.1.2 Overview of QueryCondition . . . 385
6.101.2 Filtering with ContentFilteredTopic . . . 386
6.101.3 Filtering with Query Conditions . . . 386
6.101.4 Filtering Performance . . . 387

6.102 Creating Custom Content Filters . . . 387
6.102.1 Introduction . . . 387
6.102.2 The Custom Content Filter API . . . 388
6.102.2.1 The compile function . . . 388
6.102.2.2 The evaluate function . . . 388
6.102.2.3 The finalize function . . . 388
6.102.3 Example Using C format strings . . . 388
6.102.3.1 Writing the Compile Function . . . 389
6.102.3.2 Writing the Evaluate Function . . . 389
6.102.3.3 Writing the Finalize Function . . . 389
6.102.3.4 Registering the Filter . . . 389
6.102.3.5 Unregistering the Filter . . . 389
6.103 Large Data Use Cases . . . 390
6.103.1 Introduction
 . . . 390
6.103.2 Writing Large Data . . . 390
6.103.3 Receiving Large Data . . . 390
6.104 Request-Reply Examples . . . 391
6.104.1 Request-Reply Examples . . . 391
6.104.2 Creating a Requester . . . 392
6.104.3 Creating a Requester with optional parameters . . . 393
6.104.4 Basic Requester example . . . 393
6.104.5 Taking loaned samples . . . 394
6.104.6 Taking samples by copy . . . 395
6.104.7 Correlating requests and replies . . . 395
6.104.8 Creating a Replier . . . 396
6.104.9 Basic Replier example . . . 397
6.104.10 SimpleReplier example . . . 397
6.104.11 Error handling example . . . 398
6.104.12 Configuring Request-Reply QoS profiles . . . 398
6.105 Documentation Roadmap . . . 401
6.106 Conventions . . . 402
6.106.1 Unsupported Features . . . 402
6.106.2 API Documentation Terms . . . 402
6.106.3 Stereotypes . . . 402
6.106.3.1 Basic Qos . . . 402
6.106.3.2 Extensions . . . 403
6.106.3.3 Experimental . . . 403
6.106.3.4 Types . . . 403
6.106.3.5 Method Parameters . . . 404

6.107 RTI Connext DDS API Reference . . . 404
6.107.1 Detailed Description . . . 405
6.107.2 Overview . . . 405
6.107.3 Conceptual Model . . . 406
6.107.4 Modules . . . 407
6.108 Additional RTI Connext Communication Patterns . . . 407
6.108.1 Detailed Description . . . 408
6.109 Programming How-To's . . . 408
6.109.1 Detailed Description . . . 409
6.110 Participant Built-in Topics . . . 409
6.110.1 Detailed Description . . . 410
6.110.2 Variable Documentation . . . 410

Chapter 1

RTI Connext

Core Libraries and Utilities

Real-Time Innovations, Inc.

RTI Connext is network middleware for real-time distributed applications. It provides the communications services that programmers need to distribute time-critical data between embedded and/or enterprise devices or nodes. RTI Connext uses the publish-subscribe communications model to make data distribution efficient and robust.

The RTI Connext Application Programming Interface (API) is based on the OMG's Data Distribution Service (DDS) specification, version 1.4. The most recent publication of this specification can be found in the Catalog of OMG Specifications under "Platform Categories".

1.1 Available Documentation.

The documentation for this release is provided in two forms: the API Reference HTML documentation and PDF documents. If you are new to RTI Connext, the **Documentation Roadmap** (p. 401) will provide direction on how to learn about this product.

1.1.1 The documents for the Core Libraries and Utilities are:

- **What's New.** An overview of the new features in this release.
- **Release Notes.** System requirements, compatibility, what's fixed in this release, and known issues.
- **Platform Notes.** Specific details, such as compilation setting and libraries, related to building and using RTI Connext on the various supported platforms.
- **Getting Started Guide.** Core value and concepts behind the product, taking you step-by-step through the creation of a simple example application. Developers should read this document first.
- **Code Generator User's Manual.** Information about using rtiddsgen to generate code from data types.
- **User's Manual.** Introduction to RTI Connext, product tour and conceptual presentation of the functionality of RTI Connext.
- **QoS Reference Guide.** A compact summary of supported Quality of Service (QoS) policies.
- **XML-Based Application Creation Getting Started Guide.** Details on how to use XML-Based Application Creation.
- **Extensible Types Guide.** Additional information about extensible types.
- See more `documentation` on RTI Community.

1.1.2 The API Reference HTML documentation contains:

- **RTI Connext DDS API Reference** (p. 404) - The RTI Connext API reference.
- **Additional RTI Connext Communication Patterns** (p. 407) - RTI Connext APIs for additional communication patterns
- **Programming How-To's** (p. 408) - Describes and shows the common tasks done using the API.

The API Reference HTML documentation can be accessed through the tree view in the left frame of the web browser window. The bulk of the documentation is found under the entry labeled "Modules".

1.2 Feedback and Support for this Release.

We welcome any input on how to improve RTI Connext to suit your needs. If you have questions or comments about this release, please visit the RTI Customer Portal at `https://support.rti.com`.

The Customer Portal provides access to RTI software, documentation, and support. It also allows you to log support cases. Furthermore, the portal provides detailed solutions and a free public knowledge base. To access the software, documentation or log support cases, the RTI Customer Portal requires a username and password. You will receive this in the email confirming your purchase. If you do not have this email, please contact `license@rti.com`. Resetting your login password can be done directly at the RTI Customer Portal.

Chapter 3

Namespace Index

3.1 Packages

Here are the packages with brief descriptions (if available):

com.rti
RTI . . . 549
com.rti.connext
RTI Connext Messaging communication patterns . . . 549
com.rti.connext.requestreply
Support for the request-reply communication pattern . . . 550
com.rti.dds
DDS . . . 551
com.rti.dds.domain
Contains the **com.rti.dds.domain.DomainParticipant** (p. 948) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **com.rti.dds.domain.Domain↩ Participant** (p. 948) also acts as a container for the other objects that make up RTI Connext . . . 551
com.rti.dds.dynamicdata
<<***extension***>> *(p. 403)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation . . . 552
com.rti.dds.infrastructure
Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies . . . 554
com.rti.dds.publication
Contains the **com.rti.dds.publication.FlowController** (p. 1348), **com.rti.dds.publication.↩ Publisher** (p. 1767), and **com.rti.dds.publication.DataWriter** (p. 818) classes as well as the **com.rti.dds.publication.PublisherListener** (p. 1789) and **com.rti.dds.publication.DataWriter↩ Listener** (p. 853) interfaces, and more generally, all that is needed on the publication side . . . 565
com.rti.dds.subscription . . . 566
com.rti.dds.topic
Contains the **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.topic.ContentFilteredTopic** (p. 692), and **com.rti.dds.topic.MultiTopic** (p. 1618) classes, the **com.rti.dds.topic.TopicListener** (p. 2131) interface, and more generally, all that is needed by an application to define **com.rti.dds.topic.Topic** (p. 2116) objects and attach QoS policies to them . . . 568
com.rti.dds.type.builtin . . . 569
com.rti.dds.typecode . . . 570

com.rti.dds.util
Utility types that support the DDS API 571
com.rti.ndds.config
APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext . 572
com.rti.ndds.example
Programming HowTos: Code templates for common use cases 573
com::rti::ndds::transport 573
com.rti.ndds.utility
API of general utilities used in the RTI Connext distribution 574

Chapter 5

Class Index

5.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

AbstractBuiltinTopicDataTypeSupport . . . 575
AbstractPrimitiveSequence . . . 576
AbstractSequence
Abstract sequence . . . 581
AcknowledgmentInfo
Information about an application-level acknowledged sample . . . 584
AckResponseData_t
Data payload of an application-level acknowledgment . . . 586
ActivityContext
Activity Context APIs . . . 587
ActivityContextAttributeKind
The resources of the **Activity Context** (p. 540) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context . . . 587
AllocationSettings_t
Resource allocation settings . . . 590
AsynchronousPublisherQosPolicy
<<***extension***>> *(p. 138)* Configures the mechanism that sends user data in an external middleware thread . . . 593
AvailabilityQosPolicy
<<***extension***>> *(p. 138)* Configures the availability of data . . . 597
BAD_PARAM
Exception thrown when a parameter passed to a call is considered illegal . . . 602
BAD_TYPECODE
The exception **BadKind** (p. 602) is thrown when an inappropriate operation is invoked on a TypeCode object . . . 602
BadKind
The exception **BadKind** (p. 602) is thrown when an inappropriate operation is invoked on a TypeCode object . . . 602
BadMemberId
The specified **com.rti.dds.typecode.TypeCode** (p. 2183) member ID is invalid . . . 603

BadMemberName
The specified **com.rti.dds.typecode.TypeCode** (p. 2183) member name is invalid . . . 603
Base64 . . . 604
BatchQosPolicy
<<***extension***>> *(p. 138)* Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples . . . 607
BooleanSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < boolean > . . . 612
Bounds
A user exception thrown when a parameter is not within the legal bounds . . . 618
BuiltinQosProfiles
The available built-in QoS libraries, profiles, and snippets . . . 619
BuiltinTopicKey_t
The key type of the built-in topic types . . . 623
BuiltinTopicReaderResourceLimits_t
<<***extension***>> *(p. 138)* Built-in topic reader's resource limits . . . 631
Bytes
Built-in type consisting of a variable-length array of opaque bytes . . . 638
BytesDataReader
<<***interface***>> *(p. 403)* Instantiates `DataReader` < com.rti.dds.type.builtin.com.rti.dds.type.↩ builtin.Bytes > . . . 642
BytesDataWriter
<<***interface***>> *(p. 403)* Instantiates `DataWriter` < com.rti.dds.type.builtin.com.rti.dds.type.↩ builtin.Bytes > . . . 645
ByteSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < byte > . . . 649
BytesSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes > . . . 656
BytesTypeSupport
<<***interface***>> *(p. 403)* com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type support . . . 659
CdrPaddingKind
The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization . . . 664
ChannelSettings_t
<<***extension***>> *(p. 138)* Type used to configure the properties of a channel . . . 666
ChannelSettingsSeq
Declares IDL `sequence<` **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) > . . . 670
CharSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < char > . . . 671
CloseableFinalizer
Ensures that subclasses get automatically closed when they are garbage collected . . . 677
CoherentSetInfo_t
<<***extension***>> *(p. 403)* Type definition for a coherent set info . . . 678
Compliance
This class contains methods to configure the compliance masks . . . 679
CompressionSettings_t
<<***extension***>> *(p. 138)* Settings related to compressing user data . . . 681
Condition
<<***interface***>> *(p. 403)* Root class for all the conditions that may be attached to a **com.rti.dds.↩ infrastructure.WaitSet** (p. 2287) . . . 686

ConditionSeq
Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < **com.rti.dds.infrastructure.Condition** (p. 686) > . . . 687
ContentFilter
<<***interface***>> *(p. 403)* Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) . . . 689
ContentFilteredTopic
<<***interface***>> *(p. 403)* Specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows for content-based subscriptions . . . 692
ContentFilterProperty_t
<<***extension***>> *(p. 403)* Type used to provide all the required information to enable content filtering 697
Cookie_t
<<***extension***>> *(p. 403)* Sequence of bytes . . . 699
CookieSeq
Declares IDL sequence < **com.rti.dds.infrastructure.Cookie_t** (p. 699) > . . . 700
Copyable
<<***extension***>> *(p. 403)* <<***interface***>> *(p. 403)* Interface for all the user-defined data type classes that support copy . . . 700
DatabaseQosPolicy
<<***extension***>> *(p. 138)* Various threads and resource limits settings used by RTI Connext to control its internal database . . . 702
DataReader
<<***interface***>> *(p. 403)* Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **com.rti.dds.subscription.Subscriber** (p. 2039) . . . 707
DataReaderAdapter
<<***extension***>> *(p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods) . . . 745
DataReaderCacheStatus
<<***extension***>> *(p. 403)* The status of the reader's cache . . . 748
DataReaderInstanceRemovalKind
Sets the kinds of instances that can be replaced when instance resource limits (**com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896)) are reached . . . 755
DataReaderListener
<<***interface***>> *(p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for reader status . . . 757
DataReaderProtocolQosPolicy
<<***extension***>> *(p. 138)* Along with **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299) and **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy** (p. 860), this QoS policy configures the DDS on-the-network protocol (RTPS) . . . 761
DataReaderProtocolStatus
<<***extension***>> *(p. 403)* The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic . . . 765
DataReaderQos
QoS policies supported by a **com.rti.dds.subscription.DataReader** (p. 707) entity . . . 777
DataReaderResourceLimitsInstanceReplacementSettings
Instance replacement kind applied to each instance state . . . 787
DataReaderResourceLimitsQosPolicy
<<***extension***>> *(p. 138)* Various settings that configure how a **com.rti.dds.subscription.DataReader** (p. 707) allocates and uses physical memory for internal resources . . . 789
DataReaderSeq
Declares IDL sequence < **com.rti.dds.subscription.DataReader** (p. 707) > . . . 808

DataRepresentationQosPolicy
<<***spec***>> *(p. 132)* This QoS policy contains a list of representation identifiers and compression settings used by **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) entities to negotiate which data representation and compression settings to use . . . 810
DataTagQosPolicy
<<***spec***>> *(p. 132)* Stores (name, value) pairs that can be used to determine access permissions 813
DataTagQosPolicyHelper
Policy helpers that facilitate management of the data tags in the input policy . . . 814
DataWriter
<<***interface***>> *(p. 403)* Allows an application to set the value of the data to be published under a given **com.rti.dds.topic.Topic** (p. 2116) . . . 818
DataWriterAdapter
<<***extension***>> *(p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods or functions.) . . . 844
DataWriterCacheStatus
<<***extension***>> *(p. 403)* The status of the **DataWriter** (p. 818)'s cache. Provides information on cache related metrics such as the number of samples and instances in the **DataWriter** (p. 818) queue 851
DataWriterListener
<<***interface***>> *(p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for writer status . . . 853
DataWriterProtocolQosPolicy
<<***extension***>> *(p. 138)* Protocol that applies only to **com.rti.dds.publication.DataWriter** (p. 818) instances . . . 860
DataWriterProtocolStatus
<<***extension***>> *(p. 403)* The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic . . . 867
DataWriterQos
QoS policies supported by a **com.rti.dds.publication.DataWriter** (p. 818) entity . . . 878
DataWriterResourceLimitsInstanceReplacementKind
Sets the kinds of instances that can be replaced when instance resource limits are reached . . . 889
DataWriterResourceLimitsQosPolicy
<<***extension***>> *(p. 138)* Various settings that configure how a **com.rti.dds.publication.DataWriter** (p. 818) allocates and uses physical memory for internal resources . . . 892
DeadlineQosPolicy
<<***spec***>> *(p. 132)* Expresses the maximum duration (deadline) within which an instance is expected to be updated . . . 900
DestinationOrderQosPolicy
<<***spec***>> *(p. 132)* Controls how the middleware will deal with data sent by multiple **com.rti.dds.publication.DataWriter** (p. 818) entities for the same instance of data (i.e., same **com.rti.dds.topic.Topic** (p. 2116) and key) . . . 903
DestinationOrderQosPolicyKind
Kinds of destination order . . . 906
DestinationOrderQosPolicyScopeKind
Scope of source destination order . . . 908
DiscoveryBuiltinReaderFragmentationResourceLimits_t . . . 909
DiscoveryConfigBuiltinChannelKind
Built-in channels that can be enabled . . . 911
DiscoveryConfigBuiltinPluginKind
Built-in discovery plugins that can be used . . . 913
DiscoveryConfigQosPolicy
Settings for discovery configuration . . . 915
DiscoveryQosPolicy
<<***extension***>> *(p. 138)* Configures the mechanism used by the middleware to automatically discover and connect with new remote applications . . . 943

DomainEntity
<<***interface***>> *(p. 403)* Abstract base class for all DDS entities except for the **com.rti.dds.domain.DomainParticipant** (p. 948) . . . 947
DomainParticipant
<<***interface***>> *(p. 403)* Container for all **com.rti.dds.infrastructure.DomainEntity** (p. 947) objects . . . 948
DomainParticipantAdapter
<<***extension***>> *(p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods) . . . 1028
DomainParticipantConfigParams_t
<<***extension***>> *(p. 403)* Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration . . . 1035
DomainParticipantFactory
<<***singleton***>> *(p. 403)* <<***interface***>> *(p. 403)* Allows creation and destruction of **com.rti.dds.domain.DomainParticipant** (p. 948) objects . . . 1039
DomainParticipantFactoryQos
QoS policies supported by a **com.rti.dds.domain.DomainParticipantFactory** (p. 1039) . . . 1065
DomainParticipantListener
<<***interface***>> *(p. 403)* Listener for participant status . . . 1070
DomainParticipantProtocolStatus
<<***extension***>> *(p. 403)* The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message . . . 1072
DomainParticipantQos
QoS policies supported by a **com.rti.dds.domain.DomainParticipant** (p. 948) entity . . . 1073
DomainParticipantResourceLimitsIgnoredEntityReplacementKind
Available replacement policies for the ignored entities . . . 1080
DomainParticipantResourceLimitsQosPolicy
<<***extension***>> *(p. 138)* Various settings that configure how a **com.rti.dds.domain.DomainParticipant** (p. 948) allocates and uses physical memory for internal resources, including the maximum sizes of various properties . . . 1081
DoubleSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < double > . . . 1109
DurabilityQosPolicy
<<***spec***>> *(p. 132)* This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **com.rti.dds.subscription.DataReader** (p. 707) entities that join the network later . . . 1116
DurabilityQosPolicyKind
Kinds of durability . . . 1121
DurabilityServiceQosPolicy
<<***spec***>> *(p. 132)* Various settings to configure the external *RTI Persistence Service* used by RTI Connext for DataWriters with a **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116) setting of com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_DURABILITY_QOS or com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT_DURABILITY_QOS . . . 1123
Duration_t
Type for *duration* representation . . . 1126
DynamicData
A sample of any complex data type, which can be inspected and manipulated reflectively . . . 1134
DynamicDataInfo
A descriptor for a **com.rti.dds.dynamicdata.DynamicData** (p. 1134) object . . . 1242
DynamicDataMemberInfo
A descriptor for a single member (i.e. field) of dynamically defined data type . . . 1243

DynamicDataProperty_t
A collection of attributes used to configure **com.rti.dds.dynamicdata.DynamicData** (p. 1134) objects . . . 1246
DynamicDataReader
Reads (subscribes to) objects of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134) . . . 1249
DynamicDataSeq
An ordered collection of **com.rti.dds.dynamicdata.DynamicData** (p. 1134) elements . . . 1279
DynamicDataTypeProperty_t
A collection of attributes used to configure **com.rti.dds.dynamicdata.DynamicData** (p. 1134) objects . . . 1281
DynamicDataTypeSerializationProperty_t
Properties that govern how data of a certain type will be serialized on the network . . . 1283
DynamicDataTypeSupport
A factory for registering a dynamically defined type and creating **com.rti.dds.dynamicdata.DynamicData** (p. 1134) objects . . . 1286
DynamicDataWriter
Writes (publishes) objects of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134) . . . 1294
EndpointGroup_t
Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum 1313
EndpointGroupSeq
A sequence of **com.rti.dds.infrastructure.EndpointGroup_t** (p. 1313) . . . 1315
EndpointTrustAlgorithmInfo
Trust Plugins algorithm information associated with the discovered endpoint . . . 1315
EndpointTrustInterceptorAlgorithmInfo
Trust Plugins interception algorithm information associated with the discovered endpoint . . . 1316
EndpointTrustProtectionInfo
Trust Plugins Protection information associated with the discovered endpoint . . . 1318
Entity
<<***interface***>> *(p. 403)* Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition . . . 1320
EntityFactoryQosPolicy
<<***spec***>> *(p. 132)* A QoS policy for all **com.rti.dds.infrastructure.Entity** (p. 1320) types that can act as factories for one or more other **com.rti.dds.infrastructure.Entity** (p. 1320) types . . . 1326
EntityNameQosPolicy
<<***extension***>> *(p. 138)* Assigns a name and a role name to a **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707). Except for **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system . . . 1328
Enum
A superclass for all type-safe enumerated types . . . 1330
EnumMember
A description of a member of an enumeration . . . 1333
EventQosPolicy
<<***extension***>> *(p. 138)* Settings for event . . . 1335
ExpressionProperty
Provides additional information about the filter expression passed to **com.rti.dds.topic.ContentFilter.writer_compile** (p. 2317) . . . 1337
ExtensibilityKind
Type to indicate the extensibility of a type . . . 1338
FilterSampleInfo
Provides meta information associated with the sample . . . 1339

FloatSeq
Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < float > . . . 1341
FlowController
<<***interface***>> *(*p. *403)* A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **com.rti.dds.publication.DataWriter** (p. 818) instances are allowed to write data . . . 1348
FlowControllerProperty_t
Determines the flow control characteristics of the **com.rti.dds.publication.FlowController** (p. 1348) 1351
FlowControllerSchedulingPolicy
Kinds of flow controller scheduling policy . . . 1352
FlowControllerTokenBucketProperty_t
Com.rti.dds.publication.FlowController uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties . . . 1355
Foo
A representative user-defined data type . . . 1358
FooDataReader
<<***interface***>> *(*p. *403)* <<***generic***>> *(*p. *403)* User data type-specific data reader . . . 1359
FooDataWriter
<<***interface***>> *(*p. *403)* <<***generic***>> *(*p. *403)* User data type specific data writer . . . 1389
FooSeq
<<***interface***>> *(*p. *403)* <<***generic***>> *(*p. *403)* A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **com.rti.ndds.example.Foo** (p. 1358) . . . 1408
FooTypeSupport
<<***interface***>> *(*p. *403)* <<***generic***>> *(*p. *403)* User data type specific interface . . . 1410
GroupDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery . . . 1419
GuardCondition
<<***interface***>> *(*p. *403)* A specific **com.rti.dds.infrastructure.Condition** (p. 686) whose trigger_value is completely under the control of the application . . . 1421
GUID_t
Type for *GUID* (Global Unique Identifier) representation . . . 1423
HeapMonitoring
Heap Monitoring APIs . . . 1427
HeapMonitoringParams
Input parameters for enabling heap monitoring. They will be used for configuring the format of the snapshot . . . 1431
HeapMonitoringSnapshotContentFormat
Bitmap used to decide which information of the snapshot will be displayed . . . 1432
HeapMonitoringSnapshotOutputFormat
Specify the format of the output of the snapshot. RTI Connext . . . 1434
HistoryQosPolicy
<<***spec***>> *(*p. *132)* Specifies the behavior of RTI Connext in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers . . . 1435
HistoryQosPolicyKind
Kinds of history . . . 1439
IMMUTABLE_TYPECODE
An attempt was made to modify a **com.rti.dds.typecode.TypeCode** (p. 2183) that was received from a remote object . . . 1440
InconsistentTopicStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.INCONSISTENT_TOPIC_STATUS . . . 1440

InetAddressSeq
Declares IDL sequence< com.rti.dds.infrastructure.java.net.InetAddress > 1442
InstanceHandle_t
Type definition for an instance handle 1443
InstanceHandleSeq
Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < **com.rti.dds.infrastructure.InstanceHandle_t** (p. 1443) > 1447
InstanceStateConsistencyKind
<<***extension***>> *(p. 138)* Whether instance state consistency is enabled 1450
InstanceStateKind
Indicates if the samples are from a live **com.rti.dds.publication.DataWriter** (p. 818) or not 1451
IntSeq
Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < com.rti.dds.infrastructure.int > 1453
Sample< T >.Iterator< T >
Provides access to a collection of middleware-loaned samples 1459
KeyedBytes
Built-in type consisting of a variable-length array of opaque bytes and a string that is the key . . . 1463
KeyedBytesDataReader
<<***interface***>> *(p. 403)* Instantiates DataReader < com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes > 1467
KeyedBytesDataWriter
<<***interface***>> *(p. 403)* Instantiates DataWriter < com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes > 1475
KeyedBytesSeq
Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes > 1486
KeyedBytesTypeSupport
<<***interface***>> *(p. 403)* com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes type support 1489
KeyedString
Keyed string built-in type 1494
KeyedStringDataReader
<<***interface***>> *(p. 403)* Instantiates DataReader < com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString > 1497
KeyedStringDataWriter
<<***interface***>> *(p. 403)* Instantiates DataWriter < com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString > 1506
KeyedStringSeq
Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString > 1514
KeyedStringTypeSupport
<<***interface***>> *(p. 403)* Keyed string type support 1518
LatencyBudgetQosPolicy
<<***spec***>> *(p. 132)* Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications 1523
LibraryVersion_t
The version of a single library shipped as part of an RTI Connext distribution 1525
LifespanQosPolicy
<<***spec***>> *(p. 132)* Specifies how long the data written by the **com.rti.dds.publication.DataWriter** (p. 818) is considered valid 1526
Listener
<<***interface***>> *(p. 403)* Abstract base class for all **Listener** (p. 1528) interfaces 1528
LivelinessChangedStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS 1531

LivelinessLostStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS 1534
LivelinessQosPolicy
Specifies and configures the mechanism that allows **com.rti.dds.subscription.DataReader** (p. 707) entities to detect when **com.rti.dds.publication.DataWriter** (p. 818) entities become disconnected or "dead." 1535
LivelinessQosPolicyKind
Kinds of liveliness 1539
LoanableSequence
A sequence capable of storing its elements directly or taking out a loan on them from an internal middleware store 1541
Locator_t
<<***extension***>> *(p. 138)* Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports 1546
LocatorFilter_t
<<***extension***>> *(p. 138)* Specifies the configuration of an individual channel within a MultiChannel DataWriter 1551
LocatorFilterQosPolicy
<<***extension***>> *(p. 138)* The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753) 1553
LocatorFilterSeq
Declares IDL `sequence<` **com.rti.dds.infrastructure.LocatorFilter_t** (p. 1551) `>` 1554
LocatorSeq
Declares IDL `sequence <` **com.rti.dds.infrastructure.Locator_t** (p. 1546) `>` 1555
LogCategory
Categories of logged messages 1555
LogFacility
A number that identifies the source of a log message 1558
Logger
<<***interface***>> *(p. 403)* The singleton type used to configure RTI Connext logging 1560
LoggerDevice
<<***interface***>> *(p. 403)* Logging device interface. Use for user-defined logging devices 1567
LoggingQosPolicy
<<***extension***>> *(p. 138)* Configures the RTI Connext logging facility 1568
LogLevel
Level category assigned to RTI Connext log messages returned to an output device 1572
LogMessage
A log message's input parameter to a logging device, including the text and additional information . 1574
LogPrintFormat
The format used to output RTI Connext diagnostic information 1576
LogVerbosity
The verbosities at which RTI Connext diagnostic information is logged 1579
LongDoubleSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence <` com.rti.dds.infrastructure.LongDouble `>` 1581
LongSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence <` long `>` 1582
MonitoringDedicatedParticipantSettings
<<***extension***>> *(p. 138)* Configures the use of a dedicated **com.rti.dds.domain.DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data 1589
MonitoringDistributionSettings
<<***extension***>> *(p. 138)* Configures the distribution of telemetry data 1593

MonitoringEventDistributionSettings
<<***extension***>> *(p. 138)* Configures the distribution of event metrics . . . 1595
MonitoringLoggingDistributionSettings
<<***extension***>> *(p. 138)* Configures the distribution of log messages . . . 1599
MonitoringLoggingForwardingSettings
<<***extension***>> *(p. 138)* Configures the forwarding levels of log messages for the different **com.rti.ndds.config.LogFacility** (p. 1558) . . . 1602
MonitoringMetricSelection
<<***extension***>> *(p. 138)* This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources . . . 1605
MonitoringMetricSelectionSeq
Declares IDL `sequence` < **com.rti.dds.infrastructure.MonitoringMetricSelection** (p. 1605) > . . . 1608
MonitoringPeriodicDistributionSettings
<<***extension***>> *(p. 138)* Configures the distribution of periodic metrics . . . 1608
MonitoringQosPolicy
<<***extension***>> *(p. 138)* Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data . . . 1611
MonitoringTelemetryData
<<***extension***>> *(p. 138)* Configures the telemetry data that will be distributed . . . 1614
MultiChannelQosPolicy
<<***extension***>> *(p. 138)* Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data . . . 1616
MultiTopic
[Not supported (optional)] <<***interface***>> *(p. 403)* A specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows subscriptions that combine/filter/rearrange data coming from several topics . . . 1618
EntityHowTo.MyEntityListener . . . 1621
NetworkCapture
Network Capture APIs . . . 1621
NetworkCaptureContentKind
Bitmap used to specify a content type, i.e., a part of the RTPS frame . . . 1630
NetworkCaptureParams
Input parameters for starting network capture . . . 1632
NetworkCaptureTrafficKind
Bitmap used to specify whether we want to capture inbound or outbound traffic . . . 1634
NO_MEMORY
Exception thrown when there is not enough memory for a dynamic memory allocation . . . 1636
ObjectHolder
<<***extension***>> *(p. 403)* Holder of object instance . . . 1636
OfferedDeadlineMissedStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS . . . 1637
OfferedIncompatibleQosStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS . . . 1638
OwnershipQosPolicy
<<***spec***>> *(p. 132)* Specifies whether it is allowed for multiple **com.rti.dds.publication.DataWriter** (p. 818) (s) to write the same instance of the data and if so, how these modifications should be arbitrated . . . 1640
OwnershipQosPolicyKind
Kinds of ownership . . . 1645
OwnershipStrengthQosPolicy
Specifies the value of the strength used to arbitrate among multiple **com.rti.dds.publication.DataWriter** (p. 818) objects that attempt to modify the same instance of a data type (identified by **com.rti.dds.topic.Topic** (p. 2116) + key) . . . 1646

ParticipantBuiltinTopicData
Entry created when a **DomainParticipant** (p. 948) object is discovered . . . 1647
ParticipantBuiltinTopicDataDataReader
Instantiates DataReader < **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647) > . . . 1653
ParticipantBuiltinTopicDataSeq
Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647) > . . . 1654
ParticipantBuiltinTopicDataTypeSupport
Instantiates TypeSupport < **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647) > . . . 1654
ParticipantTrustAlgorithmInfo
Trust Plugins algorithm information associated with the discovered DomainParticipant . . . 1655
ParticipantTrustInterceptorAlgorithmInfo
Trust Plugins interception algorithm information associated with the discovered DomainParticipant . . . 1657
ParticipantTrustKeyEstablishmentAlgorithmInfo
Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant . . . 1659
ParticipantTrustProtectionInfo
Trust Plugins Protection information associated with the discovered DomainParticipant . . . 1660
ParticipantTrustSignatureAlgorithmInfo
Trust Plugins signature algorithm information associated with the discovered DomainParticipant . . . 1662
PartitionQosPolicy
<<***spec***>> *(p. 132)* Set of strings that introduces logical partitions in **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), or **com.rti.dds.subscription.Subscriber** (p. 2039) entities . . . 1664
PersistentJournalKind
Sets the journal mode of the persistent storage . . . 1667
PersistentStorageSettings
Configures durable writer history and durable reader state . . . 1669
PersistentSynchronizationKind
<<***extension***>> *(p. 138)* Whether instance state consistency is enabled . . . 1677
PresentationQosPolicy
<<***spec***>> *(p. 132)* Specifies how the samples representing changes to data instances are presented to a subscribing application . . . 1678
PresentationQosPolicyAccessScopeKind
Kinds of presentation "access scope" . . . 1683
PrintFormatKind
Format kinds available when converting data samples to string representations . . . 1685
PrintFormatProperty
A collection of attributes used to configure how data samples will be formatted when converted to a string . . . 1686
PRIVATE_MEMBER
Constant used to indicate that a value type member is private . . . 1689
ProductVersion_t
<<***extension***>> *(p. 403)* Type used to represent the current version of RTI Connext . . . 1689
ProfileQosPolicy
<<***extension***>> *(p. 138)* Configures the way that XML documents containing QoS profiles are loaded by RTI Connext . . . 1692
Property_t
Properties are name/value pairs objects . . . 1695
ShmemTransport.Property_t
Subclass of **com.rti.ndds.transport.Transport.Property_t** (p. 1700) allowing specification of parameters that are specific to the shared-memory transport . . . 1698

Transport.Property_t
Base configuration structure that must be inherited by derived **Transport** (p. 2150) Plugin classes . 1700
UDPv4Transport.Property_t
Configurable IPv4/UDP Transport-Plugin properties . . . 1707
UDPv4WanTransport.Property_t
Configurable IPv4/UDP WAN Transport-Plugin properties . . . 1720
UDPv6Transport.Property_t
Configurable IPv6/UDP Transport-Plugin properties . . . 1731
PropertyQosPolicy
<<***extension***>> *(p. 138)* Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery . . . 1739
PropertyQosPolicyHelper
Policy helpers that facilitate management of the properties in the input policy . . . 1742
PropertyQosPolicyMutability
Determines if, and when, the value of a property can change . . . 1748
PropertySeq
Declares IDL `sequence` < **com.rti.dds.infrastructure.Property_t** (p. 1695) > . . . 1749
ProtocolVersion_t
<<***extension***>> *(p. 403)* Type used to represent the version of the RTPS protocol . . . 1750
PUBLIC_MEMBER
Constant used to indicate that a value type member is public . . . 1753
PublicationBuiltinTopicData
Entry created when a **com.rti.dds.publication.DataWriter** (p. 818) is discovered in association with its **Publisher** (p. 1767) . . . 1753
PublicationBuiltinTopicDataDataReader
Instantiates `DataReader` < **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753) > . . . 1762
PublicationBuiltinTopicDataSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753) > . . . 1763
PublicationBuiltinTopicDataTypeSupport
Instantiates `TypeSupport` < **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753) > . . . 1763
PublicationMatchedStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS . . . 1764
PublicationPriority . . . 1767
Publisher
<<***interface***>> *(p. 403)* A publisher is the object responsible for the actual dissemination of publications . . . 1767
PublisherAdapter
<<***extension***>> *(p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods) . . . 1789
PublisherListener
<<***interface***>> *(p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for **com.rti.dds.publication.Publisher** (p. 1767) status . . . 1789
PublisherQos
QoS policies supported by a **com.rti.dds.publication.Publisher** (p. 1767) entity . . . 1791
PublisherSeq
Declares IDL `sequence` < **com.rti.dds.publication.Publisher** (p. 1767) > . . . 1795

PublishModeQosPolicy
<<***extension***>> *(p. 138)* Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread . . . 1797
PublishModeQosPolicyKind
Kinds of publishing mode . . . 1800
Qos
An abstract base class for all QoS types . . . 1802
QosPolicy
The base class for all QoS policies . . . 1802
QosPolicyCount
Type to hold a counter for a **com.rti.dds.infrastructure.QosPolicyId_t** (p. 1806) . . . 1804
QosPolicyCountSeq
Declares IDL `sequence` < **com.rti.dds.infrastructure.QosPolicyCount** (p. 1804) > . . . 1805
QosPolicyId_t
Type to identify `QosPolicies` . . . 1806
QosPrintFormat
A collection of attributes used to configure how a QoS appears when printed . . . 1809
QueryCondition
<<***interface***>> *(p. 403)* These are specialised **com.rti.dds.subscription.ReadCondition** (p. 1816) objects that allow the application to also specify a filter on the locally available data . . . 1812
QueryConditionParams
<<***extension***>> *(p. 403)* Input parameters for **com.rti.dds.subscription.DataReader.create_↩ querycondition_w_params** (p. 714) . . . 1813
ReadCondition
<<***interface***>> *(p. 403)* Conditions specifically dedicated to read operations and attached to one **com.rti.dds.subscription.DataReader** (p. 707) . . . 1816
ReadConditionParams
<<***extension***>> *(p. 403)* Input parameters for **com.rti.dds.subscription.DataReader.create_↩ readcondition_w_params** (p. 713) . . . 1818
ReaderDataLifecycleQosPolicy
<<***spec***>> *(p. 132)* Controls how a DataReader manages the lifecycle of the data that it has received . . . 1822
ReceiverPoolQosPolicy
<<***extension***>> *(p. 138)* Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets) . . . 1826
ReliabilityQosPolicy
<<***extension***>> *(p. 138)* <<***spec***>> *(p. 132)* Indicates the level of reliability offered/requested by RTI Connext . . . 1829
ReliabilityQosPolicyAcknowledgmentModeKind
<<***extension***>> *(p. 138)* Kinds of acknowledgment . . . 1834
ReliabilityQosPolicyKind
Kinds of reliability . . . 1835
ReliableReaderActivityChangedStatus
<<***extension***>> *(p. 403)* Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer . . . 1836
ReliableWriterCacheChangedStatus
<<***extension***>> *(p. 403)* A summary of the state of a data writer's cache of unacknowledged samples written . . . 1839
ReliableWriterCacheEventCount
<<***extension***>> *(p. 403)* The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold . . . 1843

RemoteParticipantPurgeKind
Available behaviors for halting communication with remote participants (and their contained entities) with which discovery communication has been lost . . . 1844
Replier< TReq, TRep >
Allows receiving requests and sending replies . . . 1846
ReplierListener< TReq, TRep >
Called when a com.rti.connext.requestreply.Replier<TReq,TRep> has new available requests . . . 1859
ReplierParams< TReq, TRep >
Contains the parameters for creating a com.rti.connext.requestreply.Replier<TReq,TRep> . . . 1860
RequestedDeadlineMissedStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS . . . 1864
RequestedIncompatibleQosStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS . . . 1865
Requester< TReq, TRep >
Allows sending requests and receiving replies . . . 1867
RequesterParams
Contains the parameters for creating a com.rti.connext.requestreply.Requester<TReq,TRep> . . . 1890
ResourceLimitsQosPolicy
<<***spec***>> *(p. 132)* Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics . . . 1894
RETCODE_ALREADY_DELETED
The object target of this operation has already been deleted . . . 1899
RETCODE_BAD_PARAMETER
Illegal parameter value . . . 1899
RETCODE_ERROR
Generic, unspecified error . . . 1900
RETCODE_ILLEGAL_OPERATION
The operation was called under improper circumstances . . . 1900
RETCODE_IMMUTABLE_POLICY
Application attempted to modify an immutable QoS policy . . . 1901
RETCODE_INCONSISTENT_POLICY
Application specified a set of QoS policies that are not consistent with each other . . . 1901
RETCODE_NO_DATA
Indicates a transient situation where the operation did not return any data but there is no inherent error 1902
RETCODE_NOT_ALLOWED_BY_SECURITY
An operation on the DDS API that fails because the security plugins do not allow it . . . 1902
RETCODE_NOT_ENABLED
Operation invoked on a **com.rti.dds.infrastructure.Entity** (p. 1320) that is not yet enabled . . . 1902
RETCODE_OUT_OF_RESOURCES
RTI Connext ran out of the resources needed to complete the operation . . . 1903
RETCODE_PRECONDITION_NOT_MET
A pre-condition for the operation was not met . . . 1903
RETCODE_TIMEOUT
The operation timed out . . . 1904
RETCODE_UNSUPPORTED
Unsupported operation. Only returned by operations that are unsupported . . . 1904
RtpsReliableReaderProtocol_t
<<***extension***>> *(p. 138)* **Qos** (p. 1802) related to reliable reader protocol defined in RTPS . . . 1904
RtpsReliableWriterProtocol_t
<<***extension***>> *(p. 138)* QoS related to the reliable writer protocol defined in RTPS . . . 1911
RtpsReservedPortKind
RTPS reserved port kind, used to identify the types of ports that can be reserved on domain participant enable . . . 1929

RtpsWellKnownPorts_t
<<***extension***>> *(p. 138)* RTPS well-known port mapping configuration . . . 1931
Sample< **T** >
A data sample and related info received from the middleware . . . 1936
SampleData< **T** >
Sample (p. 1936) base type that contains data and has an identity . . . 1938
SampleFlagBits
Type to identify the sample flags reserved by RTI . . . 1939
SampleIdentity_t
Type definition for a Sample Identity . . . 1942
SampleInfo
Information that accompanies each sample that is `read` or `taken` . . . 1944
SampleInfoSeq
Declares IDL `sequence` < **com.rti.dds.subscription.SampleInfo** (p. 1944) > . . . 1957
SampleLostStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS . . . 1958
SampleLostStatusKind
<<***extension***>> *(p. 403)* Kinds of reasons why a sample was lost . . . 1959
SampleRejectedStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS . . . 1966
SampleRejectedStatusKind
Kinds of reasons for rejecting a sample . . . 1968
SampleStateKind
Indicates whether or not a sample has ever been read . . . 1972
Sequence
<<***interface***>> *(p. 403)* <<***generic***>> *(p. 403)* A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **`com.rti.ndds.example.Foo`** (p. 1358) . . . 1973
SequenceNumber_t
Type for *sequence* number representation . . . 1976
ServiceQosPolicy
<<***extension***>> *(p. 138)* Service or tool associated with a DDS entity . . . 1981
ServiceQosPolicyKind
Kinds of service . . . 1982
ServiceRequest
A request coming from one of the built-in services . . . 1985
ServiceRequestAcceptedStatus
Com.rti.dds.infrastructure.StatusKind.SERVICE_REQUEST_ACCEPTED_STATUS . . . 1986
ServiceRequestDataReader
Instantiates `DataReader` < **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) > . . . 1989
ServiceRequestSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) > . . . 1989
ServiceRequestTypeSupport
Instantiates **`TypeSupport`** (p. 2252) < **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) > 1990
ShmemTransport
Built-in transport plug-in for inter-process communications using shared memory . . . 1990
ShortSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < short > . . . 1995
SimpleReplier< **TReq, TRep** >
A callback-based replier . . . 2001
SimpleReplierListener< **TReq, TRep** >
The listener called by a **SimpleReplier** (p. 2001) . . . 2003

SimpleReplierParams< TReq, TRep >
Contains the parameters for creating a com.rti.connext.requestreply.SimpleReplier<TReq,TRep> 2005
StatusCondition
<<*interface*>> *(p. 403)* A specific **com.rti.dds.infrastructure.Condition** (p. 686) that is associated with each **com.rti.dds.infrastructure.Entity** (p. 1320) 2008
StatusKind
Type for *status* kinds 2010
StreamKind
Indicates if the samples are **TopicQuery** (p. 2139) samples or not 2022
StringDataReader
<<*interface*>> *(p. 403)* Instantiates `DataReader` < com.rti.dds.infrastructure.String > 2023
StringDataWriter
<<*interface*>> *(p. 403)* Instantiates `DataWriter` < com.rti.dds.infrastructure.String > 2026
StringSeq
Declares IDL `sequence` < com.rti.dds.infrastructure.String > 2027
StringTypeSupport
<<*interface*>> *(p. 403)* String type support 2031
StructMember
A description of a member of a struct 2036
Subscriber
<<*interface*>> *(p. 403)* A subscriber is the object responsible for actually receiving data from a subscription 2039
SubscriberAdapter
A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods) 2062
SubscriberListener
<<*interface*>> *(p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for status about a subscriber 2063
SubscriberQos
QoS policies supported by a **com.rti.dds.subscription.Subscriber** (p. 2039) entity 2065
SubscriberSeq
Declares IDL `sequence` < **com.rti.dds.subscription.Subscriber** (p. 2039) > 2069
SubscriptionBuiltinTopicData
Entry created when a **com.rti.dds.subscription.DataReader** (p. 707) is discovered in association with its **Subscriber** (p. 2039) 2070
SubscriptionBuiltinTopicDataDataReader
Instantiates **`DataReader`** (p. 707) < **com.rti.dds.subscription.builtin.SubscriptionBuiltin↩ TopicData** (p. 2070) > 2079
SubscriptionBuiltinTopicDataSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) > 2080
SubscriptionBuiltinTopicDataTypeSupport
Instantiates `TypeSupport` < **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) > 2081
SubscriptionMatchedStatus
Com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS 2081
SyslogLevel
Syslog level category assigned to RTI Connext log messages. See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information 2084
SyslogVerbosity
The Syslog verbosities at which RTI Connext diagnostic information is logged. These Syslog verbosities are mapped to **com.rti.ndds.config.LogVerbosity** (p. 1579). See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information 2086

SystemException
System exception 2089
SystemResourceLimitsQosPolicy
<<***extension***>> *(p. 138)* Configures **com.rti.dds.domain.DomainParticipant** (p. 948)-independent resources used by RTI Connext. Mainly used to change the maximum number of **com.rti.dds.domain.DomainParticipant** (p. 948) entities that can be created within a single process (address space) 2090
Tag
Tags are name/value pair objects 2092
TagSeq
Declares IDL `sequence` < **com.rti.dds.infrastructure.Tag** (p. 2092) > 2094
TCKind
Enumeration type for **com.rti.dds.typecode.TypeCode** (p. 2183) kinds 2094
ThreadSettings_t
The properties of a thread of execution 2101
ThreadSettingsCpuRotationKind
Determines how **com.rti.dds.infrastructure.ThreadSettings_t.cpu_list** (p. 2103) affects processor affinity for thread-related QoS policies that apply to multiple threads 2104
ThreadSettingsKind
A collection of flags used to configure threads of execution 2105
Time_t
Type for *time* representation 2107
TimeBasedFilterQosPolicy
<<***spec***>> *(p. 132)* Filter that allows a **com.rti.dds.subscription.DataReader** (p. 707) to specify that it is interested only in (potentially) a subset of the values of the data 2113
Topic
<<***interface***>> *(p. 403)* The most basic description of the data to be published and subscribed . 2116
TopicAdapter
<<***extension***>> *(p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods) 2121
TopicBuiltinTopicData
Entry created when a **Topic** (p. 2116) object discovered 2122
TopicBuiltinTopicDataDataReader
Instantiates `DataReader` < **builtin.TopicBuiltinTopicData** (p. 2122) > 2126
TopicBuiltinTopicDataSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **builtin.TopicBuiltinTopicData** (p. 2122) > 2127
TopicBuiltinTopicDataTypeSupport
Instantiates **`TypeSupport`** (p. 2252) < **builtin.TopicBuiltinTopicData** (p. 2122) > 2127
TopicDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery 2128
TopicDescription
Com.rti.dds.topic.Topic entity and associated elements 2129
TopicListener
<<***interface***>> *(p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for **com.rti.dds.topic.Topic** (p. 2116) entities 2131
TopicQos
QoS policies supported by a **com.rti.dds.topic.Topic** (p. 2116) entity 2133
TopicQuery
<<***extension***>> *(p. 403)* Allows a **com.rti.dds.subscription.DataReader** (p. 707) to query the sample cache of its matching **com.rti.dds.publication.DataWriter** (p. 818) 2139

TopicQueryData
<<***extension***>> *(p. 403)* Provides information about a **com.rti.dds.subscription.TopicQuery** (p. 2139) 2139
TopicQueryDispatchQosPolicy
<<***extension***>> *(p. 138)* Configures the ability of a **com.rti.dds.publication.DataWriter** (p. 818) to publish samples in response to a **com.rti.dds.subscription.TopicQuery** (p. 2139) 2142
TopicQueryHelper
Helpers to provide utility operations related to **com.rti.dds.subscription.TopicQuery** (p. 2139) . . 2144
TopicQuerySelection
<<***extension***>> *(p. 403)* Specifies the data query that defines a **com.rti.dds.subscription.↩ TopicQuery** (p. 2139) 2145
TopicQuerySelectionKind
Kinds of **TopicQuerySelection** (p. 2145) 2149
Transport
RTI Connext's abstract pluggable transport interface 2150
TransportBuiltinKind
Built-in transport kind 2150
TransportBuiltinQosPolicy
<<***extension***>> *(p. 138)* Specifies which built-in transports are used 2152
TransportInfo_t
Contains the class_id and message_size_max of an installed transport 2154
TransportInfoSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence <` **com.rti.dds.infrastructure.TransportInfo_t** (p. 2154) `>` 2155
TransportMulticastMapping_t
<<***extension***>> *(p. 138)* Type representing a list of multicast mapping elements 2156
TransportMulticastMappingFunction_t
Type representing an external mapping function 2158
TransportMulticastMappingQosPolicy
<<***extension***>> *(p. 138)* Specifies the multicast address on which a **com.rti.dds.subscription.↩ DataReader** (p. 707) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **com.rti.dds.domain.DomainParticipant** (p. 948) level) transports with which to receive the multicast data 2160
TransportMulticastMappingSeq
Declares IDL `sequence<` **com.rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) `>` 2162
TransportMulticastQosPolicy
<<***extension***>> *(p. 138)* Specifies the multicast address on which a **com.rti.dds.subscription.↩ DataReader** (p. 707) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **com.rti.dds.domain.DomainParticipant** (p. 948) level) transports with which to receive the multicast data 2162
TransportMulticastQosPolicyKind
Transport Multicast Policy Kind 2164
TransportMulticastSettings_t
Type representing a list of multicast locators 2165
TransportMulticastSettingsSeq
Declares IDL `sequence<` **com.rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) `>` 2168
TransportPriorityQosPolicy
<<***spec***>> *(p. 132)* This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities 2168
TransportSelectionQosPolicy
<<***extension***>> *(p. 138)* Specifies the physical transports a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707) may use to send or receive data 2170
TransportSupport
<<***interface***>> *(p. 403)* The utility class used to configure RTI Connext pluggable transports . . 2172

TransportUdpWanCommPortsMappingInfo_t
Type for storing UDP WAN communication ports . . . 2174
TransportUdpWanCommPortsMappingInfoSeq
List of < **com.rti.dds.infrastructure.TransportUdpWanCommPortsMappingInfo_t** (p. 2174) > . 2176
TransportUnicastQosPolicy
<<***extension***>> *(p. 138)* Specifies a subset of transports and a port number that can be used by an **Entity** (p. 1320) to receive data . . . 2177
TransportUnicastSettings_t
Type representing a list of unicast locators . . . 2179
TransportUnicastSettingsSeq
Declares IDL `sequence<` **com.rti.dds.infrastructure.TransportUnicastSettings_t** (p. 2179) > 2181
TrustAlgorithmRequirements
Type to describe Trust Plugins algorithm requirements for an entity . . . 2181
TypeCode
The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the `Code Generator User's Manual`) or to modify types you define yourself at runtime . . . 2183
TypeCodeFactory
A singleton factory for creating, copying, and deleting data type definitions dynamically . . . 2232
TypeConsistencyEnforcementQosPolicy
<<***spec***>> *(p. 132)* Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it . . . 2246
TypeConsistencyKind
Kinds of type consistency . . . 2250
TypeSupport
<<***interface***>> *(p. 403)* An abstract *marker* interface that has to be specialized for each concrete user data type that will be used by the application . . . 2252
TypeSupportQosPolicy
[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Allows you to attach application-specific values to a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization . . . 2253
UDPv4Transport
Transport (p. 2150) plug-in using UDP/IPv4 . . . 2255
UDPv4WanTransport
Transport (p. 2150) plug-in using UDP/IPv4 for WAN communications. . . . 2261
UDPv6Transport
Transport (p. 2150) plug-in using UDP/IPv6 . . . 2265
Union . . . 2269
UnionMember
A description of a member of a union . . . 2269
UserDataQosPolicy
Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery . . . 2272
UserException
User exception . . . 2273
Utility
Other Utilities APIs . . . 2274
ValueMember
A description of a member of a value type . . . 2276
VendorId_t
<<***extension***>> *(p. 403)* Type used to represent the vendor of the service implementing the RTPS protocol . . . 2280

Version
<<***interface***>> *(p. 403)* The version of an RTI Connext distribution 2281
ViewStateKind
Indicates whether or not an instance is new 2283
VM_ABSTRACT
Constant used to indicate that a value type has the `abstract` modifier 2285
VM_CUSTOM
Constant used to indicate that a value type has the `custom` modifier 2285
VM_NONE
Constant used to indicate that a value type has no modifiers 2286
VM_TRUNCATABLE
Constant used to indicate that a value type has the `truncatable` modifier 2286
WaitSet
<<***interface***>> *(p. 403)* Allows an application to wait until one or more of the attached **com.rti.dds.infrastructure.Condition** (p. 686) objects has a `trigger_value` of com.rti.dds.infrastructure.true or else until the timeout expires 2287
WaitSetProperty_t
<<***extension***>> *(p. 403)* Specifies the **com.rti.dds.infrastructure.WaitSet** (p. 2287) behavior for multiple trigger events 2295
WcharSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < com.rti.dds.infrastructure.char > 2297
WireProtocolQosPolicy
<<***extension***>> *(p. 138)* Specifies the wire-protocol-related attributes for the **com.rti.dds.domain.DomainParticipant** (p. 948) 2299
WireProtocolQosPolicyAutoKind
Mechanism to automatically calculate the GUID prefix 2308
WriteParams_t
<<***extension***>> *(p. 403)* Input parameters for writing with **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402), **com.rti.ndds.example.FooDataWriter.dispose_w_params** (p. 1406), **com.rti.ndds.example.FooDataWriter.register_instance_w_params** (p. 1392), **com.rti.ndds.example.FooDataWriter.unregister_instance_w_params** (p. 1396) 2308
WriterContentFilter
<<***interface***>> *(p. 403)* Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) 2316
WriterDataLifecycleQosPolicy
<<***spec***>> *(p. 132)* Controls how a **com.rti.dds.publication.DataWriter** (p. 818) handles the lifecycle of the instances (keys) that it is registered to manage 2320
WriteSample< **T** >
A sample for writing data 2323
WstringSeq
Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < com.rti.dds.infrastructure.char* > 2325
Compliance.XTypesMask
XTypes compliance mask 2327

Chapter 6

Module Documentation

6.1 RTI Connext Exceptions

RTI Connext return-code exceptions.

RTI Connext return-code exceptions.

The request-reply API reports internal DDS errors as exceptions. Each RTI Connext return code maps to a exception.

Note that RETCODE_TIMEOUT and RETCODE_NO_DATA are not thrown in the request-reply API, because they are not considered errors. For example in case of no data or timeouts operations may return empty containers (e.g. **com.rti.connext.requestreply.Requester<TReq,TRep>.takeReplies(int)** (p. 1877)) or false (e.g. **com.rti.connext.requestreply.Requester<TReq,TRep>.waitForReplies(int,Duration_t)** (p. 1884)).

Return Codes (p. 512)

Error handling example (p. 398)

6.2 Clock Selection

APIs related to clock selection.

APIs related to clock selection.

RTI Connext uses clocks to measure time and generate timestamps.

RTI Connext uses three clocks, an "internal clock," an "external clock," and a "wall clock". The internal clock measures time internally. The external clock generates timestamps, such as the source timestamp and the reception timestamp, in addition to providing the current time given by the Domain Participant's API. The internal and external clocks can be configured via properties. The wall clock is not configurable and always shows the system time. It is used internally whenever a real-world time is necessary, such as for external document time verification.

6.2.1 Available Clocks

Two clock implementations are generally available, the monotonic clock and the realtime clock.

The monotonic clock provides times that are monotonic from a clock that is not adjustable. This clock is useful to use in order to not be subject to changes in the system or realtime clock, which may be adjusted by the user or via time synchronization protocols. However, this time generally starts from an arbitrary point in time, such as system startup. Note that this clock is not available for all architectures. Please see the `Platform Notes` for the architectures on which it is supported. For the purposes of clock selection, this clock can be referenced by the name "monotonic".

The realtime clock provides the real time of the system. This clock may generally be monotonic but may not be guaranteed to be so. It is adjustable and may be subject to small and large changes in time. The time obtained from this clock is generally a meaningful time in that it is the amount of time from a known epoch. For the purposes of clock selection, this clock can be referenced by the names "realtime" or "system".

6.2.2 Clock Selection Strategy

By default, the internal clock uses the monotonic clock and the external clocks uses the realtime clock. The default setup offers robustness to changes in the system time. Since the monotonic clock is not available on all platforms, by default, RTI Connext will attempt to use the monotonic clock, and will fall back to the realtime clock if the monotonic clock is not available.

If you want your application to be robust to changes in the system time, you are not relying on source timestamps, and you want to avoid obtaining times from both clocks, you may use the monotonic clock for both the internal and external clocks.

6.2.3 Configuring Clock Selection

To configure the clock selection, use the **PROPERTY** (p. 499) QoS policy associated with the **com.rti.dds.domain.↩ DomainParticipant** (p. 948).

See also

com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)

The following table lists the supported clock selection properties.

Table 6.1 ***Clock Selection Properties***

Property	Description
dds.clock.external_clock	Comma-delimited list of clocks to use for the external clock, in order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "realtime"
dds.clock.internal_clock	Comma-delimited list of clocks to use for the internal clock, in order of preference. Valid clock names are "realtime", "system", and "monotonic". Default: "monotonic" if available, "realtime" if not

6.3 Domain Module

Contains the **com.rti.dds.domain.DomainParticipant** (p. 948) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **com.rti.dds.domain.DomainParticipant** (p. 948) also acts as a container for the other objects that make up RTI Connext.

Modules

- **DomainParticipantFactory**

  com.rti.dds.domain.DomainParticipantFactory *(p. 1039) entity and associated elements*
- **DomainParticipants**

  com.rti.dds.domain.DomainParticipant *(p. 948) entity and associated elements*
- **Built-in Topics**

  Built-in objects created by RTI Connext but accessible to the application.

6.3.1 Detailed Description

Contains the **com.rti.dds.domain.DomainParticipant** (p. 948) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **com.rti.dds.domain.DomainParticipant** (p. 948) also acts as a container for the other objects that make up RTI Connext.

6.4 DomainParticipantFactory

com.rti.dds.domain.DomainParticipantFactory (p. 1039) entity and associated elements

Classes

- class **DomainParticipantFactory**

  *<<**singleton**>> (p. 403) <<**interface**>> (p. 403) Allows creation and destruction of **com.rti.dds.domain.Domain↩ Participant** (p. 948) objects.*
- class **DomainParticipantFactoryQos**

  *QoS policies supported by a **com.rti.dds.domain.DomainParticipantFactory** (p. 1039).*

Variables

- static final **DomainParticipantQos PARTICIPANT_QOS_DEFAULT**

  *Special value for creating a **DomainParticipant** (p. 948) with default QoS.*
- static **DomainParticipantFactory TheParticipantFactory** = create_singletonI()

  *Can be used as an alias for the singleton factory returned by the operation **com.rti.dds.domain.DomainParticipant↩ Factory.get_instance** (p. 1042).*
- static **DomainParticipantConfigParams_t PARTICIPANT_CONFIG_PARAMS_DEFAULT**

  *Special value for creating a **com.rti.dds.domain.DomainParticipant** (p. 948) from configuration using default parameters.*

6.4.1 Detailed Description

com.rti.dds.domain.DomainParticipantFactory (p. 1039) entity and associated elements

6.4.2 Variable Documentation

6.4.2.1 PARTICIPANT_QOS_DEFAULT

```
final DomainParticipantQos PARTICIPANT_QOS_DEFAULT [static]
```

Initial value:

```
=
    new DomainParticipantQos()
```

Special value for creating a **DomainParticipant** (p. 948) with default QoS.

When used in **com.rti.dds.domain.DomainParticipantFactory.create_participant** (p. 1043), this special value is used to indicate that the **com.rti.dds.domain.DomainParticipant** (p. 948) should be created with the default **com.rti.dds.domain.DomainParticipant** (p. 948) QoS by means of the operation **com.rti.dds.domain.DomainParticipantFactory.get_default_participant_qos()** (p. 1045) and using the resulting QoS to create the **com.rti.dds.domain.DomainParticipant** (p. 948).

When used in **com.rti.dds.domain.DomainParticipantFactory.set_default_participant_qos** (p. 1046), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **com.rti.dds.domain.DomainParticipantFactory.set_default_participant_qos** (p. 1046) operation had never been called.

When used in **com.rti.dds.domain.DomainParticipant.set_qos** (p. 992), this special value is used to indicate that the QoS of the **com.rti.dds.domain.DomainParticipant** (p. 948) should be changed to match the current default QoS set in the **com.rti.dds.domain.DomainParticipantFactory** (p. 1039) that the **com.rti.dds.domain.DomainParticipant** (p. 948) belongs to.

RTI Connext treats this special value as a constant.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values from the **DomainParticipant** (p. 948) factory; for this purpose, use **com.rti.dds.domain.DomainParticipantFactory.get_default_participant_qos** (p. 1045).

See also

NDDS_DISCOVERY_PEERS (p. 472)

com.rti.dds.domain.DomainParticipantFactory.create_participant() (p. 1043)

com.rti.dds.domain.DomainParticipantFactory.set_default_participant_qos() (p. 1046)

com.rti.dds.domain.DomainParticipant.set_qos() (p. 992)

6.4.2.2 TheParticipantFactory

```
DomainParticipantFactory TheParticipantFactory = create_singletonI()  [static]
```

Can be used as an alias for the singleton factory returned by the operation **com.rti.dds.domain.DomainParticipantFactory.get_instance** (p. 1042).

See also

com.rti.dds.domain.DomainParticipantFactory.get_instance (p. 1042)

Referenced by **DomainParticipantFactory.finalize_instance()**, and **DomainParticipantFactory.get_instance()**.

6.4.2.3 PARTICIPANT_CONFIG_PARAMS_DEFAULT

```
DomainParticipantConfigParams_t PARTICIPANT_CONFIG_PARAMS_DEFAULT  [static]
```

Initial value:

```
=
            new DomainParticipantConfigParams_t()
```

Special value for creating a **com.rti.dds.domain.DomainParticipant** (p. 948) from configuration using default parameters.

This value can be used only in **com.rti.dds.domain.DomainParticipantFactory.create_participant_from_config_w_params** (p. 1063) and indicates that the **com.rti.dds.domain.DomainParticipant** (p. 948) must be created applying the information defined in the participant configuration. That is, the domain ID, participant entity name, and QoS profiles for all the entities will be retrieved from the configuration.

RTI Connext treats this special value as a constant.

See also

com.rti.dds.infrastructure.DomainParticipantConfigParams_t (p. 1035)

com.rti.dds.domain.DomainParticipantFactory.create_participant_from_config_w_params (p. 1063)

6.5 DomainParticipants

com.rti.dds.domain.DomainParticipant (p. 948) entity and associated elements

Classes

- interface **DomainParticipant**

  *<<**interface**>> (p. 403) Container for all **com.rti.dds.infrastructure.DomainEntity** (p. 947) objects.*
- class **DomainParticipantAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)*
- interface **DomainParticipantListener**

  *<<**interface**>> (p. 403) Listener for participant status.*
- class **DomainParticipantProtocolStatus**

  *<<**extension**>> (p. 403) The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message.*
- class **DomainParticipantQos**

  *QoS policies supported by a **com.rti.dds.domain.DomainParticipant** (p. 948) entity.*

Variables

- static final **TopicQos** **TOPIC_QOS_DEFAULT** = new **TopicQos**()

  *Special value for creating a **com.rti.dds.topic.Topic** (p. 2116) with default QoS.*
- static final **TopicQos** **TOPIC_QOS_PRINT_ALL** = new **TopicQos**()

  *Special value which can be supplied to **com.rti.dds.topic.TopicQos.toString(TopicQos baseQos, QosPrintFormat format)** (p. 2135) indicating that all of the QoS should be printed.*
- static final **PublisherQos** **PUBLISHER_QOS_DEFAULT** = new **PublisherQos**()

  *Special value for creating a **com.rti.dds.publication.Publisher** (p. 1767) with default QoS.*
- static final **PublisherQos** **PUBLISHER_QOS_PRINT_ALL** = new **PublisherQos**()

  *Special value which can be supplied to **com.rti.dds.publication.PublisherQos.toString(PublisherQos baseQos, QosPrintFormat format)** (p. 1792) indicating that all of the QoS should be printed.*
- static final **SubscriberQos** **SUBSCRIBER_QOS_PRINT_ALL**

  *Special value which can be supplied to **com.rti.dds.subscription.SubscriberQos.toString(SubscriberQos baseQos, QosPrintFormat format)** (p. 2066) indicating that all of the QoS should be printed.*
- static final **SubscriberQos** **SUBSCRIBER_QOS_DEFAULT**

  *Special value for creating a **com.rti.dds.subscription.Subscriber** (p. 2039) with default QoS.*
- static final **DomainParticipantQos** **DOMAINPARTICIPANT_QOS_PRINT_ALL**

6.5.1 Detailed Description

com.rti.dds.domain.DomainParticipant (p. 948) entity and associated elements

6.5.2 Variable Documentation

6.5.2.1 TOPIC_QOS_DEFAULT

```
final TopicQos TOPIC_QOS_DEFAULT = new TopicQos() [static]
```

Special value for creating a **com.rti.dds.topic.Topic** (p. 2116) with default QoS.

When used in **com.rti.dds.domain.DomainParticipant.create_topic** (p. 984), this special value is used to indicate that the **com.rti.dds.topic.Topic** (p. 2116) should be created with the default **com.rti.dds.topic.Topic** (p. 2116) QoS by means of the operation get_default_topic_qos and using the resulting QoS to create the **com.rti.dds.topic.Topic** (p. 2116).

When used in **com.rti.dds.domain.DomainParticipant.set_default_topic_qos** (p. 957), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **com.rti.dds.domain.↩ DomainParticipant.set_default_topic_qos** (p. 957) operation had never been called.

When used in **com.rti.dds.topic.Topic.set_qos** (p. 2118), this special value is used to indicate that the QoS of the **com.rti.dds.topic.Topic** (p. 2116) should be changed to match the current default QoS set in the **com.rti.dds.↩ domain.DomainParticipant** (p. 948) that the **com.rti.dds.topic.Topic** (p. 2116) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Topic; for this purpose, use **com.rti.dds.domain.DomainParticipant.get_default_topic_qos** (p. 957).

See also

com.rti.dds.domain.DomainParticipant.create_topic (p. 984)

com.rti.dds.domain.DomainParticipant.set_default_topic_qos (p. 957)

com.rti.dds.topic.Topic.set_qos (p. 2118)

6.5.2.2 TOPIC_QOS_PRINT_ALL

```
final TopicQos TOPIC_QOS_PRINT_ALL = new TopicQos() [static]
```

Special value which can be supplied to **com.rti.dds.topic.TopicQos.toString(TopicQos baseQos, QosPrintFormat format)** (p. 2135) indicating that all of the QoS should be printed.

The **com.rti.dds.topic.TopicQos.toString(TopicQos baseQos, QosPrintFormat format)** (p. 2135) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **com.rti.dds.domain.DomainParticipant.TOPIC_QOS_PRINT_ALL** (p. 47) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **com.rti.dds.↩ domain.DomainParticipant.TOPIC_QOS_PRINT_ALL** (p. 47) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809) structure.

This value should only be used as the base parameter to the **com.rti.dds.topic.TopicQos.toString(TopicQos base↩ Qos, QosPrintFormat format)** (p. 2135) API.

Referenced by **TopicQos.toString()**.

6.5.2.3 PUBLISHER_QOS_DEFAULT

```
final PublisherQos PUBLISHER_QOS_DEFAULT = new PublisherQos() [static]
```

Special value for creating a **com.rti.dds.publication.Publisher** (p. 1767) with default QoS.

When used in **com.rti.dds.domain.DomainParticipant.create_publisher** (p. 971), this special value is used to indicate that the **com.rti.dds.publication.Publisher** (p. 1767) should be created with the default **com.rti.dds.publication.↩ Publisher** (p. 1767) QoS by means of the operation get_default_publisher_qos and using the resulting QoS to create the **com.rti.dds.publication.Publisher** (p. 1767).

When used in **com.rti.dds.domain.DomainParticipant.set_default_publisher_qos** (p. 960), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **com.rti.dds.domain.↩ DomainParticipant.set_default_publisher_qos** (p. 960) operation had never been called.

When used in **com.rti.dds.publication.Publisher.set_qos** (p. 1777), this special value is used to indicate that the QoS of the **com.rti.dds.publication.Publisher** (p. 1767) should be changed to match the current default QoS set in the **com.rti.dds.domain.DomainParticipant** (p. 948) that the **com.rti.dds.publication.Publisher** (p. 1767) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Publisher; for this purpose, use **com.rti.dds.domain.DomainParticipant.get_default_publisher_qos** (p. 959).

See also

com.rti.dds.domain.DomainParticipant.create_publisher (p. 971)

com.rti.dds.domain.DomainParticipant.set_default_publisher_qos (p. 960)

com.rti.dds.publication.Publisher.set_qos (p. 1777)

6.5.2.4 PUBLISHER_QOS_PRINT_ALL

```
final PublisherQos PUBLISHER_QOS_PRINT_ALL = new PublisherQos() [static]
```

Special value which can be supplied to **com.rti.dds.publication.PublisherQos.toString(PublisherQos baseQos, QosPrintFormat format)** (p. 1792) indicating that all of the QoS should be printed.

The **com.rti.dds.publication.PublisherQos.toString(PublisherQos baseQos, QosPrintFormat format)** (p. 1792) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **com.rti.dds.domain.DomainParticipant.PUBLISHER_QOS_PRINT_↩ ALL** (p. 48) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **com.rti.dds.↩ domain.DomainParticipant.PUBLISHER_QOS_PRINT_ALL** (p. 48) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809) structure.

This value should only be used as the base parameter to the **com.rti.dds.publication.PublisherQos.toString(↩ PublisherQos baseQos, QosPrintFormat format)** (p. 1792) API.

Referenced by **PublisherQos.toString()**.

6.5.2.5 SUBSCRIBER_QOS_PRINT_ALL

```
final SubscriberQos SUBSCRIBER_QOS_PRINT_ALL [static]
```

Initial value:

```
=
    new SubscriberQos()
```

Special value which can be supplied to **com.rti.dds.subscription.SubscriberQos.toString(SubscriberQos base↩ Qos, QosPrintFormat format)** (p. 2066) indicating that all of the QoS should be printed.

The **com.rti.dds.subscription.SubscriberQos.toString(SubscriberQos baseQos, QosPrintFormat format)** (p. 2066) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **com.rti.dds.domain.DomainParticipant.SUBSCRIBER_↩ QOS_PRINT_ALL** (p. 49) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **com.rti.dds.↩ domain.DomainParticipant.SUBSCRIBER_QOS_PRINT_ALL** (p. 49) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809) structure.

This value should only be used as the base parameter to the **com.rti.dds.subscription.SubscriberQos.toString(↩ SubscriberQos baseQos, QosPrintFormat format)** (p. 2066) API.

Referenced by **SubscriberQos.toString()**.

6.5.2.6 SUBSCRIBER_QOS_DEFAULT

```
final SubscriberQos SUBSCRIBER_QOS_DEFAULT [static]
```

Initial value:

```
=
    new SubscriberQos()
```

Special value for creating a **com.rti.dds.subscription.Subscriber** (p. 2039) with default QoS.

When used in **com.rti.dds.domain.DomainParticipant.create_subscriber** (p. 975), this special value is used to indicate that the **com.rti.dds.subscription.Subscriber** (p. 2039) should be created with the default **com.rti.dds.subscription.Subscriber** (p. 2039) QoS by means of the operation get_default_subscriber_qos and using the resulting QoS to create the **com.rti.dds.subscription.Subscriber** (p. 2039).

When used in **com.rti.dds.domain.DomainParticipant.set_default_subscriber_qos** (p. 965), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **com.rti.dds.domain.DomainParticipant.set_default_subscriber_qos** (p. 965) operation had never been called.

When used in **com.rti.dds.subscription.Subscriber.set_qos** (p. 2052), this special value is used to indicate that the QoS of the **com.rti.dds.subscription.Subscriber** (p. 2039) should be changed to match the current default QoS set in the **com.rti.dds.domain.DomainParticipant** (p. 948) that the **com.rti.dds.subscription.Subscriber** (p. 2039) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a Subscriber; for this purpose, use **com.rti.dds.domain.DomainParticipant.get_default_subscriber_qos** (p. 967).

See also

com.rti.dds.domain.DomainParticipant.create_subscriber (p. 975)

com.rti.dds.domain.DomainParticipant.get_default_subscriber_qos (p. 967)

com.rti.dds.subscription.Subscriber.set_qos (p. 2052)

6.5.2.7 DOMAINPARTICIPANT_QOS_PRINT_ALL

```
final DomainParticipantQos DOMAINPARTICIPANT_QOS_PRINT_ALL [static]
```

Initial value:

```
=
    new DomainParticipantQos()
```

Special value which can be supplied to **com.rti.dds.domain.DomainParticipantQos.toString(DomainParticipantQos baseQos, QosPrintFormat format)** (p. 1076) indicating that all of the QoS should be printed.

The **com.rti.dds.domain.DomainParticipantQos.toString(DomainParticipantQos baseQos, QosPrintFormat format)** (p. 1076) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **com.rti.dds.domain.DomainParticipant.↩ DOMAINPARTICIPANT_QOS_PRINT_ALL** (p. 50) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **com.rti.dds.↩ domain.DomainParticipant.DOMAINPARTICIPANT_QOS_PRINT_ALL** (p. 50) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809) structure.

This value should only be used as the base parameter to the **com.rti.dds.domain.DomainParticipantQos.toString(↩ DomainParticipantQos baseQos, QosPrintFormat format)** (p. 1076) API.

Referenced by **DomainParticipantQos.toString()**.

6.5.2.8 DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL

```
final DomainParticipantFactoryQos DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL [static]
```

Initial value:

```
=
    new DomainParticipantFactoryQos()
```

Special value which can be supplied to **com.rti.dds.domain.DomainParticipantFactoryQos.toString(Domain↩ ParticipantFactoryQos baseQos, QosPrintFormat format)** (p. 1067) indicating that all of the QoS should be printed.

The **com.rti.dds.domain.DomainParticipantFactoryQos.toString(DomainParticipantFactoryQos baseQos, QosPrintFormat format)** (p. 1067) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **com.rti.dds.domain.↩ DomainParticipant.DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL** (p. 51) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **com.rti.↩ dds.domain.DomainParticipant.DOMAINPARTICIPANTFACTORY_QOS_PRINT_ALL** (p. 51) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809) structure.

This value should only be used as the base parameter to the **com.rti.dds.domain.DomainParticipantFactoryQos.↩ toString(DomainParticipantFactoryQos baseQos, QosPrintFormat format)** (p. 1067) API.

Referenced by **DomainParticipantFactoryQos.toString()**.

6.5.2.9 FLOW_CONTROLLER_PROPERTY_DEFAULT

```
final FlowControllerProperty_t FLOW_CONTROLLER_PROPERTY_DEFAULT [static]
```

Initial value:

```
=
    new FlowControllerProperty_t()
```

<<***extension***>> *(p. 403)* Special value for creating a **com.rti.dds.publication.FlowController** (p. 1348) with default property.

When used in **com.rti.dds.domain.DomainParticipant.create_flowcontroller** (p. 969) and **com.rti.dds.↩ publication.FlowController.set_property** (p. 1349), this special value represents the set of values specified on the last successful call to **com.rti.dds.domain.DomainParticipant.set_default_flowcontroller_property** (p. 956), or else, if the call was never made, the default values listed in **com.rti.dds.publication.FlowControllerProperty_t** (p. 1351).

When used in **com.rti.dds.domain.DomainParticipant.set_default_flowcontroller_property** (p. 956), this special value indicates that the default QoS should be reset back to the initial value that would be used if the **com.rti.dds.↩ domain.DomainParticipant.set_default_flowcontroller_property** (p. 956) operation had never been called.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default properties for a FlowController; for this purpose, use **com.rti.dds.domain.DomainParticipant.get_default_flowcontroller_↩ property** (p. 955).

See also

com.rti.dds.domain.DomainParticipant.create_flowcontroller (p. 969)

com.rti.dds.domain.DomainParticipant.set_default_flowcontroller_property (p. 956)

com.rti.dds.publication.FlowController.set_property (p. 1349)

6.5.2.10 SQLFILTER_NAME

```
final String SQLFILTER_NAME [static]
```

<<***extension***>> *(p. 403)* The name of the built-in SQL filter that can be used with ContentFilteredTopics and Multi↩ Channel DataWriters.

See also

Queries and Filters Syntax (p. 108)

6.5.2.11 STRINGMATCHFILTER_NAME

```
final String STRINGMATCHFILTER_NAME  [static]
```

<<***extension***>> *(p. 403)* The name of the built-in StringMatch filter that can be used with ContentFilteredTopics and MultiChannel DataWriters.

The StringMatch Filter is a subset of the SQL filter; it only supports the MATCH relational operator on a single string field.

See also

Queries and Filters Syntax (p. 108)

6.6 Built-in Topics

Built-in objects created by RTI Connext but accessible to the application.

Modules

- **Participant Built-in Topics**

  Builtin topic for accessing information about the DomainParticipants discovered by RTI Connext.
- **Publication Built-in Topics**

  Builtin topic for accessing information about the Publications discovered by RTI Connext.
- **Subscription Built-in Topics**

  Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.
- **Topic Built-in Topics**
- **ServiceRequest Built-in Topic**

  Builtin topic for accessing requests from different services within RTI Connext.
- **Common types and functions**

  Types and functions related to the built-in topics.

6.6.1 Detailed Description

Built-in objects created by RTI Connext but accessible to the application.

RTI Connext must discover and keep track of the remote entities, such as new participants in the domain. This information may also be important to the application, which may want to react to this discovery, or else access it on demand.

A set of built-in topics and corresponding **com.rti.dds.subscription.DataReader** (p. 707) objects are introduced to be used by the application to access this discovery information.

The information can be accessed as if it were normal application data. This allows the application to know when there are any changes in those values by means of the **com.rti.dds.infrastructure.Listener** (p. 1528) or the **com.rti.dds.↩ infrastructure.Condition** (p. 686) mechanisms.

The built-in data-readers all belong to a built-in **com.rti.dds.subscription.Subscriber** (p. 2039), which can be retrieved by using the method **com.rti.dds.domain.DomainParticipant.get_builtin_subscriber** (p. 998). The built-in **com.rti.dds.subscription.DataReader** (p. 707) objects can be retrieved by using the operation **com.rti.dds.subscription.Subscriber.lookup_datareader** (p. 2049), with the topic name as a parameter.

Built-in entities have default listener settings as well. The built-in **com.rti.dds.subscription.Subscriber** (p. 2039) and all of its built-in topics have 'nil' listeners with all statuses appearing in their listener masks (acting as a NO-OP listener that does not reset communication status). The built-in DataReaders have null listeners with no statuses in their masks.

The information that is accessible about the remote entities by means of the built-in topics includes all the QoS policies that apply to the corresponding remote Entity. These QoS policies appear as normal 'data' fields inside the data read by means of the built-in Topic. Additional information is provided to identify the Entity and facilitate the application logic.

The built-in **com.rti.dds.subscription.DataReader** (p. 707) will not provide data pertaining to entities created from the same **com.rti.dds.domain.DomainParticipant** (p. 948) under the assumption that such entities are already known to the application that created them.

The discovery information provided by each built-in reader won't be received until it is first looked up. And if the DomainParticipant was created in a disabled state (see **com.rti.dds.infrastructure.EntityFactoryQosPolicy** (p. 1326)), the built-in subscriber and readers will need to be enabled explicitly (by the **com.rti.dds.infrastructure.Entity.enable** (p. 1323) operation).

Refer to **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647), builtin.TopicBuiltinTopicData, **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) and **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753) for a description of all the built-in topics and their contents.

The QoS of the built-in **com.rti.dds.subscription.Subscriber** (p. 2039) and **com.rti.dds.subscription.DataReader** (p. 707) objects is given by the following table:

Table 6.2 ***QoS of built-in com.rti.dds.subscription.Subscriber (*** p. ***2039) and com.rti.dds.subscription.DataReader (*** p. ***707)***

QoS	Value
com.rti.dds.infrastructure.UserDataQosPolicy (p. 2272)	0-length sequence

com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	autopurge_nowriter_samples_delay = infinite autopurge_disposed_samples_delay = infinite
com.rti.dds.infrastructure.EntityFactoryQosPolicy (p. 1326)	autoenable_created_entities = com.rti.dds.↩ infrastructure.true

6.7 Topic Module

Contains the **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.topic.ContentFilteredTopic** (p. 692), and **com.rti.dds.↩ topic.MultiTopic** (p. 1618) classes, the **com.rti.dds.topic.TopicListener** (p. 2131) interface, and more generally, all that is needed by an application to define **com.rti.dds.topic.Topic** (p. 2116) objects and attach QoS policies to them.

Modules

- **Topics**

  com.rti.dds.topic.Topic *(p. 2116) entity and associated elements*
- **FlatData Topic-Types**

  *<<**extension**>> (p. 403) FlatData Language Binding for IDL topic-types*
- **Zero Copy Transfer Over Shared Memory**

  *<<**extension**>> (p. 403) Zero Copy transfer over shared memory*
- **User Data Type Support**

  Defines generic classes and macros to support user data types.
- **Type Code Support**

  *<<**extension**>> (p. 403) A **com.rti.dds.typecode.TypeCode** (p. 2183) is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 67) capability or to inspect the type information you receive from remote readers and writers.*
- **Built-in Types**

  RTI Connext provides a set of very simple data types for you to use with the topics in your application.
- **Built-in Topic's Trust Types**

  *Types used as part of **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647), **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753), **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) to describe Trust Plugins configuration.*
- **Dynamic Data**

  *<<**extension**>> (p. 403) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.*

6.7.1 Detailed Description

Contains the **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.topic.ContentFilteredTopic** (p. 692), and **com.rti.dds.topic.MultiTopic** (p. 1618) classes, the **com.rti.dds.topic.TopicListener** (p. 2131) interface, and more generally, all that is needed by an application to define **com.rti.dds.topic.Topic** (p. 2116) objects and attach QoS policies to them.

6.8 Topics

com.rti.dds.topic.Topic (p. 2116) entity and associated elements

Classes

- interface **ContentFilter**

  *<<**interface**>> (p. 403) Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692)*
- interface **ContentFilteredTopic**

  *<<**interface**>> (p. 403) Specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows for content-based subscriptions.*
- class **ExpressionProperty**

  *Provides additional information about the filter expression passed to **com.rti.dds.topic.WriterContentFilter.writer_compile** (p. 2317) .*
- class **FilterSampleInfo**

Provides meta information associated with the sample.

- class **InconsistentTopicStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.INCONSISTENT_TOPIC_STATUS
- interface **MultiTopic**

  [Not supported (optional)] *<<**interface**>> (p. 403) A specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows subscriptions that combine/filter/rearrange data coming from several topics.*
- class **PrintFormatKind**

  Format kinds available when converting data samples to string representations.
- class **PrintFormatProperty**

  A collection of attributes used to configure how data samples will be formatted when converted to a string.
- interface **Topic**

  *<<**interface**>> (p. 403) The most basic description of the data to be published and subscribed.*
- class **TopicAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)*
- interface **TopicDescription**

  ***com.rti.dds.topic.Topic** (p. 2116) entity and associated elements*
- interface **TopicListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for **com.rti.dds.topic.Topic** (p. 2116) entities.*
- class **TopicQos**

  *QoS policies supported by a **com.rti.dds.topic.Topic** (p. 2116) entity.*
- interface **WriterContentFilter**

  *<<**interface**>> (p. 403) Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692).*

6.8.1 Detailed Description

com.rti.dds.topic.Topic (p. 2116) entity and associated elements

6.9 FlatData Topic-Types

*<<**extension**>> (p. 403)* FlatData Language Binding for IDL topic-types

*<<**extension**>> (p. 403)* FlatData Language Binding for IDL topic-types

Warning

The FlatData language binding is available in the Traditional C++ API and in the Modern C++ API. It is not available in this API.

FlatData is a language binding for IDL types in which the in-memory
representation of a sample matches the wire representation. Therefore, the cost of serialization/deserialization is zero.

Note

For a complete description of the FlatData language binding and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connext User's Manual**.

For buildable **code examples**, see `https://community.rti.com/kb/flatdata-and-zerocopy-examples`.

6.10 Zero Copy Transfer Over Shared Memory

<<***extension***>> *(*p. *403)* Zero Copy transfer over shared memory

<<***extension***>> *(*p. *403)* Zero Copy transfer over shared memory

Note

For a description of Zero Copy transfer over shared memory and its benefits, and a tutorial, see the "Sending Large Data" chapter in the **RTI Connext User's Manual**.

For buildable **code examples**, see `https://community.rti.com/kb/flatdata-and-zerocopy-examples`.

Zero Copy transfer over shared memory is available in the C API, in the Traditional C++ API, and in the Modern C++ API.

6.11 User Data Type Support

Defines generic classes and macros to support user data types.

Classes

- class **Foo**

  A representative user-defined data type.
- class **FooTypeSupport**

  <<***interface***>> *(*p. *403)* <<***generic***>> *(*p. *403) User data type specific interface.*
- class **InstanceHandle_t**

  Type definition for an instance handle.
- class **InstanceHandleSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < ***com.rti.dds.infrastructure.***↩***InstanceHandle_t*** *(*p. *1443)* > .
- interface **TypeSupport**

  <<***interface***>> *(*p. *403) An abstract marker interface that has to be specialized for each concrete user data type that will be used by the application.*

6.11.1 Detailed Description

Defines generic classes and macros to support user data types.

DDS specifies strongly typed interfaces to read and write user data. For each data class defined by the application, there is a number of specialised classes that are required to facilitate the type-safe interaction of the application with RTI Connext.

RTI Connext provides an automatic means to generate all these type-specific classes with the rtiddsgen utility. The complete set of automatic classes created for a hypothetical user data type named `Foo` are shown below.

an application data type named `Foo`"

The macros defined here declare the strongly typed APIs needed to support an arbitrary user defined data of type `Foo`.

the `Code Generator User's Manual`

6.12 Type Code Support

<<***extension***>> *(p. 403)* A ***com.rti.dds.typecode.TypeCode*** *(p. 2183)* is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 67) capability or to inspect the type information you receive from remote readers and writers.

Classes

- class **EnumMember**

  A description of a member of an enumeration.
- class **ExtensibilityKind**

  Type to indicate the extensibility of a type.
- class **PRIVATE_MEMBER**

  Constant used to indicate that a value type member is private.
- class **PUBLIC_MEMBER**

  Constant used to indicate that a value type member is public.
- class **StructMember**

  A description of a member of a struct.
- class **TCKind**

  Enumeration type for ***com.rti.dds.typecode.TypeCode*** *(p. 2183) kinds.*
- class **TypeCode**

  The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the `Code Generator User's Manual`*) or to modify types you define yourself at runtime.*
- class **TypeCodeFactory**

  A singleton factory for creating, copying, and deleting data type definitions dynamically.
- class **UnionMember**

  A description of a member of a union.
- class **ValueMember**

  A description of a member of a value type.
- class **VM_ABSTRACT**

  Constant used to indicate that a value type has the `abstract` *modifier.*
- class **VM_CUSTOM**

  Constant used to indicate that a value type has the `custom` *modifier.*
- class **VM_NONE**

  Constant used to indicate that a value type has no modifiers.
- class **VM_TRUNCATABLE**

  Constant used to indicate that a value type has the `truncatable` *modifier.*

Variables

- static final **ExtensibilityKind FINAL_EXTENSIBILITY**

  Specifies that a type has FINAL extensibility.
- static final **ExtensibilityKind EXTENSIBLE_EXTENSIBILITY**

  Specifies that a type has EXTENSIBLE extensibility.
- static final **ExtensibilityKind MUTABLE_EXTENSIBILITY**

  Specifies that a type has MUTABLE extensibility.

6.12.1 Detailed Description

<<***extension***>> *(p. 403)* A ***com.rti.dds.typecode.TypeCode*** *(p. 2183)* is a mechanism for representing a type at runtime. RTI Connext can use type codes to send type definitions on the network. You will need to understand this API in order to use the **Dynamic Data** (p. 67) capability or to inspect the type information you receive from remote readers and writers.

Type codes are values that are used to describe arbitrarily complex types at runtime. Type code values are manipulated via the **com.rti.dds.typecode.TypeCode** (p. 2183) class, which has an analogue in CORBA.

A **com.rti.dds.typecode.TypeCode** (p. 2183) value consists of a type code *kind* (represented by the **com.rti.dds.typecode.TCKind** (p. 2094) enumeration) and a list of *members* (that is, fields). These members are recursive: each one has its own **com.rti.dds.typecode.TypeCode** (p. 2183), and in the case of complex types (structures, arrays, and so on), these contained type codes contain their own members.

There are a number of uses for type codes. The type code mechanism can be used to unambiguously match type representations. The com.rti.dds.typecode.TypeCode.TypeCode.equals method is a more reliable test than comparing the string type names, requiring equivalent definitions of the types.

6.12.2 Accessing a Local com.rti.dds.typecode.TypeCode

When generating types with rtiddsgen, type codes are always enabled. For these types, a **com.rti.dds.typecode.TypeCode** (p. 2183) may be accessed via the **FooTypeCode.VALUE** member. This API also includes support for dynamic creation of **com.rti.dds.typecode.TypeCode** (p. 2183) values, typically for use with the **Dynamic Data** (p. 67) API. You can create a **com.rti.dds.typecode.TypeCode** (p. 2183) using the **com.rti.dds.typecode.TypeCodeFactory** (p. 2232) class. You will construct the **com.rti.dds.typecode.TypeCode** (p. 2183) recursively, from the outside in: start with the type codes for primitive types, then compose them into complex types like arrays, structures, and so on. You will find the following methods helpful:

- **com.rti.dds.typecode.TypeCodeFactory.get_primitive_tc** (p. 2245), which provides the **com.rti.dds.typecode.TypeCode** (p. 2183) instances corresponding to the primitive types (e.g. **com.rti.dds.typecode.TCKind.TK_LONG** (p. 2096), **com.rti.dds.typecode.TCKind.TK_SHORT** (p. 2096), and so on).
- **com.rti.dds.typecode.TypeCodeFactory.create_string_tc** (p. 2241) and **com.rti.dds.typecode.TypeCodeFactory.create_wstring_tc** (p. 2241) create a **com.rti.dds.typecode.TypeCode** (p. 2183) representing a text string with a certain *bound* (i.e. maximum length).
- **com.rti.dds.typecode.TypeCodeFactory.create_array_tc** (p. 2242) and **com.rti.dds.typecode.TypeCodeFactory.create_sequence_tc** (p. 2242) create a **com.rti.dds.typecode.TypeCode** (p. 2183) for a collection based on the **com.rti.dds.typecode.TypeCode** (p. 2183) for its elements.
- **com.rti.dds.typecode.TypeCodeFactory.create_struct_tc** (p. 2235) and **com.rti.dds.typecode.TypeCodeFactory.create_value_tc** (p. 2236) create a **com.rti.dds.typecode.TypeCode** (p. 2183) for a structured type.

6.12.3 Accessing a Remote com.rti.dds.typecode.TypeCode

In addition to being used locally, RTI Connext can transmit **com.rti.dds.typecode.TypeCode** (p. 2183) on the network between participants. This information can be used to access information about types used remotely at runtime, for example to be able to publish or subscribe to topics of arbitrarily types (see **Dynamic Data** (p. 67)). This functionality is useful for a generic system monitoring tool like `rtiddsspy`.

Remote **com.rti.dds.typecode.TypeCode** (p. 2183) information is shared during discovery over the publication and subscription built-in topics and can be accessed using the built-in readers for these topics; see **Built-in Topics** (p. 53). Discovered **com.rti.dds.typecode.TypeCode** (p. 2183) values are not cached by RTI Connext upon receipt and are therefore not available from the built-in topic data returned by **com.rti.dds.publication.DataWriter.get_matched_subscription_data** (p. 832) or **com.rti.dds.subscription.DataReader.get_matched_publication_data** (p. 724).

The space available locally to deserialize a discovered remote **com.rti.dds.typecode.TypeCode** (p. 2183) is specified by the **com.rti.dds.domain.DomainParticipant** (p. 948)'s **com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy.type_code_max_serialized_length** (p. 1099) QoS parameter. To support especially complex type codes, it may be necessary for you to increase the value of this parameter.

6.12.4 Variable Documentation

6.12.4.1 FINAL_EXTENSIBILITY

`final` **ExtensibilityKind** `FINAL_EXTENSIBILITY [static]`

Specifies that a type has FINAL extensibility.

A type may be final, indicating that the range of its possible values is strictly defined. In particular, it is not possible to add elements to members of collection or aggregated types while maintaining type assignability.

The following types are always final:

- **com.rti.dds.typecode.TCKind.TK_ARRAY** (p. 2099)
- All primitive types

6.12.4.2 EXTENSIBLE_EXTENSIBILITY

```
final ExtensibilityKind EXTENSIBLE_EXTENSIBILITY [static]
```

Specifies that a type has EXTENSIBLE extensibility.

A type may be appendable (formerly called extensible), indicating that two types, where one contains all of the elements/members of the other plus additional elements/members appended to the end, may remain assignable.

Referenced by **TypeCodeFactory.create_enum_tc()**, **TypeCodeFactory.create_struct_tc()**, **TypeCodeFactory.create_union_tc()**, **TypeCodeFactory.create_value_tc()**, **BytesTypeSupport.get_serialized_sample_max_size()**, **KeyedBytesTypeSupport.get_serialized_sample_max_size()**, **KeyedStringTypeSupport.get_serialized_sample_max_size()**, and **StringTypeSupport.get_serialized_sample_max_size()**.

6.12.4.3 MUTABLE_EXTENSIBILITY

```
final ExtensibilityKind MUTABLE_EXTENSIBILITY [static]
```

Specifies that a type has MUTABLE extensibility.

A type may be mutable, indicating that two types may differ from one another in the additional, removal, and/or transposition of elements/members while remaining assignable.

The following types are always mutable:

- **com.rti.dds.typecode.TCKind.TK_SEQUENCE** (p. 2099)
- **com.rti.dds.typecode.TCKind.TK_STRING** (p. 2098)
- **com.rti.dds.typecode.TCKind.TK_WSTRING** (p. 2100)

6.13 Built-in Types

RTI Connext provides a set of very simple data types for you to use with the topics in your application.

Modules

- **String Built-in Type**

  Built-in type consisting of a single character string.
- **KeyedString Built-in Type**

  Built-in type consisting of a string payload and a second string that is the key.
- **Octets Built-in Type**

  Built-in type consisting of a variable-length array of opaque bytes.
- **KeyedOctets Built-in Type**

  Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

6.13.1 Detailed Description

RTI Connext provides a set of very simple data types for you to use with the topics in your application.

The middleware provides four built-in types:

- String: A payload consisting of a single string of characters. This type has no key.
- com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString: A payload consisting of a single string of characters and a second string, the key, that identifies the instance to which the sample belongs.
- com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes: A payload consisting of an opaque variable-length array of bytes. This type has no key.
- com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes: A payload consisting of an opaque variable-length array of bytes and a string, the key, that identifies the instance to which the sample belongs.

The String and com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString types are appropriate for simple text-based applications. The com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes and com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes types are appropriate for applications that perform their own custom data serialization, such as legacy applications still in the process of migrating to RTI Connext. In most cases, string-based or structured data is preferable to opaque data, because the latter cannot be easily visualized in tools or used with content-based filters (see **com.rti.dds.topic.ContentFilteredTopic** (p. 692)).

The built-in types are very simple in order to get you up and running as quickly as possible. If you need a structured data type you can define your own type with exactly the fields you need in one of two ways:

- At compile time, by generating code from an IDL or XML file using the rtiddsgen utility
- At runtime, by using the **Dynamic Data** (p. 67) API

6.13.2 Managing Memory for Builtin Types

When a sample is written, the DataWriter serializes it and stores the result in a buffer obtained from a pool of preallocated buffers. In the same way, when a sample is received, the DataReader deserializes it and stores the result in a sample coming from a pool of preallocated samples.

For builtin types, the maximum size of the buffers/samples and depends on the nature of the application using the builtin type.

You can configure the maximum size of the builtin types on a per-DataWriter and per-DataReader basis using the **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) in DataWriters, DataReaders or Participants.

The following table lists the supported builtin type properties to configure memory allocation. When the properties are defined in the DomainParticipant, they are applicable to all DataWriters and DataReaders belonging to the DomainParticipant unless they are overwrittem in the DataWriters and DataReaders.

Table 6.3 ***Builtin Types Allocation Properties***

Property	Description
dds.builtin_type.string.alloc_size	Maximum size of the strings published by the **com.rti.dds.type.builtin.StringDataWriter** (p. 2026) or received the **com.rti.dds.type.builtin.StringDataReader** (p. 2023) (includes the NULL-terminated character). Default: dds.builtin_type.string.max_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_string.alloc_key_size	Maximum size of the keys used by the com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedStringDataWriter or com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedStringDataReader (includes the NULL-terminated character). Default: dds.builtin_type.keyed_string.max_key_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_string.alloc_size	Maximum size of the strings published by the com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedStringDataWriter or received by the com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedStringDataReader (includes the NULL-terminated character). Default: dds.builtin_type.keyed_string.max_size if defined. Otherwise, 1024.
dds.builtin_type.octets.alloc_size	Maximum size of the octet sequences published the com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataWriter or received by the com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataReader. Default: dds.builtin_type.octets.max_size if defined. Otherwise, 2048.
dds.builtin_type.keyed_octets.alloc_key_size	Maximum size of the key published by the com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytesDataWriter or received by the com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytesDataReader (includes the NULL-terminated character). Default: dds.builtin_type.keyed_octets.max_key_size if defined. Otherwise, 1024.
dds.builtin_type.keyed_octets.alloc_size	Maximum size of the octets sequences published by a com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytesDataWriter or received by a com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytesDataReader. Default: dds.builtin_type.keyed_octets.max_size if defined. Otherwise, 2048.

The previous properties must be set consistently with respect to the corresponding $*$.max_size properties that set the maximum size of the builtin types in the typecode.

6.13.3 Typecodes for Builtin Types

The typecodes associated with the builtin types are generated from the following IDL type definitions:

```
module DDS {

    struct String {
```

```
        string value;
    };

    struct KeyedString {
        string key;
        string value;
    };

    struct Octets {
        sequence<octet> value;
    };

    struct KeyedOctets {
        string key;
        sequence<octet> value;
    };
};
```

The maximum size of the strings and sequences that will be included in the type code definitions can be configured on a per-DomainParticipant-basis by using the properties in following table.

Table 6.4 ***Properties for Allocating Size of Builtin Types, per DomainParticipant***

Property	Description
dds.builtin_type.string.max_size	Maximum size of the strings published by the StringDataWriters and received by the StringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_string.max_key_size	Maximum size of the keys used by the KeyedStringDataWriters and KeyedStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_string.max_size	Maximum size of the strings published by the KeyedStringData↩ Writers and received by the KeyedStringDataReaders belonging to a DomainParticipant using the builtin type (includes the NULL-terminated character). Default: 1024
dds.builtin_type.octets.max_size	Maximum size of the octet sequences published by the Octets↩ DataWriters and received by the OctetsDataReader belonging to a DomainParticipant. Default: 2048
dds.builtin_type.keyed_octets.max_key_size	Maximum size of the keys used by the KeyedOctetsString↩ DataWriters and KeyedOctetsStringDataReaders belonging to a DomainParticipant (includes the NULL-terminated character). Default: 1024.
dds.builtin_type.keyed_octets.max_size	Maximum size of the octet sequences published by the Keyed↩ OctetsDataWriters and received by the KeyedOctetsDataReaders belonging to a DomainParticipant. Default: 2048

For more information about the built-in types, including how to control memory usage and maximum lengths, please see the "Data Types and DDS Data Samples" chapter in the `User's Manual`.

6.14 Built-in Topic's Trust Types

Types used as part of **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647), **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753), **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) to describe Trust Plugins configuration.

Classes

- class **EndpointTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered endpoint.
- class **EndpointTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered endpoint.
- class **EndpointTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered endpoint.
- class **ParticipantTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered DomainParticipant.
- class **ParticipantTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered DomainParticipant.
- class **ParticipantTrustKeyEstablishmentAlgorithmInfo**

  Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.
- class **ParticipantTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered DomainParticipant.
- class **ParticipantTrustSignatureAlgorithmInfo**

  Trust Plugins signature algorithm information associated with the discovered DomainParticipant.
- class **TrustAlgorithmRequirements**

  Type to describe Trust Plugins algorithm requirements for an entity.

6.14.1 Detailed Description

Types used as part of **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647), **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753), **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) to describe Trust Plugins configuration.

These types are used to describe how RTPS wire serialization, discovery, and liveliness interact with the loaded Trust Plugins.

The meaning of the contents of these types may vary depending on what Trust Plugins the DomainParticipant is using. For information about how these types interact with the RTI Security Plugins, please refer to the `RTI Security Plugins User's Manual`.

6.15 Dynamic Data

<<***extension***>> *(*p. *403)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

Classes

- class **DynamicData**

  A sample of any complex data type, which can be inspected and manipulated reflectively.
- class **DynamicDataInfo**

  A descriptor for a ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134) object.*
- class **DynamicDataMemberInfo**

  A descriptor for a single member (i.e. field) of dynamically defined data type.
- class **DynamicDataProperty_t**

  A collection of attributes used to configure ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134) objects.*
- class **DynamicDataReader**

  Reads (subscribes to) objects of type ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134).*
- class **DynamicDataSeq**

  An ordered collection of ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134) elements.*
- class **DynamicDataTypeProperty_t**

  A collection of attributes used to configure ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134) objects.*
- class **DynamicDataTypeSerializationProperty_t**

  Properties that govern how data of a certain type will be serialized on the network.
- class **DynamicDataTypeSupport**

  A factory for registering a dynamically defined type and creating ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134) objects.*
- class **DynamicDataWriter**

  Writes (publishes) objects of type ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134).*

Functions

- **DynamicDataInfo** ()

  A descriptor for a ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134) object.*
- **DynamicDataInfo** (int **member_count**, int **stored_size**, boolean is_optimized_storage)

  A descriptor for a ***com.rti.dds.dynamicdata.DynamicData*** *(*p. *1134) object.*
- **DynamicDataMemberInfo** ()

  A descriptor for a single member (i.e. field) of dynamically defined data type.
- **DynamicDataMemberInfo** (int **member_id**, String **member_name**, boolean **member_exists**, **TCKind member_kind**, int representation_count, int **element_count**, **TCKind element_kind**)

  A descriptor for a single member (i.e. field) of dynamically defined data type.

Variables

- static final **DynamicDataProperty_t PROPERTY_DEFAULT**

  Sentinel constant indicating default values for ***com.rti.dds.dynamicdata.DynamicDataProperty_t*** *(*p. *1246).*
- static final **DynamicDataTypeProperty_t TYPE_PROPERTY_DEFAULT**

  Sentinel constant indicating default values for ***com.rti.dds.dynamicdata.DynamicDataTypeProperty_t*** *(*p. *1281).*

6.15.1 Detailed Description

<<***extension***>> *(p. 403)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

This API allows you to define new data types, modify existing data types, and interact reflectively with samples. To use it, you will take the following steps:

1. Obtain a com.rti.dds.typecode.TypeCode (p. 2183) (see Type Code Support (p. 59)) that defines the type definition you want to use.
A **com.rti.dds.typecode.TypeCode** (p. 2183) includes a type's *kind* (**com.rti.dds.typecode.TCKind** (p. 2094)), *name*, and *members* (that is, fields). You can create your own **com.rti.dds.typecode.TypeCode** (p. 2183) using the **com.rti.dds.typecode.TypeCodeFactory** (p. 2232) class – see, for example, the **com.rti.dds.typecode.TypeCodeFactory.create_struct_tc** (p. 2235) method. Alternatively, you can use a remote **com.rti.dds.typecode.TypeCode** (p. 2183) that you discovered on the network (see **Built-in Topics** (p. 53)) or one generated by rtiddsgen (see the `Code Generator User's Manual`). If you are relying on discovering TypeCodes on the network and are using TypeObject v2 (TypeObject v2 is the default behavior, see **com.rti.dds.infrastructure.DiscoveryConfigBuiltinChannelKind.TYPE_LOOKUP_SERVICE_CHANNEL** (p. 912)), you must set **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.request_types_filter** (p. 942) to a string filter containing all of the topic names for which you want to dynamically discover types ("∗" to request all types). Otherwise, types will only be discovered if a local endpoint is already created on the topic and the local endpoint matches the remote endpoint.

2. Wrap the com.rti.dds.typecode.TypeCode (p. 2183) in a com.rti.dds.dynamicdata.DynamicDataTypeSupport (p. 1286) object.
See the constructor com.rti.dds.dynamicdata.DynamicDataTypeSupport.DynamicDataTypeSupport.DynamicDataTypeSupport. This object lets you connect the type definition to a **com.rti.dds.domain.DomainParticipant** (p. 948) and manage data samples (of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134)).

3. Register the com.rti.dds.dynamicdata.DynamicDataTypeSupport (p. 1286) with one or more domain participants.
See **com.rti.dds.dynamicdata.DynamicDataTypeSupport.register_type** (p. 1288). This action associates the data type with a logical name that you can use to create topics. (Starting with this step, working with a dynamically defined data type is almost exactly the same as working with a generated one.)

4. Create a com.rti.dds.topic.Topic (p. 2116) from the com.rti.dds.domain.DomainParticipant (p. 948).
Use the name under which you registered your data type – see **com.rti.dds.domain.DomainParticipant.create_topic** (p. 984). This **com.rti.dds.topic.Topic** (p. 2116) is what you will use to produce and consume data.

5. Create a com.rti.dds.dynamicdata.DynamicDataWriter (p. 1294) and/or com.rti.dds.dynamicdata.DynamicDataReader (p. 1249).
These objects will produce and/or consume data (of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134)) on the **com.rti.dds.topic.Topic** (p. 2116). You can create these objects directly from the **com.rti.dds.domain.DomainParticipant** (p. 948) – see **com.rti.dds.domain.DomainParticipant.create_datawriter** (p. 978) and **com.rti.dds.domain.DomainParticipant.create_datareader** (p. 981) – or by first creating intermediate **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039) objects – see **com.rti.dds.domain.DomainParticipant.create_publisher** (p. 971) and **com.rti.dds.domain.DomainParticipant.create_subscriber** (p. 975).

6. Write and/or read the data of interest.

7. Tear down the objects described above.
You should delete them in the reverse order in which you created them. Note that unregistering your data type with the **com.rti.dds.domain.DomainParticipant** (p. 948) is optional; all types are automatically unregistered when the **com.rti.dds.domain.DomainParticipant** (p. 948) itself is deleted.

6.15.2 Function Documentation

6.15.2.1 DynamicDataInfo() [1/2]

```
DynamicDataInfo ( )
```

A descriptor for a **com.rti.dds.dynamicdata.DynamicData** (p. 1134) object.

See also

com.rti.dds.dynamicdata.DynamicData.get_info (p. 1152)

6.15.2.2 DynamicDataInfo() [2/2]

```
DynamicDataInfo (
            int member_count,
            int stored_size,
            boolean is_optimized_storage )
```

A descriptor for a **com.rti.dds.dynamicdata.DynamicData** (p. 1134) object.

See also

com.rti.dds.dynamicdata.DynamicData.get_info (p. 1152)

References **DynamicDataInfo.member_count**, and **DynamicDataInfo.stored_size**.

6.15.2.3 DynamicDataMemberInfo() [1/2]

```
DynamicDataMemberInfo ( )
```

A descriptor for a single member (i.e. field) of dynamically defined data type.

See also

com.rti.dds.dynamicdata.DynamicData.get_member_info (p. 1161)

References **TCKind.TK_NULL**.

6.15.2.4 DynamicDataMemberInfo() [2/2]

```
DynamicDataMemberInfo (
            int member_id,
            String member_name,
            boolean member_exists,
             TCKind member_kind,
            int representation_count,
            int element_count,
             TCKind element_kind )
```

A descriptor for a single member (i.e. field) of dynamically defined data type.

See also

com.rti.dds.dynamicdata.DynamicData.get_member_info (p. 1161)

References **DynamicDataMemberInfo.element_count**, **DynamicDataMemberInfo.element_kind**, **DynamicData↩ MemberInfo.member_exists**, **DynamicDataMemberInfo.member_id**, **DynamicDataMemberInfo.member_kind**, and **DynamicDataMemberInfo.member_name**.

6.15.3 Variable Documentation

6.15.3.1 PROPERTY_DEFAULT

```
final  DynamicDataProperty_t PROPERTY_DEFAULT  [static]
```

Sentinel constant indicating default values for **com.rti.dds.dynamicdata.DynamicDataProperty_t** (p. 1246).

Pass this object instead of your own **com.rti.dds.dynamicdata.DynamicDataProperty_t** (p. 1246) object to use the default property values:

```
DynamicData sample = new DynamicData(

    myTypeCode,

    DynamicData.DYNAMIC_DATA_PROPERTY_DEFAULT);
```

See also

com.rti.dds.dynamicdata.DynamicDataProperty_t (p. 1246)

Referenced by **BytesTypeSupport.data_to_string()**, **KeyedBytesTypeSupport.data_to_string()**, **KeyedString↩ TypeSupport.data_to_string()**, and **StringTypeSupport.data_to_string()**.

6.15.3.2 TYPE_PROPERTY_DEFAULT

```
final  DynamicDataTypeProperty_t TYPE_PROPERTY_DEFAULT  [static]
```

Sentinel constant indicating default values for **com.rti.dds.dynamicdata.DynamicDataTypeProperty_t** (p. 1281).

Pass this object instead of your own **com.rti.dds.dynamicdata.DynamicDataTypeProperty_t** (p. 1281) object to use the default property values:

```
DynamicDataTypeSupport support = new DynamicDataTypeSupport(

    myTypeCode,

    DynamicDataTypeSupport.DYNAMIC_DATA_TYPE_PROPERTY_DEFAULT);
```

6.16 Publication Module

Contains the **com.rti.dds.publication.FlowController** (p. 1348), **com.rti.dds.publication.Publisher** (p. 1767), and **com.rti.dds.publication.DataWriter** (p. 818) classes as well as the **com.rti.dds.publication.PublisherListener** (p. 1789) and **com.rti.dds.publication.DataWriterListener** (p. 853) interfaces, and more generally, all that is needed on the publication side.

Modules

- **Publishers**

  com.rti.dds.publication.Publisher *(p. 1767) entity and associated elements*
- **Data Writers**

  com.rti.dds.publication.DataWriter *(p. 818) entity and associated elements*
- **Flow Controllers**

  *<<**extension**>> (p. 403)* ***com.rti.dds.publication.FlowController*** *(p. 1348) and associated elements*
- **Multi-channel DataWriters**

  APIs related to Multi-channel DataWriters.

6.16.1 Detailed Description

Contains the **com.rti.dds.publication.FlowController** (p. 1348), **com.rti.dds.publication.Publisher** (p. 1767), and **com.rti.dds.publication.DataWriter** (p. 818) classes as well as the **com.rti.dds.publication.PublisherListener** (p. 1789) and **com.rti.dds.publication.DataWriterListener** (p. 853) interfaces, and more generally, all that is needed on the publication side.

"DCPS Publication package"

6.17 Publishers

com.rti.dds.publication.Publisher (p. 1767) entity and associated elements

Classes

- interface **Publisher**

  *<<**interface**>> (p. 403) A publisher is the object responsible for the actual dissemination of publications.*
- class **PublisherAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)*
- interface **PublisherListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for **com.rti.dds.publication.Publisher** (p. 1767) status.*
- class **PublisherQos**

  *QoS policies supported by a **com.rti.dds.publication.Publisher** (p. 1767) entity.*
- class **PublisherSeq**

  *Declares IDL `sequence` < **com.rti.dds.publication.Publisher** (p. 1767) > .*

Variables

- static final **DataWriterQos** **DATAWRITER_QOS_DEFAULT**

  *Special value for creating **com.rti.dds.publication.DataWriter** (p. 818) with default QoS.*
- static final **DataWriterQos** **DATAWRITER_QOS_USE_TOPIC_QOS** = new **DataWriterQos**()

  *Special value for creating **com.rti.dds.publication.DataWriter** (p. 818) with a combination of the default **com.rti.dds.↩ publication.DataWriterQos** (p. 878) and the **com.rti.dds.topic.TopicQos** (p. 2133).*
- static final **DataWriterQos** **DATAWRITER_QOS_PRINT_ALL** = new **DataWriterQos**()

  *Special value which can be supplied to **com.rti.dds.publication.DataWriterQos.toString(DataWriterQos baseQos, QosPrintFormat format)** (p. 881) indicating that all of the QoS should be printed.*

6.17.1 Detailed Description

com.rti.dds.publication.Publisher (p. 1767) entity and associated elements

6.17.2 Variable Documentation

6.17.2.1 DATAWRITER_QOS_DEFAULT

```
final DataWriterQos DATAWRITER_QOS_DEFAULT [static]
```

Initial value:

```
=
    new DataWriterQos()
```

Special value for creating **com.rti.dds.publication.DataWriter** (p. 818) with default QoS.

When used in **com.rti.dds.publication.Publisher.create_datawriter** (p. 1773), this special value is used to indicate that the **com.rti.dds.publication.DataWriter** (p. 818) should be created with the default **com.rti.dds.publication.↩ DataWriter** (p. 818) QoS by means of the operation get_default_datawriter_qos and using the resulting QoS to create the **com.rti.dds.publication.DataWriter** (p. 818).

When used in **com.rti.dds.publication.Publisher.set_default_datawriter_qos** (p. 1771), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **com.rti.dds.↩ publication.Publisher.set_default_datawriter_qos** (p. 1771) operation had never been called.

When used in **com.rti.dds.publication.DataWriter.set_qos** (p. 822), this special value is used to indicate that the QoS of the **com.rti.dds.publication.DataWriter** (p. 818) should be changed to match the current defualt QoS set in the **com.rti.dds.publication.Publisher** (p. 1767) that the **com.rti.dds.publication.DataWriter** (p. 818) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a **DataWriter** (p. 818); for this purpose, use **com.rti.dds.domain.DomainParticipant.get_default_datawriter_qos** (p. 962).

See also

com.rti.dds.publication.Publisher.create_datawriter (p. 1773)

com.rti.dds.publication.Publisher.set_default_datawriter_qos (p. 1771)

com.rti.dds.publication.DataWriter.set_qos (p. 822)

6.17.2.2 DATAWRITER_QOS_USE_TOPIC_QOS

```
final DataWriterQos DATAWRITER_QOS_USE_TOPIC_QOS = new DataWriterQos() [static]
```

Special value for creating **com.rti.dds.publication.DataWriter** (p. 818) with a combination of the default **com.rti.dds.↩ publication.DataWriterQos** (p. 878) and the **com.rti.dds.topic.TopicQos** (p. 2133).

The use of this value is equivalent to the application obtaining the default **com.rti.dds.publication.DataWriterQos** (p. 878) and the **com.rti.dds.topic.TopicQos** (p. 2133) (by means of the operation **com.rti.dds.topic.Topic.get_qos** (p. 2119)) and then combining these two QoS using the operation **com.rti.dds.publication.Publisher.copy_from_↩ topic_qos** (p. 1785) whereby any policy that is set on the **com.rti.dds.topic.TopicQos** (p. 2133) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **com.rti.dds.publication.↩ DataWriter** (p. 818).

This value should only be used in **com.rti.dds.publication.Publisher.create_datawriter** (p. 1773).

See also

com.rti.dds.publication.Publisher.create_datawriter (p. 1773)

com.rti.dds.publication.Publisher.get_default_datawriter_qos (p. 1770)

com.rti.dds.topic.Topic.get_qos (p. 2119)

com.rti.dds.publication.Publisher.copy_from_topic_qos (p. 1785)

6.17.2.3 DATAWRITER_QOS_PRINT_ALL

```
final DataWriterQos DATAWRITER_QOS_PRINT_ALL = new DataWriterQos() [static]
```

Special value which can be supplied to **com.rti.dds.publication.DataWriterQos.toString(DataWriterQos baseQos, QosPrintFormat format)** (p. 881) indicating that all of the QoS should be printed.

The **com.rti.dds.publication.DataWriterQos.toString(DataWriterQos baseQos, QosPrintFormat format)** (p. 881) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **com.rti.dds.publication.Publisher.DATAWRITER_QOS_PRINT_ALL** (p. 73) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **com.rti.dds.↩ publication.Publisher.DATAWRITER_QOS_PRINT_ALL** (p. 73) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809) structure.

This value should only be used as the base parameter to the **com.rti.dds.publication.DataWriterQos.toString(Data↩ WriterQos baseQos, QosPrintFormat format)** (p. 881) API.

Referenced by **DataWriterQos.toString()**.

6.18 Data Writers

com.rti.dds.publication.DataWriter (p. 818) entity and associated elements

Classes

- class **FooDataWriter**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) User data type specific data writer.*
- class **AcknowledgmentInfo**

  Information about an application-level acknowledged sample.
- interface **DataWriter**

  *<<**interface**>> (p. 403) Allows an application to set the value of the data to be published under a given **com.rti.dds.↩ topic.Topic** (p. 2116).*
- class **DataWriterAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods or functions.)*
- class **DataWriterCacheStatus**

  *<<**extension**>> (p. 403) The status of the **DataWriter** (p. 818)'s cache. Provides information on cache related metrics such as the number of samples and instances in the **DataWriter** (p. 818) queue.*
- interface **DataWriterListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for writer status.*
- class **DataWriterProtocolStatus**

  *<<**extension**>> (p. 403) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.*
- class **DataWriterQos**

  *QoS policies supported by a **com.rti.dds.publication.DataWriter** (p. 818) entity.*

- class **LivelinessLostStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS
- class **OfferedDeadlineMissedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS
- class **OfferedIncompatibleQosStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS
- class **PublicationMatchedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS
- class **ReliableReaderActivityChangedStatus**

  *<<**extension**>> (p. 403) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer.*
- class **ReliableWriterCacheChangedStatus**

  *<<**extension**>> (p. 403) A summary of the state of a data writer's cache of unacknowledged samples written.*
- class **ReliableWriterCacheEventCount**

  *<<**extension**>> (p. 403) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold.*
- class **ServiceRequestAcceptedStatus**

  ***com.rti.dds.infrastructure.StatusKind.SERVICE_REQUEST_ACCEPTED_STATUS** (p. 2018)*

6.18.1 Detailed Description

com.rti.dds.publication.DataWriter (p. 818) entity and associated elements

6.19 Flow Controllers

*<<**extension**>> (p. 403)* **com.rti.dds.publication.FlowController** (p. 1348) and associated elements

Classes

- interface **FlowController**

  *<<**interface**>> (p. 403) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **com.rti.dds.publication.DataWriter** (p. 818) instances are allowed to write data.*
- class **FlowControllerProperty_t**

  *Determines the flow control characteristics of the **com.rti.dds.publication.FlowController** (p. 1348).*
- class **FlowControllerSchedulingPolicy**

  Kinds of flow controller scheduling policy.
- class **FlowControllerTokenBucketProperty_t**

  ***com.rti.dds.publication.FlowController** (p. 1348) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties.*

Variables

- static final String **DEFAULT_FLOW_CONTROLLER_NAME**

  [default] *Special value of* ***com.rti.dds.infrastructure.PublishModeQosPolicy.flow_controller_name*** *(*p. *1798) that refers to the built-in default flow controller.*
- static final String **FIXED_RATE_FLOW_CONTROLLER_NAME**

  Special value of ***com.rti.dds.infrastructure.PublishModeQosPolicy.flow_controller_name*** *(*p. *1798) that refers to the built-in fixed-rate flow controller.*
- static final String **ON_DEMAND_FLOW_CONTROLLER_NAME**

  Special value of ***com.rti.dds.infrastructure.PublishModeQosPolicy.flow_controller_name*** *(*p. *1798) that refers to the built-in on-demand flow controller.*

6.19.1 Detailed Description

<<***extension***>> *(*p. *403)* **com.rti.dds.publication.FlowController** (p. 1348) and associated elements

com.rti.dds.publication.FlowController (p. 1348) provides the network traffic shaping capability to asynchronous **com.rti.dds.publication.DataWriter** (p. 818) instances. For use cases and advantages of publishing asnychronously, please refer to **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797) of **com.rti.dds.publication.Data↩ WriterQos** (p. 878).

See also

com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)

com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)

6.19.2 Variable Documentation

6.19.2.1 DEFAULT_FLOW_CONTROLLER_NAME

```
final String DEFAULT_FLOW_CONTROLLER_NAME  [static]
```

[default] Special value of **com.rti.dds.infrastructure.PublishModeQosPolicy.flow_controller_name** (p. 1798) that refers to the built-in default flow controller.

RTI Connext provides several built-in **com.rti.dds.publication.FlowController** (p. 1348) for use with an asynchronous **com.rti.dds.publication.DataWriter** (p. 818). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

By default, flow control is disabled. That is, the built-in **com.rti.dds.publication.FlowController.DEFAULT_FLOW_↩ CONTROLLER_NAME** (p. 76) flow controller does not apply any flow control. Instead, it allows data to be sent asynchronously as soon as it is written by the **com.rti.dds.publication.DataWriter** (p. 818).

Essentially, this is equivalent to a user-created **com.rti.dds.publication.FlowController** (p. 1348) with the following **com.rti.dds.publication.FlowControllerProperty_t** (p. 1351) settings:

- **com.rti.dds.publication.FlowControllerProperty_t.scheduling_policy** (p. 1352) = com.rti.dds.publication.↩ FlowControllerSchedulingPolicy.FlowControllerSchedulingPolicy.EDF_FLOW_CONTROLLER_SCHED_POLICY

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `max_tokens` = **com.rti.dds.↩ infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `tokens_added_per_period` = **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `tokens_leaked_per_↩ period` = 0

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `period` = 60 seconds

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `bytes_per_token` = **com.↩ rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

See also

com.rti.dds.publication.Publisher.create_datawriter (p. 1773)

com.rti.dds.domain.DomainParticipant.lookup_flowcontroller (p. 999)

com.rti.dds.publication.FlowController.set_property (p. 1349)

com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)

com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)

6.19.2.2 FIXED_RATE_FLOW_CONTROLLER_NAME

```
final String FIXED_RATE_FLOW_CONTROLLER_NAME  [static]
```

Special value of **com.rti.dds.infrastructure.PublishModeQosPolicy.flow_controller_name** (p. 1798) that refers to the built-in fixed-rate flow controller.

RTI Connext provides several builtin **com.rti.dds.publication.FlowController** (p. 1348) for use with an asynchronous **com.rti.dds.publication.DataWriter** (p. 818). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **com.rti.dds.publication.FlowController.FIXED_RATE_FLOW_CONTROLLER_NAME** (p. 77) flow controller shapes the network traffic by allowing data to be sent only once every second. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

Essentially, this is equivalent to a user-created **com.rti.dds.publication.FlowController** (p. 1348) with the following **com.rti.dds.publication.FlowControllerProperty_t** (p. 1351) settings:

- **com.rti.dds.publication.FlowControllerProperty_t.scheduling_policy** (p. 1352) = com.rti.dds.publication.↩ FlowControllerSchedulingPolicy.FlowControllerSchedulingPolicy.EDF_FLOW_CONTROLLER_SCHED_POLICY

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `max_tokens` = **com.rti.dds.↩ infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `tokens_added_per_period` = **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `tokens_leaked_per_↩ period` = **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `period` = 1 second

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `bytes_per_token` = **com.↩ rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

See also

com.rti.dds.publication.Publisher.create_datawriter (p. 1773)

com.rti.dds.domain.DomainParticipant.lookup_flowcontroller (p. 999)

com.rti.dds.publication.FlowController.set_property (p. 1349)

com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)

com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)

6.19.2.3 ON_DEMAND_FLOW_CONTROLLER_NAME

```
final String ON_DEMAND_FLOW_CONTROLLER_NAME  [static]
```

Special value of **com.rti.dds.infrastructure.PublishModeQosPolicy.flow_controller_name** (p. 1798) that refers to the built-in on-demand flow controller.

RTI Connext provides several builtin **com.rti.dds.publication.FlowController** (p. 1348) for use with an asynchronous **com.rti.dds.publication.DataWriter** (p. 818). The user can choose to use the built-in flow controllers and optionally modify their properties or can create a custom flow controller.

The built-in **com.rti.dds.publication.FlowController.ON_DEMAND_FLOW_CONTROLLER_NAME** (p. 78) allows data to be sent only when the user calls **com.rti.dds.publication.FlowController.trigger_flow** (p. 1350). With each trigger, all accumulated data since the previous trigger is sent (across all **com.rti.dds.publication.Publisher** (p. 1767) or **com.rti.dds.publication.DataWriter** (p. 818) instances). In other words, the network traffic shape is fully controlled by the user. Any accumulated samples destined for the same destination are coalesced into as few network packets as possible.

This external trigger source is ideal for users who want to implement some form of closed-loop flow control or who want to only put data on the wire every so many samples (e.g. with the number of samples based on **com.rti.ndds.↩ transport.Transport.Property_t.gather_send_buffer_count_max** (p. 1704)).

Essentially, this is equivalent to a user-created **com.rti.dds.publication.FlowController** (p. 1348) with the following **com.rti.dds.publication.FlowControllerProperty_t** (p. 1351) settings:

- **com.rti.dds.publication.FlowControllerProperty_t.scheduling_policy** (p. 1352) = com.rti.dds.publication.↩ FlowControllerSchedulingPolicy.FlowControllerSchedulingPolicy.EDF_FLOW_CONTROLLER_SCHED_POLICY

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `max_tokens` = **com.rti.dds.↩ infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `tokens_added_per_period` = **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `tokens_leaked_per_↩ period` = **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `period` = **com.rti.dds.↩ infrastructure.Duration_t.DURATION_INFINITE** (p. 1133)

- **com.rti.dds.publication.FlowControllerProperty_t.token_bucket** (p. 1352) `bytes_per_token` = **com.↩ rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

See also

6.20 Subscription Module

Contains the **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.subscription.DataReader** (p. 707), **com.↩ rti.dds.subscription.ReadCondition** (p. 1816), **com.rti.dds.subscription.QueryCondition** (p. 1812), and **com.↩ rti.dds.subscription.TopicQuery** (p. 2139) classes, as well as the **com.rti.dds.subscription.SubscriberListener** (p. 2063) and **com.rti.dds.subscription.DataReaderListener** (p. 757) interfaces, and more generally, all that is needed on the subscription side.

Modules

- **Subscribers**

  com.rti.dds.subscription.Subscriber *(p. 2039) entity and associated elements*
- **DataReaders**

  com.rti.dds.subscription.DataReader *(p. 707) entity and associated elements*
- **Data Samples**

  com.rti.dds.subscription.SampleInfo *(p. 1944),* ***com.rti.dds.subscription.SampleStateKind*** *(p. 1972),* ***com.rti.↩ dds.subscription.ViewStateKind*** *(p. 2283),* ***com.rti.dds.subscription.InstanceStateKind*** *(p. 1451) and associated elements*

6.20.1 Detailed Description

Contains the **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.subscription.DataReader** (p. 707), **com.↩ rti.dds.subscription.ReadCondition** (p. 1816), **com.rti.dds.subscription.QueryCondition** (p. 1812), and **com.↩ rti.dds.subscription.TopicQuery** (p. 2139) classes, as well as the **com.rti.dds.subscription.SubscriberListener** (p. 2063) and **com.rti.dds.subscription.DataReaderListener** (p. 757) interfaces, and more generally, all that is needed on the subscription side.

"DCPS Subscription package"

6.20.2 Access to data samples

Data is made available to the application by the following operations on **com.rti.dds.subscription.DataReader** (p. 707) objects: **com.rti.ndds.example.FooDataReader.read** (p. 1361), **com.rti.ndds.example.FooDataReader.↩ read_w_condition** (p. 1368), **com.rti.ndds.example.FooDataReader.take** (p. 1363), **com.rti.ndds.example.Foo↩ DataReader.take_w_condition** (p. 1369), and the other variants of read() and take().

The general semantics of the `read()` operation is that the application only gets access to the corresponding data (i.e. a precise instance value); the data remains the responsibility of RTI Connext and can be read again.

The semantics of the `take()` operations is that the application takes full responsibility for the data; that data will no longer be available locally to RTI Connext. Consequently, it is possible to access the same information multiple times only if all previous accesses were read() operations, not take().

Each of these operations returns a collection of `Data` values and associated **com.rti.dds.subscription.SampleInfo** (p. 1944) objects. Each data value represents an atom of data information (i.e., a value for one instance). This collection may contain samples related to the same or different instances (identified by the key). Multiple samples can refer to the same instance if the settings of the **HISTORY** (p. 487) QoS allow for it.

These operations reset the read communication statuses; see **Changes in read communication status** (p. 516).

To return the memory back to the middleware, every read() or take() that retrieves a sequence of samples must be followed with a call to com.rti.ndds.example.FooDataReader.return_loan (p. **1386).**

See also

Interpretation of the SampleInfo (p. 1945)

6.20.2.1 Data access patterns

The application accesses data by means of the operations `read` or `take` on the **com.rti.dds.subscription.Data↩ Reader** (p. 707). These operations return an ordered collection of `DataSamples` consisting of a **com.rti.dds.↩ subscription.SampleInfo** (p. 1944) part and a `Data` part.

The way RTI Connext builds the collection depends on QoS policies set on the **com.rti.dds.subscription.DataReader** (p. 707) and **com.rti.dds.subscription.Subscriber** (p. 2039), as well as the `source_timestamp` of the samples, and the parameters passed to the `read()` / `take()` operations, namely:

- the desired sample states (any combination of **com.rti.dds.subscription.SampleStateKind** (p. 1972))

- the desired view states (any combination of **com.rti.dds.subscription.ViewStateKind** (p. 2283))
- the desired instance states (any combination of **com.rti.dds.subscription.InstanceStateKind** (p. 1451))

The `read()` and `take()` operations are non-blocking and just deliver what is currently available that matches the specified states.

The `read_w_condition()` and `take_w_condition()` operations take a **com.rti.dds.subscription.Read↩ Condition** (p. 1816) object as a parameter instead of sample, view or instance states. The behaviour is that the samples returned will only be those for which the condition is com.rti.dds.infrastructure.true. These operations, in conjunction with **com.rti.dds.subscription.ReadCondition** (p. 1816) objects and a **com.rti.dds.infrastructure.WaitSet** (p. 2287), allow performing waiting reads.

Once the data samples are available to the data readers, they can be read or taken by the application. The basic rule is that the application may do this in any order it wishes. This approach is very flexible and allows the application ultimate control.

To access data coherently, or in order, the **PRESENTATION** (p. 497) QoS must be set properly.

6.21 Subscribers

com.rti.dds.subscription.Subscriber (p. 2039) entity and associated elements

Classes

- interface **Subscriber**

  *<<**interface**>> (p. 403) A subscriber is the object responsible for actually receiving data from a subscription.*
- class **SubscriberAdapter**

  A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)
- interface **SubscriberListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for status about a subscriber.*
- class **SubscriberQos**

  *QoS policies supported by a **com.rti.dds.subscription.Subscriber** (p. 2039) entity.*
- class **SubscriberSeq**

  *Declares IDL `sequence` < **com.rti.dds.subscription.Subscriber** (p. 2039) > .*

Variables

- static final **DataReaderQos** **DATAREADER_QOS_DEFAULT**

  Special value for creating data reader with default QoS.
- static final **DataReaderQos** **DATAREADER_QOS_USE_TOPIC_QOS** = new **DataReaderQos**()

  *Special value for creating **com.rti.dds.subscription.DataReader** (p. 707) with a combination of the default **com.rti.↩ dds.subscription.DataReaderQos** (p. 777) and the **com.rti.dds.topic.TopicQos** (p. 2133).*
- static final **DataReaderQos** **DATAREADER_QOS_PRINT_ALL** = new **DataReaderQos**()

  *Special value which can be supplied to **com.rti.dds.subscription.DataReaderQos.toString(DataReaderQos baseQos, QosPrintFormat format)** (p. 780) indicating that all of the QoS should be printed.*

6.21.1 Detailed Description

com.rti.dds.subscription.Subscriber (p. 2039) entity and associated elements

6.21.2 Variable Documentation

6.21.2.1 DATAREADER_QOS_DEFAULT

```
final  DataReaderQos DATAREADER_QOS_DEFAULT  [static]
```

Initial value:

```
=
    new DataReaderQos()
```

Special value for creating data reader with default QoS.

When used in **com.rti.dds.subscription.Subscriber.create_datareader** (p. 2045), this special value is used to indicate that the **com.rti.dds.subscription.DataReader** (p. 707) should be created with the default **com.rti.dds.subscription.DataReader** (p. 707) QoS by means of the operation get_default_datareader_qos and using the resulting QoS to create the **com.rti.dds.subscription.DataReader** (p. 707).

When used in **com.rti.dds.subscription.Subscriber.set_default_datareader_qos** (p. 2043), this special value is used to indicate that the default QoS should be reset back to the initial value that would be used if the **com.rti.dds.subscription.Subscriber.set_default_datareader_qos** (p. 2043) operation had never been called.

When used in **com.rti.dds.subscription.DataReader.set_qos** (p. 715), this special value is used to indicate that the QoS of the **com.rti.dds.subscription.DataReader** (p. 707) should be changed to match the current default QoS set in the **com.rti.dds.subscription.Subscriber** (p. 2039) that the **com.rti.dds.subscription.DataReader** (p. 707) belongs to.

Warning

This value is a constant and should never be modified. You cannot use this value to *get* the default QoS values for a **DataReader** (p. 707); for this purpose, use **com.rti.dds.domain.DomainParticipant.get_default_datareader_qos** (p. 964).

See also

com.rti.dds.subscription.Subscriber.create_datareader (p. 2045)

com.rti.dds.subscription.Subscriber.set_default_datareader_qos (p. 2043)

com.rti.dds.subscription.DataReader.set_qos (p. 715)

6.21.2.2 DATAREADER_QOS_USE_TOPIC_QOS

```
final DataReaderQos DATAREADER_QOS_USE_TOPIC_QOS = new DataReaderQos() [static]
```

Special value for creating **com.rti.dds.subscription.DataReader** (p. 707) with a combination of the default **com.rti.dds.subscription.DataReaderQos** (p. 777) and the **com.rti.dds.topic.TopicQos** (p. 2133).

The use of this value is equivalent to the application obtaining the default **com.rti.dds.subscription.DataReaderQos** (p. 777) and the **com.rti.dds.topic.TopicQos** (p. 2133) (by means of the operation **com.rti.dds.topic.Topic.get_qos** (p. 2119)) and then combining these two QoS using the operation **com.rti.dds.subscription.Subscriber.copy_from_topic_qos** (p. 2060) whereby any policy that is set on the **com.rti.dds.topic.TopicQos** (p. 2133) "overrides" the corresponding policy on the default QoS. The resulting QoS is then applied to the creation of the **com.rti.dds.subscription.DataReader** (p. 707).

This value should only be used in **com.rti.dds.subscription.Subscriber.create_datareader** (p. 2045).

See also

com.rti.dds.subscription.Subscriber.create_datareader (p. 2045)

com.rti.dds.subscription.Subscriber.get_default_datareader_qos (p. 2042)

com.rti.dds.topic.Topic.get_qos (p. 2119)

com.rti.dds.subscription.Subscriber.copy_from_topic_qos (p. 2060)

6.21.2.3 DATAREADER_QOS_PRINT_ALL

```
final DataReaderQos DATAREADER_QOS_PRINT_ALL = new DataReaderQos() [static]
```

Special value which can be supplied to **com.rti.dds.subscription.DataReaderQos.toString(DataReaderQos baseQos, QosPrintFormat format)** (p. 780) indicating that all of the QoS should be printed.

The **com.rti.dds.subscription.DataReaderQos.toString(DataReaderQos baseQos, QosPrintFormat format)** (p. 780) API accepts a base QoS profile as one of its arguments. The resultant string only contains the differences with respect to the supplied base QoS profile. Supplying the **com.rti.dds.subscription.Subscriber.DATAREADER_QOS_PRINT_ALL** (p. 83) sentinel value as the base QoS will result in all of the QoS being printed.

Note that there are some QoS policies and fields which are not intended for public use. Even when **com.rti.dds.subscription.Subscriber.DATAREADER_QOS_PRINT_ALL** (p. 83) is supplied as the base, these will not be printed unless they differ from the documented default. If you want to see their values, you must use the print_private field within the **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809) structure.

This value should only be used as the base parameter to the **com.rti.dds.subscription.DataReaderQos.toString(DataReaderQos baseQos, QosPrintFormat format)** (p. 780) API.

Referenced by **DataReaderQos.toString()**.

- class **TopicQuerySelectionKind**

  *Kinds of **TopicQuerySelection** (p. 2145).*

Variables

- static final **TopicQuerySelection TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER**

  *Special value for creating a **com.rti.dds.subscription.TopicQuery** (p. 2139) that applies the same filter as the **Data↩ Reader** (p. 707)'s **com.rti.dds.topic.ContentFilteredTopic** (p. 692).*
- static final **TopicQuerySelection TOPIC_QUERY_SELECTION_SELECT_ALL**

  *Special value for creating a **com.rti.dds.subscription.TopicQuery** (p. 2139) that selects all the samples in a **com.rti.↩ dds.publication.DataWriter** (p. 818) cache.*

6.26.1 Detailed Description

com.rti.dds.subscription.TopicQuery (p. 2139) and associated elements.

TopicQueries allow a **com.rti.dds.subscription.DataReader** (p. 707) to query the sample cache of its matching **com.↩ rti.dds.publication.DataWriter** (p. 818). A user can create a **com.rti.dds.subscription.TopicQuery** (p. 2139) with the **com.rti.dds.subscription.DataReader.create_topic_query** (p. 732) API. When a DataReader creates a TopicQuery, DDS will propagate it to other DomainParticipants and their DataWriters. When a DataWriter matching with the DataReader that created the TopicQuery receives it, it will send the cached samples that pass the TopicQuery's filter.

To configure how to dispatch a TopicQuery, the **com.rti.dds.publication.DataWriterQos** (p. 878) includes the **com.↩ rti.dds.infrastructure.TopicQueryDispatchQosPolicy** (p. 2142) policy. By default, a DataWriter ignores TopicQueries unless they are explicitly enabled using this policy.

The delivery of TopicQuery samples occurs in a separate RTPS channel. This allows DataReaders to receive Topic↩ Query samples and live samples in parallel. This is a key difference with respect to the Durability QoS policy.

Late-joining DataWriters will also discover existing TopicQueries. To delete a TopicQuery you must use **com.rti.dds.↩ subscription.DataReader.delete_topic_query** (p. 733).

After deleting a TopicQuery, new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

By default, a TopicQuery queries the samples that were in the DataWriter's queue at the time the DataWriter received the TopicQuery. These TopicQueries are snapshot TopicQueries. However, a TopicQuery can be created in "continuous" mode; in this case, a DataWriter will continue delivering samples that pass a continuous TopicQuery filter until the DataReader application explicitly deletes it. These TopicQueries are continuous TopicQueries.

The samples received in response to a TopicQuery are stored in the associated DataReader's cache. Any of the read/take operations can retrieve TopicQuery samples. The field **com.rti.dds.subscription.SampleInfo.topic_query_guid** (p. 1956) associates each sample to its TopicQuery. If the read sample is not in response to a TopicQuery then this field will be **com.rti.dds.infrastructure.GUID_t.GUID_UNKNOWN** (p. 1426). Note that the same data may be received several times, depending on how many TopicQueries the DataReader creates and their TopicQuerySelection.

You can choose to read or take only TopicQuery samples, only live samples, or both. To support this ReadConditions and QueryConditions provide the **com.rti.dds.subscription.DataReader.create_querycondition_w_params** (p. 714) and **com.rti.dds.subscription.DataReader.create_readcondition_w_params** (p. 713) APIs.

Each TopicQuery is identified by a GUID that can be accessed using the **com.rti.dds.subscription.TopicQuery.get_guid** (p. 2139) method.

6.26.2 Snapshot TopicQueries

A snapshot TopicQuery queries the samples that are in a DataWriter's queue when the DataWriter receives the TopicQuery.

When a DataWriter receives a snapshot TopicQuery, it registers the last sequence number available in the DataWriter queue (known as the cut-off SN). Then, the DataWriter applies the TopicQuery expression to all the samples up to the cut-off SN. If a sample with a SN smaller than or equal to the cut-off SN passes the filter expression, it will be included in the TopicQuery response.

When a DataWriter responds to a snapshot TopicQuery, it doesn't create any copies of the samples that are part of the response. As a result, a sample that passes the TopicQuery expression and should have been included in the response may be removed from the DataWriter queue before it reaches the DataReader that issued the TopicQuery. This can result in incomplete TopicQueries, which may or may not be necessary for your application to detect.

For instance, your application may issue a TopicQuery on a keyed topic using a filter on key-only fields and expect to receive the latest value for an instance that passes the filter. However, if the latest value for the instance is replaced with a newer value before the sample is delivered to the DataReader, it is important to detect this situation and re-issue the TopicQuery.

On the other hand, some applications may not care about which samples are returned in response to a TopicQuery, and are only interested in a snapshot of the DataWriter's queue. In such cases, the concept of incomplete TopicQueries can be ignored.

The application can detect incomplete TopicQueries by checking the **com.rti.dds.infrastructure.SampleFlagBits.INCOMPLETE_SNAPSHOT_TOPIC_QUERY** (p. 1941) bit in the **com.rti.dds.subscription.SampleInfo.flag** (p. 1954) field of the last sample received for a snapshot TopicQuery.

To reduce the probability of receiving incomplete responses, DataWriters configured with com.rti.dds.infrastructure.HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_QOS recalculate the cut-off SN for a snapshot TopicQuery if a sample is replaced in the DataWriter queue due to KEEP_LAST replacement before the complete TopicQuery response is published.

Snapshot TopicQueries are not automatically deleted once the DataWriters that respond to the TopicQuery have finished delivering the samples included in the response. It is the responsibility of the user to delete the TopicQuery when it is no longer needed. To detect the end of a snapshot TopicQuery response, check for the **com.rti.dds.infrastructure.SampleFlagBits.INTERMEDIATE_TOPIC_QUERY_SAMPLE** (p. 1940) flag in the **com.rti.dds.subscription.SampleInfo.flag** (p. 1954) field of the samples included in the response. For more information on how to use this flag, see **Reading TopicQuery Samples** (p. 89).

6.26.3 Reading TopicQuery Samples

A TopicQuery response is the set of samples published by a DataWriter in response to a TopicQuery. Because multiple DataWriters may respond to a TopicQuery, a DataReader may receive multiple responses for a single TopicQuery.

Responses can be proxied by Routing Service DataWriters by setting <topic_query_proxy>/<mode> to PROPAGATION. These DataWriters forward a TopicQuery response, but they are not considered to be responding to the TopicQuery.

Samples that a DataReader receives in response to a TopicQuery have a value for **com.rti.dds.subscription.SampleInfo.topic_query_guid** (p. 1956) different than **com.rti.dds.infrastructure.GUID_t.GUID_UNKNOWN** (p. 1426).

In addition, the virtual GUID of the DataWriter(s) that responded to a TopicQuery is set in **com.rti.dds.subscription.SampleInfo.source_guid** (p. 1955).

Intermediate samples, not the final sample, have the flag **com.rti.dds.infrastructure.SampleFlagBits.INTERMEDIATE_TOPIC_QUERY_SAMPLE** (p. 1940) set in **com.rti.dds.subscription.SampleInfo.flag** (p. 1954) for a given response to a snapshot TopicQuery.

If two DataWriters respond to a snapshot TopicQuery, you should expect two final samples, one per unique **com.rti.dds.subscription.SampleInfo.source_guid** (p. 1955) responding to the TopicQuery, assuming that at least one sample passes the TopicQuery filter for each DataWriter.

The **com.rti.dds.subscription.SampleInfo.flag** (p. 1954) field of the last sample received for a snapshot TopicQuery may have the **com.rti.dds.infrastructure.SampleFlagBits.INCOMPLETE_SNAPSHOT_TOPIC_QUERY** (p. 1941) bit set if the TopicQuery response is incomplete, which may or may not be necessary for your application to detect. See **Snapshot TopicQueries** (p. 88) for more information.

6.26.4 Debugging Topic Queries

There are a number of ways in which to gain more insight into what is happening in an application that is creating Topic Queries.

6.26.4.1 The Built-in ServiceRequest DataReader

TopicQueries are communicated to publishing applications through a built-in **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) channel. The ServiceRequest channel is designed to be generic so that it can be used for many different purposes, one of which is TopicQueries.

When a DataReader creates a TopicQuery, a **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) message is sent containing the TopicQuery information. Just as there are built-in DataReaders for **com.rti.dds.domain.builtin.ParticipantBuiltinTopicData** (p. 1647), **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070), and **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753), there is a fourth built-in DataReader for ServiceRequests.

The new built-in DataReader can be retrieved using the built-in subscriber and **com.rti.dds.subscription.Subscriber.lookup_datareader** (p. 2049). The topic name is **com.rti.dds.topic.builtin.ServiceRequestTypeSupport.SERVICE_REQUEST_TOPIC_NAME** (p. 415). Installing a listener with the **com.rti.dds.subscription.DataReaderListener.on_data_available** (p. 760) callback implemented will allow a publishing application to be notified whenever a TopicQuery has been received from a subscribing application.

The builtin.ServiceRequest.service_id of a **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) corresponding to a **com.rti.dds.subscription.TopicQuery** (p. 2139) will be **com.rti.dds.topic.builtin.ServiceRequest.TOPIC_QUERY_SERVICE_ID** (p. 414) and the builtin.ServiceRequest.instance_id will be equal to the GUID of the **com.rti.dds.subscription.TopicQuery** (p. 2139) (see **com.rti.dds.subscription.TopicQuery.get_guid** (p. 2139)).

The builtin.ServiceRequest.request_body is a sequence of bytes containing more information about the TopcQuery. This information can be retrieved using the **com.rti.dds.subscription.TopicQueryHelper.topic_query_data_from_service_request** (p. 2145) function. The resulting **com.rti.dds.subscription.TopicQueryData** (p. 2139) contains the **com.rti.dds.subscription.TopicQuerySelection** (p. 2145) that the **com.rti.dds.subscription.TopicQuery** (p. 2139) was created with, the GUID of the original DataReader that created the TopicQuery, and the topic name of that DataReader. Note: When TopicQueries are propagated through one or more Routing Services, the last DataReader that issued the TopicQuery will be a Routing Service DataReader. The **com.rti.dds.subscription.TopicQueryData.original_related_reader_guid** (p. 2141), however, will be that of the first DataReader to have created the TopicQuery.

6.26.4.2 The on_service_request_accepted DataWriter Listener Callback

It is possible that a **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) for a **com.rti.dds.subscription.TopicQuery** (p. 2139) is received but is not immediately dispatched to a DataWriter. This can happen, for example, if a DataWriter was not matching with a DataReader at the time that the TopicQuery was received by the publishing application. The **com.rti.dds.publication.DataWriterListener.on_service_request_accepted** (p. 860) callback notifies a DataWriter when a ServiceRequest has been dispatched to that DataWriter. The **com.rti.dds.publication.ServiceRequestAcceptedStatus** (p. 1986) provides information about how many ServiceRequests have been accepted by the DataWriter since the last time that the status was read. The status also includes the **com.rti.dds.publication.ServiceRequestAcceptedStatus.last_request_handle** (p. 1988), which is the **com.rti.dds.infrastructure.InstanceHandle_t** (p. 1443) of the last ServiceRequest that was accepted. This instance handle can be used to read samples per instance from the built-in ServiceRequest DataReader and correlate which ServiceRequests have been dispatched to which DataWriters.

6.26.5 Variable Documentation

6.26.5.1 TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER

```
final TopicQuerySelection TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER [static]
```

Special value for creating a **com.rti.dds.subscription.TopicQuery** (p. 2139) that applies the same filter as the **DataReader** (p. 707)'s **com.rti.dds.topic.ContentFilteredTopic** (p. 692).

If the **com.rti.dds.subscription.DataReader** (p. 707) that creates the **com.rti.dds.subscription.TopicQuery** (p. 2139) uses a **com.rti.dds.topic.ContentFilteredTopic** (p. 692), this **com.rti.dds.subscription.TopicQuerySelection** (p. 2145) value indicates that the **TopicQuery** (p. 2139) should use the same filter.

Otherwise it behaves as **com.rti.dds.subscription.DataReader.TOPIC_QUERY_SELECTION_SELECT_ALL** (p. 90).

6.26.5.2 TOPIC_QUERY_SELECTION_SELECT_ALL

```
final TopicQuerySelection TOPIC_QUERY_SELECTION_SELECT_ALL [static]
```

Special value for creating a **com.rti.dds.subscription.TopicQuery** (p. 2139) that selects all the samples in a **com.rti.dds.publication.DataWriter** (p. 818) cache.

6.27 Sample States

com.rti.dds.subscription.SampleStateKind (p. 1972) and associated elements

Classes

- class **SampleStateKind**

  Indicates whether or not a sample has ever been read.

Variables

- static final int **ANY_SAMPLE_STATE** = 0xffff

  Any sample state com.rti.dds.subscription.SampleStateKind.SampleStateKind.READ_SAMPLE_STATE | com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ_SAMPLE_STATE.

6.27.1 Detailed Description

com.rti.dds.subscription.SampleStateKind (p. 1972) and associated elements

6.27.2 Variable Documentation

6.27.2.1 ANY_SAMPLE_STATE

```
final int ANY_SAMPLE_STATE = 0xffff [static]
```

Any sample state com.rti.dds.subscription.SampleStateKind.SampleStateKind.READ_SAMPLE_STATE | com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ_SAMPLE_STATE.

Referenced by **Requester< TReq, TRep >.readReplies()**, **Requester< TReq, TRep >.readReply()**, **Requester< TReq, TRep >.takeReplies()**, **Requester< TReq, TRep >.takeReply()**, and **Requester< TReq, TRep >.waitForReplies()**.

6.28 View States

com.rti.dds.subscription.ViewStateKind (p. 2283) and associated elements

Classes

- class **ViewStateKind**

  Indicates whether or not an instance is new.

Variables

- static final int **ANY_VIEW_STATE** = 0xffff

  Any view state com.rti.dds.subscription.ViewStateKind.ViewStateKind.NEW_VIEW_STATE | com.rti.dds.subscription.↩ ViewStateKind.ViewStateKind.NOT_NEW_VIEW_STATE.

6.28.1 Detailed Description

com.rti.dds.subscription.ViewStateKind (p. 2283) and associated elements

6.28.2 Variable Documentation

6.28.2.1 ANY_VIEW_STATE

```
final int ANY_VIEW_STATE = 0xffff  [static]
```

Any view state com.rti.dds.subscription.ViewStateKind.ViewStateKind.NEW_VIEW_STATE | com.rti.dds.subscription.↩ ViewStateKind.ViewStateKind.NOT_NEW_VIEW_STATE.

6.29 Instance States

com.rti.dds.subscription.InstanceStateKind (p. 1451) and associated elements

Classes

- class **InstanceStateKind**

  *Indicates if the samples are from a live **com.rti.dds.publication.DataWriter** (p. 818) or not.*

Variables

- static final int **ANY_INSTANCE_STATE** = 0xffff

  Any instance state ALIVE_INSTANCE_STATE | NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE.
- static final int **NOT_ALIVE_INSTANCE_STATE** = 0x006

  Not alive instance state NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_WRITERS_INSTANCE_STATE.

6.29.1 Detailed Description

com.rti.dds.subscription.InstanceStateKind (p. 1451) and associated elements

6.29.2 Variable Documentation

6.29.2.1 ANY_INSTANCE_STATE

```
final int ANY_INSTANCE_STATE = 0xffff  [static]
```

Any instance state ALIVE_INSTANCE_STATE | NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE.

6.29.2.2 NOT_ALIVE_INSTANCE_STATE

```
final int NOT_ALIVE_INSTANCE_STATE = 0x006  [static]
```

Not alive instance state NOT_ALIVE_DISPOSED_INSTANCE_STATE | NOT_ALIVE_NO_WRITERS_INSTANCE_↩ STATE.

6.30 Stream Kinds

com.rti.dds.subscription.StreamKind (p. 2022) and associated elements

Classes

- class **StreamKind**

  *Indicates if the samples are **TopicQuery** (p. 2139) samples or not.*

Variables

- static final int **ANY_STREAM** = 0xffff

  Any stream kind LIVE_STREAM | TOPIC_QUERY_STREAM.

6.30.1 Detailed Description

com.rti.dds.subscription.StreamKind (p. 2022) and associated elements

6.30.2 Variable Documentation

6.30.2.1 ANY_STREAM

```
final int ANY_STREAM = 0xffff  [static]
```

Any stream kind LIVE_STREAM | TOPIC_QUERY_STREAM.

6.31 Infrastructure Module

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

Modules

- **Clock Selection**

  APIs related to clock selection.
- **Builtin Qos Profiles**

  *<<**extension**>> (p. 403) QoS libraries, profiles, and snippets that are automatically built into RTI Connext.*
- **Conditions and WaitSets**

  ***com.rti.dds.infrastructure.Condition** (p. 686) and **com.rti.dds.infrastructure.WaitSet** (p. 2287) and related items.*
- **Time Support**

  Time and duration types and defines.
- **Entity Support**

  ***com.rti.dds.infrastructure.Entity** (p. 1320), **com.rti.dds.infrastructure.Listener** (p. 1528) and related items.*
- **GUID Support**

  *<<**extension**>> (p. 403) GUID type and defines.*
- **Object Support**

  *<<**extension**>> (p. 403) Object related items.*
- **QoS**

  Quality of Service (QoS) policies.

- **Return Codes**

  Types of return codes.
- **Sequence Number Support**

  *<<**extension**>> (p. 403) Sequence number type and defines.*
- **Status Kinds**

  Kinds of communication status.
- **Exception Codes**

  *<<**extension**>> (p. 403) Exception codes.*
- **Sequence Support**

  The com.rti.dds.infrastructure.com.rti.dds.util.Sequence interface allows you to work with variable-length collections of homogeneous data.

Classes

- class **Enum**

  A superclass for all type-safe enumerated types.

6.31.1 Detailed Description

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

"DCPS Infrastructure package"

6.32 Built-in Sequences

Defines sequences of primitive data type. .

Classes

- class **BooleanSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< boolean >*
- class **ByteSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< byte >*
- class **CharSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< char >*
- class **DoubleSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< double >*
- class **FloatSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< float >*
- class **IntSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< com.rti.dds.infrastructure.↩ int >*

- class **LongDoubleSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < *com.rti.dds.infrastructure.LongDouble* >
- class **LongSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < *long* >
- class **ShortSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < *short* >
- class **StringSeq**

  Declares IDL `sequence` < *com.rti.dds.infrastructure.String* > .
- class **WcharSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < *com.rti.dds.infrastructure.char* >
- class **WstringSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < *com.rti.dds.infrastructure.char** >

6.32.1 Detailed Description

Defines sequences of primitive data type. .

6.33 Multi-channel DataWriters

APIs related to Multi-channel DataWriters.

APIs related to Multi-channel DataWriters.

6.33.1 What is a Multi-channel DataWriter?

A Multi-channel **com.rti.dds.publication.DataWriter** (p. 818) is a **com.rti.dds.publication.DataWriter** (p. 818) that is configured to send data over multiple multicast addresses, according to some filtering criteria applied to the data.

To determine which multicast addresses will be used to send the data, the middleware evaluates a set of filters that are configured for the **com.rti.dds.publication.DataWriter** (p. 818). Each filter "guards" a channel (a set of multicast addresses). Each time a multi-channel **com.rti.dds.publication.DataWriter** (p. 818) writes data, the filters are applied. If a filter evaluates to true, the data is sent over that filter's associated channel (set of multicast addresses). We refer to this type of filter as a Channel Guard filter.

6.33.2 Configuration on the Writer Side

To configure a multi-channel **com.rti.dds.publication.DataWriter** (p. 818), simply define a list of all its channels in the **com.rti.dds.infrastructure.MultiChannelQosPolicy** (p. 1616).

The **com.rti.dds.infrastructure.MultiChannelQosPolicy** (p. 1616) is propagated along with discovery traffic. The value of this policy is available in builtin.PublicationBuiltinTopicData.locator_filter.

6.33.3 Configuration on the Reader Side

No special changes are required in a subscribing application to get data from a multichannel **com.rti.dds.publication.DataWriter** (p. 818). If you want the **com.rti.dds.subscription.DataReader** (p. 707) to subscribe to only a subset of the channels, use a **com.rti.dds.topic.ContentFilteredTopic** (p. 692).

For more information on Multi-channel DataWriters, refer to the `User's Manual`.

6.33.4 Reliability with Multi-Channel DataWriters

6.33.4.1 Reliable Delivery

Reliable delivery is only guaranteed when the **com.rti.dds.infrastructure.PresentationQosPolicy.access_scope** (p. 1682) is set to com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.INSTANCE_PRESENTATION_QOS and the filters in **com.rti.dds.infrastructure.MultiChannelQosPolicy** (p. 1616) are keyed-only based.

If any of the guard filters are based on non-key fields, RTI Connext only guarantees reception of the most recent data from the MultiChannel DataWriter.

6.33.4.2 Reliable Protocol Considerations

Reliability is maintained on a per-channel basis. Each channel has its own reliability channel send queue. The size of that queue is limited by **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_samples** (p. 1896) and/or **com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy.max_batches** (p. 895).

The protocol parameters described in **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy** (p. 860) are applied per channel, with the following exceptions:

com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.low_watermark (p. 1913) and **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.high_watermark** (p. 1913): The low watermark and high watermark control the queue levels (in number of samples) that determine when to switch between regular and fast heartbeat rates. With MultiChannel DataWriters, high_watermark and low_watermark refer to the DataWriter's queue (not the reliability channel queue). Therefore, periodic heartbeating cannot be controlled on a per-channel basis.

Important: With MultiChannel DataWriters, low_watermark and high_watermark refer to application samples even if batching is enabled. This behavior differs from the one without MultiChannel DataWriters (where low_watermark and high_watermark refer to batches).

com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.heartbeats_per_max_samples (p. 1918): This field defines the number of heartbeats per send queue. For MultiChannel DataWriters, the value is applied per channel. However, the send queue size that is used to calculate the a piggyback heartbeat rate is defined per DataWriter (see **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_samples** (p. 1896))

Important: With MultiChannel DataWriters, heartbeats_per_max_samples refers to samples even if batching is enabled. This behavior differs from the one without MultiChannels DataWriters (where heartbeats_per_max_samples refers to batches).

With batching and MultiChannel DataWriters, the size of the DataWriter's send queue should be configured using **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_samples** (p. 1896) instead of max_batches **com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy.max_batches** (p. 895) in order to take advantage of heartbeats_per_max_samples.

6.34 Transports

APIs related to RTI Connext pluggable transports.

Modules

- **Installing Transport Plugins**

  Installing and configuring transports used by RTI Connext.
- **Built-in Transport Plugins**

  Transport plugins delivered with RTI Connext.
- **Creating New Transport Plugins**

  Developing new transport plugins for RTI Connext.

6.34.1 Detailed Description

APIs related to RTI Connext pluggable transports.

6.34.2 Overview

RTI Connext has a pluggable transports architecture. The core of RTI Connext is transport agnostic; it does not make any assumptions about the actual transports used to send and receive messages. Instead, the RTI Connext core uses an abstract "transport API" to interact with the **transport plugins** which implement that API.

A transport plugin implements the abstract transport API and performs the actual work of sending and receiving messages over a physical transport. A collection of **builtin plugins** (see **Built-in Transport Plugins** (p. 106)) is delivered with RTI Connext for commonly used transports. New transport plugins can easily be created, thus enabling RTI Connext applications to run over transports that may not even be conceived yet. This is a powerful capability and that distinguishes RTI Connext from competing middleware approaches.

RTI Connext also provides a set of APIs for installing and configuring transport plugins to be used in an application. So that RTI Connext applications work out of the box, a subset of the builtin transport plugins is preconfigured by default (see **com.rti.dds.infrastructure.TransportBuiltinQosPolicy** (p. 2152)). You can "turn-off" some or all of the builtin transport plugins. In addition, you can configure other transport plugins for use by the application.

6.34.3 Transport Aliases

In order to use a transport plugin instance in an RTI Connext application, it must be registered with a **com.rti.dds.domain.DomainParticipant** (p. 948). When you register a transport, you specify a sequence of "alias" strings to symbolically refer to the transport plugin. The same alias strings can be used to register more than one transport plugin.

You can register multiple transport plugins with a **com.rti.dds.domain.DomainParticipant** (p. 948). An **alias** symbolically refers to one or more transport plugins registered with the **com.rti.dds.domain.DomainParticipant** (p. 948). Builtin transport plugin instances can be referred to using preconfigured aliases (see **TRANSPORT_BUILTIN** (p. 521)).

A transport plugin's class name is automatically used as an implicit alias. It can be used to refer to all the transport plugin instances of that class.

You can use aliases to refer to transport plugins, in order to specify:

- the transport plugins to use for **discovery** (see **com.rti.dds.infrastructure.DiscoveryQosPolicy.enabled_↩ transports** (p. 944)), and for **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.Data↩ Reader** (p. 707) entities (see **com.rti.dds.infrastructure.TransportSelectionQosPolicy** (p. 2170)).

- the **multicast** addresses on which to receive discovery messages (see **com.rti.dds.infrastructure.Discovery↩ QosPolicy.multicast_receive_addresses** (p. 944)), and the multicast addresses and ports on which to receive user data (see **com.rti.dds.subscription.DataReaderQos.multicast** (p. 785)).

- the **unicast ports** used for user data (see **com.rti.dds.infrastructure.TransportUnicastQosPolicy** (p. 2177)) on both **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) entities.

- the transport plugins used to parse an address string in a locator (**Locator Format** (p. 473) and **NDDS_↩ DISCOVERY_PEERS** (p. 472)).

A **com.rti.dds.domain.DomainParticipant** (p. 948) (and contained its entities) start using a transport plugin after the **com.rti.dds.domain.DomainParticipant** (p. 948) is enabled (see **com.rti.dds.infrastructure.Entity.enable** (p. 1323)). An entity will use *all* the transport plugins that match the specified transport QoS policy. All transport plugins are treated uniformly, regardless of how they were created or registered; there is no notion of some transports being more "special" that others.

6.34.4 Transport Lifecycle

A transport plugin is owned by whomever creates it. Thus, if you create and register a transport plugin with a **com.↩ rti.dds.domain.DomainParticipant** (p. 948), you are responsible for deleting it by calling its destructor. Note that builtin transport plugins (**TRANSPORT_BUILTIN** (p. 521)) and transport plugins that are loaded through the **PROPERTY** (p. 499) QoS policy (see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 104)) are automatically managed by RTI Connext.

A user-created transport plugin must not be deleted while it is still in use by a **com.rti.dds.domain.DomainParticipant** (p. 948). This generally means that a user-created transport plugin instance can only be deleted after the **com.rti.↩ dds.domain.DomainParticipant** (p. 948) with which it was registered is deleted (see **com.rti.dds.domain.Domain↩ ParticipantFactory.delete_participant** (p. 1044)). Note that a transport plugin *cannot* be "unregistered" from a **com.↩ rti.dds.domain.DomainParticipant** (p. 948).

A transport plugin instance cannot be registered with more than one **com.rti.dds.domain.DomainParticipant** (p. 948) at a time. This requirement is necessary to guarantee the multi-threaded safety of the transport API.

If the same physical transport resources are to be used with more than one **com.rti.dds.domain.DomainParticipant** (p. 948) in the same address space, the transport plugin should be written in such a way so that it can be instantiated multiple times—once for each **com.rti.dds.domain.DomainParticipant** (p. 948) in the address space. Note that it is always possible to write the transport plugin so that multiple transport plugin instances share the same underlying resources; however the burden (if any) of guaranteeing multi-threaded safety to access shared resource shifts to the transport plugin developer.

6.34.5 Transport Class Attributes

A transport plugin instance is associated with two kinds of attributes:

- the *class* attributes that are decided by the plugin writer; these are invariant across all instances of the transport plugin class, and
- the *instance* attributes that can be set on a per instance basis by the transport plugin user.

Every transport plugin must specify the following class attributes.

transport class id (see com.rti.ndds.transport.Transport.Property_t.classid (p. **1702))** Identifies a transport plugin implementation class. It denotes a unique "class" to which the transport plugin instance belongs. The class is used to distinguish between different transport plugin implementations. Thus, a transport plugin vendor should ensure that its transport plugin implementation has a unique class.

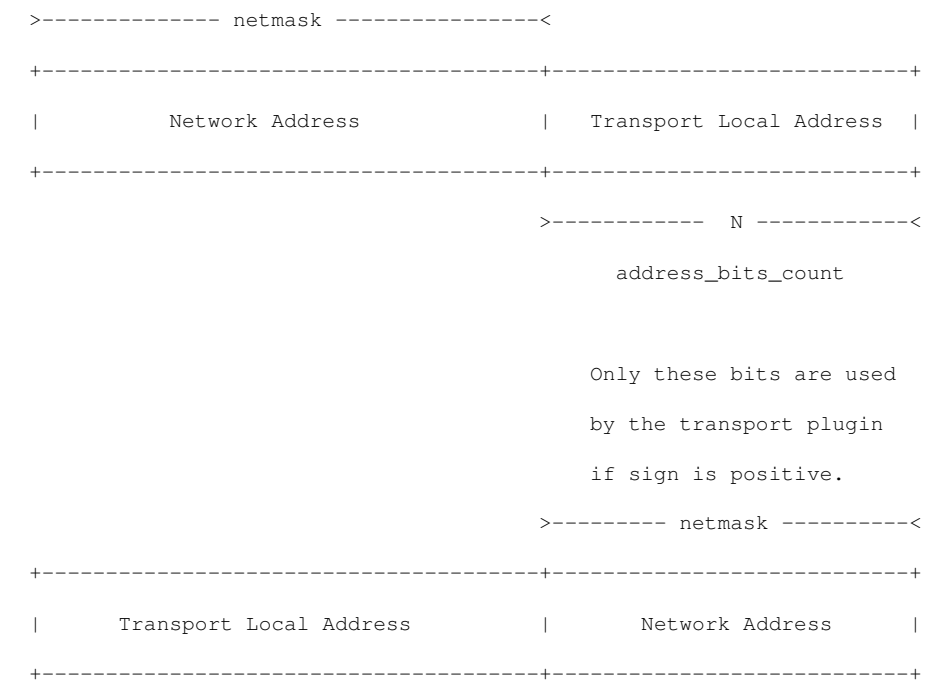
Two transport plugin instances report the same class *iff* they have compatible implementations. Transport plugin instances with mismatching classes are not allowed (by the RTI Connext Core) to communicate with one another.

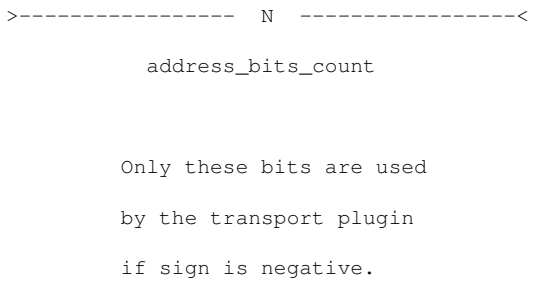
Multiple implementations (possibly from different vendors) for a physical transport mechanism can co-exist in an RTI Connext application, provided they use different transport class IDs.

The class ID can also be used to distinguish between different transport protocols over the same physical transport network (e.g., UDP vs. TCP over the IP routing infrastructure).

transport significant address bit count (see com.rti.ndds.transport.Transport.Property_t.address_bit_count (p. **1703))** RTI Connext's addressing is modeled after the IPv6 and uses 128-bit addresses (java.net.InetAddress) to route messages.

A transport plugin is expected to map the transport's internal addressing scheme to 128-bit addresses. Depending on the sign of this attribute, this mapping uses only `N` least significant bits (LSB) if positive or `N` most significant bits (MSB) if negative; these bits are specified by this attribute.





The remaining bits of an address using the 128 - abs(bit address) representation will be considered as part of the "network address" (see **Transport Network Address** (p. 102)) and thus ignored by the transport plugin's internal addressing scheme.

For *unicast* addresses, the transport plugin is expected to ignore the higher (128 - **com.rti.ndds.transport.↩ Transport.Property_t.address_bit_count** (p. 1703)) bits. RTI Connext is free to manipulate those bits freely in the addresses passed in/out to the transport plugin APIs.

Theoretically, the significant address bits count, N is related to the size of the underlying transport network as follows:

$$address_bits_count >= ceil(log_2(total_addressable_transport_unicast_interfaces))$$

The equality holds when the most compact (theoretical) internal address mapping scheme is used. A practical address mapping scheme may waste some bits.

6.34.6 Transport Instance Attributes

The *per instance* attributes to configure the plugin instance are generally passed in to the plugin constructor. These are defined by the transport plugin writer, and can be used to:

- customize the behavior of an instance of a transport plugin, including the send and the receiver buffer sizes, the maximum message size, various transport level classes of service (CoS), and so on.
- specify the resource values, network interfaces to use, various transport level policies, and so on.

RTI Connext requires that every transport plugin instance must specify the **com.rti.ndds.transport.Transport.↩ Property_t.message_size_max** (p. 1704) and **com.rti.ndds.transport.Transport.Property_t.gather_send_buffer↩ _count_max** (p. 1704).

It is up to the transport plugin developer to make these available for configuration to transport plugin user.

Note that it is important that the instance attributes are "compatible" between the sending side and the receiving side of communicating applications using different instances of a transport plugin class. For example, if one side is configured to send messages larger than can be received by the other side, then communications via the plugin may fail.

6.34.7 Transport Network Address

The address bits not used by the transport plugin for its internal addressing constitute its network address bits.

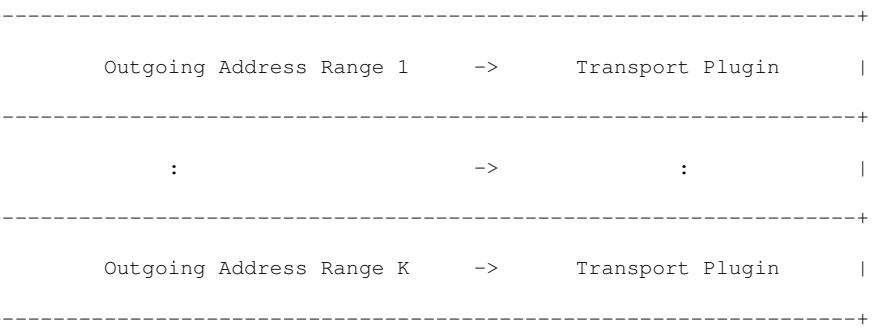
In order for RTI Connext to properly route the messages, each unicast interface in the RTI Connext *domain* must have a unique address. RTI Connext allows the user to specify the value of the network address when installing a transport plugin via the com.rti.ndds.transport.TransportSupport.register_transport() API.

The network address for a transport plugin should be chosen such that the resulting fully qualified 128-bit address will be unique in the RTI Connext domain. Thus, if two instances of a transport plugin are registered with a **com.rti.dds.domain.DomainParticipant** (p. 948), they will be at different network addresses in order for their unicast interfaces to have unique fully qualified 128-bit addresses. It is also possible to create multiple transports with the same network address, as it can be useful for certain use cases; note that this will require special entity configuration for most transports to avoid clashes in resource use (e.g. sockets for UDPv4 transport).

6.34.8 Transport Send Route

By default, a transport plugin is configured to send outgoing messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of outgoing messages via the com.rti.ndds.transport.TransportSupport.add_send_route() API, so that a transport plugin will be used to send messages only to certain ranges of destination addresses. The method can be called multiple times for a transport plugin, with different address ranges.

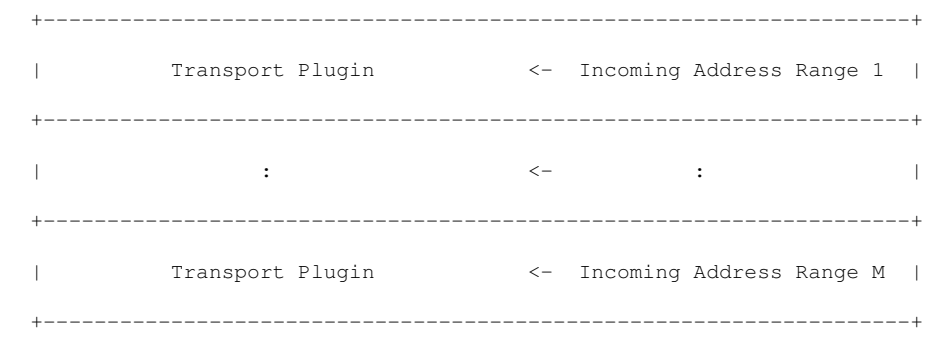


The user can set up a routing table to restrict the use of a transport plugin to send messages to selected addresses ranges.

6.34.9 Transport Receive Route

By default, a transport plugin is configured to receive incoming messages destined to addresses in the network address range at which the plugin was registered.

RTI Connext allows the user to configure the routing of incoming messages via the com.rti.ndds.transport.TransportSupport.add_receive_route() API, so that a transport plugin will be used to receive messages only on certain ranges of addresses. The method can be called multiple times for a transport plugin, with different address ranges.



The user can set up a routing table to restrict the use of a transport plugin to receive messages from selected ranges. For example, the user may restrict a transport plugin to

- receive messages from a certain multicast address range.
- receive messages only on certain unicast interfaces (when multiple unicast interfaces are available on the transport plugin).

6.35 Installing Transport Plugins

Installing and configuring transports used by RTI Connext.

Classes

- class **TransportSupport**
  <<***interface***>> *(p. 403) The utility class used to configure RTI Connext pluggable transports.*

6.35.1 Detailed Description

Installing and configuring transports used by RTI Connext.

There is more than one way to install a transport plugin for use with RTI Connext:

- If it is a builtin transport plugin, by specifying a bitmask in **com.rti.dds.infrastructure.TransportBuiltinQos↩ Policy** (p. 2152) (see **Built-in Transport Plugins** (p. 106))
- For all other non-builtin transport plugins, by dynamically loading the plugin through **PROPERTY** (p. 499) QoS policy settings of **com.rti.dds.domain.DomainParticipant** (p. 948) (only supported on architectures that support dynamic libraries, see **Loading Transport Plugins through Property QoS Policy of Domain Participant** (p. 104))

The lifecycle of the transport plugin is automatically managed by RTI Connext. See **Transport Lifecycle** (p. 99) for details.

6.35.2 Loading Transport Plugins through Property QoS Policy of Domain Participant

On architectures that support dynamic libraries, a non-builtin transport plugin written in C/C++ and built as a dynamic-link library (∗.dll/∗.so) can be loaded by RTI Connext through the **PROPERTY** (p. 499) QoS policy settings of the **com.rti.dds.domain.DomainParticipant** (p. 948).

Dynamic libraries are supported on all architectures except INTEGRITY and certain VxWorks platforms. For VxWorks, dynamic libraries are only supported for architectures that are on Pentium/Arm CPUs AND use kernel mode.

The dynamic-link library (and all the dependent libraries) need to be in the library search path during runtime (in the **LD_LIBRARY_PATH** environment variable on Linux systems, DYLD_LIBRARY_PATH on macOS systems, or **Path** on Windows systems).

To allow dynamic loading of the transport plugin, the transport plugin must implement the RTI Connext abstract transport API and must provide a function with the signature com.rti.ndds.transport.NDDS_Transport_create_plugin that can be called by RTI Connext to create an instance of the transport plugin. The name of the dynamic library that contains the transport plugin implementation, the name of the function and properties that can be used to create the plugin, and the aliases and network address that are used to register the plugin can all be specified through the **PROPERTY** (p. 499) QoS policy of the **com.rti.dds.domain.DomainParticipant** (p. 948).

The following table lists the property names that are used to load the transport plugins dynamically:

Table 6.5 ***Properties for dynamically loading and registering transport plugins***

Property Name	Description	Required?
dds.transport.load_plugins	Comma-separated strings indicating the prefix names of all plugins that will be loaded by RTI Connext. Up to 8 plugins may be specified. For example, "dds.transport.TCPv4.tcp1, dds.transport.TCPv4.tcp2", In the following examples, <TRANSPORT_PREFIX> is used to indicate one element of this string that is used as a prefix in the property names for all the settings that are related to the plugin. <TRANSPORT_PREFIX> must begin with "dds.transport." (such as "dds.transport.mytransport").	**YES**
<TRANSPORT_PREFIX>.library	Should be set to the name of the dynamic library (∗.so for Linux systems, ∗.dylib for macOS systems, and ∗.dll for Windows systems) that contains the transport plugin implementation. This library (and all the other dependent dynamic libraries) needs to be in the library search path used by RTI Connext during run time (pointed to by the environment variable **LD_LIBRARY_PATH** on Linux systems, DYLD_LIBRARY_PATH on macOS systems, or **Path** on Windows systems).	**YES**
<TRANSPORT_PREFIX>.create_function	Should be set to the name of the function with the prototype of com.rti.ndds.transport.NDDS_Transport_create_plugin that can be called by RTI Connext to create an instance of the plugin. The resulting transport plugin will then be registered by RTI Connext through com.rti.ndds.transport.TransportSupport.register_transport	**YES**

Property Name	Description	Required?
<TRANSPORT_PREFIX>.aliases	Used to register the transport plugin returned by com.rti.ndds.transport.NDDS_Transport_create_plugin (as specified by <**TRANSPORT_PREFIX**>**.create_function**) to the **com.rti.dds.domain.DomainParticipant** (p. 948). Refer to **aliases_in** parameter in com.rti.ndds.transport.TransportSupport.register_transport for details. Aliases should be specified as a comma-separated string, with each comma delimiting an alias. If it is not specified, <TRANSPORT_PREFIX> –without the leading "dds.transport" – is used as the default alias for the plugin.	NO
<TRANSPORT_PREFIX>.network_address	Used to register the transport plugin returned by com.rti.ndds.transport.NDDS_Transport_create_plugin (as specified by <**TRANSPORT_PREFIX**>**.create_function**) to the **com.rti.dds.domain.DomainParticipant** (p. 948). Refer to **network_address_in** parameter in com.rti.ndds.transport.TransportSupport.register_transport for details. If it is not specified, the **network_address_out** output parameter from com.rti.ndds.transport.NDDS_Transport_create_plugin is used. The default value is a zeroed out network address.	NO
<TRANSPORT_PREFIX>.<property_name>	Property that is passed into com.rti.ndds.transport.NDDS_Transport_create_plugin (as specified by <**TRANSPORT_PREFIX**>**.create_function**) for creating the transport plugin. This property name-value pair will be passed to com.rti.ndds.transport.NDDS_Transport_create_plugin after stripping out <TRANSPORT_PREFIX> from the property name. The parsing of this property and configuring the transport using this property should be handled by the implementation of each transport plugin. Multiple <TRANSPORT_PREFIX>.<property_name> can be specified. Note: "library", "create_function", "aliases" and "network_address" cannot be used as the <property_name> due to conflicts with other builtin property names.	NO

A transport plugin is dynamically created and registered to the **com.rti.dds.domain.DomainParticipant** (p. 948) by RTI Connext when:

- the **com.rti.dds.domain.DomainParticipant** (p. 948) is enabled,
- the first DataWriter/DataReader is created, or

- you lookup a builtin DataReader (**com.rti.dds.subscription.Subscriber.lookup_datareader** (p. 2049)),

whichever happens first.

Any changes to the transport plugin related properties in the **PROPERTY** (p. 499) QoS policy after the transport plugin has been registered with the **com.rti.dds.domain.DomainParticipant** (p. 948) will have no effect.

6.36 Built-in Transport Plugins

Transport plugins delivered with RTI Connext.

Classes

- interface **ShmemTransport**

  Built-in transport plug-in for inter-process communications using shared memory.
- interface **UDPv4Transport**

  Transport *(*p. *2150) plug-in using UDP/IPv4.*
- interface **UDPv4WanTransport**

  Transport *(*p. *2150) plug-in using UDP/IPv4 for WAN communications..*
- interface **UDPv6Transport**

  Transport *(*p. *2150) plug-in using UDP/IPv6.*

6.36.1 Detailed Description

Transport plugins delivered with RTI Connext.

The **TRANSPORT_BUILTIN** (p. 521) specifies the collection of transport plugins that can be automatically configured and managed by RTI Connext as a convenience to the user.

These transport plugins can simply be turned "on" or "off" by a specifying a bitmask in **com.rti.dds.infrastructure.↩ TransportBuiltinQosPolicy** (p. 2152), thus bypassing the steps for setting up a transport plugin. RTI Connext preconfigures the transport plugin properties, the network address, and the aliases to "factory defined" values.

If a builtin transport plugin is turned "on" in **com.rti.dds.infrastructure.TransportBuiltinQosPolicy** (p. 2152), the plugin is implicitly created and registered to the corresponding **com.rti.dds.domain.DomainParticipant** (p. 948) by RTI Connext when:

- the **com.rti.dds.domain.DomainParticipant** (p. 948) is enabled,
- the first DataWriter/DataReader is created, or
- you lookup a builtin DataReader (**com.rti.dds.subscription.Subscriber.lookup_datareader** (p. 2049)),

whichever happens first.

Each builtin transport contains its own set of properties. For example, the **com.rti.ndds.transport.UDPv4Transport** (p. 2255) allows the application to specify whether or not multicast is supported, the maximum size of the message, and provides a mechanism for the application to filter out network interfaces.

The builtin transport plugin properties can be changed by the method **com.rti.ndds.transport.TransportSupport.set_builtin_transport_property()** (p. 2173) or by using the **PROPERTY** (p. 499) QoS policy associated with the **com.rti.dds.domain.DomainParticipant** (p. 948). Builtin transport plugin properties specified in **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) always overwrite the ones specified through **com.rti.ndds.transport.TransportSupport.set_builtin_transport_property()** (p. 2173). Refer to the specific builtin transport for the list of property names that can be specified through **PROPERTY** (p. 499) QoS policy.

Any changes to the builtin transport properties after the builtin transports have been registered with will have no effect.

com.rti.ndds.transport.TransportSupport.set_builtin_transport_property() (p. 2173) **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739)

6.37 Creating New Transport Plugins

Developing new transport plugins for RTI Connext.

Classes

- interface **Transport**

  RTI Connext's abstract pluggable transport interface.

6.37.1 Detailed Description

Developing new transport plugins for RTI Connext.

RTI Connext provides an abstract "C" language API for creating new transport plugins. If you are interested in creating a new transport plugin for RTI Connext, please contact your RTI representative or email `sales@rti.com`.

6.38 Queries and Filters Syntax

6.38.1 Syntax for DDS Queries and Filters

A subset of the WHERE clause in SQL is used in several parts of the specification:

- The `filter_expression` in the **com.rti.dds.topic.ContentFilteredTopic** (p. 692)
- The `query_expression` in the **com.rti.dds.subscription.QueryCondition** (p. 1812)
- <<***extension***>> *(p. 403)* The `filter_expression` in the **com.rti.dds.subscription.TopicQuerySelection** (p. 2145)
- <<***extension***>> *(p. 403)* The `filter_expression` in the **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666)

Those expressions may use a subset of SQL, extended with the possibility to use program variables in the SQL expression. The allowed SQL expressions are defined with the BNF-grammar below.

The following notational conventions are made:

- *NonTerminals* are typeset in italics.
- `'Terminals'` are quoted and typeset in a fixed width font. They are written in upper case in most cases in the BNF-grammar below, but should be case insensitive.
- **TOKENS** are typeset in bold.
- The notation (*element* // ',') represents a non-empty comma-separated list of *elements*.

6.38.2 SQL grammar in BNF

```
FilterExpression ::= Condition
Condition   ::= Predicate
          |   Condition 'AND' Condition
          |   Condition 'OR' Condition
          |   'NOT' Condition
          |   '(' Condition ')'
Predicate   ::= ComparisonPredicate
          |   BetweenPredicate
ComparisonPredicate ::= ComparisonTerm RelOp ComparisonTerm
ComparisonTerm      ::= FieldIdentifier
                    | Parameter
BetweenPredicate    ::= FieldIdentifier 'BETWEEN' Range
                    |   FieldIdentifier 'NOT BETWEEN' Range
FieldIdentifier      ::= FIELDNAME
                    | IDENTIFIER
RelOp     ::= '=' | '>' | '>=' | '<' | '<=' | '<>' | 'LIKE' | 'MATCH'
Range     ::= Parameter 'AND' Parameter
Parameter ::= INTEGERVALUE
          |   CHARVALUE
          |   FLOATVALUE
          |   STRING
          |   ENUMERATEDVALUE
          |   BOOLEANVALUE
          |   NULLVALUE
          |   PARAMETER
```

6.38.3 Token expression

The syntax and meaning of the tokens used in the SQL grammar is described as follows:

- **IDENTIFIER** - An identifier for a FIELDNAME, and is defined as any series of characters 'a', ..., 'z', 'A', ..., 'Z', '0', ..., '9', '_' but may not start with a digit.

Formal notation:

```
IDENTIFIER:  LETTER ( PART_LETTER)*
where  LETTER: [ "A"-"Z","_","a"-"z" ]
       PART_LETTER: [ "A"-"Z","_","a"-"z","0"-"9" ]
```

- **FIELDNAME** - A fieldname is a reference to a field in the data structure. The dot '.' is used to navigate through nested structures. The number of dots that may be used in a FIELDNAME is unlimited. The FIELDNAME can refer to fields at any depth in the data structure. The names of the field are those specified in the IDL definition of the corresponding structure, which may or may not match the fieldnames that appear on the language-specific (e.g., C/C++, Java) mapping of the structure. To reference to the *n*+1 element in an array or sequence, use the notation '[*n*]', where *n* is a natural number (zero included). FIELDNAME must resolve to a primitive IDL type; that is either boolean, octet, (unsigned) short, (unsigned) long, (unsigned) long long, float double, char, wchar, string, wstring, or enum.

Formal notation:

```
FIELDNAME:  FieldNamePart ( "."  FieldNamePart )*
where  FieldNamePart : IDENTIFIER ( "["  Index "]" )*
       Index> : (["0"-"9"])+
              | ["0x","0X"](["0"-"9", "A"-"F", "a"-"f"])+
```

Primitive IDL types referenced by FIELDNAME are treated as different types in *Predicate* according to the following table:

Predicate Data Type	IDL Type
BOOLEANVALUE	boolean
INTEGERVALUE	octet, (unsigned) short, (unsigned) long, (unsigned) long long
FLOATVALUE	float, double
CHARVALUE	char, wchar
STRING	string, wstring
ENUMERATEDVALUE	enum

- **INTEGERVALUE** - Any series of digits, optionally preceded by a plus or minus sign, representing a decimal integer value within the range of the system. 64-bit integers (int64 and uint64) must be followed by either l or L, otherwise the value is treated as a 32-bit integer. A hexadecimal number is preceded by 0x and must be a valid hexadecimal expression.

Formal notation:

```
INTEGERVALUE : (["+","-"])? (["0"-"9"])+ [("L","l")]?
             | (["+","-"])? ["0x","0X"](["0"-"9", "A"-"F", "a"-"f"])+ [("L","l")]?
```

- **CHARVALUE** - A single character enclosed between single quotes.

Formal notation:

```
CHARVALUE : "'" (~["'"])? "'"
```

- **FLOATVALUE** - Any series of digits, optionally preceded by a plus or minus sign and optionally including a floating point ('.'). A power-of-ten expression may be postfixed, which has the syntax e*n* or E*n*, where *n* is a number, optionally preceded by a plus or minus sign.

Formal notation:

```
FLOATVALUE : (["+","-"])? (["0"-"9"])* (".")? (["0"-"9"])+ ( EXPONENT)?
where  EXPONENT: ["e","E"] (["+","-"])? (["0"-"9"])+
```

- **STRING** - Any series of characters encapsulated in single quotes, except the single quote itself.

Formal notation:

```
STRING : "'" (~["'"])* "'"
```

- **ENUMERATEDVALUE** - An enumerated value is a reference to a value declared within an enumeration. Enumerated values consist of the name of the enumeration label enclosed in single quotes. The name used for the enumeration label must correspond to the label names specified in the IDL definition of the enumeration.

Formal notation:

```
ENUMERATEDVALUE : "'" ["A" - "Z", "a" - "z"] ["A" - "Z", "a" - "z", "_", "0" - "9"]* "'"
```

- **BOOLEANVALUE** - Can either be 'TRUE' or 'FALSE', case insensitive.

Formal notation (case insensitive):

```
BOOLEANVALUE : ["TRUE","FALSE"]
```

- **NULLVALUE** - Can be null, and is case insensitive.

Formal notation (case insensitive):

```
NULLVALUE : "null"
```

- **PARAMETER** - A parameter is of the form %*n*, where *n* represents a natural number (zero included) smaller than 100. It refers to the n + 1 th argument in the given context. Argument can only in primitive type value format. It cannot be a FIELDNAME.

Formal notation:

```
PARAMETER : "%" (["0"-"9"])+
```

6.38.4 String Parameters

Strings used as parameter values must contain the enclosing quotation marks (') within the parameter value, and not place the quotation marks within the expression statement. For example, the following expression is legal:

```
" symbol MATCH %0 " with parameter 0 = " 'IBM' "
```

whereas the following expression will not compile:

```
" symbol MATCH '%0' " with parameter 0 = " IBM "
```

6.38.5 Type compatability in Predicate

Only certain combination of type comparisons are valid in *Predicate*. The following table marked all the compatible pairs with 'YES':

	BOOLEANVALUE	INTEGERVALUE	FLOATVALUE	CHARVALUE	STRING	ENUMERATEDVALUE
BOOLEAN	YES					
INTEGERVALUE		YES	YES			
FLOATVALUE		YES	YES			
CHARVALUE				YES	YES	YES
STRING				YES	YES(∗1)	YES
ENUMERATEDVALUE		YES		YES(∗2)	YES(∗2)	YES(∗3)

- (∗1) See **SQL Extension: Regular Expression Matching** (p. 111)
- (∗2) Because the formal notation of the Enumeration values, they are compatible with string and char literals, but they are not compatible with string or char variables, i.e., "MyEnum='EnumValue'" would be correct, but "My↩ Enum=MyString" is not allowed.
- (∗3) Only for same type Enums.

6.38.6 SQL Extension: Regular Expression Matching

The relational operator MATCH may only be used with string fields. The right-hand operator is a string *pattern*. A string pattern specifies a template that the left-hand field value must match. The characters ,/\?∗[]-^!% have special meanings unless they are escaped by the escape character '\'.

MATCH is case-sensitive.

The pattern allows limited "wild card" matching under the following rules:

Character	Meaning
,	"," separates a list of alternate patterns. The field string is matched if it matches one or more of the patterns.
/	"/" in the pattern string matches a / in the field string. This character is used to separate a sequence of mandatory substrings.
?	"?" in the pattern string matches any single *non-special* characters in the field string.
*	"*" in the pattern string matches 0 or more *non-special* characters in field string.
[*charlist*]	Matches any one of the characters from the list of characters in *charlist*.
[*s-e*]	Matches any character any character from *s* to *e*, inclusive.
%	"%" is used to designate filter expressions parameters.
[!*charlist*] or [^*charlist*]	Matches any characters not in *charlist* (not supported).
[!*s-e*] or [^*s-e*]	Matches any characters not in the interval [s-e] (not supported).
\	Escape character for special characters.

The syntax is similar to the POSIX fnmatch syntax (1003.2-1992 section B.6). The MATCH syntax is also similar to the 'subject' strings of TIBCO Rendezvous.

Note: To use special characters as regular characters in regular expressions, you must escape them using the character '\'. For example, 'A[' is considered a malformed expression and the result is undefined.

6.38.7 Character Encoding

The default encoding for IDL strings is UTF-8. RTI Connext offers ISO 8859-1 as an alternative encoding for IDL strings.

In order to configure ISO 8859-1 as the encoding for filtering of IDL strings, you can set the DomainParticipant property **dds.domain_participant.filtering_character_encoding** to ISO-8859:

The possible values for **dds.domain_participant.filtering_character_encoding** are:

- **UTF-8** (default value)
- **ISO-8859-1**

6.38.8 Unicode Normalization

Unicode supports multiple ways to encode some characters, most notably accented characters. A composed character in Unicode can often have a number of different ways of representing the character. For example:

- Precomposed is represented by \u1e3c
- Composed = L + ^ is represented by \u004c + \u032d

The lexical comparison of the two characters above will return false. In order to do the correct comparison the characters need to be normalized, that is, reduced to the same character composition.

When the character encoding for filtering of IDL strings is UTF-8, the Unicode normalization behavior can be controlled using a DomainParticipant property called **dds.domain_participant.filtering_unicode_normalization**.

The possible values of the normalization property are:

- **OFF**: Disables normalization
- **NFD**: Canonical Decomposition
- **NFC (default value)**: Canonical Decomposition, followed by Canonical Composition
- **NFK**: Compatibility Decomposition, followed by Canonical Composition
- **NFKC_Casefold**: Casefold followed by NFKC normalization

Because normalization may affect performance, and it is enabled by default, the property allows disabling the normalization process per DomainParticipant using the value OFF. However, you should be aware that doing this may lead to unexpected behavior.

6.38.9 Examples

Assuming Topic "Location" has as an associated type a structure with fields "flight_id, x, y, z", and Topic "FlightPlan" has as fields "flight_id, source, destination". The following are examples of using these expressions.

Example of a **filter_expression** (for **com.rti.dds.topic.ContentFilteredTopic** (p. 692)) or a **query_expression** (for **com.rti.dds.subscription.QueryCondition** (p. 1812)):

- `"z < 1000 AND x < 23"`

Examples of a **filter_expression** using **MATCH** (for **com.rti.dds.topic.ContentFilteredTopic** (p. 692)) operator:

- `"symbol MATCH 'NASDAQ/GOOG'"`
- `"symbol MATCH 'NASDAQ/[A-M]*'"`

6.39 Logging and Version

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

Modules

- **Logging**

  Configure how much debugging information is reported during runtime and where it is logged.
- **Version**

  Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.

6.39.1 Detailed Description

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

6.40 General Utilities and Compliance Configuration

API of general utilities used in the RTI Connext distribution.

Modules

- **Heap Monitoring**

  Monitor memory allocations done by the middleware on the native heap.
- **Network Capture**

  Save network traffic into a capture file for further analysis.
- **Other Utilities**

  Other Utilities, such as com.rti.ndds.utility.Utility.spin.

6.40.1 Detailed Description

API of general utilities used in the RTI Connext distribution.

6.41 Observability Framework

RTI Connext Observability Framework modules and APIs.

Modules

- **Monitoring Library 2.0**

  RTI Monitoring Library 2.0 public API.

6.41.1 Detailed Description

RTI Connext Observability Framework modules and APIs.

RTI Connext Observability Framework is a holistic solution that uses telemetry data to provide deep visibility into the current and past states of your RTI Connext applications.

6.42 Request-Reply Pattern

Support for the request-reply communication pattern.

Modules

- **Requester**

  com.rti.connext.requestreply.Requester<TReq,TRep> and associated elements
- **Replier**

  com.rti.connext.requestreply.Replier<TReq,TRep>, com.rti.connext.requestreply.SimpleReplier<TReq,TRep> and associated elements

6.42.1 Detailed Description

Support for the request-reply communication pattern.

There are two basic entities that enable this pattern:

- com.rti.connext.requestreply.Requester<TReq,TRep>
- com.rti.connext.requestreply.Replier<TReq,TRep> (and a simpler version com.rti.connext.requestreply.Simple↩ Replier<TReq,TRep>)

This functionality is built on top of RTI Connext.

A Requester publishes a request topic and subscribes to a reply topic. A Replier subscribes to the request topic and publishes the reply topic.

You can find more information about this pattern in `Request-Reply`, in the Core Libraries User's Manual.

See also

Request-Reply Examples (p. 391).

6.43 Requester

com.rti.connext.requestreply.Requester<TReq,TRep> and associated elements

Classes

- class **RequesterParams**

  Contains the parameters for creating a com.rti.connext.requestreply.Requester<TReq,TRep>
- class **Requester< TReq, TRep >**

  Allows sending requests and receiving replies.

6.43.1 Detailed Description

com.rti.connext.requestreply.Requester<TReq,TRep> and associated elements

6.44 Replier

com.rti.connext.requestreply.Replier<TReq,TRep>, com.rti.connext.requestreply.SimpleReplier<TReq,TRep> and associated elements

Classes

- interface **ReplierListener< TReq, TRep >**

  Called when a com.rti.connext.requestreply.Replier<TReq,TRep> has new available requests.
- class **ReplierParams< TReq, TRep >**

  Contains the parameters for creating a com.rti.connext.requestreply.Replier<TReq,TRep>.
- interface **SimpleReplierListener< TReq, TRep >**

  *The listener called by a **SimpleReplier** (p. 2001).*
- class **SimpleReplierParams< TReq, TRep >**

  Contains the parameters for creating a com.rti.connext.requestreply.SimpleReplier<TReq,TRep>
- class **Replier< TReq, TRep >**

  Allows receiving requests and sending replies.
- class **SimpleReplier< TReq, TRep >**

  A callback-based replier.

6.44.1 Detailed Description

com.rti.connext.requestreply.Replier<TReq,TRep>, com.rti.connext.requestreply.SimpleReplier<TReq,TRep> and associated elements

6.45 Infrastructure

Infrastructure types for Request-Reply.

Modules

- **RTI Connext Exceptions**

  RTI Connext return-code exceptions.

Classes

- interface **Sample**< **T** >

  A data sample and related info received from the middleware.
- interface **Sample**< **T** >**.Iterator**< **T** >

  Provides access to a collection of middleware-loaned samples.
- interface **SampleData**< **T** >

  Sample *(p. 1936) base type that contains data and has an identity.*
- interface **WriteSample**< **T** >

  A sample for writing data.

6.45.1 Detailed Description

Infrastructure types for Request-Reply.

This section describes the sample types used for reading and writing. These types encapsulate data and related information:

- com.rti.connext.infrastructure.Sample<T> (used for reading)
- com.rti.connext.infrastructure.WriteSample<T> (used for writing)

There are different operations that provide loaned samples from the middleware. They return a com.rti.connext.↩ infrastructure.Sample<T>.Iterator<T>.

6.46 Utilities

Utilities for the RTI Connext Messaging module.

Utilities for the RTI Connext Messaging module.

Connext Messaging Utilities

6.47 Durability and Persistence

APIs related to RTI Connext Durability and Persistence.

APIs related to RTI Connext Durability and Persistence.

RTI Connext offers the following mechanisms for achieving durability and persistence:

- **Durable Writer History** (p. 118)
- **Durable Reader State** (p. 118)
- **Data Durability** (p. 118)

To use the first two features, you need a relational database, which is not included with RTI Connext. Supported databases are listed in the `Release Notes`.

The third feature, provided by RTI Persistence Service, can use the filesystem or a relational database to persist information.

These three features can be used separately or in combination.

6.47.1 Durable Writer History

This feature allows a **com.rti.dds.publication.DataWriter** (p. 818) to locally persist its local history cache so that it can survive shutdowns, crashes and restarts. When an application restarts, each **com.rti.dds.publication.DataWriter** (p. 818) that has been configured to have durable writer history automatically loads all the data in its history cache from disk and can carry on sending data as if it had never stopped executing. To the rest of the system, it will appear as if the **com.rti.dds.publication.DataWriter** (p. 818) had been temporarily disconnected from the network and then reappeared.

See also

Configuring Durable Writer History (p. 119)

6.47.2 Durable Reader State

This feature allows a **com.rti.dds.subscription.DataReader** (p. 707) to locally persists its state and remember the sequence numbers it has already received. When an application restarts, each **com.rti.dds.subscription.DataReader** (p. 707) that has been configured to have durable reader state automatically loads its state from disk and can carry on receiving data as if it had never stopped executing. Data that had already been received by the **com.rti.dds.↩ subscription.DataReader** (p. 707) before the restart will will not be provided to the application again.

See also

Configuring Durable Reader State (p. 121)

6.47.3 Data Durability

This feature is a full implementation of the OMG DDS Persistence Profile. The **DURABILITY** (p. 481) QoS lets an application configure a **com.rti.dds.publication.DataWriter** (p. 818) such that the information written by the **com.rti.↩ dds.publication.DataWriter** (p. 818) survives beyond the lifetime of the **com.rti.dds.publication.DataWriter** (p. 818). In this manner, a late-joining **com.rti.dds.subscription.DataReader** (p. 707) can subscribe and receive the information even after the **com.rti.dds.publication.DataWriter** (p. 818) application is no longer executing. To use this feature, you need RTI Persistence Service – an optional product that can be purchased separately.

6.47.4 Durability and Persistence Based on Virtual GUID

Every modification to the global dataspace made by a **com.rti.dds.publication.DataWriter** (p. 818) is identified by a pair (virtual GUID, sequence number).

- The virtual GUID (Global Unique Identifier) is a 16-byte character identifier associated with a **com.rti.dds.↩ publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707); it is used to uniquely identify this entity in the global data space.

- The sequence number is a 64-bit identifier that identifies changes published by a specific **com.rti.dds.publication.DataWriter** (p. 818).

Several **com.rti.dds.publication.DataWriter** (p. 818) entities can be configured with the same virtual GUID. If each of these **com.rti.dds.publication.DataWriter** (p. 818) entities publishes a sample with sequence number '0', the sample will only be received once by the **com.rti.dds.subscription.DataReader** (p. 707) entities subscribing to the content published by the **com.rti.dds.publication.DataWriter** (p. 818) entities.

RTI Connext also uses the virtual GUID (Global Unique Identifier) to associate a persisted state (state in permanent storage) to the corresponding DDS entity.

For example, the history of a **com.rti.dds.publication.DataWriter** (p. 818) will be persisted in a database table with a name generated from the virtual GUID of the **com.rti.dds.publication.DataWriter** (p. 818). If the **com.rti.dds.publication.DataWriter** (p. 818) is restarted, it must have associated the same virtual GUID to restore its previous history.

Likewise, the state of a **com.rti.dds.subscription.DataReader** (p. 707) will be persisted in a database table whose name is generated from the **com.rti.dds.subscription.DataReader** (p. 707) virtual GUID

A **com.rti.dds.publication.DataWriter** (p. 818)'s virtual GUID can be configured using **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.virtual_guid** (p. 862). Similarly, a **com.rti.dds.subscription.DataReader** (p. 707)'s virtual GUID can be configured using **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.virtual_guid** (p. 762).

The **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753) and **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) structures include the virtual GUID associated with the discovered publication or subscription.

Refer to the `User's Manual` for additional use cases.

6.47.5 Configuring Durable Writer History

To configure a **com.rti.dds.publication.DataWriter** (p. 818) to have durable writer history, use the **PROPERTY** (p. 499) QoS policy associated with the **com.rti.dds.publication.DataWriter** (p. 818) or the **com.rti.dds.domain.DomainParticipant** (p. 948).

Properties defined for the **com.rti.dds.domain.DomainParticipant** (p. 948) will be applied to all the **com.rti.dds.publication.DataWriter** (p. 818) objects belonging to the **com.rti.dds.domain.DomainParticipant** (p. 948), unless the property is overwritten by the **com.rti.dds.publication.DataWriter** (p. 818).

See also

com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)

The following table lists the supported durable writer history properties.

Table 6.9 *Durable Writer History Properties*

Property	Description
dds.data_writer.history.plugin_name	Must be set to "dds.data_writer.history.odbc_plugin.↩ builtin" to enable durable writer history in the DataWriter. This property is required.
dds.data_writer.history.odbc_plugin.builtin.dsn	The ODBC DSN (Data Source Name) associated with the database where the writer history must be persisted. This property is required.
dds.data_writer.history.odbc_plugin.builtin.driver	This property tells RTI Connext which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library↩ : UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems.
dds.data_writer.history.odbc_plugin.builtin.username	Configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.password	Configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_writer.history.odbc_plugin.builtin.shared	If set to 1, RTI Connext creates a single connection per DSN that will be shared across DataWriters within the same Publisher. If set to 0 (the default), a **com.rti.↩ dds.publication.DataWriter** (p. 818) will create its own database connection. Default: 0
dds.data_writer.history.odbc_plugin.builtin.instance_↩ cache_max_size	These properties configure the resource limits associated with the ODBC writer history caches. To minimize the number of accesses to the database, RTI Connext uses two caches, one for samples and one for instances. The initial and maximum sizes of these caches are configured using these properties. The resource limits initial_instances, max_instances, initial↩ _samples, max_samples and max_samples_per_↩ instance in the **com.rti.dds.infrastructure.Resource↩ LimitsQosPolicy** (p. 1894) are used to configure the maximum number of samples and instances that can be stored in the relational database. Default↩ : **com.rti.dds.infrastructure.ResourceLimitsQos↩ Policy.max_instances** (p. 1896)
dds.data_writer.history.odbc_plugin.builtin.instance_↩ cache_init_size	See description above. Default: **com.rti.dds.↩ infrastructure.ResourceLimitsQosPolicy.initial_↩ instances** (p. 1898)
dds.data_writer.history.odbc_plugin.builtin.sample_↩ cache_max_size	See description above. Default: 32 (the minimum)
dds.data_writer.history.odbc_plugin.builtin.sample_↩ cache_init_size	See description above. Default: 32

Property	Description
dds.data_writer.history.odbc_plugin.builtin.restore	This property indicates whether or not the persisted writer history must be restored once the **com.rti.dds.publication.DataWriter** (p. 818) is restarted. If the value is 0, the content of the database associated with the **com.rti.dds.publication.DataWriter** (p. 818) being restarted will be deleted. If the value is 1, the **com.rti.dds.publication.DataWriter** (p. 818) will restore its previous state from the database content. Default: 1
dds.data_writer.history.odbc_plugin.builtin.in_memory_state	This property determines how much state will be kept in memory by the ODBC writer history in order to avoid accessing the database. When in_memory_state is equal to 1, instance_cache_max_size is always equal to **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896) (it cannot be changed). In addition, the ODBC writer history will keep in memory a fixed state overhead of 24 bytes per sample. In this operating mode, the ODBC writer history provides the best performance. However, the restore operation will be slower and the maximum number of samples that the writer history can manage will be limited by the available physical memory. If in_memory_state is equal to 0, all the state will be kept in the underlying database. In this operating mode, the maximum number of samples in the writer history will not be limited by the physical memory available unless the underlying database is an in-memory database (TimesTen). Default: 1

6.47.6 Configuring Durable Reader State

To configure a **com.rti.dds.subscription.DataReader** (p. 707) with durable reader state, use the **PROPERTY** (p. 499) QoS policy associated with the **com.rti.dds.subscription.DataReader** (p. 707) or **com.rti.dds.domain.DomainParticipant** (p. 948).

A property defined in the **com.rti.dds.domain.DomainParticipant** (p. 948) will be applicable to all the **com.rti.dds.subscription.DataReader** (p. 707) belonging to the **com.rti.dds.domain.DomainParticipant** (p. 948) unless it is overwritten by the **com.rti.dds.subscription.DataReader** (p. 707).

See also

com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)

The following table lists the supported durable reader state properties.

Table 6.10 ***Durable Reader State Properties***

Property	Description
dds.data_reader.state.odbc.dsn	The ODBC DSN (Data Source Name) associated with the database where the **com.rti.dds.subscription.DataReader** (p. 707) state must be persisted. This property is required.
dds.data_reader.state.filter_redundant_samples	To enable durable reader state, this property must be set to 1. Otherwise, the reader state will not be kept and/or persisted. When the reader state is not maintained, RTI Connext does not filter duplicate samples that may be coming from the same virtual writer. By default, this property is set to 1.
dds.data_reader.state.odbc.driver	This property is used to indicate which ODBC driver to load. If the property is not specified, RTI Connext will try to use the standard ODBC driver manager library: UnixOdbc (odbc32.dll) on Linux systems; the Windows ODBC driver manager (libodbc.so) on Windows systems).
dds.data_reader.state.odbc.username	This property configures the username used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.odbc.password	This property configures the password used to connect to the database. This property is not used if it is unspecified. There is no default value.
dds.data_reader.state.restore	This property indicates if the persisted **com.rti.dds.subscription.DataReader** (p. 707) state must be restored or not once the **com.rti.dds.subscription.DataReader** (p. 707) is restarted. If this property is 0, the previous state will be deleted from the database. If it is 1, the **com.rti.dds.subscription.DataReader** (p. 707) will restore its previous state from the database content. Default: 1
dds.data_reader.state.checkpoint_frequency	This property controls how often the reader state is stored in the database. A value of N means to store the state once every N samples. A high value will provide better performance. However, if the reader is restarted it may receive some duplicate samples. These samples will be filtered by the middleware and they will not be propagated to the application. Default: 1
dds.data_reader.state.persistence_service.request_depth	This property indicates the number of most recent historical samples that the persisted **com.rti.dds.subscription.DataReader** (p. 707) wants to receive when it starts up. Default: 0

6.47.7 Configuring Data Durability

RTI Connext implements com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT_↩ DURABILITY_QOS and com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_↩ DURABILITY_QOS durability using RTI Persistence Service, available for purchase as a separate RTI product.

For more information on RTI Persistence Service, refer to the `User's Manual`, or the RTI Persistence Service API Reference HTML documentation.

DURABILITY (p. 481)

6.48 Basic QoS

QoS that are considered basic and fundamental to RTI Connext.

QoS that are considered basic and fundamental to RTI Connext.

This page lists all QoS that are considered Basic. Basic QoS are applicable to many different use cases, are widely applicable to almost any customer, and should be relatively easy to understand and set.

These are QoS policies and fields that you should be aware of even if you are not setting them today. These QoS are fundamental to DDS and to RTI Connext, and showcase RTI Connext capabilities and features.

All other Qos are applicable to a smaller subset of use cases and customers, or are finer-grained controls for a Basic QoS.

com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**kind** (p. 1119)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of durability.
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**writer_depth** (p. 1119)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Indicates the number of samples per instance that a durable **com.rti.dds.publication.DataWriter** (p. 818) will send to a late-joining **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**compression_settings** (p. 812)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Structure that contains the compression settings.
com.rti.dds.infrastructure.DeadlineQosPolicy (p. 900)	**period** (p. 902)

	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Duration of the deadline period.
com.rti.dds.infrastructure.OwnershipQosPolicy (p. 1640)	**kind** (p. 1644)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The kind of ownership
com.rti.dds.infrastructure.OwnershipStrengthQosPolicy (p. 1646)	**value** (p. 1647)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The strength value used to arbitrate among multiple writers.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**kind** (p. 1538)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The kind of liveliness desired.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**lease_duration** (p. 1538)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The duration within which a **com.rti.dds.publication.DataWriter** (p. 818) must be asserted, or else it is assumed to be not alive.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**assertions_per_lease_duration** (p. 1538)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of assertions a **com.rti.dds.publication.DataWriter** (p. 818) will send during a its **com.rti.dds.infrastructure.LivelinessQosPolicy.lease_duration** (p. 1538).
com.rti.dds.infrastructure.TimeBasedFilterQosPolicy (p. 2113)	**minimum_separation** (p. 2115)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The minimum separation duration between subsequent samples.
com.rti.dds.infrastructure.PartitionQosPolicy (p. 1664)	**name** (p. 1666)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* A list of partition names
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**kind** (p. 1831)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Kind of reliability.

com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**max_blocking_time** (p. 1831)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The maximum time a DataWriter can block on a write() call.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**kind** (p. 905)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the desired kind of destination order.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**kind** (p. 1437)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the kind of history to be kept.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**depth** (p. 1438)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the number of samples per instance to be kept, when the `kind` is com.rti.dds.infrastructure.HistoryQosPolicy↩ Kind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_↩ QOS
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum samples the middleware can store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum number of instances a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_samples** (p. 1897)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial samples the middleware will store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_instances** (p. 1898)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial number of instances a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) will manage.

com.rti.dds.infrastructure.EntityFactoryQosPolicy (p. 1326)	**autoenable_created_entities** (p. 1327)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies whether the entity acting as a factory automatically enables the instances it creates.
com.rti.dds.infrastructure.LifespanQosPolicy (p. 1526)	**duration** (p. 1528)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Maximum duration for the data's validity.
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**kind** (p. 1798)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Publishing mode
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**participant_id** (p. 2303)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* A value used to distinguish among different participants belonging to the same domain on the same host.
com.rti.dds.infrastructure.TransportBuiltinQos↩ Policy (p. 2152)	**mask** (p. 2153)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the built-in transports that are registered automatically when the **com.rti.dds.domain.DomainParticipant** (p. 948) is enabled.
com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**value** (p. 2163)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* A sequence of multicast communications settings.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**initial_peers** (p. 945)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**multicast_receive_addresses** (p. 944)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.

com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**accept_unknown_peers** (p. 946)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Whether to accept a new participant that is not in the initial peers list.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_liveliness_lease_duration** (p. 918)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The liveliness lease duration for the participant.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_liveliness_assert_period** (p. 919)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The period to assert liveliness for the participant.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_announcement_period** (p. 919)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**initial_participant_announcements** (p. 921)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of initial announcements sent when a participant is first enabled.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**new_remote_participant_announcements** (p. 921)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of participant announcements sent when a remote participant is newly discovered.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**min_initial_participant_announcement_period** (p. 922)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**max_initial_participant_announcement_period** (p. 922)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**heartbeat_period** (p. 1914)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The period at which to send heartbeats.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**fast_heartbeat_period** (p. 1914)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**late_joiner_heartbeat_period** (p. 1915)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_send_window_size** (p. 1924)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Minimum size of send window of unacknowledged samples
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_send_window_size** (p. 1924)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Maximum size of send window of unacknowledged samples
com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)	**value** (p. 1741)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of properties.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**name** (p. 1329)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The name of the entity.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**enable** (p. 608)

	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Specifies whether or not batching is enabled.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_data_bytes** (p. 608)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The maximum cumulative length of all serialized samples in a batch.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_samples** (p. 609)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The maximum number of samples in a batch.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**string_profile** (p. 1693)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Sequence of strings containing a XML document to load.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**url_profile** (p. 1694)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Sequence of **URL groups** (p. 367) containing a set of XML documents to load.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_user_profile** (p. 1694)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_environment_profile** (p. 1694)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 367).
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_resource_profile** (p. 1695)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Ignores the file NDDS_QOS_PROFILES.xml.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**verbosity** (p. 1569)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The verbosities at which RTI Connext diagnostic information is logged.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**category** (p. 1569)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Categories of logged messages.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file** (p. 1570)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Specifies the file to which log messages will be redirected to.

com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file_suffix** (p. 1570)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Sets the file suffix when logging to a set of files
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**publication_period** (p. 1598)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**polling_period** (p. 1610)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Period at which the periodic metric thread polls and publishes the periodic metrics.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**max_historical_logs** (p. 1601)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**publication_period** (p. 1602)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Period at which the logging thread publishes log messages.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**enable** (p. 1591)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Enables the use of a dedicated **com.rti.dds.domain.↩ DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**domain_id** (p. 1591)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The domain ID used in the creation of RTI Monitoring Library 2.0 **com.rti.dds.domain.DomainParticipant** (p. 948).
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**collector_initial_peers** (p. 1592)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **com.rti.dds.infrastructure.Monitoring↩ DistributionSettings.dedicated_participant** (p. 1594).
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**middleware_forwarding_level** (p. 1603)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 1560) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**security_event_forwarding_level** (p. 1603)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**service_forwarding_level** (p. 1604)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**user_forwarding_level** (p. 1604)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_USER** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**metrics** (p. 1615)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of **com.rti.dds.infrastructure.Monitoring↩ MetricSelection** (p. 1605) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**logs** (p. 1615)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* **com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings** (p. 1602) containing the **com.rti.↩ ndds.config.SyslogVerbosity** (p. 2086) levels that will be forwarded for the different **com.rti.ndds.config.↩ LogFacility** (p. 1558).
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**enable** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**application_name** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The name of the resource that represents this RTI Connext application.
com.rti.dds.infrastructure.TopicQueryDispatch↩ QosPolicy (p. 2142)	**publication_period** (p. 2144)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sets the periodic interval at which samples are published.

6.49 DDS Specification QoS

QoS that are defined in one of the OMG DDS Specifications.

QoS that are defined in one of the OMG DDS Specifications.

This page lists the QoS that are included in an OMG DDS specification. The standards are listed here: `https↩ ://www.omg.org/spec/category/omg-data-distribution-service/`.

com.rti.dds.infrastructure.UserDataQosPolicy (p. 2272)	**value** (p. 2273)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.GroupDataQosPolicy (p. 1419)	**value** (p. 1420)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**kind** (p. 1119)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of durability.

com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**service_cleanup_delay** (p. 1124)
	<<***spec***>> *(p. 132)* Controls when the service is able to remove all information regarding a data instances.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_kind** (p. 1125)
	<<***spec***>> *(p. 132)* The kind of history to apply in recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_depth** (p. 1125)
	<<***spec***>> *(p. 132)* Setting to use for the **com.rti.↩ dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119) when recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples** (p. 1125)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**value** (p. 812)
	<<***spec***>> *(p. 132)* Sequence of representation identifiers.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**access_scope** (p. 1682)
	<<***spec***>> *(p. 132)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.

com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**coherent_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**ordered_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.DeadlineQosPolicy (p. 900)	**period** (p. 902)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Duration of the deadline period.
com.rti.dds.infrastructure.LatencyBudgetQosPolicy (p. 1523)	**duration** (p. 1525)
	<<***spec***>> *(p. 132)* Duration of the maximum acceptable delay.
com.rti.dds.infrastructure.OwnershipQosPolicy (p. 1640)	**kind** (p. 1644)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of ownership
com.rti.dds.infrastructure.OwnershipStrengthQosPolicy (p. 1646)	**value** (p. 1647)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The strength value used to arbitrate among multiple writers.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**kind** (p. 1538)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of liveliness desired.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**lease_duration** (p. 1538)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The duration within which a **com.rti.dds.publication.DataWriter** (p. 818) must be asserted, or else it is assumed to be not alive.
com.rti.dds.infrastructure.TimeBasedFilterQosPolicy (p. 2113)	**minimum_separation** (p. 2115)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The minimum separation duration between subsequent samples.

com.rti.dds.infrastructure.PartitionQosPolicy (p. 1664)	**name** (p. 1666)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* A list of partition names
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**kind** (p. 1831)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Kind of reliability.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**max_blocking_time** (p. 1831)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The maximum time a DataWriter can block on a write() call.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**kind** (p. 905)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the desired kind of destination order.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**scope** (p. 905)
	<<***spec***>> *(p. 132)* Specifies the desired scope of the source destination order.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**kind** (p. 1437)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the kind of history to be kept.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**depth** (p. 1438)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the number of samples per instance to be kept, when the `kind` is com.rti.dds.infrastructure.HistoryQosPolicy↩ Kind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_↩ QOS
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum samples the middleware can store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)

	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum number of instances a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples_per_instance** (p. 1897)
	<<***spec***>> *(p. 132)* Represents the maximum number of samples of any one instance a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.EntityFactoryQosPolicy (p. 1326)	**autoenable_created_entities** (p. 1327)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies whether the entity acting as a factory automatically enables the instances it creates.
com.rti.dds.infrastructure.TransportPriorityQosPolicy (p. 2168)	**value** (p. 2170)
	<<***spec***>> *(p. 132)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
com.rti.dds.infrastructure.LifespanQosPolicy (p. 1526)	**duration** (p. 1528)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Maximum duration for the data's validity.
com.rti.dds.infrastructure.WriterDataLifecycleQosPolicy (p. 2320)	**autodispose_unregistered_instances** (p. 2321)
	<<***spec***>> *(p. 132)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **com.rti.dds.publication.DataWriter** (p. 818) unregisters from the instance by means of the unregister operations.
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_nowriter_samples_delay** (p. 1824)
	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_disposed_samples_delay** (p. 1824)

	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**kind** (p. 2248)
	<<***spec***>> *(p. 132)* Type consistency kind.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_sequence_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether sequence bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_string_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether string bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_member_names** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether member names are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**prevent_type_widening** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type widening is allowed.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**force_type_validation** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type information must be available in order to complete matching between a **com.rti.dds.publication.DataWriter** (p. 818) and a **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_enum_literal_names** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether enumeration constant names are taken into consideration for type assignability.

com.rti.dds.infrastructure.DataTagQosPolicy (p. 813)	**tags** (p. 814)
	<<***spec***>> *(p. 132)* Sequence of data tags.

6.50 DDS Extension QoS

QoS that are RTI extensions to the DDS standard.

QoS that are RTI extensions to the DDS standard.

This page lists all of the QoS that are RTI extensions of the DDS Standard. The extension QoS complement the standard QoS specified by the OMG DDS specifications. They are provided to improve product usability and enable access to product-specific features.

com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**enable_required_subscriptions** (p. 600)
	<<***extension***>> *(p. 138)* Enables support for required subscriptions in a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_data_availability_waiting_time** (p. 600)
	<<***extension***>> *(p. 138)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_endpoint_availability_waiting_time** (p. 600)
	<<***extension***>> *(p. 138)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**required_matched_endpoint_groups** (p. 601)
	<<***extension***>> *(p. 138)* A sequence of endpoint groups.
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**direct_communication** (p. 1119)
	<<***extension***>> *(p. 138)* Indicates whether or not a TRANSIENT or PERSISTENT **com.rti.dds.subscription.DataReader** (p. 707) should receive samples directly from a TRANSIENT or PERSISTENT **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**writer_depth** (p. 1119)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Indicates the number of samples per instance that a durable **com.rti.dds.publication.DataWriter** (p. 818) will send to a late-joining **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**storage_settings** (p. 1120)
	<<***extension***>> *(p. 138)* Configures durable writer history and durable reader state.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**enable** (p. 1671)
	<<***extension***>> *(p. 138)* Enables durable writer history in a **com.rti.dds.publication.DataWriter** (p. 818) and durable reader state in a **com.rti.dds.↩ subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**file_name** (p. 1671)
	<<***extension***>> *(p. 138)* The file name where the durable writer history or durable reader state will be stored.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**trace_file_name** (p. 1671)
	<<***extension***>> *(p. 138)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**journal_kind** (p. 1672)
	<<***extension***>> *(p. 138)* Sets the journal mode of the persistent storage.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**synchronization_kind** (p. 1672)
	<<***extension***>> *(p. 138)* Sets the level of synchronization with the physical disk.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**vacuum** (p. 1672)
	<<***extension***>> *(p. 138)* Sets the auto-vacuum status of the storage.

com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**restore** (p. 1673)
	<<***extension***>> *(*p. *138)* Indicates if the persisted writer history or reader state must be restored.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_instance_cache_allocation** (p. 1673)
	<<***extension***>> *(*p. *138)* Configures the resource limits associated with the instance durable writer history cache.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_sample_cache_allocation** (p. 1674)
	<<***extension***>> *(*p. *138)* Configures the resource limits associated with the sample durable writer history cache.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_memory_state** (p. 1675)
	<<***extension***>> *(*p. *138)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**reader_checkpoint_frequency** (p. 1676)
	<<***extension***>> *(*p. *138)* Controls how often the reader state is stored into the database.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**compression_ids** (p. 683)
	<<***extension***>> *(*p. *138)* Mask that represents the compression algorithms enabled.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**writer_compression_level** (p. 684)
	<<***extension***>> *(*p. *138)* The level of compression to use when compressing data.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**writer_compression_threshold** (p. 685)
	<<***extension***>> *(*p. *138)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**compression_settings** (p. 812)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Structure that contains the compression settings.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**drop_incomplete_coherent_set** (p. 1683)
	<<***extension***>> *(p. 138)* Indicates whether or not a **com.rti.dds.subscription.DataReader** (p. 707) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**assertions_per_lease_duration** (p. 1538)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The number of assertions a **com.rti.dds.publication.DataWriter** (p. 818) will send during a its **com.rti.dds.infrastructure.LivelinessQosPolicy.lease_duration** (p. 1538).
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**acknowledgment_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Kind of reliable acknowledgment
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**instance_state_consistency_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Whether instance state consistency is enabled
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**exact_reliability_kind_match** (p. 1833)
	<<***extension***>> *(p. 138)* Whether an exact reliability kind match is required for endpoint matching.
com.rti.dds.infrastructure.DestinationOrderQosPolicy (p. 903)	**source_timestamp_tolerance** (p. 905)
	<<***extension***>> *(p. 138)* Allowed tolerance between source timestamps of consecutive samples.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_samples** (p. 1897)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial samples the middleware will store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_instances** (p. 1898)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial number of instances a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) will manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**instance_hash_buckets** (p. 1898)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Number of hash buckets for instances.
com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**plugin_data** (p. 2254)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Value to pass into the type plugin's de-/serialization function
com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**cdr_padding_kind** (p. 2254)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**kind** (p. 1798)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Publishing mode
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**flow_controller_name** (p. 1798)
	<<***extension***>> *(p. 138)* Name of the associated flow controller
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**priority** (p. 1799)
	<<***extension***>> *(p. 138)* Publication priority
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**disable_asynchronous_write** (p. 594)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Disable asynchronous publishing.
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**thread** (p. 594)
	<<***extension***>> *(p. 138)* Settings of the publishing thread.
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**disable_asynchronous_batch** (p. 595)

	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Disable asynchronous batch flushing.
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**asynchronous_batch_thread** (p. 595)
	<<***extension***>> *(p. 138)* Settings of the batch flushing thread.
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**disable_topic_query_publication** (p. 596)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Disable topic query publication.
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**topic_query_publication_thread** (p. 596)
	<<***extension***>> *(p. 138)* Settings of the **com.rti.dds.subscription.TopicQuery** (p. 2139) publication thread.
com.rti.dds.infrastructure.WriterDataLifecycleQosPolicy (p. 2320)	**autopurge_unregistered_instances_delay** (p. 2321)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has unregistered the instance.
com.rti.dds.infrastructure.WriterDataLifecycleQosPolicy (p. 2320)	**autopurge_disposed_instances_delay** (p. 2322)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has disposed the instance.
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_disposed_instances_delay** (p. 1824)
	<<***extension***>> *(p. 138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_nowriter_instances_delay** (p. 1825)

	<<***extension***>> *(*p. *138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.dds.↩ subscription.InstanceStateKind.NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**participant_id** (p. 2303)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* A value used to distinguish among different participants belonging to the same domain on the same host.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_host_id** (p. 2304)
	<<***extension***>> *(*p. *138)* The RTPS Host ID of the domain participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_app_id** (p. 2305)
	<<***extension***>> *(*p. *138)* The RTPS App ID of the domain participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_instance_id** (p. 2305)
	<<***extension***>> *(*p. *138)* The RTPS Instance ID of the **com.rti.dds.domain.DomainParticipant** (p. 948).
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_well_known_ports** (p. 2304)
	<<***extension***>> *(*p. *138)* Configures the RTPS well-known port mappings.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_reserved_port_mask** (p. 2306)
	<<***extension***>> *(*p. *138)* Specifies which well-known ports to reserve when enabling the participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_auto_id_kind** (p. 2306)
	<<***extension***>> *(*p. *138)* Kind of auto mechanism used to calculate the GUID prefix.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**compute_crc** (p. 2307)
	<<***extension***>> *(*p. *138)* Adds RTPS CRC submessage to every message when this field is set to com.↩ rti.dds.infrastructure.true.

com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**check_crc** (p. 2307)
	<<***extension***>> *(*p. *138)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to com.rti.dds.infrastructure.true.
com.rti.dds.infrastructure.TransportSelectionQos↩ Policy (p. 2170)	**enabled_transports** (p. 2171)
	<<***extension***>> *(*p. *138)* A sequence of transport aliases that specifies the transport instances available for use by the entity.
com.rti.dds.infrastructure.TransportBuiltinQos↩ Policy (p. 2152)	**mask** (p. 2153)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Specifies the built-in transports that are registered automatically when the **com.rti.dds.domain.DomainParticipant** (p. 948) is enabled.
com.rti.dds.infrastructure.TransportUnicastQos↩ Policy (p. 2177)	**value** (p. 2178)
	<<***extension***>> *(*p. *138)* A sequence of unicast communication settings.
com.rti.dds.infrastructure.TransportMulticast↩ MappingQosPolicy (p. 2160)	**value** (p. 2161)
	<<***extension***>> *(*p. *138)* A sequence of multicast communication mappings.
com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**value** (p. 2163)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* A sequence of multicast communications settings.
com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**kind** (p. 2163)
	<<***extension***>> *(*p. *138)* A value that specifies a way to determine how to obtain the multicast address.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enabled_transports** (p. 944)
	<<***extension***>> *(*p. *138)* The transports available for use by the Discovery mechanism.

com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**initial_peers** (p. 945)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**multicast_receive_addresses** (p. 944)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**metatraffic_transport_priority** (p. 945)
	<<***extension***>> *(p. 138)* The transport priority to use for the Discovery meta-traffic.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**accept_unknown_peers** (p. 946)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Whether to accept a new participant that is not in the initial peers list.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enable_endpoint_discovery** (p. 946)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Whether to automatically enable endpoint discovery for all the remote participants.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers** (p. 792)
	<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers_per_instance** (p. 792)
	<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read a single instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_samples_per_remote_writer** (p. 793)

	<<***extension***>> *(*p. *138)* The maximum number of out-of-order samples from a given remote **com.rti.dds.publication.DataWriter** (p. 818) that a **com.rti.dds.subscription.DataReader** (p. 707) may store when maintaining a reliable connection to the **com.rti.dds.publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**max_infos** (p. 793)
	<<***extension***>> *(*p. *138)* The maximum number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can use to store **com.rti.dds.subscription.SampleInfo** (p. 1944).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**initial_remote_writers** (p. 794)
	<<***extension***>> *(*p. *138)* The initial number of remote writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**initial_remote_writers_per_instance** (p. 794)
	<<***extension***>> *(*p. *138)* The initial number of remote writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read a single instance.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**initial_infos** (p. 795)
	<<***extension***>> *(*p. *138)* The initial number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can have, which are used to store **com.rti.dds.subscription.SampleInfo** (p. 1944).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**initial_outstanding_reads** (p. 795)
	<<***extension***>> *(*p. *138)* The initial number of outstanding calls to read/take (or one of their variants) on the same **com.rti.dds.subscription.DataReader** (p. 707) for which memory has not been returned by calling **com.rti.ndds.example.FooDataReader.return_loan** (p. 1386).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**max_outstanding_reads** (p. 796)

	<<***extension***>> *(*p. *138)* The maximum number of outstanding read/take calls (or one of their variants) on the same **com.rti.dds.subscription.DataReader** (p. 707) for which memory has not been returned by calling **com.rti.ndds.example.FooDataReader.return_loan** (p. 1386).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**max_samples_per_read** (p. 796)
	<<***extension***>> *(*p. *138)* The maximum number of data samples that the application can receive from the middleware in a single call to **com.rti.ndds.example.FooDataReader.read** (p. 1361) or **com.rti.ndds.example.FooDataReader.take** (p. 1363). If more data exists in the middleware, the application will need to issue multiple read/take calls.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**disable_fragmentation_support** (p. 796)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**max_fragmented_samples** (p. 797)
	<<***extension***>> *(*p. *138)* The maximum number of samples for which the **com.rti.dds.subscription.DataReader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**initial_fragmented_samples** (p. 797)
	<<***extension***>> *(*p. *138)* The initial number of samples for which a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**max_fragmented_samples_per_remote_writer** (p. 798)
	<<***extension***>> *(*p. *138)* The maximum number of samples per remote writer for which a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**max_fragments_per_sample** (p. 798)
	<<***extension***>> *(*p. *138)* Maximum number of fragments for a single sample.

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**dynamically_allocate_fragmented_samples** (p. 799)
	<<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_total_instances** (p. 799)
	<<***extension***>> *(p. 138)* Maximum number of instances for which a DataReader will keep state.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_virtual_writers** (p. 800)
	<<***extension***>> *(p. 138)* The maximum number of remote virtual writers from which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_virtual_writers** (p. 801)
	<<***extension***>> *(p. 138)* The initial number of remote virtual writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_virtual_writers_per_instance** (p. 801)
	<<***extension***>> *(p. 138)* The maximum number of virtual remote writers that can be associated with an instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_virtual_writers_per_instance** (p. 802)
	<<***extension***>> *(p. 138)* The initial number of virtual remote writers per instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers_per_sample** (p. 802)
	<<***extension***>> *(p. 138)* The maximum number of remote writers allowed to write the same sample.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_query_condition_filters** (p. 803)

	<<***extension***>> *(*p. *138)* The maximum number of query condition filters a reader is allowed.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_app_ack_response_length** (p. 803)
	<<***extension***>> *(*p. *138)* Maximum length of application-level acknowledgment response data
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**keep_minimum_state_for_instances** (p. 804)
	<<***extension***>> *(*p. *138)* Whether or not keep a minimum instance state for up to **com.rti.dds.↩ infrastructure.DataReaderResourceLimitsQos↩ Policy.max_total_instances** (p. 799).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_topic_queries** (p. 804)
	<<***extension***>> (p. *138)* The initial number of Topic↩ Queries allocated by a **com.rti.dds.subscription.↩ DataReader** (p. 707).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_topic_queries** (p. 805)
	<<***extension***>> (p. *138)* The maximum number of active TopicQueries that a **com.rti.dds.subscription.↩ DataReader** (p. 707) can create.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**instance_replacement** (p. 805)
	<<***extension***>> (p. *138)* Sets the kind of instances allowed to be replaced for each instance state (**com.rti.↩ dds.subscription.InstanceStateKind** (p. 1451)) when a DataReader reaches **com.rti.dds.infrastructure.↩ ResourceLimitsQosPolicy.max_instances** (p. 1896).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**autopurge_remote_not_alive_writer_delay** (p. 806)
	<<***extension***>> (p. *138)* Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a **com.rti.dds.↩ publication.DataWriter** (p. 818) once the **com.rti.↩ dds.publication.DataWriter** (p. 818) has become not alive.

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**lazily_allocate_batch_resources** (p. 808)
	<<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_concurrent_blocking_threads** (p. 894)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The initial number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_concurrent_blocking_threads** (p. 894)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The maximum number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_remote_reader_filters** (p. 894)
	<<***extension***>> *(p. 138)* The maximum number of remote DataReaders for which the **com.rti.dds.↩ publication.DataWriter** (p. 818) will perform content-based filtering.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_batches** (p. 895)
	<<***extension***>> *(p. 138)* Represents the initial number of batches a **com.rti.dds.publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_batches** (p. 895)
	<<***extension***>> *(p. 138)* Represents the maximum number of batches a **com.rti.dds.publication.Data↩ Writer** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**instance_replacement** (p. 896)
	<<***extension***>> *(p. 138)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.

com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**replace_empty_instances** (p. 896)
	<<***extension***>> *(p. 138)* Whether or not to replace empty instances during instance replacement
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**autoregister_instances** (p. 897)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Whether or not to automatically register new instances
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_virtual_writers** (p. 898)
	<<***extension***>> *(p. 138)* The maximum number of virtual writers supported by a **com.rti.dds.publication.↩ DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_virtual_writers** (p. 897)
	<<***extension***>> *(p. 138)* The initial number of virtual writers supported by a **com.rti.dds.publication.Data↩ Writer** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_remote_readers** (p. 898)
	<<***extension***>> *(p. 138)* Controls the initial memory allocation for the matched remote readers of a **com.↩ rti.dds.publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_remote_readers** (p. 898)
	<<***extension***>> *(p. 138)* The maximum number of remote readers supported by a **com.rti.dds.↩ publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_app_ack_remote_readers** (p. 899)
	<<***extension***>> *(p. 138)* The maximum number of application-level acknowledging remote readers supported by a **com.rti.dds.publication.DataWriter** (p. 818)

com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_active_topic_queries** (p. 899)
	<<***extension***>> *(p. 138)* Represents the initial number of active topic queries a **com.rti.dds.publication.↩ DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_active_topic_queries** (p. 899)
	<<***extension***>> *(p. 138)* Represents the maximum number of active topic queries a **com.rti.dds.↩ publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**virtual_guid** (p. 762)
	<<***extension***>> *(p. 138)* The virtual GUID (Global Unique Identifier).
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**rtps_object_id** (p. 762)
	<<***extension***>> *(p. 138)* The RTPS Object ID.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**rtps_reliable_reader** (p. 765)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **com.rti.dds.subscription.Data↩ Reader** (p. 707). This parameter only has effect if the reader is configured with **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.RELIABLE_RELIABILITY↩ _QOS** (p. 1836) **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**expects_inline_qos** (p. 763)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Specifies whether this DataReader expects inline QoS with every sample.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**disable_positive_acks** (p. 763)
	<<***extension***>> *(p. 138)* Whether the reader sends positive acknowledgements to writers.

com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**propagate_dispose_of_unregistered_instances** (p. 764)
	<<***extension***>> *(p. 138)* Indicates whether or not an instance can move to the **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_DISPOSED_↩ INSTANCE_STATE** (p. 1452) state without being in the **com.rti.dds.subscription.InstanceStateKind.↩ ALIVE_INSTANCE_STATE** (p. 1452) state.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**propagate_unregister_of_disposed_instances** (p. 764)
	<<***extension***>> *(p. 138)* Indicates whether or not an instance can move to the **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_NO_WRITERS_↩ INSTANCE_STATE** (p. 1452) state directly from the **com.rti.dds.subscription.InstanceStateKind.NOT_↩ ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**virtual_guid** (p. 862)
	<<***extension***>> *(p. 138)* The virtual GUID (Global Unique Identifier).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**rtps_object_id** (p. 862)
	<<***extension***>> *(p. 138)* The RTPS Object ID.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**push_on_write** (p. 863)
	<<***extension***>> *(p. 138)* Whether to push sample out when write is called.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**disable_positive_acks** (p. 863)
	<<***extension***>> *(p. 138)* Controls whether or not the writer expects positive acknowledgements from matching readers.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**disable_inline_keyhash** (p. 864)
	<<***extension***>> *(p. 138)* Controls whether or not a keyhash is propagated on the wire with each sample.

com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**serialize_key_with_dispose** (p. 864)
	<<***extension***>> *(p. 138)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**propagate_app_ack_with_no_response** (p. 865)
	<<***extension***>> *(p. 138)* Controls whether or not a **com.rti.dds.publication.DataWriter** (p. 818) receives **com.rti.dds.publication.DataWriterListener.on_↩ application_acknowledgment** (p. 859) notifications with an empty or invalid response.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**rtps_reliable_writer** (p. 865)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **com.rti.dds.publication.Data↩ Writer** (p. 818). This parameter only has effect if both the writer and the matching reader are configured with **com.rti.dds.infrastructure.ReliabilityQos↩ PolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**initial_virtual_sequence_number** (p. 866)
	<<***extension***>> *(p. 138)* Determines, the initial virtual sequence number for this DataWriter.
com.rti.dds.infrastructure.SystemResourceLimits↩ QosPolicy (p. 2090)	**max_objects_per_thread** (p. 2091)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The maximum number of objects that can be stored per thread for a **com.rti.dds.domain.DomainParticipant↩ Factory** (p. 1039).
com.rti.dds.infrastructure.SystemResourceLimits↩ QosPolicy (p. 2090)	**initial_objects_per_thread** (p. 2091)
	<<***extension***>> *(p. 138)* The number of objects per thread for a **com.rti.dds.domain.DomainParticipant↩ Factory** (p. 1039) for which infrastructure will initially be allocated.

com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_writer_allocation** (p. 1085)

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**new_remote_participant_announcements** (p. 921)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of participant announcements sent when a remote participant is newly discovered.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**min_initial_participant_announcement_period** (p. 922)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**max_initial_participant_announcement_period** (p. 922)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_reader_resource_limits** (p. 923)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_reader** (p. 927)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_reader_resource_limits** (p. 923)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_reader** (p. 927)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_reader_resource_limits** (p. 924)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_writer** (p. 929)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **com.rti.dds.infrastructure.ReliabilityQosPolicy↩ Kind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.↩ rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer_publish_mode** (p. 930)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer_publish_mode** (p. 931)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in subscription writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**asynchronous_publisher** (p. 931)
	<<***extension***>> *(p. 138)* Asynchronous publishing settings for the discovery **com.rti.dds.publication.↩ Publisher** (p. 1767) and all entities that are created by it.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**default_domain_announcement_period** (p. 931)
	<<***extension***>> *(p. 138)* The period to announce a participant to the default domain 0.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**ignore_default_domain_announcements** (p. 932)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader_reliability_kind** (p. 928)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Reliability policy for a built-in participant message reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader** (p. 929)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **com.rti.dds.infrastructure.DiscoveryConfig↩ QosPolicy.participant_message_reader_reliability↩ _kind** (p. 928) is set to **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.RELIABLE_RELIABILITY↩ _QOS** (p. 1836).

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer** (p. 924)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer_data_lifecycle** (p. 925)
	<<***extension***>> *(*p. *138)* Writer data lifecycle settings for a built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer** (p. 925)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer_data_lifecycle** (p. 926)
	<<***extension***>> *(*p. *138)* Writer data lifecycle settings for a built-in subscription writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**builtin_discovery_plugins** (p. 927)
	<<***extension***>> *(*p. *138)* Mask of built-in discovery plugin kinds.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**enabled_builtin_channels** (p. 928)
	<<***extension***>> *(*p. *138)* The mask specifying which built-in channels should be enabled.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer** (p. 933)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **com.rti.dds.topic.builtin.↩ ServiceRequest** (p. 1985) writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer_data_lifecycle** (p. 933)

	<<***extension***>> *(*p. *138)* Writer data lifecycle settings for a built-in **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer_publish_mode** (p. 934)
	<<***extension***>> *(*p. *138)* Publish mode policy for the built-in service request writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_reader** (p. 934)
	<<***extension***>> *(*p. *138)* RTPS reliable reader protocol-related configuration settings for a built-in **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**locator_reachability_lease_duration** (p. 935)
	<<***extension***>> *(*p. *138)* The time period after which other DomainParticipants can consider one of their locators as "unreachable" if they do not receive a REACHABILITY PING from this DomainParticipant.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**locator_reachability_assert_period** (p. 934)
	<<***extension***>> *(*p. *138)* Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**locator_reachability_change_detection_period** (p. 935)
	<<***extension***>> *(*p. *138)* Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer** (p. 936)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer_publish_mode** (p. 937)
	<<***extension***>> *(*p. *138)* Publish mode policy for the built-in secure volatile writer.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_reader** (p. 937)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**endpoint_type_object_lb_serialization_threshold** (p. 938)
	<<***extension***>> *(p. 138)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**dns_tracker_polling_period** (p. 938)
	<<***extension***>> *(p. 138)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_reader** (p. 941)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_reader_resource_limits** (p. 939)
	<<***extension***>> *(p. 138)* Resource limits for the built-in topic participant configuration reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer_publish_mode** (p. 941)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in participant configuration writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer** (p. 940)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer_data_lifecycle** (p. 941)

	<<***extension***>> *(*p. *138)* Writer data lifecycle settings for a built-in participant configuration writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**request_types_filter** (p. 942)
	<<***extension***>> *(*p. *138)* Topic name pattern for requesting all types via Type Lookup Service.
com.rti.dds.infrastructure.RtpsWellKnownPorts_t (p. 1931)	**port_base** (p. 1933)
	<<***extension***>> *(*p. *138)* The base port offset.
com.rti.dds.infrastructure.RtpsWellKnownPorts_t (p. 1931)	**domain_id_gain** (p. 1933)
	<<***extension***>> *(*p. *138)* Tunable domain gain parameter.
com.rti.dds.infrastructure.RtpsWellKnownPorts_t (p. 1931)	**participant_id_gain** (p. 1935)
	<<***extension***>> *(*p. *138)* Tunable participant gain parameter.
com.rti.dds.infrastructure.RtpsWellKnownPorts_t (p. 1931)	**builtin_multicast_port_offset** (p. 1935)
	<<***extension***>> *(*p. *138)* Additional offset for **metatraffic** multicast port.
com.rti.dds.infrastructure.RtpsWellKnownPorts_t (p. 1931)	**builtin_unicast_port_offset** (p. 1935)
	<<***extension***>> *(*p. *138)* Additional offset for **metatraffic** unicast port.
com.rti.dds.infrastructure.RtpsWellKnownPorts_t (p. 1931)	**user_multicast_port_offset** (p. 1935)
	<<***extension***>> *(*p. *138)* Additional offset for **usertraffic** multicast port.
com.rti.dds.infrastructure.RtpsWellKnownPorts_t (p. 1931)	**user_unicast_port_offset** (p. 1936)
	<<***extension***>> *(*p. *138)* Additional offset for **usertraffic** unicast port.
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**min_heartbeat_response_delay** (p. 1906)
	<<***extension***>> *(*p. *138)* The minimum delay to respond to a heartbeat.

com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**max_heartbeat_response_delay** (p. 1906)
	<<***extension***>> *(p. 138)* The maximum delay to respond to a heartbeat.
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**heartbeat_suppression_duration** (p. 1907)
	<<***extension***>> *(p. 138)* The duration a reader ignores consecutively received heartbeats
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**nack_period** (p. 1907)
	<<***extension***>> *(p. 138)* The period at which to send NACKs
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**receive_window_size** (p. 1908)
	<<***extension***>> *(p. 138)* The number of received out-of-order samples a reader can keep at a time
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**round_trip_time** (p. 1908)
	<<***extension***>> *(p. 138)* The duration from sending a NACK to receiving a repair of a sample
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**app_ack_period** (p. 1909)
	<<***extension***>> *(p. 138)* The period at which application-level acknowledgment messages are sent
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**min_app_ack_response_keep_duration** (p. 1909)
	<<***extension***>> *(p. 138)* Minimum duration for which application-level acknowledgment response data is kept
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**samples_per_app_ack** (p. 1910)
	<<***extension***>> *(p. 138)* The minimum number of samples acknowledged by one application-level acknowledgment message

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**low_watermark** (p. 1913)
	*<<**extension**>>* (p. *138)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the com.rti.dds.infrastructure.StatusKind.StatusKind.↩ RELIABLE_WRITER_CACHE_CHANGED_STATUS is considered to have changed.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**high_watermark** (p. 1913)
	*<<**extension**>>* (p. *138)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the com.rti.dds.infrastructure.StatusKind.StatusKind.↩ RELIABLE_WRITER_CACHE_CHANGED_STATUS is considered to have changed.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**heartbeat_period** (p. 1914)
	*<<**basic**>>* (p. *123) <<**extension**>>* (p. *138)* The period at which to send heartbeats.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**fast_heartbeat_period** (p. 1914)
	*<<**basic**>>* (p. *123) <<**extension**>>* (p. *138)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**late_joiner_heartbeat_period** (p. 1915)
	*<<**basic**>>* (p. *123) <<**extension**>>* (p. *138)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**virtual_heartbeat_period** (p. 1916)
	*<<**extension**>>* (p. *138)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**samples_per_virtual_heartbeat** (p. 1916)
	<<***extension***>> *(p. 138)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_heartbeat_retries** (p. 1917)
	<<***extension***>> *(p. 138)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**inactivate_nonprogressing_readers** (p. 1917)
	<<***extension***>> *(p. 138)* Whether to treat remote readers as inactive when their NACKs do not progress
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**heartbeats_per_max_samples** (p. 1918)
	<<***extension***>> *(p. 138)* The number of piggyback heartbeats sent per max send window.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The minimum delay to respond to a NACK or NACK_FRAG.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The maximum delay to respond to a NACK or NACK_FRAG.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**nack_suppression_duration** (p. 1920)
	<<***extension***>> *(p. 138)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_bytes_per_nack_response** (p. 1920)
	<<***extension***>> *(p. 138)* The maximum total message size when resending rejected samples or data fragments.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_enable_adaptive_sample_↩ keep_duration** (p. 1922)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Enables dynamic adjustment of sample keep duration in response to congestion.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_min_sample_keep_duration** (p. 1921)
	<<***extension***>> *(*p. *138)* The minimum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_max_sample_keep_duration** (p. 1922)
	<<***extension***>> *(*p. *138)* The maximum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_decrease_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Controls rate of contraction of dynamic sample keep duration.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Controls rate of growth of dynamic sample keep duration.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_send_window_size** (p. 1924)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Minimum size of send window of unacknowledged samples
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_send_window_size** (p. 1924)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Maximum size of send window of unacknowledged samples
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_update_period** (p. 1925)
	<<***extension***>> *(*p. *138)* Period in which send window may be dynamically changed

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_increase_factor** (p. 1926)
	<<***extension***>> *(p. 138)* Increases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_decrease_factor** (p. 1927)
	<<***extension***>> *(p. 138)* Decreases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**enable_multicast_periodic_heartbeat** (p. 1928)
	<<***extension***>> *(p. 138)* Whether periodic heartbeat messages are sent over multicast
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**multicast_resend_threshold** (p. 1928)
	<<***extension***>> *(p. 138)* The minimum number of requesting readers needed to trigger a multicast resend
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_repair_piggyback_heartbeat** (p. 1929)
	<<***extension***>> *(p. 138)* Prevents piggyback heartbeats from being sent with repair samples
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_samples** (p. 633)
	<<***extension***>> *(p. 138)* Initial number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_samples** (p. 633)
	<<***extension***>> *(p. 138)* Maximum number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_infos** (p. 633)
	<<***extension***>> *(p. 138)* Initial number of sample infos.

com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_infos** (p. 634)
	<<***extension***>> *(p. 138)* Maximum number of sample infos.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**disable_fragmentation_support** (p. 634)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Determines whether the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples** (p. 635)
	<<***extension***>> *(p. 138)* The maximum number of samples for which the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_fragmented_samples** (p. 635)
	<<***extension***>> *(p. 138)* The initial number of samples for which a built-in topic **com.rti.dds.subscription.↩ DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples_per_remote_writer** (p. 636)
	<<***extension***>> *(p. 138)* The maximum number of samples per remote writer for which a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragments_per_sample** (p. 636)
	<<***extension***>> *(p. 138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**dynamically_allocate_fragmented_samples** (p. 637)
	<<***extension***>> *(p. 138)* Determines whether the built-in topic **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.

com.rti.dds.infrastructure.TransportUnicast↩ Settings_t (p. 2179)	**transports** (p. 2180)
	<<***extension***>> *(*p. *138)* A sequence of transport aliases that specifies the unicast interfaces on which to receive *unicast* traffic for the entity.
com.rti.dds.infrastructure.TransportUnicast↩ Settings_t (p. 2179)	**receive_port** (p. 2180)
	<<***extension***>> *(*p. *138)* The unicast port on which the entity can receive data.
com.rti.dds.infrastructure.TransportMulticast↩ Settings_t (p. 2165)	**transports** (p. 2166)
	<<***extension***>> *(*p. *138)* A sequence of transport aliases that specifies the transports on which to receive *multicast* traffic for the entity.
com.rti.dds.infrastructure.TransportMulticast↩ Settings_t (p. 2165)	**receive_address** (p. 2167)
	<<***extension***>> *(*p. *138)* The multicast group address on which the entity can receive data.
com.rti.dds.infrastructure.TransportMulticast↩ Settings_t (p. 2165)	**receive_port** (p. 2167)
	<<***extension***>> *(*p. *138)* The multicast port on which the entity can receive data.
com.rti.dds.infrastructure.TransportMulticast↩ Mapping_t (p. 2156)	**addresses** (p. 2157)
	<<***extension***>> *(*p. *138)* A string containing a comma-separated list of IP addresses or IP address ranges to be used to receive *multicast* traffic for the entity with a topic that matches the **com.rti.dds.infrastructure.↩ TransportMulticastMapping_t.topic_expression** (p. 2157).
com.rti.dds.infrastructure.TransportMulticast↩ Mapping_t (p. 2156)	**topic_expression** (p. 2157)
	<<***extension***>> *(*p. *138)* A regular expression that will be used to map topic names to corresponding multicast receive addresses.
com.rti.dds.infrastructure.TransportMulticast↩ Mapping_t (p. 2156)	**mapping_function** (p. 2158)

	<<***extension***>> *(p. 138)* Specifies a function that will define the mapping between a topic name and a specific multicast address from a list of addresses.
com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)	**value** (p. 1741)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of properties.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**name** (p. 1329)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The name of the entity.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**role_name** (p. 1329)
	<<***extension***>> *(p. 138)* The entity role name.
com.rti.dds.infrastructure.ServiceQosPolicy (p. 1981)	**kind** (p. 1982)
	<<***extension***>> *(p. 138)* The kind of service.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**enable** (p. 608)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies whether or not batching is enabled.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_data_bytes** (p. 608)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum cumulative length of all serialized samples in a batch.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_samples** (p. 609)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum number of samples in a batch.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_flush_delay** (p. 610)
	<<***extension***>> *(p. 138)* The maximum flush delay.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**source_timestamp_resolution** (p. 610)
	<<***extension***>> *(p. 138)* Batch source timestamp resolution.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**thread_safe_write** (p. 611)
	<<***extension***>> *(p. 138)* Determines whether or not the write operation is thread safe.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**string_profile** (p. 1693)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of strings containing a XML document to load.

com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**url_profile** (p. 1694)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) Sequence of **URL groups** (p. 367) containing a set of XML documents to load.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_user_profile** (p. 1694)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) Ignores the file USER_QOS_PROFILES.xml in the current working directory.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_environment_profile** (p. 1694)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) Ignores the value of the **NDDS_QOS_PROFILES** (p. 367).
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_resource_profile** (p. 1695)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) Ignores the file NDDS_QOS_PROFILES.xml.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**verbosity** (p. 1569)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) The verbosities at which RTI Connext diagnostic information is logged.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**category** (p. 1569)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) Categories of logged messages.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**print_format** (p. 1570)
	*<<**extension**>>* (p. *138*) The format used to output RTI Connext diagnostic information.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file** (p. 1570)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) Specifies the file to which log messages will be redirected to.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file_suffix** (p. 1570)
	*<<**basic**>>* (p. *123*) *<<**extension**>>* (p. *138*) Sets the file suffix when logging to a set of files
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_bytes_per_file** (p. 1571)
	*<<**extension**>>* (p. *138*) Specifies the maximum number of bytes a single file can contain

com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_files** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of files to create before overwritting the previous ones.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**concurrency_level** (p. 1597)
	<<***extension***>> *(p. 138)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**datawriter_qos_profile_name** (p. 1597)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes event metrics.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**thread** (p. 1598)
	<<***extension***>> *(p. 138)* The settings of the event metric thread.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**publication_period** (p. 1598)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**datawriter_qos_profile_name** (p. 1610)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes periodic metrics.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**thread** (p. 1610)
	<<***extension***>> *(p. 138)* The settings of the periodic metric thread.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**polling_period** (p. 1610)

	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Period at which the periodic metric thread polls and publishes the periodic metrics.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**concurrency_level** (p. 1600)
	<<***extension***>> *(*p. *138)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**max_historical_logs** (p. 1601)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**datawriter_qos_profile_name** (p. 1601)
	<<***extension***>> *(*p. *138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes log messages.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**thread** (p. 1601)
	<<***extension***>> *(*p. *138)* The settings of the logging thread.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**publication_period** (p. 1602)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Period at which the logging thread publishes log messages.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**enable** (p. 1591)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Enables the use of a dedicated **com.rti.dds.domain.↩ DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**domain_id** (p. 1591)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The domain ID used in the creation of RTI Monitoring Library 2.0 **com.rti.dds.domain.DomainParticipant** (p. 948).

com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**participant_qos_profile_name** (p. 1591)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.domain.↩ DomainParticipant** (p. 948) that will be used to distribute telemetry data.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**collector_initial_peers** (p. 1592)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **com.rti.dds.infrastructure.Monitoring↩ DistributionSettings.dedicated_participant** (p. 1594).
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**dedicated_participant** (p. 1594)
	<<***extension***>> *(p. 138)* Configures the use of a dedicated **com.rti.dds.domain.DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**publisher_qos_profile_name** (p. 1594)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**event_settings** (p. 1595)
	<<***extension***>> *(p. 138)* Configures the distribution of event metrics.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**periodic_settings** (p. 1594)
	<<***extension***>> *(p. 138)* Configures the distribution of periodic metrics.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**logging_settings** (p. 1595)
	<<***extension***>> *(p. 138)* Configures the distribution of logging messages.

com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**resource_selection** (p. 1606)
	<<***extension***>> *(p. 138)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.enabled_metrics_↩ selection** (p. 1606) and **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.disabled_metrics_↩ selection** (p. 1607) are applied to this subset of resources.
com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**enabled_metrics_selection** (p. 1606)
	<<***extension***>> *(p. 138)* A sequence of POSIX fn-match patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.resource_selection** (p. 1606).
com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**disabled_metrics_selection** (p. 1607)
	<<***extension***>> *(p. 138)* A sequence of POSIX fn-match patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.resource_selection** (p. 1606).
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**middleware_forwarding_level** (p. 1603)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 1560) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**security_event_forwarding_level** (p. 1603)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**service_forwarding_level** (p. 1604)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**user_forwarding_level** (p. 1604)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_USER** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**metrics** (p. 1615)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of **com.rti.dds.infrastructure.Monitoring↩ MetricSelection** (p. 1605) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**logs** (p. 1615)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* **com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings** (p. 1602) containing the **com.rti.↩ ndds.config.SyslogVerbosity** (p. 2086) levels that will be forwarded for the different **com.rti.ndds.config.↩ LogFacility** (p. 1558).
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**enable** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**application_name** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The name of the resource that represents this RTI Connext application.
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**distribution_settings** (p. 1613)
	<<***extension***>> *(p. 138)* Configures the distribution of telemetry data.

com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**telemetry_data** (p. 1613)
	<<***extension***>> *(p. 138)* Configures the telemetry data that will be distributed.
com.rti.dds.infrastructure.LocatorFilter_t (p. 1551)	**locators** (p. 1552)
	<<***extension***>> *(p. 138)* Sequence containing from one to 16 **com.rti.dds.infrastructure.Locator_t** (p. 1546), used to specify the multicast address locators of an individual channel within a MultiChannel DataWriter.
com.rti.dds.infrastructure.LocatorFilter_t (p. 1551)	**filter_expression** (p. 1552)
	<<***extension***>> *(p. 138)* A logical expression used to determine the data that will be published in the channel.
com.rti.dds.infrastructure.LocatorFilterQosPolicy (p. 1553)	**locator_filters** (p. 1554)
	<<***extension***>> *(p. 138)* A sequence of **com.rti.dds.infrastructure.LocatorFilter_t** (p. 1551). Each **com.rti.dds.infrastructure.LocatorFilter_t** (p. 1551) reports the configuration of a single channel of a MultiChannel DataWriter.
com.rti.dds.infrastructure.LocatorFilterQosPolicy (p. 1553)	**filter_name** (p. 1554)
	<<***extension***>> *(p. 138)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**multicast_settings** (p. 668)
	<<***extension***>> *(p. 138)* A sequence of **com.rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) used to configure the multicast addresses associated with a channel.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**filter_expression** (p. 668)
	<<***extension***>> *(p. 138)* A logical expression used to determine the data that will be published in the channel.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**priority** (p. 669)
	<<***extension***>> *(p. 138)* Publication priority
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**channels** (p. 1617)
	<<***extension***>> *(p. 138)* A sequence of **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.

com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**filter_name** (p. 1617)
	<<***extension***>> *(p. 138)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
com.rti.dds.infrastructure.TopicQueryDispatch↩ QosPolicy (p. 2142)	**enable** (p. 2143)
	<<***extension***>> *(p. 138)* Allows this writer to dispatch TopicQueries
com.rti.dds.infrastructure.TopicQueryDispatch↩ QosPolicy (p. 2142)	**publication_period** (p. 2144)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sets the periodic interval at which samples are published.
com.rti.dds.infrastructure.TopicQueryDispatch↩ QosPolicy (p. 2142)	**samples_per_period** (p. 2143)
	<<***extension***>> *(p. 138)* Sets the maximum number of samples to publish in each publication_period.

6.51 Functional Categories

These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 237), then looking at any QoS in that category will be helpful.

Modules

- **Application Acknowledgement**

  This page lists all QoS related to application acknowledgement.
- **Application-Defined Metadata**

  This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.
- **Application Startup**

  Use these QoS fields to configure entity creation and application startup settings.
- **Batching**

  Use these QoS fields to configure the batching feature.
- **Concurrency**

  Use these QoS fields to configure threads and concurrency settings in RTI Connext.
- **Content Filtering**

  Use these QoS fields if you are using content filtering on your data.
- **Data Availability**

  Use these QoS fields to configure how much data, which data, and when that data is available to an application.

- **Debuggability**

  Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.
- **Discovery**

  Use these QoS fields to configure how applications discover each other.
- **Discovery Isolation**

  Use these QoS fields to isolate applications from each other.
- **Durability**

  Use these QoS fields to configure how much and how long data remains retrievable in the system.
- **Flow Control**

  Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.
- **Fragmentation**

  QoS related to DDS-level data fragmentation.
- **Instance Lifecycle**

  QoS that control the lifecycle of instances.
- **Sending Large Data**

  Use these QoS fields to optimize the process of sending large data.
- **Liveliness**

  Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.
- **Logging**

  Use these QoS fields to configure the RTI Connext logging infrastructure.
- **Middleware Memory Management**

  Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.
- **QoS Profile Management**

  Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.
- **Reliability QoS**

  Reliability related QoS.
- **Sample Memory Management QoS**

  Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.
- **Sample Ordering**

  Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.
- **Security**

  Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.
- **Throughput**

  Use these QoS fields to configure features which may be helpful to increase throughput.
- **Transports**

  Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.
- **Topic Queries**

  Use these QoS fields to configure the topic query feature.
- **Type System**

  Use these QoS fields to configure aspects of the type system.

6.51.1 Detailed Description

These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 237), then looking at any QoS in that category will be helpful.

6.52 Application Acknowledgement

This page lists all QoS related to application acknowledgement.

This page lists all QoS related to application acknowledgement.

See `Application Acknowledgment`, in the *Core Libraries User's Manual*, for more information about this feature.

Advanced Settings

com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**acknowledgment_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Kind of reliable acknowledgment
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_app_ack_response_length** (p. 803)
	<<***extension***>> *(p. 138)* Maximum length of application-level acknowledgment response data
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_app_ack_remote_readers** (p. 899)
	<<***extension***>> *(p. 138)* The maximum number of application-level acknowledging remote readers supported by a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**propagate_app_ack_with_no_response** (p. 865)
	<<***extension***>> *(p. 138)* Controls whether or not a **com.rti.dds.publication.DataWriter** (p. 818) receives **com.rti.dds.publication.DataWriterListener.on_↩ application_acknowledgment** (p. 859) notifications with an empty or invalid response.
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**app_ack_period** (p. 1909)
	<<***extension***>> *(p. 138)* The period at which application-level acknowledgment messages are sent
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**min_app_ack_response_keep_duration** (p. 1909)
	<<***extension***>> *(p. 138)* Minimum duration for which application-level acknowledgment response data is kept

com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**samples_per_app_ack** (p. 1910)
	<<***extension***>> *(p. 138)* The minimum number of samples acknowledged by one application-level acknowledgment message

6.53 Application-Defined Metadata

This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.

This page lists QoS fields that can be used to send application-specific data during participant and endpoint discovery.

There are also various resource limits related to these QoS which are also listed below.

Basic Settings

com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)	**value** (p. 1741)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of properties.

Advanced Settings

com.rti.dds.infrastructure.UserDataQosPolicy (p. 2272)	**value** (p. 2273)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.GroupDataQosPolicy (p. 1419)	**value** (p. 1420)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**plugin_data** (p. 2254)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Value to pass into the type plugin's de-/serialization function
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**participant_user_data_max_length** (p. 1096)

	<<***extension***>> *(*p. *138)* Maximum length of user data in **com.rti.dds.domain.DomainParticipant↩ Qos** (p. 1073) and **com.rti.dds.domain.builtin.↩ ParticipantBuiltinTopicData** (p. 1647)
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**topic_data_max_length** (p. 1096)

6.54 Application Startup

Use these QoS fields to configure entity creation and application startup settings.

Use these QoS fields to configure entity creation and application startup settings.

Basic Settings

com.rti.dds.infrastructure.EntityFactoryQosPolicy (p. 1326)	**autoenable_created_entities** (p. 1327)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies whether the entity acting as a factory automatically enables the instances it creates.

6.55 Batching

Use these QoS fields to configure the batching feature.

Use these QoS fields to configure the batching feature.

See `BATCH QosPolicy (DDS Extension)`, in the *Core Libraries User's Manual*, for more information about this feature.

Basic Settings

com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**enable** (p. 608)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies whether or not batching is enabled.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_data_bytes** (p. 608)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum cumulative length of all serialized samples in a batch.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_samples** (p. 609)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum number of samples in a batch.

Advanced Settings

com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**disable_asynchronous_batch** (p. 595)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Disable asynchronous batch flushing.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**asynchronous_batch_thread** (p. 595)
	<<***extension***>> *(p. 138)* Settings of the batch flushing thread.

com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**initial_batches** (p. 895)
	<<***extension***>> *(p. 138)* Represents the initial number of batches a **com.rti.dds.publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**max_batches** (p. 895)
	<<***extension***>> *(p. 138)* Represents the maximum number of batches a **com.rti.dds.publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_flush_delay** (p. 610)
	<<***extension***>> *(p. 138)* The maximum flush delay.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**source_timestamp_resolution** (p. 610)
	<<***extension***>> *(p. 138)* Batch source timestamp resolution.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**thread_safe_write** (p. 611)
	<<***extension***>> *(p. 138)* Determines whether or not the write operation is thread safe.

6.56 Concurrency

Use these QoS fields to configure threads and concurrency settings in RTI Connext.

Use these QoS fields to configure threads and concurrency settings in RTI Connext.

See `Connext Threading Model`, in the *Core Libraries User's Manual*, for more information.

This community article gives a thorough overview of how and why to use many of the QoS listed below: `https://community.rti.com/kb/achieving-low-jitter-performance-connext-pro`.

Advanced Settings

com.rti.dds.infrastructure.TransportPriorityQosPolicy (p. 2168)	**value** (p. 2170)
	<<***spec***>> *(p. 132)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.

com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**disable_asynchronous_write** (p. 594)
	[DEPRECATED] (p. **358**) <<***extension***>> (p. *138*) Disable asynchronous publishing.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**thread** (p. 594)
	<<***extension***>> (p. *138*) Settings of the publishing thread.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**disable_asynchronous_batch** (p. 595)
	[DEPRECATED] (p. **358**) <<***extension***>> (p. *138*) Disable asynchronous batch flushing.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**asynchronous_batch_thread** (p. 595)
	<<***extension***>> (p. *138*) Settings of the batch flushing thread.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**disable_topic_query_publication** (p. 596)
	[DEPRECATED] (p. **358**) <<***extension***>> (p. *138*) Disable topic query publication.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**topic_query_publication_thread** (p. 596)
	<<***extension***>> (p. *138*) Settings of the **com.↩ rti.dds.subscription.TopicQuery** (p. 2139) publication thread.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**metatraffic_transport_priority** (p. 945)
	<<***extension***>> (p. *138*) The transport priority to use for the Discovery meta-traffic.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_concurrent_blocking_threads** (p. 894)
	[DEPRECATED] (p. **358**) <<***extension***>> (p. *138*) The initial number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.↩ publication.DataWriter** (p. 818).

com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_concurrent_blocking_threads** (p. 894)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The maximum number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.EventQosPolicy (p. 1335)	**thread** (p. 1336)
	<<***extension***>> *(p. 138)* Event thread QoS.
com.rti.dds.infrastructure.DatabaseQosPolicy (p. 702)	**thread** (p. 704)
	<<***extension***>> *(p. 138)* Database thread settings.
com.rti.dds.infrastructure.ReceiverPoolQosPolicy (p. 1826)	**thread** (p. 1827)
	<<***extension***>> *(p. 138)* Receiver pool thread(s).
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**thread_safe_write** (p. 611)
	<<***extension***>> *(p. 138)* Determines whether or not the write operation is thread safe.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**concurrency_level** (p. 1597)
	<<***extension***>> *(p. 138)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**thread** (p. 1598)
	<<***extension***>> *(p. 138)* The settings of the event metric thread.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**thread** (p. 1610)
	<<***extension***>> *(p. 138)* The settings of the periodic metric thread.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**concurrency_level** (p. 1600)
	<<***extension***>> *(p. 138)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**thread** (p. 1601)

	<<***extension***>> *(*p. *138)* The settings of the logging thread.

6.57 Content Filtering

Use these QoS fields if you are using content filtering on your data.

Use these QoS fields if you are using content filtering on your data.

Content filtering most commonly refers to using a **com.rti.dds.topic.ContentFilteredTopic** (p. 692), but data can also be filtered using **com.rti.dds.subscription.TopicQuery** (p. 2139) to run a new filter over the data in a DataWriter's cache, or **com.rti.dds.subscription.QueryCondition** (p. 1812) to read a subset of the data that is currently stored in the DataReader's cache.

See also

Queries and Filters Syntax (p. 108).

Advanced Settings

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_query_condition_filters** (p. 803)
	<<***extension***>> *(*p. *138)* The maximum number of query condition filters a reader is allowed.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_remote_reader_filters** (p. 894)
	<<***extension***>> *(*p. *138)* The maximum number of remote DataReaders for which the **com.rti.dds.↩ publication.DataWriter** (p. 818) will perform content-based filtering.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**content_filtered_topic_allocation** (p. 1089)
	<<***extension***>> *(*p. *138)* Allocation settings applied to content filtered topic.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**content_filter_allocation** (p. 1089)
	<<***extension***>> *(*p. *138)* Allocation settings applied to content filter.

com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**query_condition_allocation** (p. 1090)
	<<***extension***>> *(p. 138)* Allocation settings applied to query condition pool.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**content_filtered_topic_hash_buckets** (p. 1095)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for content filtered topics.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**content_filter_hash_buckets** (p. 1095)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for content filters.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**contentfilter_property_max_length** (p. 1102)
	<<***extension***>> *(p. 138)* This field is the maximum length of all data related to a Content-filtered topic.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**channel_seq_max_length** (p. 1102)
	<<***extension***>> *(p. 138)* Maximum number of channels that can be specified in **com.rti.dds.↩ infrastructure.MultiChannelQosPolicy** (p. 1616) for MultiChannel DataWriters.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**channel_filter_expression_max_length** (p. 1103)
	<<***extension***>> *(p. 138)* Maximum length of a channel **com.rti.dds.infrastructure.ChannelSettings_t.↩ filter_expression** (p. 668) in a MultiChannel DataWriter.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**multicast_settings** (p. 668)
	<<***extension***>> *(p. 138)* A sequence of **com.↩ rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) used to configure the multicast addresses associated with a channel.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**filter_expression** (p. 668)
	<<***extension***>> *(p. 138)* A logical expression used to determine the data that will be published in the channel.
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**filter_name** (p. 1617)

	<<***extension***>> *(p. 138)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

6.58 Data Availability

Use these QoS fields to configure how much data, which data, and when that data is available to an application.

Use these QoS fields to configure how much data, which data, and when that data is available to an application.

Data availability refers to configurations such as ownership and lifespan.

Basic Settings

com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**kind** (p. 1119)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of durability.
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**writer_depth** (p. 1119)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Indicates the number of samples per instance that a durable **com.rti.dds.publication.DataWriter** (p. 818) will send to a late-joining **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.DeadlineQosPolicy (p. 900)	**period** (p. 902)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Duration of the deadline period.
com.rti.dds.infrastructure.OwnershipQosPolicy (p. 1640)	**kind** (p. 1644)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of ownership
com.rti.dds.infrastructure.OwnershipStrengthQosPolicy (p. 1646)	**value** (p. 1647)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The strength value used to arbitrate among multiple writers.
com.rti.dds.infrastructure.TimeBasedFilterQosPolicy (p. 2113)	**minimum_separation** (p. 2115)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The minimum separation duration between subsequent samples.

com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**kind** (p. 1437)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the kind of history to be kept.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**depth** (p. 1438)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the number of samples per instance to be kept, when the `kind` is com.rti.dds.infrastructure.HistoryQosPolicy↩ Kind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_↩ QOS
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum samples the middleware can store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum number of instances a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.LifespanQosPolicy (p. 1526)	**duration** (p. 1528)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Maximum duration for the data's validity.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**publication_period** (p. 1598)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**polling_period** (p. 1610)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the periodic metric thread polls and publishes the periodic metrics.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**publication_period** (p. 1602)

	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Period at which the logging thread publishes log messages.

Advanced Settings

com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**enable_required_subscriptions** (p. 600)
	<<***extension***>> *(*p. *138)* Enables support for required subscriptions in a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_data_availability_waiting_time** (p. 600)
	<<***extension***>> *(*p. *138)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_endpoint_availability_waiting_time** (p. 600)
	<<***extension***>> *(*p. *138)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**required_matched_endpoint_groups** (p. 601)
	<<***extension***>> *(*p. *138)* A sequence of endpoint groups.
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**direct_communication** (p. 1119)
	<<***extension***>> *(*p. *138)* Indicates whether or not a TRANSIENT or PERSISTENT **com.rti.dds.subscription.DataReader** (p. 707) should receive samples directly from a TRANSIENT or PERSISTENT **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**storage_settings** (p. 1120)
	<<***extension***>> *(*p. *138)* Configures durable writer history and durable reader state.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**service_cleanup_delay** (p. 1124)
	<<***spec***>> *(*p. *132)* Controls when the service is able to remove all information regarding a data instances.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**max_samples** (p. 1125)

	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**access_scope** (p. 1682)
	<<***spec***>> *(p. 132)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**coherent_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**ordered_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**drop_incomplete_coherent_set** (p. 1683)
	<<***extension***>> *(p. 138)* Indicates whether or not a **com.rti.dds.subscription.DataReader** (p. 707) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
com.rti.dds.infrastructure.LatencyBudgetQosPolicy (p. 1523)	**duration** (p. 1525)
	<<***spec***>> *(p. 132)* Duration of the maximum acceptable delay.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples_per_instance** (p. 1897)

	<<***spec***>> *(p. 132)* Represents the maximum number of samples of any one instance a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_nowriter_samples_delay** (p. 1824)
	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_disposed_samples_delay** (p. 1824)
	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_disposed_instances_delay** (p. 1824)
	<<***extension***>> *(p. 138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy (p. 1822)	**autopurge_nowriter_instances_delay** (p. 1825)
	<<***extension***>> *(p. 138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.TransportMulticastMappingQosPolicy (p. 2160)	**value** (p. 2161)
	<<***extension***>> *(p. 138)* A sequence of multicast communication mappings.

com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**kind** (p. 2163)
	<<***extension***>> *(*p. *138)* A value that specifies a way to determine how to obtain the multicast address.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**virtual_guid** (p. 862)
	<<***extension***>> *(*p. *138)* The virtual GUID (Global Unique Identifier).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**push_on_write** (p. 863)
	<<***extension***>> *(*p. *138)* Whether to push sample out when write is called.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**source_timestamp_resolution** (p. 610)
	<<***extension***>> *(*p. *138)* Batch source timestamp resolution.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**priority** (p. 669)
	<<***extension***>> *(*p. *138)* Publication priority
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**channels** (p. 1617)
	<<***extension***>> *(*p. *138)* A sequence of **com.rti.↩ dds.infrastructure.ChannelSettings_t** (p. 666) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**filter_name** (p. 1617)
	<<***extension***>> *(*p. *138)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.

6.59 Debuggability

Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.

Use these QoS to configure logging and observability capabilities to help debug RTI Connext applications.

Basic Settings

com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**name** (p. 1329)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The name of the entity.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**verbosity** (p. 1569)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The verbosities at which RTI Connext diagnostic information is logged.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**category** (p. 1569)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Categories of logged messages.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file** (p. 1570)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the file to which log messages will be redirected to.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file_suffix** (p. 1570)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sets the file suffix when logging to a set of files
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**publication_period** (p. 1598)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**polling_period** (p. 1610)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the periodic metric thread polls and publishes the periodic metrics.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**max_historical_logs** (p. 1601)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.

com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**publication_period** (p. 1602)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Period at which the logging thread publishes log messages.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**enable** (p. 1591)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Enables the use of a dedicated **com.rti.dds.domain.↩ DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**domain_id** (p. 1591)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The domain ID used in the creation of RTI Monitoring Library 2.0 **com.rti.dds.domain.DomainParticipant** (p. 948).
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**collector_initial_peers** (p. 1592)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **com.rti.dds.infrastructure.Monitoring↩ DistributionSettings.dedicated_participant** (p. 1594).
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**middleware_forwarding_level** (p. 1603)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 1560) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**security_event_forwarding_level** (p. 1603)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**service_forwarding_level** (p. 1604)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**user_forwarding_level** (p. 1604)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_USER** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**metrics** (p. 1615)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of **com.rti.dds.infrastructure.Monitoring↩ MetricSelection** (p. 1605) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**logs** (p. 1615)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* **com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings** (p. 1602) containing the **com.rti.↩ ndds.config.SyslogVerbosity** (p. 2086) levels that will be forwarded for the different **com.rti.ndds.config.↩ LogFacility** (p. 1558).
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**enable** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**application_name** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The name of the resource that represents this RTI Connext application.

Advanced Settings

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**default_domain_announcement_period** (p. 931)

	<<***extension***>> *(p. 138)* The period to announce a participant to the default domain 0.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**ignore_default_domain_announcements** (p. 932)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**role_name** (p. 1329)
	<<***extension***>> *(p. 138)* The entity role name.
com.rti.dds.infrastructure.ServiceQosPolicy (p. 1981)	**kind** (p. 1982)
	<<***extension***>> *(p. 138)* The kind of service.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**print_format** (p. 1570)
	<<***extension***>> *(p. 138)* The format used to output RTI Connext diagnostic information.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_bytes_per_file** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of bytes a single file can contain
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_files** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of files to create before overwritting the previous ones.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**concurrency_level** (p. 1597)
	<<***extension***>> *(p. 138)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**datawriter_qos_profile_name** (p. 1597)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes event metrics.

com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**thread** (p. 1598)
	<<***extension***>> *(*p. *138)* The settings of the event metric thread.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**datawriter_qos_profile_name** (p. 1610)
	<<***extension***>> *(*p. *138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes periodic metrics.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**thread** (p. 1610)
	<<***extension***>> *(*p. *138)* The settings of the periodic metric thread.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**concurrency_level** (p. 1600)
	<<***extension***>> *(*p. *138)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**datawriter_qos_profile_name** (p. 1601)
	<<***extension***>> *(*p. *138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes log messages.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**thread** (p. 1601)
	<<***extension***>> *(*p. *138)* The settings of the logging thread.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**participant_qos_profile_name** (p. 1591)
	<<***extension***>> *(*p. *138)* The fully qualified name of the profile used to configure the **com.rti.dds.domain.↩ DomainParticipant** (p. 948) that will be used to distribute telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**dedicated_participant** (p. 1594)

	<<***extension***>> *(p. 138)* Configures the use of a dedicated **com.rti.dds.domain.DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**publisher_qos_profile_name** (p. 1594)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**event_settings** (p. 1595)
	<<***extension***>> *(p. 138)* Configures the distribution of event metrics.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**periodic_settings** (p. 1594)
	<<***extension***>> *(p. 138)* Configures the distribution of periodic metrics.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**logging_settings** (p. 1595)
	<<***extension***>> *(p. 138)* Configures the distribution of logging messages.
com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**resource_selection** (p. 1606)
	<<***extension***>> *(p. 138)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.enabled_metrics_↩ selection** (p. 1606) and **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.disabled_metrics_↩ selection** (p. 1607) are applied to this subset of resources.
com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**enabled_metrics_selection** (p. 1606)
	<<***extension***>> *(p. 138)* A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.resource_selection** (p. 1606).

com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**disabled_metrics_selection** (p. 1607)
	<<***extension***>> *(*p. *138)* A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.resource_selection** (p. 1606).
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**distribution_settings** (p. 1613)
	<<***extension***>> *(*p. *138)* Configures the distribution of telemetry data.
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**telemetry_data** (p. 1613)
	<<***extension***>> *(*p. *138)* Configures the telemetry data that will be distributed.

6.60 Discovery

Use these QoS fields to configure how applications discover each other.

Use these QoS fields to configure how applications discover each other.

See `Discovery Overview`, in the *Core Libraries User's Manual*, for more information about discovery.

Basic Settings

com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**participant_id** (p. 2303)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* A value used to distinguish among different participants belonging to the same domain on the same host.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**initial_peers** (p. 945)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**multicast_receive_addresses** (p. 944)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.

com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**accept_unknown_peers** (p. 946)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Whether to accept a new participant that is not in the initial peers list.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_liveliness_lease_duration** (p. 918)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The liveliness lease duration for the participant.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_liveliness_assert_period** (p. 919)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The period to assert liveliness for the participant.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_announcement_period** (p. 919)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**initial_participant_announcements** (p. 921)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of initial announcements sent when a participant is first enabled.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**new_remote_participant_announcements** (p. 921)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of participant announcements sent when a remote participant is newly discovered.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**min_initial_participant_announcement_period** (p. 922)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**max_initial_participant_announcement_period** (p. 922)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**domain_id** (p. 1591)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The domain ID used in the creation of RTI Monitoring Library 2.0 **com.rti.dds.domain.DomainParticipant** (p. 948).
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**collector_initial_peers** (p. 1592)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **com.rti.dds.infrastructure.Monitoring↩ DistributionSettings.dedicated_participant** (p. 1594).

Advanced Settings

com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_host_id** (p. 2304)
	*<<**extension**>> (p. 138)* The RTPS Host ID of the domain participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_app_id** (p. 2305)
	*<<**extension**>> (p. 138)* The RTPS App ID of the domain participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_instance_id** (p. 2305)
	*<<**extension**>> (p. 138)* The RTPS Instance ID of the **com.rti.dds.domain.DomainParticipant** (p. 948).
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_well_known_ports** (p. 2304)
	*<<**extension**>> (p. 138)* Configures the RTPS well-known port mappings.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_reserved_port_mask** (p. 2306)

	<<***extension***>> *(*p. *138)* Specifies which well-known ports to reserve when enabling the participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_auto_id_kind** (p. 2306)
	<<***extension***>> *(*p. *138)* Kind of auto mechanism used to calculate the GUID prefix.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enabled_transports** (p. 944)
	<<***extension***>> *(*p. *138)* The transports available for use by the Discovery mechanism.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**metatraffic_transport_priority** (p. 945)
	<<***extension***>> *(*p. *138)* The transport priority to use for the Discovery meta-traffic.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enable_endpoint_discovery** (p. 946)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Whether to automatically enable endpoint discovery for all the remote participants.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**remote_participant_purge_kind** (p. 920)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**max_liveliness_loss_detection_period** (p. 920)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_reader_resource_limits** (p. 923)
	<<***extension***>> *(*p. *138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_reader** (p. 927)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_reader_resource_limits** (p. 923)
	<<***extension***>> *(*p. *138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_reader** (p. 927)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_reader_resource_limits** (p. 924)
	<<***extension***>> *(*p. *138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_writer** (p. 929)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **com.rti.dds.infrastructure.ReliabilityQosPolicy↩ Kind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.↩ rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer_publish_mode** (p. 930)
	<<***extension***>> *(*p. *138)* Publish mode policy for the built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer_publish_mode** (p. 931)
	<<***extension***>> *(*p. *138)* Publish mode policy for the built-in subscription writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**asynchronous_publisher** (p. 931)
	<<***extension***>> *(*p. *138)* Asynchronous publishing settings for the discovery **com.rti.dds.publication.↩ Publisher** (p. 1767) and all entities that are created by it.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**default_domain_announcement_period** (p. 931)
	<<***extension***>> *(p. 138)* The period to announce a participant to the default domain 0.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**ignore_default_domain_announcements** (p. 932)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Used to ignore the announcements received by a participant on the default domain 0 corresponding to participants running on domains IDs other than 0.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader_reliability_kind** (p. 928)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Reliability policy for a built-in participant message reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader** (p. 929)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **com.rti.dds.infrastructure.DiscoveryConfig↩ QosPolicy.participant_message_reader_reliability↩ _kind** (p. 928) is set to **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.RELIABLE_RELIABILITY↩ _QOS** (p. 1836).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer** (p. 924)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer_data_lifecycle** (p. 925)
	<<***extension***>> *(p. 138)* Writer data lifecycle settings for a built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer** (p. 925)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer_data_lifecycle** (p. 926)
	<<***extension***>> *(*p. *138)* Writer data lifecycle settings for a built-in subscription writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**builtin_discovery_plugins** (p. 927)
	<<***extension***>> *(*p. *138)* Mask of built-in discovery plugin kinds.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer** (p. 933)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **com.rti.dds.topic.builtin.↩ ServiceRequest** (p. 1985) writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer_data_lifecycle** (p. 933)
	<<***extension***>> *(*p. *138)* Writer data lifecycle settings for a built-in **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer_publish_mode** (p. 934)
	<<***extension***>> *(*p. *138)* Publish mode policy for the built-in service request writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_reader** (p. 934)
	<<***extension***>> *(*p. *138)* RTPS reliable reader protocol-related configuration settings for a built-in **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer** (p. 936)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer_publish_mode** (p. 937)

	<<***extension***>> *(*p. *138)* Publish mode policy for the built-in secure volatile writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_reader** (p. 937)
	<<***extension***>> *(*p. *138)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**endpoint_type_object_lb_serialization_threshold** (p. 938)
	<<***extension***>> *(*p. *138)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**dns_tracker_polling_period** (p. 938)
	<<***extension***>> *(*p. *138)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_reader** (p. 941)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_reader_resource_limits** (p. 939)
	<<***extension***>> *(*p. *138)* Resource limits for the built-in topic participant configuration reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer_publish_mode** (p. 941)
	<<***extension***>> *(*p. *138)* Publish mode policy for the built-in participant configuration writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer** (p. 940)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer_data_lifecycle** (p. 941)
	<<***extension***>> *(p. 138)* Writer data lifecycle settings for a built-in participant configuration writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**request_types_filter** (p. 942)
	<<***extension***>> *(p. 138)* Topic name pattern for requesting all types via Type Lookup Service.

6.61 Discovery Isolation

Use these QoS fields to isolate applications from each other.

Use these QoS fields to isolate applications from each other.

Applications can be isolated through mechanisms such as domain ids, domain tags, and partitions.

See `Discovery Overview`, in the *Core Libraries User's Manual*, for more information about discovery.

Basic Settings

com.rti.dds.infrastructure.PartitionQosPolicy (p. 1664)	**name** (p. 1666)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* A list of partition names
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**initial_peers** (p. 945)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**accept_unknown_peers** (p. 946)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Whether to accept a new participant that is not in the initial peers list.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**domain_id** (p. 1591)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The domain ID used in the creation of RTI Monitoring Library 2.0 **com.rti.dds.domain.DomainParticipant** (p. 948).

com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**collector_initial_peers** (p. 1592)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **com.rti.dds.infrastructure.Monitoring↩ DistributionSettings.dedicated_participant** (p. 1594).

Advanced Settings

com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enable_endpoint_discovery** (p. 946)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Whether to automatically enable endpoint discovery for all the remote participants.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**max_partitions** (p. 1098)
	<<***extension***>> *(p. 138)* Maximum number of partition name strings allowable in a **com.rti.dds.↩ infrastructure.PartitionQosPolicy** (p. 1664).
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**max_partition_cumulative_characters** (p. 1098)
	<<***extension***>> *(p. 138)* Maximum number of combined characters allowable in all partition names in a **com.rti.dds.infrastructure.PartitionQosPolicy** (p. 1664).

6.62 Durability

Use these QoS fields to configure how much and how long data remains retrievable in the system.

Use these QoS fields to configure how much and how long data remains retrievable in the system.

Basic Settings

com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**kind** (p. 1119)

	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The kind of durability.
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**writer_depth** (p. 1119)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Indicates the number of samples per instance that a durable **com.rti.dds.publication.DataWriter** (p. 818) will send to a late-joining **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples** (p. 1896)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Represents the maximum samples the middleware can store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Represents the maximum number of instances a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.LifespanQosPolicy (p. 1526)	**duration** (p. 1528)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Maximum duration for the data's validity.

Advanced Settings

com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**enable_required_subscriptions** (p. 600)
	*<<**extension**>> (p. 138)* Enables support for required subscriptions in a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_data_availability_waiting_time** (p. 600)
	*<<**extension**>> (p. 138)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_endpoint_availability_waiting_time** (p. 600)
	*<<**extension**>> (p. 138)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).

com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**required_matched_endpoint_groups** (p. 601)
	<<***extension***>> *(p. 138)* A sequence of endpoint groups.
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**direct_communication** (p. 1119)
	<<***extension***>> *(p. 138)* Indicates whether or not a TRANSIENT or PERSISTENT **com.rti.dds.subscription.DataReader** (p. 707) should receive samples directly from a TRANSIENT or PERSISTENT **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**storage_settings** (p. 1120)
	<<***extension***>> *(p. 138)* Configures durable writer history and durable reader state.
com.rti.dds.infrastructure.PersistentStorageSettings (p. 1669)	**enable** (p. 1671)
	<<***extension***>> *(p. 138)* Enables durable writer history in a **com.rti.dds.publication.DataWriter** (p. 818) and durable reader state in a **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.PersistentStorageSettings (p. 1669)	**file_name** (p. 1671)
	<<***extension***>> *(p. 138)* The file name where the durable writer history or durable reader state will be stored.
com.rti.dds.infrastructure.PersistentStorageSettings (p. 1669)	**trace_file_name** (p. 1671)
	<<***extension***>> *(p. 138)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.
com.rti.dds.infrastructure.PersistentStorageSettings (p. 1669)	**journal_kind** (p. 1672)
	<<***extension***>> *(p. 138)* Sets the journal mode of the persistent storage.
com.rti.dds.infrastructure.PersistentStorageSettings (p. 1669)	**synchronization_kind** (p. 1672)

	<<***extension***>> *(*p. *138)* Sets the level of synchronization with the physical disk.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**vacuum** (p. 1672)
	<<***extension***>> *(*p. *138)* Sets the auto-vacuum status of the storage.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**restore** (p. 1673)
	<<***extension***>> *(*p. *138)* Indicates if the persisted writer history or reader state must be restored.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_instance_cache_allocation** (p. 1673)
	<<***extension***>> *(*p. *138)* Configures the resource limits associated with the instance durable writer history cache.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_sample_cache_allocation** (p. 1674)
	<<***extension***>> *(*p. *138)* Configures the resource limits associated with the sample durable writer history cache.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_memory_state** (p. 1675)
	<<***extension***>> *(*p. *138)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**reader_checkpoint_frequency** (p. 1676)
	<<***extension***>> *(*p. *138)* Controls how often the reader state is stored into the database.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**service_cleanup_delay** (p. 1124)
	<<***spec***>> *(*p. *132)* Controls when the service is able to remove all information regarding a data instances.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_kind** (p. 1125)

	<<***spec***>> *(p. 132)* The kind of history to apply in recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**history_depth** (p. 1125)
	<<***spec***>> *(p. 132)* Setting to use for the **com.rti.dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119) when recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**max_samples** (p. 1125)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples_per_instance** (p. 1897)
	<<***spec***>> *(p. 132)* Represents the maximum number of samples of any one instance a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.DataWriterProtocolQosPolicy (p. 860)	**propagate_app_ack_with_no_response** (p. 865)
	<<***extension***>> *(p. 138)* Controls whether or not a **com.rti.dds.publication.DataWriter** (p. 818) receives **com.rti.dds.publication.DataWriterListener.on_application_acknowledgment** (p. 859) notifications with an empty or invalid response.
com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t (p. 1911)	**disable_positive_acks_enable_adaptive_sample_keep_duration** (p. 1922)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Enables dynamic adjustment of sample keep duration in response to congestion.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_min_sample_keep_duration** (p. 1921)
	<<***extension***>> *(p. 138)* The minimum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_max_sample_keep_duration** (p. 1922)
	<<***extension***>> *(p. 138)* The maximum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_decrease_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Controls rate of contraction of dynamic sample keep duration.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Controls rate of growth of dynamic sample keep duration.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_samples** (p. 633)
	<<***extension***>> *(p. 138)* Initial number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_samples** (p. 633)
	<<***extension***>> *(p. 138)* Maximum number of samples.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**role_name** (p. 1329)
	<<***extension***>> *(p. 138)* The entity role name.

6.63 Flow Control

Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.

Use these QoS fields to configure features which help to control the rate at which data is sent, preventing network congestion.

Basic Settings

com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**max_blocking_time** (p. 1831)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The maximum time a DataWriter can block on a write() call.
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**kind** (p. 1798)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Publishing mode
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_send_window_size** (p. 1924)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Minimum size of send window of unacknowledged samples
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_send_window_size** (p. 1924)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Maximum size of send window of unacknowledged samples

Advanced Settings

com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**flow_controller_name** (p. 1798)
	<<***extension***>> *(p. 138)* Name of the associated flow controller
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**priority** (p. 1799)
	<<***extension***>> *(p. 138)* Publication priority
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**disable_asynchronous_write** (p. 594)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Disable asynchronous publishing.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**outstanding_asynchronous_sample_allocation** (p. 1090)
	<<***extension***>> *(p. 138)* Allocation settings applied to the maximum number of samples (from all **com.↩ rti.dds.publication.DataWriter** (p. 818)) waiting to be asynchronously written.

com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**flow_controller_allocation** (p. 1091)
	<<***extension***>> *(p. 138)* Allocation settings applied to flow controllers.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**flow_controller_hash_buckets** (p. 1095)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Number of hash buckets for flow controllers.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer_publish_mode** (p. 930)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer_publish_mode** (p. 931)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in subscription writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**asynchronous_publisher** (p. 931)
	<<***extension***>> *(p. 138)* Asynchronous publishing settings for the discovery **com.rti.dds.publication.↩ Publisher** (p. 1767) and all entities that are created by it.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer_publish_mode** (p. 934)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in service request writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer_publish_mode** (p. 937)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in secure volatile writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer_publish_mode** (p. 941)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in participant configuration writer.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_bytes_per_nack_response** (p. 1920)
	<<***extension***>> *(*p. *138)* The maximum total message size when resending rejected samples or data fragments.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_update_period** (p. 1925)
	<<***extension***>> *(*p. *138)* Period in which send window may be dynamically changed
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_increase_factor** (p. 1926)
	<<***extension***>> *(*p. *138)* Increases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_decrease_factor** (p. 1927)
	<<***extension***>> *(*p. *138)* Decreases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_repair_piggyback_heartbeat** (p. 1929)
	<<***extension***>> *(*p. *138)* Prevents piggyback heartbeats from being sent with repair samples

6.64 Fragmentation

QoS related to DDS-level data fragmentation.

QoS related to DDS-level data fragmentation.

See `Data Fragmentation`, in the *Core Libraries User's Manual*, for more information about DDS-level fragmentation.

Advanced Settings

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**disable_fragmentation_support** (p. 796)

	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.Data↩ Reader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples** (p. 797)
	<<***extension***>> *(p. 138)* The maximum number of samples for which the **com.rti.dds.subscription.Data↩ Reader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_fragmented_samples** (p. 797)
	<<***extension***>> *(p. 138)* The initial number of samples for which a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples_per_remote_writer** (p. 798)
	<<***extension***>> *(p. 138)* The maximum number of samples per remote writer for which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragments_per_sample** (p. 798)
	<<***extension***>> *(p. 138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**dynamically_allocate_fragmented_samples** (p. 799)
	<<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The minimum delay to respond to a NACK or NACK_FRAG.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The maximum delay to respond to a NACK or NACK_FRAG.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**nack_suppression_duration** (p. 1920)
	<<***extension***>> *(p. 138)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_bytes_per_nack_response** (p. 1920)
	<<***extension***>> *(p. 138)* The maximum total message size when resending rejected samples or data fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**disable_fragmentation_support** (p. 634)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Determines whether the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples** (p. 635)
	<<***extension***>> *(p. 138)* The maximum number of samples for which the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_fragmented_samples** (p. 635)
	<<***extension***>> *(p. 138)* The initial number of samples for which a built-in topic **com.rti.dds.subscription.↩ DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples_per_remote_writer** (p. 636)
	<<***extension***>> *(p. 138)* The maximum number of samples per remote writer for which a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragments_per_sample** (p. 636)
	<<***extension***>> *(p. 138)* Maximum number of fragments for a single sample.

com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**dynamically_allocate_fragmented_samples** (p. 637)
	<<***extension***>> *(p. 138)* Determines whether the built-in topic **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.

6.65 Instance Lifecycle

QoS that control the lifecycle of instances.

QoS that control the lifecycle of instances.

Use these QoS fields to configure how RTI Connext manages instance lifecycles and resources in the DataReader and DataWriter queues.

Basic Settings

com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum number of instances a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_instances** (p. 1898)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial number of instances a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) will manage.

Advanced Settings

com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**service_cleanup_delay** (p. 1124)
	<<***spec***>> *(p. 132)* Controls when the service is able to remove all information regarding a data instances.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.

com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**instance_state_consistency_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Whether instance state consistency is enabled
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples_per_instance** (p. 1897)
	<<***spec***>> *(p. 132)* Represents the maximum number of samples of any one instance a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**instance_hash_buckets** (p. 1898)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Number of hash buckets for instances.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autodispose_unregistered_instances** (p. 2321)
	<<***spec***>> *(p. 132)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **com.rti.dds.publication.DataWriter** (p. 818) unregisters from the instance by means of the unregister operations.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autopurge_unregistered_instances_delay** (p. 2321)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has unregistered the instance.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autopurge_disposed_instances_delay** (p. 2322)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has disposed the instance.

com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_nowriter_samples_delay** (p. 1824)
	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance↩ _state` becomes **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_NO_WRITERS_↩ INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_disposed_samples_delay** (p. 1824)
	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance↩ _state` becomes **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_DISPOSED_↩ INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_disposed_instances_delay** (p. 1824)
	<<***extension***>> *(p. 138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.↩ dds.subscription.InstanceStateKind.NOT_ALIVE_↩ DISPOSED_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_nowriter_instances_delay** (p. 1825)
	<<***extension***>> *(p. 138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.dds.↩ subscription.InstanceStateKind.NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_total_instances** (p. 799)
	<<***extension***>> *(p. 138)* Maximum number of instances for which a DataReader will keep state.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**keep_minimum_state_for_instances** (p. 804)

	<<***extension***>> *(p. 138)* Whether or not keep a minimum instance state for up to **com.rti.dds.infrastructure.DataReaderResourceLimitsQos.max_total_instances** (p. 799).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**instance_replacement** (p. 805)
	<<***extension***>> *(p. 138)* Sets the kind of instances allowed to be replaced for each instance state (**com.rti.dds.subscription.InstanceStateKind** (p. 1451)) when a DataReader reaches **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**autopurge_remote_not_alive_writer_delay** (p. 806)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a **com.rti.dds.publication.DataWriter** (p. 818) once the **com.rti.dds.publication.DataWriter** (p. 818) has become not alive.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**instance_replacement** (p. 896)
	<<***extension***>> *(p. 138)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**replace_empty_instances** (p. 896)
	<<***extension***>> *(p. 138)* Whether or not to replace empty instances during instance replacement
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**autoregister_instances** (p. 897)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Whether or not to automatically register new instances
com.rti.dds.infrastructure.DataReaderProtocolQosPolicy (p. 761)	**propagate_dispose_of_unregistered_instances** (p. 764)
	<<***extension***>> *(p. 138)* Indicates whether or not an instance can move to the **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452) state without being in the **com.rti.dds.subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452) state.

com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**propagate_unregister_of_disposed_instances** (p. 764)
	<<***extension***>> *(p. 138)* Indicates whether or not an instance can move to the **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_NO_WRITERS_↩ INSTANCE_STATE** (p. 1452) state directly from the **com.rti.dds.subscription.InstanceStateKind.NOT_↩ ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**disable_inline_keyhash** (p. 864)
	<<***extension***>> *(p. 138)* Controls whether or not a keyhash is propagated on the wire with each sample.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**serialize_key_with_dispose** (p. 864)
	<<***extension***>> *(p. 138)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer_data_lifecycle** (p. 925)
	<<***extension***>> *(p. 138)* Writer data lifecycle settings for a built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer_data_lifecycle** (p. 926)
	<<***extension***>> *(p. 138)* Writer data lifecycle settings for a built-in subscription writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer_data_lifecycle** (p. 933)
	<<***extension***>> *(p. 138)* Writer data lifecycle settings for a built-in **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer_data_lifecycle** (p. 941)
	<<***extension***>> *(p. 138)* Writer data lifecycle settings for a built-in participant configuration writer.

6.66 Sending Large Data

Use these QoS fields to optimize the process of sending large data.

Use these QoS fields to optimize the process of sending large data.

This includes QoS which help to reduce the number of copies needed and manage fragmentation.

See `Sending Large Data`, in the *Core Libraries User's Manual*, for more information.

Basic Settings

com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**compression_settings** (p. 812)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Structure that contains the compression settings.

Advanced Settings

com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**compression_ids** (p. 683)
	<<***extension***>> *(p. 138)* Mask that represents the compression algorithms enabled.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**writer_compression_level** (p. 684)
	<<***extension***>> *(p. 138)* The level of compression to use when compressing data.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**writer_compression_threshold** (p. 685)
	<<***extension***>> *(p. 138)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**disable_fragmentation_support** (p. 796)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.Data↩ Reader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples** (p. 797)

	<<***extension***>> *(*p. *138)* The maximum number of samples for which the **com.rti.dds.subscription.Data↩ Reader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_fragmented_samples** (p. 797)
	<<***extension***>> *(*p. *138)* The initial number of samples for which a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples_per_remote_writer** (p. 798)
	<<***extension***>> *(*p. *138)* The maximum number of samples per remote writer for which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragments_per_sample** (p. 798)
	<<***extension***>> *(*p. *138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**dynamically_allocate_fragmented_samples** (p. 799)
	<<***extension***>> *(*p. *138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) preallocates storage for storing fragmented samples.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**endpoint_type_object_lb_serialization_threshold** (p. 938)
	<<***extension***>> *(*p. *138)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**disable_fragmentation_support** (p. 634)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Determines whether the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples** (p. 635)

	<<***extension***>> *(*p. *138)* The maximum number of samples for which the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_fragmented_samples** (p. 635)
	<<***extension***>> *(*p. *138)* The initial number of samples for which a built-in topic **com.rti.dds.subscription.↩ DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples_per_remote_writer** (p. 636)
	<<***extension***>> *(*p. *138)* The maximum number of samples per remote writer for which a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragments_per_sample** (p. 636)
	<<***extension***>> *(*p. *138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**dynamically_allocate_fragmented_samples** (p. 637)
	<<***extension***>> *(*p. *138)* Determines whether the built-in topic **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.

6.67 Liveliness

Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.

Use these QoS fields to manage the liveliness of participants and endpoints, ensuring active communication and timely updates of the system state.

Basic Settings

com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**kind** (p. 1538)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* The kind of liveliness desired.

com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**lease_duration** (p. 1538)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The duration within which a **com.rti.dds.publication.DataWriter** (p. 818) must be asserted, or else it is assumed to be not alive.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**assertions_per_lease_duration** (p. 1538)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The number of assertions a **com.rti.dds.publication.DataWriter** (p. 818) will send during a its **com.rti.dds.infrastructure.LivelinessQosPolicy.lease_duration** (p. 1538).
com.rti.dds.infrastructure.DiscoveryConfigQosPolicy (p. 915)	**participant_liveliness_lease_duration** (p. 918)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The liveliness lease duration for the participant.
com.rti.dds.infrastructure.DiscoveryConfigQosPolicy (p. 915)	**participant_liveliness_assert_period** (p. 919)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The period to assert liveliness for the participant.

Advanced Settings

com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**autopurge_remote_not_alive_writer_delay** (p. 806)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a **com.rti.dds.publication.DataWriter** (p. 818) once the **com.rti.dds.publication.DataWriter** (p. 818) has become not alive.
com.rti.dds.infrastructure.DiscoveryConfigQosPolicy (p. 915)	**remote_participant_purge_kind** (p. 920)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.
com.rti.dds.infrastructure.DiscoveryConfigQosPolicy (p. 915)	**max_liveliness_loss_detection_period** (p. 920)

	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_writer** (p. 929)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **com.rti.dds.infrastructure.ReliabilityQosPolicy↩ Kind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.↩ rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader_reliability_kind** (p. 928)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Reliability policy for a built-in participant message reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader** (p. 929)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **com.rti.dds.infrastructure.DiscoveryConfig↩ QosPolicy.participant_message_reader_reliability↩ _kind** (p. 928) is set to **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.RELIABLE_RELIABILITY↩ _QOS** (p. 1836).
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_heartbeat_retries** (p. 1917)
	<<***extension***>> *(p. 138)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**inactivate_nonprogressing_readers** (p. 1917)
	<<***extension***>> *(p. 138)* Whether to treat remote readers as inactive when their NACKs do not progress

6.68 Logging

Use these QoS fields to configure the RTI Connext logging infrastructure.

Use these QoS fields to configure the RTI Connext logging infrastructure.

This includes settings for configuring the verbosity and directing the output.

See `Logging`, in the *Core Libraries User's Manual*, for more information.

Basic Settings

com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**verbosity** (p. 1569)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The verbosities at which RTI Connext diagnostic information is logged.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**category** (p. 1569)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Categories of logged messages.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file** (p. 1570)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Specifies the file to which log messages will be redirected to.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file_suffix** (p. 1570)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Sets the file suffix when logging to a set of files
com.rti.dds.infrastructure.MonitoringLogging↩DistributionSettings (p. 1599)	**max_historical_logs** (p. 1601)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
com.rti.dds.infrastructure.MonitoringLogging↩DistributionSettings (p. 1599)	**publication_period** (p. 1602)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Period at which the logging thread publishes log messages.
com.rti.dds.infrastructure.MonitoringLogging↩ForwardingSettings (p. 1602)	**middleware_forwarding_level** (p. 1603)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 1560) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**security_event_forwarding_level** (p. 1603)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**service_forwarding_level** (p. 1604)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**user_forwarding_level** (p. 1604)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_USER** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**logs** (p. 1615)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* **com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings** (p. 1602) containing the **com.rti.↩ ndds.config.SyslogVerbosity** (p. 2086) levels that will be forwarded for the different **com.rti.ndds.config.↩ LogFacility** (p. 1558).

Advanced Settings

com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**print_format** (p. 1570)
	<<***extension***>> *(p. 138)* The format used to output RTI Connext diagnostic information.

com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_bytes_per_file** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of bytes a single file can contain
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_files** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of files to create before overwritting the previous ones.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**concurrency_level** (p. 1600)
	<<***extension***>> *(p. 138)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**datawriter_qos_profile_name** (p. 1601)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes log messages.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**thread** (p. 1601)
	<<***extension***>> *(p. 138)* The settings of the logging thread.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**logging_settings** (p. 1595)
	<<***extension***>> *(p. 138)* Configures the distribution of logging messages.

6.69 Middleware Memory Management

Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.

Use these QoS fields to configure the memory usage of the middleware, including various initial and max limits.

Basic Settings

com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples** (p. 1896)

	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* Represents the maximum samples the middleware can store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* Represents the maximum number of instances a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_samples** (p. 1897)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Represents the initial samples the middleware will store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_instances** (p. 1898)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Represents the initial number of instances a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) will manage.
com.rti.dds.infrastructure.MonitoringLoggingDistributionSettings (p. 1599)	**max_historical_logs** (p. 1601)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.

Advanced Settings

com.rti.dds.infrastructure.PersistentStorageSettings (p. 1669)	**writer_memory_state** (p. 1675)
	<<***extension***>> *(*p. *138)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**max_samples** (p. 1125)
	<<***spec***>> *(*p. *132)* Part of resource limits QoS policy to apply when feeding a late joiner.

com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples_per_instance** (p. 1897)
	<<***spec***>> *(p. 132)* Represents the maximum number of samples of any one instance a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers** (p. 792)
	<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers_per_instance** (p. 792)
	<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read a single instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_samples_per_remote_writer** (p. 793)
	<<***extension***>> *(p. 138)* The maximum number of out-of-order samples from a given remote **com.rti.↩ dds.publication.DataWriter** (p. 818) that a **com.rti.↩ dds.subscription.DataReader** (p. 707) may store when maintaining a reliable connection to the **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_infos** (p. 793)
	<<***extension***>> *(p. 138)* The maximum number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can use to store **com.rti.dds.subscription.↩ SampleInfo** (p. 1944).

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_writers** (p. 794)
	<<***extension***>> *(*p. *138)* The initial number of remote writers from which a **com.rti.dds.subscription.Data↩ Reader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_writers_per_instance** (p. 794)
	<<***extension***>> *(*p. *138)* The initial number of remote writers from which a **com.rti.dds.subscription.Data↩ Reader** (p. 707) may read a single instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_infos** (p. 795)
	<<***extension***>> *(*p. *138)* The initial number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can have, which are used to store **com.rti.↩ dds.subscription.SampleInfo** (p. 1944).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_outstanding_reads** (p. 795)
	<<***extension***>> *(*p. *138)* The initial number of outstanding calls to read/take (or one of their variants) on the same **com.rti.dds.subscription.Data↩ Reader** (p. 707) for which memory has not been returned by calling **com.rti.ndds.example.FooData↩ Reader.return_loan** (p. 1386).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_outstanding_reads** (p. 796)
	<<***extension***>> *(*p. *138)* The maximum number of outstanding read/take calls (or one of their variants) on the same **com.rti.dds.subscription.Data↩ Reader** (p. 707) for which memory has not been returned by calling **com.rti.ndds.example.FooData↩ Reader.return_loan** (p. 1386).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_samples_per_read** (p. 796)
	<<***extension***>> *(*p. *138)* The maximum number of data samples that the application can receive from the middleware in a single call to **com.rti.ndds.↩ example.FooDataReader.read** (p. 1361) or **com.rti.↩ ndds.example.FooDataReader.take** (p. 1363). If more data exists in the middleware, the application will need to issue multiple read/take calls.

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples** (p. 797)
	<<***extension***>> *(p. 138)* The maximum number of samples for which the **com.rti.dds.subscription.Data↩ Reader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_fragmented_samples** (p. 797)
	<<***extension***>> *(p. 138)* The initial number of samples for which a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples_per_remote_writer** (p. 798)
	<<***extension***>> *(p. 138)* The maximum number of samples per remote writer for which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragments_per_sample** (p. 798)
	<<***extension***>> *(p. 138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**dynamically_allocate_fragmented_samples** (p. 799)
	<<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_total_instances** (p. 799)
	<<***extension***>> *(p. 138)* Maximum number of instances for which a DataReader will keep state.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_virtual_writers** (p. 800)
	<<***extension***>> *(p. 138)* The maximum number of remote virtual writers from which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may read, including all instances.

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_virtual_writers** (p. 801)
	<<***extension***>> *(*p. *138)* The initial number of remote virtual writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_virtual_writers_per_instance** (p. 801)
	<<***extension***>> *(*p. *138)* The maximum number of virtual remote writers that can be associated with an instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_virtual_writers_per_instance** (p. 802)
	<<***extension***>> *(*p. *138)* The initial number of virtual remote writers per instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers_per_sample** (p. 802)
	<<***extension***>> *(*p. *138)* The maximum number of remote writers allowed to write the same sample.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_query_condition_filters** (p. 803)
	<<***extension***>> *(*p. *138)* The maximum number of query condition filters a reader is allowed.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_app_ack_response_length** (p. 803)
	<<***extension***>> *(*p. *138)* Maximum length of application-level acknowledgment response data
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**keep_minimum_state_for_instances** (p. 804)
	<<***extension***>> *(*p. *138)* Whether or not keep a minimum instance state for up to **com.rti.dds.↩ infrastructure.DataReaderResourceLimitsQos↩ Policy.max_total_instances** (p. 799).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_topic_queries** (p. 804)

	<<***extension***>> *(p. 138)* The initial number of Topic↩ Queries allocated by a **com.rti.dds.subscription.**↩ **DataReader** (p. 707).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_topic_queries** (p. 805)
	<<***extension***>> *(p. 138)* The maximum number of active TopicQueries that a **com.rti.dds.subscription.**↩ **DataReader** (p. 707) can create.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**instance_replacement** (p. 805)
	<<***extension***>> *(p. 138)* Sets the kind of instances allowed to be replaced for each instance state (**com.rti.↩ dds.subscription.InstanceStateKind** (p. 1451)) when a DataReader reaches **com.rti.dds.infrastructure.↩ ResourceLimitsQosPolicy.max_instances** (p. 1896).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**autopurge_remote_not_alive_writer_delay** (p. 806)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a **com.rti.dds.↩ publication.DataWriter** (p. 818) once the **com.rti.↩ dds.publication.DataWriter** (p. 818) has become not alive.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**lazily_allocate_batch_resources** (p. 808)
	<<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_concurrent_blocking_threads** (p. 894)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The initial number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_concurrent_blocking_threads** (p. 894)

	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* The maximum number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**max_remote_reader_filters** (p. 894)
	<<***extension***>> *(p. 138)* The maximum number of remote DataReaders for which the **com.rti.dds.publication.DataWriter** (p. 818) will perform content-based filtering.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**initial_batches** (p. 895)
	<<***extension***>> *(p. 138)* Represents the initial number of batches a **com.rti.dds.publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**max_batches** (p. 895)
	<<***extension***>> *(p. 138)* Represents the maximum number of batches a **com.rti.dds.publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**instance_replacement** (p. 896)
	<<***extension***>> *(p. 138)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**replace_empty_instances** (p. 896)
	<<***extension***>> *(p. 138)* Whether or not to replace empty instances during instance replacement
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**max_virtual_writers** (p. 898)
	<<***extension***>> *(p. 138)* The maximum number of virtual writers supported by a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**initial_virtual_writers** (p. 897)

	<<***extension***>> *(*p. *138)* The initial number of virtual writers supported by a **com.rti.dds.publication.Data↩ Writer** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_remote_readers** (p. 898)
	<<***extension***>> *(*p. *138)* Controls the initial memory allocation for the matched remote readers of a **com.↩ rti.dds.publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_remote_readers** (p. 898)
	<<***extension***>> *(*p. *138)* The maximum number of remote readers supported by a **com.rti.dds.↩ publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_app_ack_remote_readers** (p. 899)
	<<***extension***>> *(*p. *138)* The maximum number of application-level acknowledging remote readers supported by a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_active_topic_queries** (p. 899)
	<<***extension***>> *(*p. *138)* Represents the initial number of active topic queries a **com.rti.dds.publication.↩ DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_active_topic_queries** (p. 899)
	<<***extension***>> *(*p. *138)* Represents the maximum number of active topic queries a **com.rti.dds.↩ publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.SystemResourceLimits↩ QosPolicy (p. 2090)	**max_objects_per_thread** (p. 2091)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* The maximum number of objects that can be stored per thread for a **com.rti.dds.domain.DomainParticipant↩ Factory** (p. 1039).
com.rti.dds.infrastructure.SystemResourceLimits↩ QosPolicy (p. 2090)	**initial_objects_per_thread** (p. 2091)

	<<***extension***>> *(p. 138)* The number of objects per thread for a **com.rti.dds.domain.DomainParticipant↩ Factory** (p. 1039) for which infrastructure will initially be allocated.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_writer_allocation** (p. 1085)
	<<***extension***>> *(p. 138)* Allocation settings applied to local DataWriters.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_reader_allocation** (p. 1086)
	<<***extension***>> *(p. 138)* Allocation settings applied to local DataReaders.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_publisher_allocation** (p. 1086)
	<<***extension***>> *(p. 138)* Allocation settings applied to local Publisher.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_subscriber_allocation** (p. 1086)
	<<***extension***>> *(p. 138)* Allocation settings applied to local Subscriber.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_topic_allocation** (p. 1087)
	<<***extension***>> *(p. 138)* Allocation settings applied to local Topic.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_writer_allocation** (p. 1087)
	<<***extension***>> *(p. 138)* Allocation settings applied to remote DataWriters.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_reader_allocation** (p. 1087)
	<<***extension***>> *(p. 138)* Allocation settings applied to remote DataReaders.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_participant_allocation** (p. 1088)
	<<***extension***>> *(p. 138)* Allocation settings applied to remote DomainParticipants.

com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**matching_writer_reader_pair_allocation** (p. 1088)
	<<***extension***>> *(p. 138)* Allocation settings applied to matching local writer and remote/local reader pairs.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**matching_reader_writer_pair_allocation** (p. 1088)
	<<***extension***>> *(p. 138)* Allocation settings applied to matching local reader and remote/local writer pairs.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**ignored_entity_allocation** (p. 1089)
	<<***extension***>> *(p. 138)* Allocation settings applied to ignored entities.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**content_filtered_topic_allocation** (p. 1089)
	<<***extension***>> *(p. 138)* Allocation settings applied to content filtered topic.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**content_filter_allocation** (p. 1089)
	<<***extension***>> *(p. 138)* Allocation settings applied to content filter.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**read_condition_allocation** (p. 1090)
	<<***extension***>> *(p. 138)* Allocation settings applied to read condition pool.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**query_condition_allocation** (p. 1090)
	<<***extension***>> *(p. 138)* Allocation settings applied to query condition pool.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**outstanding_asynchronous_sample_allocation** (p. 1090)
	<<***extension***>> *(p. 138)* Allocation settings applied to the maximum number of samples (from all **com.↩ rti.dds.publication.DataWriter** (p. 818)) waiting to be asynchronously written.

com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**flow_controller_allocation** (p. 1091)
	<<***extension***>> *(p. 138)* Allocation settings applied to flow controllers.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_writer_hash_buckets** (p. 1091)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Hash_Buckets settings applied to local DataWriters.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_reader_hash_buckets** (p. 1091)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for local DataReaders.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_publisher_hash_buckets** (p. 1092)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for local Publisher.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_subscriber_hash_buckets** (p. 1092)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for local Subscriber.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**local_topic_hash_buckets** (p. 1092)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for local Topic.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_writer_hash_buckets** (p. 1093)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for remote DataWriters.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_reader_hash_buckets** (p. 1093)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for remote DataReaders.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_participant_hash_buckets** (p. 1093)

	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for remote DomainParticipants.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**matching_writer_reader_pair_hash_buckets** (p. 1094)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for matching local writer and remote/local reader pairs.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**matching_reader_writer_pair_hash_buckets** (p. 1094)

com.rti.dds.infrastructure.DatabaseQosPolicy (p. 702)	**max_skiplist_level** (p. 705)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* The maximum level of the skiplist.
com.rti.dds.infrastructure.DatabaseQosPolicy (p. 702)	**initial_weak_references** (p. 706)
	<<***extension***>> *(p. 138)* The initial number of weak references.

com.rti.dds.infrastructure.DatabaseQosPolicy (p. 702)	**max_weak_references** (p. 706)
	<<***extension***>> *(p. 138)* The maximum number of weak references.
com.rti.dds.infrastructure.ReceiverPoolQosPolicy (p. 1826)	**buffer_size** (p. 1827)
	<<***extension***>> *(p. 138)* The receive buffer size in bytes.
com.rti.dds.infrastructure.ReceiverPoolQosPolicy (p. 1826)	**buffer_alignment** (p. 1828)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* The receive buffer alignment.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_reader_resource_limits** (p. 923)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_reader_resource_limits** (p. 923)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_reader_resource_limits** (p. 924)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_reader_resource_limits** (p. 939)
	<<***extension***>> *(p. 138)* Resource limits for the built-in topic participant configuration reader.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_samples** (p. 633)
	<<***extension***>> *(p. 138)* Initial number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_samples** (p. 633)
	<<***extension***>> *(p. 138)* Maximum number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_infos** (p. 633)

	<<***extension***>> *(*p. *138)* Initial number of sample infos.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_infos** (p. 634)
	<<***extension***>> *(*p. *138)* Maximum number of sample infos.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**disable_fragmentation_support** (p. 634)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Determines whether the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples** (p. 635)
	<<***extension***>> *(*p. *138)* The maximum number of samples for which the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_fragmented_samples** (p. 635)
	<<***extension***>> (p. *138)* The initial number of samples for which a built-in topic **com.rti.dds.subscription.↩ DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples_per_remote_writer** (p. 636)
	<<***extension***>> *(*p. *138)* The maximum number of samples per remote writer for which a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragments_per_sample** (p. 636)
	<<***extension***>> *(*p. *138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**dynamically_allocate_fragmented_samples** (p. 637)
	<<***extension***>> (p. *138)* Determines whether the built-in topic **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.

com.rti.dds.infrastructure.ThreadSettings_t (p. 2101)	**stack_size** (p. 2102)
	The thread stack-size.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_bytes_per_file** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of bytes a single file can contain
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_files** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of files to create before overwritting the previous ones.

6.70 QoS Profile Management

Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.

Use these QoS fields to configure how QoS profiles are loaded and which ones should be used when entities are created.

Basic Settings

com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**string_profile** (p. 1693)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of strings containing a XML document to load.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**url_profile** (p. 1694)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sequence of **URL groups** (p. 367) containing a set of XML documents to load.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_user_profile** (p. 1694)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_environment_profile** (p. 1694)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 367).
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_resource_profile** (p. 1695)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Ignores the file NDDS_QOS_PROFILES.xml.

com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**enable** (p. 1591)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Enables the use of a dedicated **com.rti.dds.domain.↩ DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.

Advanced Settings

com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**datawriter_qos_profile_name** (p. 1597)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes event metrics.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**datawriter_qos_profile_name** (p. 1610)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes periodic metrics.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**datawriter_qos_profile_name** (p. 1601)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes log messages.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**participant_qos_profile_name** (p. 1591)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.domain.↩ DomainParticipant** (p. 948) that will be used to distribute telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**dedicated_participant** (p. 1594)
	<<***extension***>> *(p. 138)* Configures the use of a dedicated **com.rti.dds.domain.DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.

com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**publisher_qos_profile_name** (p. 1594)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.

6.71 Reliability QoS

Reliability related QoS.

Reliability related QoS.

Use these QoS fields to configure the reliable delivery of your application data – this includes those settings that configure the reliability protocol.

See `Reliable Delivery Model`, in the *Core Libraries User's Manual*, for more information about the DDS reliability protocol.

Basic Settings

com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**kind** (p. 1831)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Kind of reliability.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**max_blocking_time** (p. 1831)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The maximum time a DataWriter can block on a write() call.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**kind** (p. 1437)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the kind of history to be kept.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**depth** (p. 1438)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the number of samples per instance to be kept, when the `kind` is com.rti.dds.infrastructure.HistoryQosPolicy↩ Kind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_↩ QOS

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**heartbeat_period** (p. 1914)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* The period at which to send heartbeats.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**fast_heartbeat_period** (p. 1914)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**late_joiner_heartbeat_period** (p. 1915)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_send_window_size** (p. 1924)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Minimum size of send window of unacknowledged samples
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_send_window_size** (p. 1924)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Maximum size of send window of unacknowledged samples

Advanced Settings

com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**enable_required_subscriptions** (p. 600)
	*<<**extension**>>* (p. *138)* Enables support for required subscriptions in a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_data_availability_waiting_time** (p. 600)
	*<<**extension**>>* (p. *138)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.

com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_endpoint_availability_waiting_time** (p. 600)
	<<***extension***>> *(p. 138)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**required_matched_endpoint_groups** (p. 601)
	<<***extension***>> *(p. 138)* A sequence of endpoint groups.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**acknowledgment_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Kind of reliable acknowledgment
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**instance_state_consistency_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Whether instance state consistency is enabled
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**exact_reliability_kind_match** (p. 1833)
	<<***extension***>> *(p. 138)* Whether an exact reliability kind match is required for endpoint matching.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_app_ack_response_length** (p. 803)
	<<***extension***>> *(p. 138)* Maximum length of application-level acknowledgment response data
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_app_ack_remote_readers** (p. 899)
	<<***extension***>> *(p. 138)* The maximum number of application-level acknowledging remote readers supported by a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**rtps_reliable_reader** (p. 765)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **com.rti.dds.subscription.Data↩ Reader** (p. 707). This parameter only has effect if the reader is configured with **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.RELIABLE_RELIABILITY↩ _QOS** (p. 1836) **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind** (p. 1835).

com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**disable_positive_acks** (p. 763)
	<<***extension***>> *(p. 138)* Whether the reader sends positive acknowledgements to writers.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**push_on_write** (p. 863)
	<<***extension***>> *(p. 138)* Whether to push sample out when write is called.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**disable_positive_acks** (p. 863)
	<<***extension***>> *(p. 138)* Controls whether or not the writer expects positive acknowledgements from matching readers.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**propagate_app_ack_with_no_response** (p. 865)
	<<***extension***>> *(p. 138)* Controls whether or not a **com.rti.dds.publication.DataWriter** (p. 818) receives **com.rti.dds.publication.DataWriterListener.on_↩ application_acknowledgment** (p. 859) notifications with an empty or invalid response.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**rtps_reliable_writer** (p. 865)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **com.rti.dds.publication.Data↩ Writer** (p. 818). This parameter only has effect if both the writer and the matching reader are configured with **com.rti.dds.infrastructure.ReliabilityQos↩ PolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_reader** (p. 927)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in publication reader.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_reader** (p. 927)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in subscription reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_writer** (p. 929)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in participant message writer. This parameter only has effect if the matching participant message reader is configured with **com.rti.dds.infrastructure.ReliabilityQosPolicy↩ Kind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.↩ rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader_reliability_kind** (p. 928)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Reliability policy for a built-in participant message reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_message_reader** (p. 929)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for a built-in participant message reader. This parameter only has effect if **com.rti.dds.infrastructure.DiscoveryConfig↩ QosPolicy.participant_message_reader_reliability↩ _kind** (p. 928) is set to **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.RELIABLE_RELIABILITY↩ _QOS** (p. 1836).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_writer** (p. 924)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in publication writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_writer** (p. 925)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in subscription writer.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_writer** (p. 933)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in **com.rti.dds.topic.builtin.↩ ServiceRequest** (p. 1985) writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**service_request_reader** (p. 934)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for a built-in **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer** (p. 936)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_reader** (p. 937)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_reader** (p. 941)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a built-in participant configuration reader.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_writer** (p. 940)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a built-in participant configuration writer.
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**min_heartbeat_response_delay** (p. 1906)
	<<***extension***>> *(p. 138)* The minimum delay to respond to a heartbeat.

com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**max_heartbeat_response_delay** (p. 1906)
	<<***extension***>> *(p. 138)* The maximum delay to respond to a heartbeat.
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**heartbeat_suppression_duration** (p. 1907)
	<<***extension***>> *(p. 138)* The duration a reader ignores consecutively received heartbeats
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**nack_period** (p. 1907)
	<<***extension***>> *(p. 138)* The period at which to send NACKs
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**receive_window_size** (p. 1908)
	<<***extension***>> *(p. 138)* The number of received out-of-order samples a reader can keep at a time
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**round_trip_time** (p. 1908)
	<<***extension***>> *(p. 138)* The duration from sending a NACK to receiving a repair of a sample
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**app_ack_period** (p. 1909)
	<<***extension***>> *(p. 138)* The period at which application-level acknowledgment messages are sent
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**min_app_ack_response_keep_duration** (p. 1909)
	<<***extension***>> *(p. 138)* Minimum duration for which application-level acknowledgment response data is kept
com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**samples_per_app_ack** (p. 1910)
	<<***extension***>> *(p. 138)* The minimum number of samples acknowledged by one application-level acknowledgment message

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**low_watermark** (p. 1913)
	<<***extension***>> *(p. 138)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the com.rti.dds.infrastructure.StatusKind.StatusKind.↩ RELIABLE_WRITER_CACHE_CHANGED_STATUS is considered to have changed.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**high_watermark** (p. 1913)
	<<***extension***>> *(p. 138)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the com.rti.dds.infrastructure.StatusKind.StatusKind.↩ RELIABLE_WRITER_CACHE_CHANGED_STATUS is considered to have changed.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**virtual_heartbeat_period** (p. 1916)
	<<***extension***>> *(p. 138)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**samples_per_virtual_heartbeat** (p. 1916)
	<<***extension***>> *(p. 138)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_heartbeat_retries** (p. 1917)
	<<***extension***>> *(p. 138)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**inactivate_nonprogressing_readers** (p. 1917)
	<<***extension***>> *(p. 138)* Whether to treat remote readers as inactive when their NACKs do not progress
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**heartbeats_per_max_samples** (p. 1918)

	<<***extension***>> *(p. 138)* The number of piggyback heartbeats sent per max send window.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The minimum delay to respond to a NACK or NACK_FRAG.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The maximum delay to respond to a NACK or NACK_FRAG.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**nack_suppression_duration** (p. 1920)
	<<***extension***>> *(p. 138)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_bytes_per_nack_response** (p. 1920)
	<<***extension***>> *(p. 138)* The maximum total message size when resending rejected samples or data fragments.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_enable_adaptive_sample_↩ keep_duration** (p. 1922)
	[DEPRECATED] (p. **358)** <<***extension***>> *(p. 138)* Enables dynamic adjustment of sample keep duration in response to congestion.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_min_sample_keep_duration** (p. 1921)
	<<***extension***>> *(p. 138)* The minimum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_max_sample_keep_duration** (p. 1922)
	<<***extension***>> *(p. 138)* The maximum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_decrease_sample_keep_↩ duration_factor** (p. 1923)

	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Controls rate of contraction of dynamic sample keep duration.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Controls rate of growth of dynamic sample keep duration.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_update_period** (p. 1925)
	<<***extension***>> *(p. 138)* Period in which send window may be dynamically changed
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_increase_factor** (p. 1926)
	<<***extension***>> *(p. 138)* Increases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_decrease_factor** (p. 1927)
	<<***extension***>> *(p. 138)* Decreases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**enable_multicast_periodic_heartbeat** (p. 1928)
	<<***extension***>> *(p. 138)* Whether periodic heartbeat messages are sent over multicast
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**multicast_resend_threshold** (p. 1928)
	<<***extension***>> *(p. 138)* The minimum number of requesting readers needed to trigger a multicast resend
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_repair_piggyback_heartbeat** (p. 1929)
	<<***extension***>> *(p. 138)* Prevents piggyback heartbeats from being sent with repair samples

6.72 Sample Memory Management QoS

Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.

Use these QoS fields to configure how Connext manages memory related to the samples that are stored and managed by the DataReader and DataWriter queues.

Basic Settings

com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum samples the middleware can store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum number of instances a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_samples** (p. 1897)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial samples the middleware will store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_instances** (p. 1898)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial number of instances a **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)) will manage.

Advanced Settings

com.rti.dds.infrastructure.PersistentStorageSettings (p. 1669)	**writer_instance_cache_allocation** (p. 1673)
	<<***extension***>> *(p. 138)* Configures the resource limits associated with the instance durable writer history cache.

com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_sample_cache_allocation** (p. 1674)
	<<***extension***>> *(p. 138)* Configures the resource limits associated with the sample durable writer history cache.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_kind** (p. 1125)
	<<***spec***>> *(p. 132)* The kind of history to apply in recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_depth** (p. 1125)
	<<***spec***>> *(p. 132)* Setting to use for the **com.rti.↩ dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119) when recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples** (p. 1125)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples_per_instance** (p. 1897)
	<<***spec***>> *(p. 132)* Represents the maximum number of samples of any one instance a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autodispose_unregistered_instances** (p. 2321)

	<<***spec***>> *(p. 132)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **com.rti.dds.publication.DataWriter** (p. 818) unregisters from the instance by means of the unregister operations.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autopurge_unregistered_instances_delay** (p. 2321)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has unregistered the instance.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autopurge_disposed_instances_delay** (p. 2322)
	<<***extension***>> *(p. 138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has disposed the instance.
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_nowriter_samples_delay** (p. 1824)
	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance↩ _state` becomes **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_NO_WRITERS_↩ INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_disposed_samples_delay** (p. 1824)
	<<***spec***>> *(p. 132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance↩ _state` becomes **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_DISPOSED_↩ INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_disposed_instances_delay** (p. 1824)
	<<***extension***>> *(p. 138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.↩ dds.subscription.InstanceStateKind.NOT_ALIVE_↩ DISPOSED_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.

com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_nowriter_instances_delay** (p. 1825)
	<<***extension***>> *(*p. *138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.dds.↩ subscription.InstanceStateKind.NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples** (p. 797)
	<<***extension***>> *(*p. *138)* The maximum number of samples for which the **com.rti.dds.subscription.Data↩ Reader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_fragmented_samples** (p. 797)
	<<***extension***>> *(*p. *138)* The initial number of samples for which a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples_per_remote_writer** (p. 798)
	<<***extension***>> *(*p. *138)* The maximum number of samples per remote writer for which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragments_per_sample** (p. 798)
	<<***extension***>> *(*p. *138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**dynamically_allocate_fragmented_samples** (p. 799)
	<<***extension***>> *(*p. *138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_batches** (p. 895)

	<<***extension***>> *(p. 138)* Represents the initial number of batches a **com.rti.dds.publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_batches** (p. 895)
	<<***extension***>> *(p. 138)* Represents the maximum number of batches a **com.rti.dds.publication.Data↩ Writer** (p. 818) will manage.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_reader_resource_limits** (p. 923)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**publication_reader_resource_limits** (p. 923)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**subscription_reader_resource_limits** (p. 924)
	<<***extension***>> *(p. 138)* Resource limits.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_configuration_reader_resource_limits** (p. 939)
	<<***extension***>> *(p. 138)* Resource limits for the built-in topic participant configuration reader.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_samples** (p. 633)
	<<***extension***>> *(p. 138)* Initial number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_samples** (p. 633)
	<<***extension***>> *(p. 138)* Maximum number of samples.

6.73 Sample Ordering

Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.

Use these QoS fields to configure how samples are ordered when stored and accessed by a DataReader.

Basic Settings

com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**kind** (p. 905)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the desired kind of destination order.

Advanced Settings

com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**access_scope** (p. 1682)
	<<***spec***>> *(p. 132)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**coherent_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**ordered_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**drop_incomplete_coherent_set** (p. 1683)
	<<***extension***>> *(p. 138)* Indicates whether or not a **com.rti.dds.subscription.DataReader** (p. 707) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**scope** (p. 905)
	<<***spec***>> *(p. 132)* Specifies the desired scope of the source destination order.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**source_timestamp_tolerance** (p. 905)
	<<***extension***>> *(p. 138)* Allowed tolerance between source timestamps of consecutive samples.

6.74 Security

Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.

Use these QoS fields to enable and configure some security-related capabilities in RTI Connext.

For a complete security solution, you should use the Security Plugins. See the `RTI Security Plugins User's Manual` for more information.

The QoS listed on this page mostly relate to features that are enabled when the Security Plugins are being used.

Basic Settings

com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**security_event_forwarding_level** (p. 1603)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.

Advanced Settings

com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**cdr_padding_kind** (p. 2254)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**compute_crc** (p. 2307)
	<<***extension***>> *(p. 138)* Adds RTPS CRC submessage to every message when this field is set to com.↩ rti.dds.infrastructure.true.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**check_crc** (p. 2307)
	<<***extension***>> *(p. 138)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to com.rti.dds.infrastructure.true.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer** (p. 936)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with the built-in secure volatile writer.

com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_writer_publish_mode** (p. 937)
	<<***extension***>> *(p. 138)* Publish mode policy for the built-in secure volatile writer.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**secure_volatile_reader** (p. 937)
	<<***extension***>> *(p. 138)* RTPS reliable reader protocol-related configuration settings for the built-in secure volatile reader.
com.rti.dds.infrastructure.DataTagQosPolicy (p. 813)	**tags** (p. 814)
	<<***spec***>> *(p. 132)* Sequence of data tags.

6.75 Throughput

Use these QoS fields to configure features which may be helpful to increase throughput.

Use these QoS fields to configure features which may be helpful to increase throughput.

Basic Settings

com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**enable** (p. 608)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies whether or not batching is enabled.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_data_bytes** (p. 608)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum cumulative length of all serialized samples in a batch.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_samples** (p. 609)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum number of samples in a batch.

Advanced Settings

com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_flush_delay** (p. 610)
	<<***extension***>> *(p. 138)* The maximum flush delay.

com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**source_timestamp_resolution** (p. 610)
	<<***extension***>> *(p. 138)* Batch source timestamp resolution.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**thread_safe_write** (p. 611)
	<<***extension***>> *(p. 138)* Determines whether or not the write operation is thread safe.

6.76 Transports

Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.

Use these QoS fields to configure aspects of the transports (udp, shared memory, etc.) used for communication.

Basic Settings

com.rti.dds.infrastructure.TransportBuiltinQos↩ Policy (p. 2152)	**mask** (p. 2153)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the built-in transports that are registered automatically when the **com.rti.dds.domain.DomainParticipant** (p. 948) is enabled.
com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**value** (p. 2163)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* A sequence of multicast communications settings.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**initial_peers** (p. 945)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**multicast_receive_addresses** (p. 944)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**accept_unknown_peers** (p. 946)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Whether to accept a new participant that is not in the initial peers list.

Advanced Settings

com.rti.dds.infrastructure.TransportPriorityQos↩ Policy (p. 2168)	**value** (p. 2170)
	<<***spec***>> *(p. 132)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
com.rti.dds.infrastructure.TransportSelectionQos↩ Policy (p. 2170)	**enabled_transports** (p. 2171)
	<<***extension***>> *(p. 138)* A sequence of transport aliases that specifies the transport instances available for use by the entity.
com.rti.dds.infrastructure.TransportUnicastQos↩ Policy (p. 2177)	**value** (p. 2178)
	<<***extension***>> *(p. 138)* A sequence of unicast communication settings.
com.rti.dds.infrastructure.TransportMulticast↩ MappingQosPolicy (p. 2160)	**value** (p. 2161)
	<<***extension***>> *(p. 138)* A sequence of multicast communication mappings.
com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**kind** (p. 2163)
	<<***extension***>> *(p. 138)* A value that specifies a way to determine how to obtain the multicast address.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enabled_transports** (p. 944)
	<<***extension***>> *(p. 138)* The transports available for use by the Discovery mechanism.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**metatraffic_transport_priority** (p. 945)
	<<***extension***>> *(p. 138)* The transport priority to use for the Discovery meta-traffic.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enable_endpoint_discovery** (p. 946)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Whether to automatically enable endpoint discovery for all the remote participants.

com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**transport_info_list_max_length** (p. 1106)
	<<***extension***>> *(p. 138)* Maximum number of installed transports to send and receive information about in builtin.ParticipantBuiltinTopicData.transport_info.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**locator_reachability_assert_period** (p. 934)
	<<***extension***>> *(p. 138)* Period at which this DomainParticipant will assert the locators discovered from other DomainParticipants.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**locator_reachability_change_detection_period** (p. 935)
	<<***extension***>> *(p. 138)* Period at which this DomainParticipant will check if its locators are reachable from other DomainParticipants.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**dns_tracker_polling_period** (p. 938)
	<<***extension***>> *(p. 138)* Duration that specifies the period used by the DNS tracker to poll the DNS service and check for changes in the hostnames.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**enable_multicast_periodic_heartbeat** (p. 1928)
	<<***extension***>> *(p. 138)* Whether periodic heartbeat messages are sent over multicast
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**multicast_resend_threshold** (p. 1928)
	<<***extension***>> *(p. 138)* The minimum number of requesting readers needed to trigger a multicast resend
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**multicast_settings** (p. 668)
	<<***extension***>> *(p. 138)* A sequence of **com.↩ rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) used to configure the multicast addresses associated with a channel.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**priority** (p. 669)
	<<***extension***>> *(p. 138)* Publication priority

6.77 Topic Queries

Use these QoS fields to configure the topic query feature.

Use these QoS fields to configure the topic query feature.

See `Querying Data`, in the *Core Libraries User's Manual*, for more information about this feature.

Basic Settings

com.rti.dds.infrastructure.TopicQueryDispatchQosPolicy (p. 2142)	**publication_period** (p. 2144)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sets the periodic interval at which samples are published.

Advanced Settings

com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**disable_topic_query_publication** (p. 596)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Disable topic query publication.
com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy (p. 593)	**topic_query_publication_thread** (p. 596)
	<<***extension***>> *(p. 138)* Settings of the **com.rti.dds.subscription.TopicQuery** (p. 2139) publication thread.
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**initial_topic_queries** (p. 804)
	<<***extension***>> *(p. 138)* The initial number of TopicQueries allocated by a **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy (p. 789)	**max_topic_queries** (p. 805)
	<<***extension***>> *(p. 138)* The maximum number of active TopicQueries that a **com.rti.dds.subscription.DataReader** (p. 707) can create.
com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)	**initial_active_topic_queries** (p. 899)

	<<***extension***>> *(*p. *138)* Represents the initial number of active topic queries a **com.rti.dds.publication.↩ DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_active_topic_queries** (p. 899)
	<<***extension***>> *(*p. *138)* Represents the maximum number of active topic queries a **com.rti.dds.↩ publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_topic_query_allocation** (p. 1106)
	<<***extension***>> *(*p. *138)* Allocation settings applied to remote TopicQueries.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**remote_topic_query_hash_buckets** (p. 1107)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Number of hash buckets for remote TopicQueries.
com.rti.dds.infrastructure.TopicQueryDispatch↩ QosPolicy (p. 2142)	**enable** (p. 2143)
	<<***extension***>> *(*p. *138)* Allows this writer to dispatch TopicQueries
com.rti.dds.infrastructure.TopicQueryDispatch↩ QosPolicy (p. 2142)	**samples_per_period** (p. 2143)
	<<***extension***>> *(*p. *138)* Sets the maximum number of samples to publish in each publication_period.

6.78 Type System

Use these QoS fields to configure aspects of the type system.

Use these QoS fields to configure aspects of the type system.

These settings include how types are sent during discovery, what criteria is used when types should be matched, and how data should be serialized.

Advanced Settings

com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**value** (p. 812)
	<<***spec***>> *(p. 132)* Sequence of representation identifiers.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**kind** (p. 2248)
	<<***spec***>> *(p. 132)* Type consistency kind.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_sequence_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether sequence bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_string_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether string bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_member_names** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether member names are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**prevent_type_widening** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type widening is allowed.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**force_type_validation** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type information must be available in order to complete matching between a **com.rti.dds.publication.DataWriter** (p. 818) and a **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_enum_literal_names** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether enumeration constant names are taken into consideration for type assignability.

com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**type_code_max_serialized_length** (p. 1099)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Maximum size of serialized string for type code.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**type_object_max_serialized_length** (p. 1099)
	<<***extension***>> *(p. 138)* The maximum length, in bytes, that the buffer to serialize a TypeObject v1 can consume.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**type_object_max_deserialized_length** (p. 1101)
	<<***extension***>> *(p. 138)* The maximum number of bytes that a deserialized TypeObject v1 can consume.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**deserialized_type_object_dynamic_allocation_↩ threshold** (p. 1101)
	<<***extension***>> *(p. 138)* A threshold, in bytes, for dynamic memory allocation for the deserialized TypeObject v1.
com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy (p. 1081)	**serialized_type_object_dynamic_allocation_↩ threshold** (p. 1100)
	<<***extension***>> *(p. 138)* A threshold, in bytes, for dynamic memory allocation for the serialized TypeObject v1.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**endpoint_type_object_lb_serialization_threshold** (p. 938)
	<<***extension***>> *(p. 138)* Controls when/if the Type↩ Object v1 is compressed when propagated in Simple Endpoint Discovery.

6.79 QoS Mutability

Some QoS are mutable after an entity is enabled, and others are not.

Modules

- **Immutable QoS**

This page lists all QoS that are immutable after an entity has been enabled.

- **Mutable QoS**

  This page lists all QoS that are always mutable.

6.79.1 Detailed Description

Some QoS are mutable after an entity is enabled, and others are not.

6.80 Immutable QoS

This page lists all QoS that are immutable after an entity has been enabled.

This page lists all QoS that are immutable after an entity has been enabled.

QoS fall into one of three mutability categories:

- Always mutable, wheter an entity is enabled or not (see **Mutable QoS** (p. 338)).
- Immutable after entity creation.
- *Mutable* after creation but *immutable* after an entity is enabled.

The QoS that fall into the second two categories are listed on this page.

Basic Settings

com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**kind** (p. 1119)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The kind of durability.
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**writer_depth** (p. 1119)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Indicates the number of samples per instance that a durable **com.rti.dds.publication.DataWriter** (p. 818) will send to a late-joining **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.DataRepresentationQosPolicy (p. 810)	**compression_settings** (p. 812)

	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Structure that contains the compression settings.
com.rti.dds.infrastructure.OwnershipQosPolicy (p. 1640)	**kind** (p. 1644)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The kind of ownership
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**kind** (p. 1538)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The kind of liveliness desired.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**lease_duration** (p. 1538)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The duration within which a **com.rti.dds.publication.DataWriter** (p. 818) must be asserted, or else it is assumed to be not alive.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**assertions_per_lease_duration** (p. 1538)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of assertions a **com.rti.dds.publication.DataWriter** (p. 818) will send during a its **com.rti.dds.infrastructure.LivelinessQosPolicy.lease_duration** (p. 1538).
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**kind** (p. 1831)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Kind of reliability.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**max_blocking_time** (p. 1831)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The maximum time a DataWriter can block on a write() call.
com.rti.dds.infrastructure.DestinationOrderQosPolicy (p. 903)	**kind** (p. 905)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Specifies the desired kind of destination order.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**kind** (p. 1437)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Specifies the kind of history to be kept.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**depth** (p. 1438)

	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the number of samples per instance to be kept, when the `kind` is com.rti.dds.infrastructure.HistoryQosPolicy↩ Kind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_↩ QOS
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum samples the middleware can store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_instances** (p. 1896)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Represents the maximum number of instances a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_samples** (p. 1897)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial samples the middleware will store for any one **com.rti.dds.publication.DataWriter** (p. 818) (or **com.rti.dds.subscription.DataReader** (p. 707)).
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**initial_instances** (p. 1898)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Represents the initial number of instances a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) will manage.
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**kind** (p. 1798)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Publishing mode
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**participant_id** (p. 2303)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* A value used to distinguish among different participants belonging to the same domain on the same host.
com.rti.dds.infrastructure.TransportBuiltinQos↩ Policy (p. 2152)	**mask** (p. 2153)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the built-in transports that are registered automatically when the **com.rti.dds.domain.DomainParticipant** (p. 948) is enabled.

com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**value** (p. 2163)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* A sequence of multicast communications settings.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**initial_peers** (p. 945)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Determines the initial list of peers that will be contacted by the Discovery mechanism to send announcements about the presence of this participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**multicast_receive_addresses** (p. 944)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the Domain↩ Participant.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**accept_unknown_peers** (p. 946)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Whether to accept a new participant that is not in the initial peers list.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_liveliness_lease_duration** (p. 918)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The liveliness lease duration for the participant.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_liveliness_assert_period** (p. 919)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The period to assert liveliness for the participant.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**participant_announcement_period** (p. 919)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**initial_participant_announcements** (p. 921)

	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of initial announcements sent when a participant is first enabled.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**new_remote_participant_announcements** (p. 921)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The number of participant announcements sent when a remote participant is newly discovered.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**min_initial_participant_announcement_period** (p. 922)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
com.rti.dds.infrastructure.DiscoveryConfigQos↩ Policy (p. 915)	**max_initial_participant_announcement_period** (p. 922)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**heartbeat_period** (p. 1914)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The period at which to send heartbeats.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**fast_heartbeat_period** (p. 1914)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* An alternative heartbeat period used when a reliable writer needs to flush its unacknowledged samples more quickly.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**late_joiner_heartbeat_period** (p. 1915)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* An alternative heartbeat period used when a reliable reader joins late and needs to be caught up on cached samples of a reliable writer more quickly than the normal heartbeat rate.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_send_window_size** (p. 1924)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Minimum size of send window of unacknowledged samples
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_send_window_size** (p. 1924)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Maximum size of send window of unacknowledged samples
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**name** (p. 1329)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* The name of the entity.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**enable** (p. 608)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Specifies whether or not batching is enabled.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_data_bytes** (p. 608)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* The maximum cumulative length of all serialized samples in a batch.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_samples** (p. 609)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* The maximum number of samples in a batch.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**string_profile** (p. 1693)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Sequence of strings containing a XML document to load.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**url_profile** (p. 1694)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Sequence of **URL groups** (p. 367) containing a set of XML documents to load.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_user_profile** (p. 1694)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Ignores the file USER_QOS_PROFILES.xml in the current working directory.
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_environment_profile** (p. 1694)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Ignores the value of the **NDDS_QOS_PROFILES** (p. 367).
com.rti.dds.infrastructure.ProfileQosPolicy (p. 1692)	**ignore_resource_profile** (p. 1695)
	*<<**basic**>>* (p. *123)* *<<**extension**>>* (p. *138)* Ignores the file NDDS_QOS_PROFILES.xml.

com.rti.dds.infrastructure.TopicQueryDispatch↩ QosPolicy (p. 2142)	**publication_period** (p. 2144)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Sets the periodic interval at which samples are published.

Advanced Settings

com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**enable_required_subscriptions** (p. 600)
	*<<**extension**>> (p. 138)* Enables support for required subscriptions in a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**direct_communication** (p. 1119)
	*<<**extension**>> (p. 138)* Indicates whether or not a TRANSIENT or PERSISTENT **com.rti.dds.↩ subscription.DataReader** (p. 707) should receive samples directly from a TRANSIENT or PERSISTENT **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**storage_settings** (p. 1120)
	*<<**extension**>> (p. 138)* Configures durable writer history and durable reader state.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**enable** (p. 1671)
	*<<**extension**>> (p. 138)* Enables durable writer history in a **com.rti.dds.publication.DataWriter** (p. 818) and durable reader state in a **com.rti.dds.↩ subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**file_name** (p. 1671)
	*<<**extension**>> (p. 138)* The file name where the durable writer history or durable reader state will be stored.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**trace_file_name** (p. 1671)
	*<<**extension**>> (p. 138)* The file name where to store the SQL statements executed when loading and storing the durable writer history or durable reader state.

com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**journal_kind** (p. 1672)
	<<***extension***>> *(p. 138)* Sets the journal mode of the persistent storage.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**synchronization_kind** (p. 1672)
	<<***extension***>> *(p. 138)* Sets the level of synchronization with the physical disk.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**vacuum** (p. 1672)
	<<***extension***>> *(p. 138)* Sets the auto-vacuum status of the storage.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**restore** (p. 1673)
	<<***extension***>> *(p. 138)* Indicates if the persisted writer history or reader state must be restored.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_instance_cache_allocation** (p. 1673)
	<<***extension***>> *(p. 138)* Configures the resource limits associated with the instance durable writer history cache.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_sample_cache_allocation** (p. 1674)
	<<***extension***>> *(p. 138)* Configures the resource limits associated with the sample durable writer history cache.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**writer_memory_state** (p. 1675)
	<<***extension***>> *(p. 138)* Determines how much state will be kept in memory by the durable writer history in order to avoid accessing the persistent storage in disk.
com.rti.dds.infrastructure.PersistentStorage↩ Settings (p. 1669)	**reader_checkpoint_frequency** (p. 1676)
	<<***extension***>> *(p. 138)* Controls how often the reader state is stored into the database.

com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**service_cleanup_delay** (p. 1124)
	<<***spec***>> *(p. 132)* Controls when the service is able to remove all information regarding a data instances.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_kind** (p. 1125)
	<<***spec***>> *(p. 132)* The kind of history to apply in recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_depth** (p. 1125)
	<<***spec***>> *(p. 132)* Setting to use for the **com.rti.↩ dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119) when recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples** (p. 1125)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**compression_ids** (p. 683)
	<<***extension***>> *(p. 138)* Mask that represents the compression algorithms enabled.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**writer_compression_level** (p. 684)
	<<***extension***>> *(p. 138)* The level of compression to use when compressing data.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**writer_compression_threshold** (p. 685)

	<<***extension***>> *(p. 138)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.
com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**value** (p. 812)
	<<***spec***>> *(p. 132)* Sequence of representation identifiers.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**access_scope** (p. 1682)
	<<***spec***>> *(p. 132)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**coherent_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**ordered_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**drop_incomplete_coherent_set** (p. 1683)
	<<***extension***>> *(p. 138)* Indicates whether or not a **com.rti.dds.subscription.DataReader** (p. 707) should drop samples from an incomplete coherent set (one for which not all the samples were received). Such samples are reported as lost in the SAMPLE_LOST Status.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**acknowledgment_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Kind of reliable acknowledgment
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**instance_state_consistency_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Whether instance state consistency is enabled
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**exact_reliability_kind_match** (p. 1833)
	<<***extension***>> *(p. 138)* Whether an exact reliability kind match is required for endpoint matching.

com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**scope** (p. 905)
	<<***spec***>> *(p. 132)* Specifies the desired scope of the source destination order.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**source_timestamp_tolerance** (p. 905)
	<<***extension***>> *(p. 138)* Allowed tolerance between source timestamps of consecutive samples.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**max_samples_per_instance** (p. 1897)
	<<***spec***>> *(p. 132)* Represents the maximum number of samples of any one instance a **com.rti.↩ dds.publication.DataWriter** (p. 818) (or **com.rti.dds.↩ subscription.DataReader** (p. 707)) can manage.
com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**instance_hash_buckets** (p. 1898)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Number of hash buckets for instances.
com.rti.dds.infrastructure.TransportPriorityQos↩ Policy (p. 2168)	**value** (p. 2170)
	<<***spec***>> *(p. 132)* This policy is a hint to the infrastructure as to how to set the priority of the underlying transport used to send the data.
com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**plugin_data** (p. 2254)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Value to pass into the type plugin's de-/serialization function
com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**cdr_padding_kind** (p. 2254)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Determines whether or not the padding bytes will be set to zero during CDR serialization.
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**flow_controller_name** (p. 1798)
	<<***extension***>> *(p. 138)* Name of the associated flow controller
com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797)	**priority** (p. 1799)

	<<***extension***>> *(p. 138)* Publication priority
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**disable_asynchronous_write** (p. 594)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Disable asynchronous publishing.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**thread** (p. 594)
	<<***extension***>> *(p. 138)* Settings of the publishing thread.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**disable_asynchronous_batch** (p. 595)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Disable asynchronous batch flushing.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**asynchronous_batch_thread** (p. 595)
	<<***extension***>> *(p. 138)* Settings of the batch flushing thread.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**disable_topic_query_publication** (p. 596)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Disable topic query publication.
com.rti.dds.infrastructure.Asynchronous↩ PublisherQosPolicy (p. 593)	**topic_query_publication_thread** (p. 596)
	<<***extension***>> *(p. 138)* Settings of the **com.↩ rti.dds.subscription.TopicQuery** (p. 2139) publication thread.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autodispose_unregistered_instances** (p. 2321)
	<<***spec***>> *(p. 132)* Boolean flag that controls whether or not a writer will also dispose of an instance when the **com.rti.dds.publication.DataWriter** (p. 818) unregisters from the instance by means of the unregister operations.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autopurge_unregistered_instances_delay** (p. 2321)

	<<***extension***>> *(*p. *138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has unregistered the instance.
com.rti.dds.infrastructure.WriterDataLifecycleQos↩ Policy (p. 2320)	**autopurge_disposed_instances_delay** (p. 2322)
	<<***extension***>> *(*p. *138)* Maximum duration for which the **com.rti.dds.publication.DataWriter** (p. 818) will maintain information regarding an instance once it has disposed the instance.
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_nowriter_samples_delay** (p. 1824)
	<<***spec***>> *(*p. *132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance↩ _state` becomes **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_NO_WRITERS_↩ INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_disposed_samples_delay** (p. 1824)
	<<***spec***>> *(*p. *132)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain samples for an instance once its `instance↩ _state` becomes **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_DISPOSED_↩ INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_disposed_instances_delay** (p. 1824)
	<<***extension***>> *(*p. *138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.↩ dds.subscription.InstanceStateKind.NOT_ALIVE_↩ DISPOSED_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.ReaderDataLifecycle↩ QosPolicy (p. 1822)	**autopurge_nowriter_instances_delay** (p. 1825)

	<<***extension***>> *(p. 138)* Minimum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information about a received instance once its `instance_state` becomes **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 1452) and there are no samples for the instance in the DataReader queue.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**kind** (p. 2248)
	<<***spec***>> *(p. 132)* Type consistency kind.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_sequence_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether sequence bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_string_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether string bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_member_names** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether member names are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**prevent_type_widening** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type widening is allowed.
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**force_type_validation** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type information must be available in order to complete matching between a **com.rti.dds.publication.DataWriter** (p. 818) and a **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.TypeConsistencyEnforcementQosPolicy (p. 2246)	**ignore_enum_literal_names** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether enumeration constant names are taken into consideration for type assignability.

com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_host_id** (p. 2304)
	<<***extension***>> *(p. 138)* The RTPS Host ID of the domain participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_app_id** (p. 2305)
	<<***extension***>> *(p. 138)* The RTPS App ID of the domain participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_instance_id** (p. 2305)
	<<***extension***>> *(p. 138)* The RTPS Instance ID of the **com.rti.dds.domain.DomainParticipant** (p. 948).
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_well_known_ports** (p. 2304)
	<<***extension***>> *(p. 138)* Configures the RTPS well-known port mappings.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_reserved_port_mask** (p. 2306)
	<<***extension***>> *(p. 138)* Specifies which well-known ports to reserve when enabling the participant.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**rtps_auto_id_kind** (p. 2306)
	<<***extension***>> *(p. 138)* Kind of auto mechanism used to calculate the GUID prefix.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**compute_crc** (p. 2307)
	<<***extension***>> *(p. 138)* Adds RTPS CRC submessage to every message when this field is set to com.↩ rti.dds.infrastructure.true.
com.rti.dds.infrastructure.WireProtocolQosPolicy (p. 2299)	**check_crc** (p. 2307)
	<<***extension***>> *(p. 138)* Checks if the received RTPS message is valid by comparing the computed CRC with the received RTPS CRC submessage when this field is set to com.rti.dds.infrastructure.true.
com.rti.dds.infrastructure.TransportSelectionQos↩ Policy (p. 2170)	**enabled_transports** (p. 2171)
	<<***extension***>> *(p. 138)* A sequence of transport aliases that specifies the transport instances available for use by the entity.

com.rti.dds.infrastructure.TransportUnicastQos↩ Policy (p. 2177)	**value** (p. 2178)
	<<***extension***>> *(p. 138)* A sequence of unicast communication settings.
com.rti.dds.infrastructure.TransportMulticast↩ MappingQosPolicy (p. 2160)	**value** (p. 2161)
	<<***extension***>> *(p. 138)* A sequence of multicast communication mappings.
com.rti.dds.infrastructure.TransportMulticastQos↩ Policy (p. 2162)	**kind** (p. 2163)
	<<***extension***>> *(p. 138)* A value that specifies a way to determine how to obtain the multicast address.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enabled_transports** (p. 944)
	<<***extension***>> *(p. 138)* The transports available for use by the Discovery mechanism.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**metatraffic_transport_priority** (p. 945)
	<<***extension***>> *(p. 138)* The transport priority to use for the Discovery meta-traffic.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**enable_endpoint_discovery** (p. 946)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Whether to automatically enable endpoint discovery for all the remote participants.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers** (p. 792)
	<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers_per_instance** (p. 792)
	<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read a single instance.

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_samples_per_remote_writer** (p. 793)
	<<***extension***>> *(*p. *138)* The maximum number of out-of-order samples from a given remote **com.rti.↩ dds.publication.DataWriter** (p. 818) that a **com.rti.↩ dds.subscription.DataReader** (p. 707) may store when maintaining a reliable connection to the **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_infos** (p. 793)
	<<***extension***>> *(*p. *138)* The maximum number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can use to store **com.rti.dds.subscription.↩ SampleInfo** (p. 1944).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_writers** (p. 794)
	<<***extension***>> *(*p. *138)* The initial number of remote writers from which a **com.rti.dds.subscription.Data↩ Reader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_writers_per_instance** (p. 794)
	<<***extension***>> *(*p. *138)* The initial number of remote writers from which a **com.rti.dds.subscription.Data↩ Reader** (p. 707) may read a single instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_infos** (p. 795)
	<<***extension***>> *(*p. *138)* The initial number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can have, which are used to store **com.rti.↩ dds.subscription.SampleInfo** (p. 1944).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_outstanding_reads** (p. 795)
	<<***extension***>> *(*p. *138)* The initial number of outstanding calls to read/take (or one of their variants) on the same **com.rti.dds.subscription.Data↩ Reader** (p. 707) for which memory has not been returned by calling **com.rti.ndds.example.FooData↩ Reader.return_loan** (p. 1386).

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_outstanding_reads** (p. 796)
	<<***extension***>> *(p. 138)* The maximum number of outstanding read/take calls (or one of their variants) on the same **com.rti.dds.subscription.Data↩ Reader** (p. 707) for which memory has not been returned by calling **com.rti.ndds.example.FooData↩ Reader.return_loan** (p. 1386).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_samples_per_read** (p. 796)
	<<***extension***>> *(p. 138)* The maximum number of data samples that the application can receive from the middleware in a single call to **com.rti.ndds.↩ example.FooDataReader.read** (p. 1361) or **com.rti.↩ ndds.example.FooDataReader.take** (p. 1363). If more data exists in the middleware, the application will need to issue multiple read/take calls.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**disable_fragmentation_support** (p. 796)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.Data↩ Reader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples** (p. 797)
	<<***extension***>> *(p. 138)* The maximum number of samples for which the **com.rti.dds.subscription.Data↩ Reader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_fragmented_samples** (p. 797)
	<<***extension***>> *(p. 138)* The initial number of samples for which a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragmented_samples_per_remote_writer** (p. 798)
	<<***extension***>> *(p. 138)* The maximum number of samples per remote writer for which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments.

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_fragments_per_sample** (p. 798)
	<<***extension***>> *(p. 138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**dynamically_allocate_fragmented_samples** (p. 799)
	<<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_total_instances** (p. 799)
	<<***extension***>> *(p. 138)* Maximum number of instances for which a DataReader will keep state.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_virtual_writers** (p. 800)
	<<***extension***>> *(p. 138)* The maximum number of remote virtual writers from which a **com.rti.dds.↩ subscription.DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_virtual_writers** (p. 801)
	<<***extension***>> *(p. 138)* The initial number of remote virtual writers from which a **com.rti.dds.subscription.↩ DataReader** (p. 707) may read, including all instances.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_virtual_writers_per_instance** (p. 801)
	<<***extension***>> *(p. 138)* The maximum number of virtual remote writers that can be associated with an instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_remote_virtual_writers_per_instance** (p. 802)
	<<***extension***>> *(p. 138)* The initial number of virtual remote writers per instance.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_remote_writers_per_sample** (p. 802)
	<<***extension***>> *(p. 138)* The maximum number of remote writers allowed to write the same sample.

com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_query_condition_filters** (p. 803)
	<<***extension***>> *(p. 138)* The maximum number of query condition filters a reader is allowed.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_app_ack_response_length** (p. 803)
	<<***extension***>> *(p. 138)* Maximum length of application-level acknowledgment response data
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**keep_minimum_state_for_instances** (p. 804)
	<<***extension***>> *(p. 138)* Whether or not keep a minimum instance state for up to **com.rti.dds.↩ infrastructure.DataReaderResourceLimitsQos↩ Policy.max_total_instances** (p. 799).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**initial_topic_queries** (p. 804)
	<<***extension***>> *(p. 138)* The initial number of Topic↩ Queries allocated by a **com.rti.dds.subscription.↩ DataReader** (p. 707).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**max_topic_queries** (p. 805)
	<<***extension***>> *(p. 138)* The maximum number of active TopicQueries that a **com.rti.dds.subscription.↩ DataReader** (p. 707) can create.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**instance_replacement** (p. 805)
	<<***extension***>> *(p. 138)* Sets the kind of instances allowed to be replaced for each instance state (**com.rti.↩ dds.subscription.InstanceStateKind** (p. 1451)) when a DataReader reaches **com.rti.dds.infrastructure.↩ ResourceLimitsQosPolicy.max_instances** (p. 1896).
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**autopurge_remote_not_alive_writer_delay** (p. 806)

	<<***extension***>> *(*p. *138)* Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a **com.rti.dds.↩ publication.DataWriter** (p. 818) once the **com.rti.↩ dds.publication.DataWriter** (p. 818) has become not alive.
com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy (p. 789)	**lazily_allocate_batch_resources** (p. 808)
	<<***extension***>> *(*p. *138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_concurrent_blocking_threads** (p. 894)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* The initial number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_concurrent_blocking_threads** (p. 894)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* The maximum number of threads that are allowed to concurrently block on write call on the same **com.rti.dds.↩ publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_remote_reader_filters** (p. 894)
	<<***extension***>> *(*p. *138)* The maximum number of remote DataReaders for which the **com.rti.dds.↩ publication.DataWriter** (p. 818) will perform content-based filtering.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_batches** (p. 895)
	<<***extension***>> *(*p. *138)* Represents the initial number of batches a **com.rti.dds.publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_batches** (p. 895)
	<<***extension***>> *(*p. *138)* Represents the maximum number of batches a **com.rti.dds.publication.Data↩ Writer** (p. 818) will manage.

com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**instance_replacement** (p. 896)
	<<***extension***>> *(p. 138)* Sets the kinds of instances allowed to be replaced when instance resource limits are reached.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**replace_empty_instances** (p. 896)
	<<***extension***>> *(p. 138)* Whether or not to replace empty instances during instance replacement
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**autoregister_instances** (p. 897)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Whether or not to automatically register new instances
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_virtual_writers** (p. 898)
	<<***extension***>> *(p. 138)* The maximum number of virtual writers supported by a **com.rti.dds.publication.↩ DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_virtual_writers** (p. 897)
	<<***extension***>> *(p. 138)* The initial number of virtual writers supported by a **com.rti.dds.publication.Data↩ Writer** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_remote_readers** (p. 898)
	<<***extension***>> *(p. 138)* Controls the initial memory allocation for the matched remote readers of a **com.↩ rti.dds.publication.DataWriter** (p. 818).
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_remote_readers** (p. 898)
	<<***extension***>> *(p. 138)* The maximum number of remote readers supported by a **com.rti.dds.↩ publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_app_ack_remote_readers** (p. 899)

	<<***extension***>> *(*p. *138)* The maximum number of application-level acknowledging remote readers supported by a **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**initial_active_topic_queries** (p. 899)
	<<***extension***>> *(*p. *138)* Represents the initial number of active topic queries a **com.rti.dds.publication.↩ DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy (p. 892)	**max_active_topic_queries** (p. 899)
	<<***extension***>> *(*p. *138)* Represents the maximum number of active topic queries a **com.rti.dds.↩ publication.DataWriter** (p. 818) will manage.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**virtual_guid** (p. 762)
	<<***extension***>> *(*p. *138)* The virtual GUID (Global Unique Identifier).
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**rtps_object_id** (p. 762)
	<<***extension***>> *(*p. *138)* The RTPS Object ID.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**rtps_reliable_reader** (p. 765)
	<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable reader associated with a **com.rti.dds.subscription.Data↩ Reader** (p. 707). This parameter only has effect if the reader is configured with **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.RELIABLE_RELIABILITY↩ _QOS** (p. 1836) **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**expects_inline_qos** (p. 763)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Specifies whether this DataReader expects inline QoS with every sample.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**disable_positive_acks** (p. 763)

	<<***extension***>> *(*p. *138)* Whether the reader sends positive acknowledgements to writers.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**propagate_dispose_of_unregistered_instances** (p. 764)
	<<***extension***>> *(*p. *138)* Indicates whether or not an instance can move to the **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_DISPOSED_↩ INSTANCE_STATE** (p. 1452) state without being in the **com.rti.dds.subscription.InstanceStateKind.↩ ALIVE_INSTANCE_STATE** (p. 1452) state.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**propagate_unregister_of_disposed_instances** (p. 764)
	<<***extension***>> *(*p. *138)* Indicates whether or not an instance can move to the **com.rti.dds.subscription.↩ InstanceStateKind.NOT_ALIVE_NO_WRITERS_↩ INSTANCE_STATE** (p. 1452) state directly from the **com.rti.dds.subscription.InstanceStateKind.NOT_↩ ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**virtual_guid** (p. 862)
	<<***extension***>> *(*p. *138)* The virtual GUID (Global Unique Identifier).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**rtps_object_id** (p. 862)
	<<***extension***>> *(*p. *138)* The RTPS Object ID.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**push_on_write** (p. 863)
	<<***extension***>> *(*p. *138)* Whether to push sample out when write is called.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**disable_positive_acks** (p. 863)
	<<***extension***>> *(*p. *138)* Controls whether or not the writer expects positive acknowledgements from matching readers.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**disable_inline_keyhash** (p. 864)

	<<***extension***>> *(p. 138)* Controls whether or not a keyhash is propagated on the wire with each sample.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**serialize_key_with_dispose** (p. 864)
	<<***extension***>> *(p. 138)* Controls whether or not the serialized key is propagated on the wire with dispose samples.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**propagate_app_ack_with_no_response** (p. 865)
	<<***extension***>> *(p. 138)* Controls whether or not a **com.rti.dds.publication.DataWriter** (p. 818) receives **com.rti.dds.publication.DataWriterListener.on_↩ application_acknowledgment** (p. 859) notifications with an empty or invalid response.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**rtps_reliable_writer** (p. 865)
	<<***extension***>> *(p. 138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **com.rti.dds.publication.Data↩ Writer** (p. 818). This parameter only has effect if both the writer and the matching reader are configured with **com.rti.dds.infrastructure.ReliabilityQos↩ PolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**initial_virtual_sequence_number** (p. 866)
	<<***extension***>> *(p. 138)* Determines, the initial virtual sequence number for this DataWriter.
com.rti.dds.infrastructure.SystemResourceLimits↩ QosPolicy (p. 2090)	**max_objects_per_thread** (p. 2091)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The maximum number of objects that can be stored per thread for a **com.rti.dds.domain.DomainParticipant↩ Factory** (p. 1039).
com.rti.dds.infrastructure.SystemResourceLimits↩ QosPolicy (p. 2090)	**initial_objects_per_thread** (p. 2091)

	<<***extension***>> *(p. 138)* The number of objects per thread for a **com.rti.dds.domain.DomainParticipant↩ Factory** (p. 1039) for which infrastructure will initially be allocated.

	<<***extension***>> *(p. 138)* Minimum duration for which application-level acknowledgment response data is kept

com.rti.dds.infrastructure.RtpsReliableReader↩ Protocol_t (p. 1904)	**samples_per_app_ack** (p. 1910)
	<<***extension***>> *(*p. *138)* The minimum number of samples acknowledged by one application-level acknowledgment message
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**low_watermark** (p. 1913)
	<<***extension***>> *(*p. *138)* When the number of unacknowledged samples in the current send window of a reliable writer meets or falls below this threshold, the com.rti.dds.infrastructure.StatusKind.StatusKind.↩ RELIABLE_WRITER_CACHE_CHANGED_STATUS is considered to have changed.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**high_watermark** (p. 1913)
	<<***extension***>> *(*p. *138)* When the number of unacknowledged samples in the current send window of a reliable writer meets or exceeds this threshold, the com.rti.dds.infrastructure.StatusKind.StatusKind.↩ RELIABLE_WRITER_CACHE_CHANGED_STATUS is considered to have changed.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**virtual_heartbeat_period** (p. 1916)
	<<***extension***>> *(*p. *138)* The period at which to send virtual heartbeats. Virtual heartbeats inform the reliable reader about the range of samples currently present, for each virtual GUID, in the reliable writer's queue.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**samples_per_virtual_heartbeat** (p. 1916)
	<<***extension***>> *(*p. *138)* The number of samples that a reliable writer has to publish before sending a virtual heartbeat.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_heartbeat_retries** (p. 1917)
	<<***extension***>> *(*p. *138)* The maximum number of *periodic* heartbeat retries before marking a remote reader as inactive.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**inactivate_nonprogressing_readers** (p. 1917)

	<<***extension***>> *(p. 138)* Whether to treat remote readers as inactive when their NACKs do not progress
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**heartbeats_per_max_samples** (p. 1918)
	<<***extension***>> *(p. 138)* The number of piggyback heartbeats sent per max send window.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**min_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The minimum delay to respond to a NACK or NACK_FRAG.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_nack_response_delay** (p. 1919)
	<<***extension***>> *(p. 138)* The maximum delay to respond to a NACK or NACK_FRAG.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**nack_suppression_duration** (p. 1920)
	<<***extension***>> *(p. 138)* The duration for ignoring consecutive NACKs/NACK_FRAGs that may trigger redundant repairs.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**max_bytes_per_nack_response** (p. 1920)
	<<***extension***>> *(p. 138)* The maximum total message size when resending rejected samples or data fragments.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_enable_adaptive_sample_↩ keep_duration** (p. 1922)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Enables dynamic adjustment of sample keep duration in response to congestion.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_min_sample_keep_duration** (p. 1921)
	<<***extension***>> *(p. 138)* The minimum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_max_sample_keep_duration** (p. 1922)

	<<***extension***>> *(p. 138)* The maximum duration a sample is queued for ACK-disabled readers.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_decrease_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Controls rate of contraction of dynamic sample keep duration.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Controls rate of growth of dynamic sample keep duration.
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_update_period** (p. 1925)
	<<***extension***>> *(p. 138)* Period in which send window may be dynamically changed
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_increase_factor** (p. 1926)
	<<***extension***>> *(p. 138)* Increases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**send_window_decrease_factor** (p. 1927)
	<<***extension***>> *(p. 138)* Decreases send window size by this percentage when reacting dynamically to network conditions
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**enable_multicast_periodic_heartbeat** (p. 1928)
	<<***extension***>> *(p. 138)* Whether periodic heartbeat messages are sent over multicast
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**multicast_resend_threshold** (p. 1928)
	<<***extension***>> *(p. 138)* The minimum number of requesting readers needed to trigger a multicast resend
com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_repair_piggyback_heartbeat** (p. 1929)

	<<***extension***>> *(*p. *138)* Prevents piggyback heartbeats from being sent with repair samples
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_samples** (p. 633)
	<<***extension***>> *(*p. *138)* Initial number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_samples** (p. 633)
	<<***extension***>> *(*p. *138)* Maximum number of samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_infos** (p. 633)
	<<***extension***>> *(*p. *138)* Initial number of sample infos.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_infos** (p. 634)
	<<***extension***>> *(*p. *138)* Maximum number of sample infos.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**disable_fragmentation_support** (p. 634)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Determines whether the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) can receive fragmented samples.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples** (p. 635)
	<<***extension***>> *(*p. *138)* The maximum number of samples for which the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments at a given point in time.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**initial_fragmented_samples** (p. 635)
	<<***extension***>> *(*p. *138)* The initial number of samples for which a built-in topic **com.rti.dds.subscription.↩ DataReader** (p. 707) may store fragments.

com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragmented_samples_per_remote_writer** (p. 636)
	<<***extension***>> *(p. 138)* The maximum number of samples per remote writer for which a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) may store fragments.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**max_fragments_per_sample** (p. 636)
	<<***extension***>> *(p. 138)* Maximum number of fragments for a single sample.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**dynamically_allocate_fragmented_samples** (p. 637)
	<<***extension***>> *(p. 138)* Determines whether the built-in topic **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.
com.rti.dds.infrastructure.DataTagQosPolicy (p. 813)	**tags** (p. 814)
	<<***spec***>> *(p. 132)* Sequence of data tags.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**role_name** (p. 1329)
	<<***extension***>> *(p. 138)* The entity role name.
com.rti.dds.infrastructure.ServiceQosPolicy (p. 1981)	**kind** (p. 1982)
	<<***extension***>> *(p. 138)* The kind of service.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**max_flush_delay** (p. 610)
	<<***extension***>> *(p. 138)* The maximum flush delay.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**source_timestamp_resolution** (p. 610)
	<<***extension***>> *(p. 138)* Batch source timestamp resolution.
com.rti.dds.infrastructure.BatchQosPolicy (p. 607)	**thread_safe_write** (p. 611)
	<<***extension***>> *(p. 138)* Determines whether or not the write operation is thread safe.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**multicast_settings** (p. 668)
	<<***extension***>> *(p. 138)* A sequence of **com.↩ rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) used to configure the multicast addresses associated with a channel.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**filter_expression** (p. 668)

	<<***extension***>> *(*p. *138)* A logical expression used to determine the data that will be published in the channel.
com.rti.dds.infrastructure.ChannelSettings_t (p. 666)	**priority** (p. 669)
	<<***extension***>> *(*p. *138)* Publication priority
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**channels** (p. 1617)
	<<***extension***>> *(*p. *138)* A sequence of **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**filter_name** (p. 1617)
	<<***extension***>> *(*p. *138)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
com.rti.dds.infrastructure.TopicQueryDispatchQosPolicy (p. 2142)	**enable** (p. 2143)
	<<***extension***>> *(*p. *138)* Allows this writer to dispatch TopicQueries
com.rti.dds.infrastructure.TopicQueryDispatchQosPolicy (p. 2142)	**samples_per_period** (p. 2143)
	<<***extension***>> *(*p. *138)* Sets the maximum number of samples to publish in each publication_period.

6.81 Mutable QoS

This page lists all QoS that are always mutable.

This page lists all QoS that are always mutable.

Mutable QoS can always be changed regardless of whether the entity has been enabled or not. QoS that are immutable after an entity has been enabled are listed on the **Immutable QoS** (p. 292) page.

Basic Settings

com.rti.dds.infrastructure.DeadlineQosPolicy (p. 900)	**period** (p. 902)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* Duration of the deadline period.

com.rti.dds.infrastructure.OwnershipStrengthQosPolicy (p. 1646)	**value** (p. 1647)
	<<***basic***>> (p. *123*) <<***spec***>> (p. *132*) The strength value used to arbitrate among multiple writers.
com.rti.dds.infrastructure.TimeBasedFilterQosPolicy (p. 2113)	**minimum_separation** (p. 2115)
	<<***basic***>> (p. *123*) <<***spec***>> (p. *132*) The minimum separation duration between subsequent samples.
com.rti.dds.infrastructure.PartitionQosPolicy (p. 1664)	**name** (p. 1666)
	<<***basic***>> (p. *123*) <<***spec***>> (p. *132*) A list of partition names
com.rti.dds.infrastructure.EntityFactoryQosPolicy (p. 1326)	**autoenable_created_entities** (p. 1327)
	<<***basic***>> (p. *123*) <<***spec***>> (p. *132*) Specifies whether the entity acting as a factory automatically enables the instances it creates.
com.rti.dds.infrastructure.LifespanQosPolicy (p. 1526)	**duration** (p. 1528)
	<<***basic***>> (p. *123*) <<***spec***>> (p. *132*) Maximum duration for the data's validity.
com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)	**value** (p. 1741)
	<<***basic***>> (p. *123*) <<***extension***>> (p. *138*) Sequence of properties.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**verbosity** (p. 1569)
	<<***basic***>> (p. *123*) <<***extension***>> (p. *138*) The verbosities at which RTI Connext diagnostic information is logged.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**category** (p. 1569)
	<<***basic***>> (p. *123*) <<***extension***>> (p. *138*) Categories of logged messages.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file** (p. 1570)
	<<***basic***>> (p. *123*) <<***extension***>> (p. *138*) Specifies the file to which log messages will be redirected to.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**output_file_suffix** (p. 1570)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Sets the file suffix when logging to a set of files
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**publication_period** (p. 1598)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the event metric thread publishes the event metrics that have changed since the last time they were published.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**polling_period** (p. 1610)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the periodic metric thread polls and publishes the periodic metrics.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**max_historical_logs** (p. 1601)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The number of log messages that RTI Monitoring Library 2.0 will keep as history.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**publication_period** (p. 1602)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Period at which the logging thread publishes log messages.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**enable** (p. 1591)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Enables the use of a dedicated **com.rti.dds.domain.↩ DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**domain_id** (p. 1591)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The domain ID used in the creation of RTI Monitoring Library 2.0 **com.rti.dds.domain.DomainParticipant** (p. 948).
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**collector_initial_peers** (p. 1592)

	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Determines the initial list of peers that the discovery process will contact to send announcements about the presence of the **com.rti.dds.infrastructure.Monitoring↩ DistributionSettings.dedicated_participant** (p. 1594).
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**middleware_forwarding_level** (p. 1603)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_MIDDLEWARE** (p. 1560) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**security_event_forwarding_level** (p. 1603)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SECURITY_EVENT** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**service_forwarding_level** (p. 1604)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_SERVICE** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings (p. 1602)	**user_forwarding_level** (p. 1604)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Log messages with **com.rti.ndds.config.LogFacility.↩ NDDS_CONFIG_LOG_FACILITY_USER** (p. 1559) and a log level more verbose than this value will not be distributed by RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**metrics** (p. 1615)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Sequence of **com.rti.dds.infrastructure.Monitoring↩ MetricSelection** (p. 1605) containing the event and periodic metrics that will be collected and distributed for a given set of observable resources.
com.rti.dds.infrastructure.MonitoringTelemetryData (p. 1614)	**logs** (p. 1615)

	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* **com.rti.dds.infrastructure.MonitoringLogging↩ ForwardingSettings** (p. 1602) containing the **com.rti.↩ ndds.config.SyslogVerbosity** (p. 2086) levels that will be forwarded for the different **com.rti.ndds.config.↩ LogFacility** (p. 1558).
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**enable** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Enables the collection and distribution of telemetry data for an RTI Connext application using RTI Monitoring Library 2.0.
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**application_name** (p. 1612)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The name of the resource that represents this RTI Connext application.

Advanced Settings

com.rti.dds.infrastructure.UserDataQosPolicy (p. 2272)	**value** (p. 2273)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.GroupDataQosPolicy (p. 1419)	**value** (p. 1420)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_data_availability_waiting_time** (p. 600)
	<<***extension***>> *(p. 138)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**max_endpoint_availability_waiting_time** (p. 600)
	<<***extension***>> *(p. 138)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).
com.rti.dds.infrastructure.AvailabilityQosPolicy (p. 597)	**required_matched_endpoint_groups** (p. 601)
	<<***extension***>> *(p. 138)* A sequence of endpoint groups.
com.rti.dds.infrastructure.LatencyBudgetQosPolicy (p. 1523)	**duration** (p. 1525)

	<<***spec***>> *(p. 132)* Duration of the maximum acceptable delay.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**print_format** (p. 1570)
	<<***extension***>> *(p. 138)* The format used to output RTI Connext diagnostic information.
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_bytes_per_file** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of bytes a single file can contain
com.rti.dds.infrastructure.LoggingQosPolicy (p. 1568)	**max_files** (p. 1571)
	<<***extension***>> *(p. 138)* Specifies the maximum number of files to create before overwritting the previous ones.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**concurrency_level** (p. 1597)
	<<***extension***>> *(p. 138)* Defines how concurrent the push of event metrics to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**datawriter_qos_profile_name** (p. 1597)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes event metrics.
com.rti.dds.infrastructure.MonitoringEvent↩ DistributionSettings (p. 1595)	**thread** (p. 1598)
	<<***extension***>> *(p. 138)* The settings of the event metric thread.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**datawriter_qos_profile_name** (p. 1610)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes periodic metrics.
com.rti.dds.infrastructure.MonitoringPeriodic↩ DistributionSettings (p. 1608)	**thread** (p. 1610)

	<<***extension***>> *(p. 138)* The settings of the periodic metric thread.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**concurrency_level** (p. 1600)
	<<***extension***>> *(p. 138)* Defines how concurrent the push of log messages to RTI Monitoring Library 2.0 is.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**datawriter_qos_profile_name** (p. 1601)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.↩ publication.DataWriter** (p. 818) that distributes log messages.
com.rti.dds.infrastructure.MonitoringLogging↩ DistributionSettings (p. 1599)	**thread** (p. 1601)
	<<***extension***>> *(p. 138)* The settings of the logging thread.
com.rti.dds.infrastructure.MonitoringDedicated↩ ParticipantSettings (p. 1589)	**participant_qos_profile_name** (p. 1591)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the **com.rti.dds.domain.↩ DomainParticipant** (p. 948) that will be used to distribute telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**dedicated_participant** (p. 1594)
	<<***extension***>> *(p. 138)* Configures the use of a dedicated **com.rti.dds.domain.DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**publisher_qos_profile_name** (p. 1594)
	<<***extension***>> *(p. 138)* The fully qualified name of the profile used to configure the Publishers that distribute telemetry data.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**event_settings** (p. 1595)
	<<***extension***>> *(p. 138)* Configures the distribution of event metrics.

com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**periodic_settings** (p. 1594)
	<<***extension***>> *(p. 138)* Configures the distribution of periodic metrics.
com.rti.dds.infrastructure.MonitoringDistribution↩ Settings (p. 1593)	**logging_settings** (p. 1595)
	<<***extension***>> *(p. 138)* Configures the distribution of logging messages.
com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**resource_selection** (p. 1606)
	<<***extension***>> *(p. 138)* An expression pattern that selects a subset of resources by matching the pattern to the resource names. **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.enabled_metrics_↩ selection** (p. 1606) and **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.disabled_metrics_↩ selection** (p. 1607) are applied to this subset of resources.
com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**enabled_metrics_selection** (p. 1606)
	<<***extension***>> *(p. 138)* A sequence of POSIX fnmatch patterns that match the names of the metrics that should be collected and distributed for the observable resources selected by **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.resource_selection** (p. 1606).
com.rti.dds.infrastructure.MonitoringMetric↩ Selection (p. 1605)	**disabled_metrics_selection** (p. 1607)
	<<***extension***>> *(p. 138)* A sequence of POSIX fnmatch patterns that mach the names of the metrics that should not be collected and distributed for the observable resources selected by **com.rti.dds.infrastructure.↩ MonitoringMetricSelection.resource_selection** (p. 1606).
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**distribution_settings** (p. 1613)
	<<***extension***>> *(p. 138)* Configures the distribution of telemetry data.
com.rti.dds.infrastructure.MonitoringQosPolicy (p. 1611)	**telemetry_data** (p. 1613)

	<<***extension***>> *(p. 138)* Configures the telemetry data that will be distributed.

6.82 Other QoS Attributes

These attributes are characteristics of the QoS – for example if they are **mutable** (p. 338) or **immutable** (p. 292), or if they **apply per-instance** (p. 346).

Modules

- **Applied Per-Instance**

  These QoS are applied per-instance.
- **Discovery Metadata**

  These QoS are sent as part of one of the built-in discovery topics.
- **Matching**

  These QoS affect participant and endpoint matching.

6.82.1 Detailed Description

These attributes are characteristics of the QoS – for example if they are **mutable** (p. 338) or **immutable** (p. 292), or if they **apply per-instance** (p. 346).

6.83 Applied Per-Instance

These QoS are applied per-instance.

These QoS are applied per-instance.

For example, the **com.rti.dds.infrastructure.HistoryQosPolicy.depth** (p. 1438) configures the number of samples that are stored in the DataWriter and DataReader queues *per-instance*.

Basic Settings

com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**writer_depth** (p. 1119)
	<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* Indicates the number of samples per instance that a durable **com.rti.dds.publication.DataWriter** (p. 818) will send to a late-joining **com.rti.dds.subscription.DataReader** (p. 707).

com.rti.dds.infrastructure.DeadlineQosPolicy (p. 900)	**period** (p. 902)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Duration of the deadline period.
com.rti.dds.infrastructure.OwnershipQosPolicy (p. 1640)	**kind** (p. 1644)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of ownership
com.rti.dds.infrastructure.OwnershipStrengthQosPolicy (p. 1646)	**value** (p. 1647)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The strength value used to arbitrate among multiple writers.
com.rti.dds.infrastructure.TimeBasedFilterQosPolicy (p. 2113)	**minimum_separation** (p. 2115)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The minimum separation duration between subsequent samples.
com.rti.dds.infrastructure.DestinationOrderQosPolicy (p. 903)	**kind** (p. 905)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the desired kind of destination order.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**kind** (p. 1437)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the kind of history to be kept.
com.rti.dds.infrastructure.HistoryQosPolicy (p. 1435)	**depth** (p. 1438)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the number of samples per instance to be kept, when the `kind` is com.rti.dds.infrastructure.HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_QOS

Advanced Settings

com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**history_kind** (p. 1125)
	<<***spec***>> *(p. 132)* The kind of history to apply in recouping durable data.

com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**history_depth** (p. 1125)
	<<***spec***>> *(p. 132)* Setting to use for the **com.rti.↩ dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119) when recouping durable data.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**access_scope** (p. 1682)
	<<***spec***>> *(p. 132)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**ordered_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**scope** (p. 905)
	<<***spec***>> *(p. 132)* Specifies the desired scope of the source destination order.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**source_timestamp_tolerance** (p. 905)
	<<***extension***>> *(p. 138)* Allowed tolerance between source timestamps of consecutive samples.

6.84 Discovery Metadata

These QoS are sent as part of one of the built-in discovery topics.

These QoS are sent as part of one of the built-in discovery topics.

	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The strength value used to arbitrate among multiple writers.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**kind** (p. 1538)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The kind of liveliness desired.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**lease_duration** (p. 1538)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The duration within which a **com.rti.dds.publication.DataWriter** (p. 818) must be asserted, or else it is assumed to be not alive.
com.rti.dds.infrastructure.TimeBasedFilterQosPolicy (p. 2113)	**minimum_separation** (p. 2115)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* The minimum separation duration between subsequent samples.
com.rti.dds.infrastructure.PartitionQosPolicy (p. 1664)	**name** (p. 1666)
	<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* A list of partition names

com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**kind** (p. 1831)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Kind of reliability.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**max_blocking_time** (p. 1831)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* The maximum time a DataWriter can block on a write() call.
com.rti.dds.infrastructure.DestinationOrderQosPolicy (p. 903)	**kind** (p. 905)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Specifies the desired kind of destination order.
com.rti.dds.infrastructure.LifespanQosPolicy (p. 1526)	**duration** (p. 1528)
	*<<**basic**>> (p. 123) <<**spec**>> (p. 132)* Maximum duration for the data's validity.
com.rti.dds.infrastructure.TransportMulticastQosPolicy (p. 2162)	**value** (p. 2163)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* A sequence of multicast communications settings.
com.rti.dds.infrastructure.DiscoveryQosPolicy (p. 943)	**multicast_receive_addresses** (p. 944)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Specifies the multicast group addresses on which discovery-related **meta-traffic** can be received by the DomainParticipant.
com.rti.dds.infrastructure.DiscoveryConfigQosPolicy (p. 915)	**participant_liveliness_lease_duration** (p. 918)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The liveliness lease duration for the participant.
com.rti.dds.infrastructure.PropertyQosPolicy (p. 1739)	**value** (p. 1741)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* Sequence of properties.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**name** (p. 1329)
	*<<**basic**>> (p. 123) <<**extension**>> (p. 138)* The name of the entity.

Advanced Settings

com.rti.dds.infrastructure.UserDataQosPolicy (p. 2272)	**value** (p. 2273)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.GroupDataQosPolicy (p. 1419)	**value** (p. 1420)
	<<***spec***>> *(p. 132)* a sequence of octets
com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**direct_communication** (p. 1119)
	<<***extension***>> *(p. 138)* Indicates whether or not a TRANSIENT or PERSISTENT **com.rti.dds.subscription.DataReader** (p. 707) should receive samples directly from a TRANSIENT or PERSISTENT **com.rti.dds.publication.DataWriter** (p. 818)
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**service_cleanup_delay** (p. 1124)
	<<***spec***>> *(p. 132)* Controls when the service is able to remove all information regarding a data instances.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**history_kind** (p. 1125)
	<<***spec***>> *(p. 132)* The kind of history to apply in recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**history_depth** (p. 1125)
	<<***spec***>> *(p. 132)* Setting to use for the **com.rti.dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119) when recouping durable data.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**max_samples** (p. 1125)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.DurabilityServiceQosPolicy (p. 1123)	**max_instances** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.

com.rti.dds.infrastructure.DurabilityServiceQos↩ Policy (p. 1123)	**max_samples_per_instance** (p. 1126)
	<<***spec***>> *(p. 132)* Part of resource limits QoS policy to apply when feeding a late joiner.
com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**compression_ids** (p. 683)
	<<***extension***>> *(p. 138)* Mask that represents the compression algorithms enabled.
com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**value** (p. 812)
	<<***spec***>> *(p. 132)* Sequence of representation identifiers.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**access_scope** (p. 1682)
	<<***spec***>> *(p. 132)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**coherent_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**ordered_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.LatencyBudgetQosPolicy (p. 1523)	**duration** (p. 1525)
	<<***spec***>> *(p. 132)* Duration of the maximum acceptable delay.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**acknowledgment_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Kind of reliable acknowledgment
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**instance_state_consistency_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Whether instance state consistency is enabled

com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**exact_reliability_kind_match** (p. 1833)
	<<***extension***>> *(p. 138)* Whether an exact reliability kind match is required for endpoint matching.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**kind** (p. 2248)
	<<***spec***>> *(p. 132)* Type consistency kind.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_sequence_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether sequence bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_string_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether string bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_member_names** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether member names are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**prevent_type_widening** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type widening is allowed.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**force_type_validation** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type information must be available in order to complete matching between a **com.rti.dds.publication.DataWriter** (p. 818) and a **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_enum_literal_names** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether enumeration constant names are taken into consideration for type assignability.

com.rti.dds.infrastructure.TransportUnicastQos↩ Policy (p. 2177)	**value** (p. 2178)
	<<***extension***>> *(p. 138)* A sequence of unicast communication settings.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**virtual_guid** (p. 762)
	<<***extension***>> *(p. 138)* The virtual GUID (Global Unique Identifier).
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**expects_inline_qos** (p. 763)
	[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* Specifies whether this DataReader expects inline QoS with every sample.
com.rti.dds.infrastructure.DataReaderProtocol↩ QosPolicy (p. 761)	**disable_positive_acks** (p. 763)
	<<***extension***>> *(p. 138)* Whether the reader sends positive acknowledgements to writers.
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**virtual_guid** (p. 862)
	<<***extension***>> *(p. 138)* The virtual GUID (Global Unique Identifier).
com.rti.dds.infrastructure.DataWriterProtocolQos↩ Policy (p. 860)	**disable_positive_acks** (p. 863)
	<<***extension***>> *(p. 138)* Controls whether or not the writer expects positive acknowledgements from matching readers.
com.rti.dds.infrastructure.DataTagQosPolicy (p. 813)	**tags** (p. 814)
	<<***spec***>> *(p. 132)* Sequence of data tags.
com.rti.dds.infrastructure.EntityNameQosPolicy (p. 1328)	**role_name** (p. 1329)
	<<***extension***>> *(p. 138)* The entity role name.
com.rti.dds.infrastructure.ServiceQosPolicy (p. 1981)	**kind** (p. 1982)
	<<***extension***>> *(p. 138)* The kind of service.
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**channels** (p. 1617)

	<<***extension***>> *(*p. *138)* A sequence of **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) used to configure the channels' properties. If the length of the sequence is zero, the QoS policy will be ignored.
com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)	**filter_name** (p. 1617)
	<<***extension***>> *(*p. *138)* Name of the filter class used to describe the filter expressions of a MultiChannel DataWriter.
com.rti.dds.infrastructure.TopicQueryDispatchQosPolicy (p. 2142)	**enable** (p. 2143)
	<<***extension***>> *(*p. *138)* Allows this writer to dispatch TopicQueries

6.85 Matching

These QoS affect participant and endpoint matching.

These QoS affect participant and endpoint matching.

See the pages of each individual QoS for a desription of how the QoS must be set in order for two applications to be considered matching. Look for information about compatibility or request-offered (**RxO** (p. 506)) semantics.

Basic Settings

com.rti.dds.infrastructure.DurabilityQosPolicy (p. 1116)	**kind** (p. 1119)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* The kind of durability.
com.rti.dds.infrastructure.DataRepresentationQosPolicy (p. 810)	**compression_settings** (p. 812)
	<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Structure that contains the compression settings.
com.rti.dds.infrastructure.DeadlineQosPolicy (p. 900)	**period** (p. 902)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* Duration of the deadline period.
com.rti.dds.infrastructure.OwnershipQosPolicy (p. 1640)	**kind** (p. 1644)

	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* The kind of ownership
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**kind** (p. 1538)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* The kind of liveliness desired.
com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)	**lease_duration** (p. 1538)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* The duration within which a **com.rti.dds.publication.DataWriter** (p. 818) must be asserted, or else it is assumed to be not alive.
com.rti.dds.infrastructure.PartitionQosPolicy (p. 1664)	**name** (p. 1666)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* A list of partition names
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**kind** (p. 1831)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* Kind of reliability.
com.rti.dds.infrastructure.DestinationOrderQos↩ Policy (p. 903)	**kind** (p. 905)
	<<***basic***>> *(*p. *123)* <<***spec***>> *(*p. *132)* Specifies the desired kind of destination order.

Advanced Settings

com.rti.dds.infrastructure.CompressionSettings_t (p. 681)	**compression_ids** (p. 683)
	<<***extension***>> *(*p. *138)* Mask that represents the compression algorithms enabled.
com.rti.dds.infrastructure.DataRepresentation↩ QosPolicy (p. 810)	**value** (p. 812)
	<<***spec***>> *(*p. *132)* Sequence of representation identifiers.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**access_scope** (p. 1682)
	<<***spec***>> *(*p. *132)* Determines the largest scope spanning the entities for which the order and coherency of changes can be preserved.

com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**coherent_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *coherent* access. Controls whether coherent access is supported within the scope `access_scope`.
com.rti.dds.infrastructure.PresentationQosPolicy (p. 1678)	**ordered_access** (p. 1682)
	<<***spec***>> *(p. 132)* Specifies support for *ordered* access to the samples received at the subscription end. Controls whether ordered access is supported within the scope `access_scope`.

	<<***spec***>> *(p. 132)* Duration of the maximum acceptable delay.
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**acknowledgment_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Kind of reliable acknowledgment
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**instance_state_consistency_kind** (p. 1832)
	<<***extension***>> *(p. 138)* Whether instance state consistency is enabled
com.rti.dds.infrastructure.ReliabilityQosPolicy (p. 1829)	**exact_reliability_kind_match** (p. 1833)
	<<***extension***>> *(p. 138)* Whether an exact reliability kind match is required for endpoint matching.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**kind** (p. 2248)
	<<***spec***>> *(p. 132)* Type consistency kind.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_sequence_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether sequence bounds are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_string_bounds** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether string bounds are taken into consideration for type assignability.

com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_member_names** (p. 2248)
	<<***spec***>> *(p. 132)* Controls whether member names are taken into consideration for type assignability.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**prevent_type_widening** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type widening is allowed.
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**force_type_validation** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether type information must be available in order to complete matching between a **com.rti.dds.publication.DataWriter** (p. 818) and a **com.rti.dds.subscription.DataReader** (p. 707).
com.rti.dds.infrastructure.TypeConsistency↩ EnforcementQosPolicy (p. 2246)	**ignore_enum_literal_names** (p. 2249)
	<<***spec***>> *(p. 132)* Controls whether enumeration constant names are taken into consideration for type assignability.

6.86 Deprecated QoS

Deprecated QoS.

Deprecated QoS.

This page lists the QoS that are deprecated. Deprecated QoS are still supported, but RTI will not support them in future releases.

com.rti.dds.infrastructure.ResourceLimitsQosPolicy (p. 1894)	**instance_hash_buckets** (p. 1898)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Number of hash buckets for instances.
com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**plugin_data** (p. 2254)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Value to pass into the type plugin's de-/serialization function

com.rti.dds.infrastructure.TypeSupportQosPolicy (p. 2253)	**cdr_padding_kind** (p. 2254)
	[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Determines whether or not the padding bytes will be set to zero during CDR serialization.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_decrease_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Controls rate of contraction of dynamic sample keep duration.

com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t (p. 1911)	**disable_positive_acks_increase_sample_keep_↩ duration_factor** (p. 1923)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Controls rate of growth of dynamic sample keep duration.
com.rti.dds.infrastructure.BuiltinTopicReader↩ ResourceLimits_t (p. 631)	**disable_fragmentation_support** (p. 634)
	[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Determines whether the built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) can receive fragmented samples.

6.87 System Properties

System Properties.

System Properties.

RTI Connext uses the **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) of a DomainParticipant to maintain a set of properties that provide system information such as hostname.

Unless the default **com.rti.dds.domain.DomainParticipantQos** (p. 1073) value is overwritten, the system properties are automatically set in the **com.rti.dds.domain.DomainParticipantQos** (p. 1073) obtained by calling the method **com.rti.dds.domain.DomainParticipantFactory.get_default_participant_qos** (p. 1045) or using the constant **com.↩ rti.dds.domain.DomainParticipantFactory.PARTICIPANT_QOS_DEFAULT** (p. 44).

System properties are also automatically set in the **com.rti.dds.domain.DomainParticipantQos** (p. 1073) loaded from an XML QoS profile unless you disable property inheritance using the attribute **inherit** in the XML tag <**property**>.

By default, the system properties are propagated to other DomainParticipants in the system and can be accessed through builtin.ParticipantBuiltinTopicData.property.

You can disable the propagation of individual properties by setting the flag **com.rti.dds.infrastructure.Property_t.↩ propagate** (p. 1698) to com.rti.dds.infrastructure.false or by removing the property using the method **com.rti.dds.↩ infrastructure.PropertyQosPolicyHelper.remove_property** (p. 1745).

The number of system properties set on the **com.rti.dds.domain.DomainParticipantQos** (p. 1073) is platform specific.

6.87.1 System Properties List

The following table lists the supported system properties. For more information, see `System Properties`, in the Core Libraries User's Manual.

Property Name	Description
dds.sys_info.hostname	Name of the host where the process is running
dds.sys_info.process_id	Process ID
dds.sys_info.username	Name of the user running the process
dds.sys_info.execution_timestamp	Time when the execution started
dds.sys_info.creation_timestamp	Time when the executable was created
dds.sys_info.executable_filepath	Name and full path of the executable
dds.sys_info.target	Architecture for which the library was compiled

6.87.2 System Resource Consideration

System properties are affected by the resource limits **com.rti.dds.infrastructure.DomainParticipantResource↩ LimitsQosPolicy.participant_property_list_max_length** (p. 1103) and **com.rti.dds.infrastructure.Domain↩ ParticipantResourceLimitsQosPolicy.participant_property_string_max_length** (p. 1103).

6.88 Configuring QoS Profiles with XML

APIs related to XML QoS Profiles.

APIs related to XML QoS Profiles.

6.88.1 Loading QoS Profiles from XML Resources

A 'QoS profile' is a group of QoS settings, specified in XML format. By using QoS profiles, you can change QoS settings without recompiling the application.

The Qos profiles are loaded the first time any of the following operations are called:

- **com.rti.dds.domain.DomainParticipantFactory.create_participant** (p. 1043)
- **com.rti.dds.domain.DomainParticipantFactory.create_participant_with_profile** (p. 1060)
- **com.rti.dds.domain.DomainParticipantFactory.set_default_participant_qos_with_profile** (p. 1046)
- **com.rti.dds.domain.DomainParticipantFactory.get_default_participant_qos** (p. 1045)
- **com.rti.dds.domain.DomainParticipantFactory.set_default_library** (p. 1051)
- **com.rti.dds.domain.DomainParticipantFactory.set_default_profile** (p. 1052)
- **com.rti.dds.domain.DomainParticipantFactory.get_participant_qos_from_profile** (p. 1054)
- **com.rti.dds.domain.DomainParticipantFactory.get_topic_qos_from_profile** (p. 1058)
- **com.rti.dds.domain.DomainParticipantFactory.get_topic_qos_from_profile_w_topic_name** (p. 1059)

- **com.rti.dds.domain.DomainParticipantFactory.get_publisher_qos_from_profile** (p. 1054)
- **com.rti.dds.domain.DomainParticipantFactory.get_subscriber_qos_from_profile** (p. 1055)
- **com.rti.dds.domain.DomainParticipantFactory.get_datawriter_qos_from_profile** (p. 1056)
- **com.rti.dds.domain.DomainParticipantFactory.get_datawriter_qos_from_profile_w_topic_name** (p. 1056)
- **com.rti.dds.domain.DomainParticipantFactory.get_datareader_qos_from_profile** (p. 1057)
- **com.rti.dds.domain.DomainParticipantFactory.get_datareader_qos_from_profile_w_topic_name** (p. 1057)
- **com.rti.dds.domain.DomainParticipantFactory.get_qos_profile_libraries** (p. 1059)
- **com.rti.dds.domain.DomainParticipantFactory.get_qos_profiles** (p. 1060)
- **com.rti.dds.domain.DomainParticipantFactory.load_profiles** (p. 1049)

The QoS profiles are reloaded replacing previously loaded profiles when the following operations are called:

- **com.rti.dds.domain.DomainParticipantFactory.set_qos** (p. 1048)
- **com.rti.dds.domain.DomainParticipantFactory.reload_profiles** (p. 1049)

The **com.rti.dds.domain.DomainParticipantFactory.unload_profiles** (p. 1050) operation will free the resources associated with the XML QoS profiles.

There are five ways to configure the XML resources (listed by load order):

- The file NDDS_QOS_PROFILES.xml in $NDDSHOME/resource/xml is loaded if it exists and **com.rti.dds.infrastructure.ProfileQosPolicy.ignore_resource_profile** (p. 1695) in **com.rti.dds.infrastructure.ProfileQosPolicy** (p. 1692) is set to com.rti.dds.infrastructure.false (first to be loaded). An example file, `NDDS_QOS_PROFILES.example.xml`, is available for reference.

- The URL groups separated by semicolons referenced by the enviroment variable NDDS_QOS_PROFILES are loaded if they exist and **com.rti.dds.infrastructure.ProfileQosPolicy.ignore_environment_profile** (p. 1694) in **com.rti.dds.infrastructure.ProfileQosPolicy** (p. 1692) is set to com.rti.dds.infrastructure.false.

- The file USER_QOS_PROFILES.xml in the working directory will be loaded if it exists and **com.rti.dds.infrastructure.ProfileQosPolicy.ignore_user_profile** (p. 1694) in **com.rti.dds.infrastructure.ProfileQosPolicy** (p. 1692) is set to com.rti.dds.infrastructure.false.

- The URL groups referenced by **com.rti.dds.infrastructure.ProfileQosPolicy.url_profile** (p. 1694) in **com.rti.dds.infrastructure.ProfileQosPolicy** (p. 1692) will be loaded if specified.

- The sequence of XML strings referenced by **com.rti.dds.infrastructure.ProfileQosPolicy.string_profile** (p. 1693) will be loaded if specified (last to be loaded).

The above methods can be combined together.

6.88.2 URL

The location of the XML resources (only files and strings are supported) is specified using a URL (Uniform Resource Locator) format. For example:

File Specification: `file:///usr/local/default_dds.xml`

String Specification: str://"<dds><qos_library> . . . lt;/qos_library>&lt/dds>"

If the URL schema name is omitted, RTI Connext will assume a file name. For example:

File Specification: /usr/local/default_dds.xml

6.88.2.1 URL groups

To provide redundancy and fault tolerance, you can specify multiple locations for a single XML document via URL groups. The syntax of a URL group is as follows:

[URL1 | URL2 | URL2 | . . .| URLn]

For example:

[`file:///usr/local/default_dds.xml` | `file:///usr/local/alternative_default_dds.xml`]

Only one of the elements in the group will be loaded by RTI Connext, starting from the left.

Brackets are not required for groups with a single URL.

6.88.2.2 NDDS_QOS_PROFILES environment variable

The environment variable NDDS_QOS_PROFILES contains a list of URL groups separated by ';'

The URL groups referenced by the environment variable are loaded if they exist and **com.rti.dds.infrastructure.ProfileQosPolicy.ignore_environment_profile** (p. 1694) is set to com.rti.dds.infrastructure.false

6.88.2.3 Built-In QoS Profiles

There are also a number of built-in QoS profiles that can be used without having to load any configurations from outside XML resources. For more information on these built-in profiles see **Built-in Qos Profiles** (p. 418).

For more information on XML Configuration, refer to the `User's Manual`.

6.89 Publication Example

A data publication example.

A data publication example.

6.89.1 A typical publication example

Prep

- Create user data types using rtiddsgen. See the `Code Generator User's Manual`.

Set up

- **Get the factory** (p. 370)
- **Set up participant** (p. 370)
- **Set up publisher** (p. 374)
- **Register user data type(s)** (p. 371)
- **Set up topic(s)** (p. 371)
- **Set up data writer(s)** (p. 375)

Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 381)

Send data

- **Send data** (p. 375)

Tear down

- **Tear down data writer(s)** (p. 376)
- **Tear down topic(s)** (p. 371)
- **Tear down publisher** (p. 374)
- **Tear down participant** (p. 371)

6.90 Subscription Example

A data subscription example.

A data subscription example.

6.90.1 A typical subscription example

Prep

- Create user data types using rtiddsgen. See the `Code Generator User's Manual`.

Set up

- **Get the factory** (p. 370)
- **Set up participant** (p. 370)
- **Set up subscriber** (p. 376)
- **Register user data type(s)** (p. 371)
- **Set up topic(s)** (p. 371)
- **Set up data reader(s)** (p. 378)

- **Set up data reader** (p. 378) **OR Set up subscriber** (p. 376) to receive data

Adjust the desired quality of service (QoS)

- **Adjust QoS on entities as necessary** (p. 381)

Receive data

- Access received data either **via a reader** (p. 379) **OR via a subscriber** (p. 377) (possibly in a **ordered or coherent** (p. 377) manner)

Tear down

- **Tear down data reader(s)** (p. 380)
- **Tear down topic(s)** (p. 371)
- **Tear down subscriber** (p. 377)
- **Tear down participant** (p. 371)

6.91 Participant Use Cases

Working with domain participants.

Working with domain participants.

6.91.1 Turning off auto-enable of newly created participant(s)

- **Get the factory** (p. 370)

- Change the value of the **ENTITY_FACTORY** (p. 484) for the **com.rti.dds.domain.DomainParticipantFactory** (p. 1039)

```
DomainParticipantFactoryQos factory_qos = new DomainParticipantFactoryQos();

try {
    factory.get_qos(factory_qos);

    /* Change the QosPolicy to create disabled participants */
    factory_qos.entity_factory.autoenable_created_entities = false;

    factory.set_qos(factory_qos);

} catch (RETCODE_ERROR err) {
    System.out.println(
            "***Error: changing domain participant factory qos\n");
}
```

6.91.2 Getting the factory

- Get the DDSDomainParticipantFactory instance:

```
DomainParticipantFactory factory = null;
factory = DomainParticipantFactory.get_instance();
```

6.91.3 Setting up a participant

- **Get the factory** (p. 370)

- Create DDSDomainParticipant:

```
int domain_id = 10;
DomainParticipantQos participant_qos = new DomainParticipantQos();
// initialize participant_qos with default values
factory.get_default_participant_qos(participant_qos);
/* Set the peer hosts. These list all the computers the application
 * may communicate with along with the maximum maximum participant
 * index of the participants that can concurrently run on that
 * computer. This list only needs to be a superset of the actual list
 * of computers and participants that will be running at any time.
 */
/* To run this example across multiple nodes, modify the following
 * IP addresses to match your network configuration.
 */
 final String[] NDDS_DISCOVERY_INITIAL_PEERS = {
                "1@udpv4://10.10.1.192",
                "1@udpv4://10.10.1.190",
                "1@udpv4://10.10.1.152"
  };
  participant_qos.discovery.initial_peers.
                                ensureCapacity(NDDS_DISCOVERY_INITIAL_PEERS.length);
  for (int i = 0; i < NDDS_DISCOVERY_INITIAL_PEERS.length; ++i) {
          participant_qos.discovery.initial_peers.add(
                NDDS_DISCOVERY_INITIAL_PEERS[i]);
  }

  // Initialize listener if desired
  DomainParticipantListener participant_listener = null;
  // Create the participant
  DomainParticipant participant = null;
  try {
          participant = factory.create_participant(
                        domain_id, participant_qos,
                                            participant_listener, StatusKind.STATUS_MASK_NONE);
  } catch (RETCODE_ERROR err) {
    // participant couldn't be created
  }
```

6.91.4 Tearing down a participant

- **Get the factory** (p. 370)
- Delete DDSDomainParticipant:

```
try {
    factory.delete_participant(participant);
} catch (RETCODE_ERROR err) {
    // unable to delete
}
```

6.92 Topic Use Cases

Working with topics.

Working with topics.

6.92.1 Registering a user data type

- **Set up participant** (p. 370)
- Register user data type of type `Foo` under the name "My_Type"

```
String type_name = "My_Type";
FooTypeSupport.register_type(participant, type_name);
```

6.92.2 Setting up a topic

- **Set up participant** (p. 370)
- **Ensure user data type is registered** (p. 371)
- Create a **com.rti.dds.topic.Topic** (p. 2116) under the name "my_topic"

```
String topic_name = "my_topic";
String type_type = "My_Type";   // user data type
TopicQos topic_qos = new TopicQos();
// MyTopicListener is user defined and
// implements TopicListener
TopicListener topic_listener = new MyTopicListener(); // or = null
participant.get_default_topic_qos(topic_qos);
Topic topic = null;
try {
    topic = participant.create_topic(topic_name, type_name,
                                     topic_qos, topic_listener,
                                StatusKind.STATUS_MASK_ALL);
} catch (RETCODE_ERROR err) {
    // handle exception
}
```

6.92.3 Tearing down a topic

- Delete Topic:

```
try {
    participant.delete_topic(topic);
} catch (RETCODE_ERROR err) {
    // handle exception
}
```

6.93 FlowController Use Cases

Working with flow controllers.

Working with flow controllers.

6.93.1 Creating a flow controller

- **Set up participant** (p. 370)
- Create a flow controller

```
FlowController controller = null;
FlowControllerProperty_t property = new FlowControllerProperty_t();
retcode = participant.get_default_flowcontroller_property(property);
// optionally modify flow controller property values
try {
    controller = participant.create_flowcontroller(
        "my flow controller name", property);
} catch (RETCODE_ERROR err) {
    // handle exception
}
```

6.93.2 Flow controlling a data writer

- **Set up participant** (p. 370)
- **Create flow controller** (p. 372)
- Create an asynchronous data writer, FooDataWriter, of user data type `Foo`:

```
DataWriterQos writer_qos = new DataWriterQos();
// MyWriterListener is user defined and
// implements DataWriterListener
MyWriterListener writer_listener = new MyWriterListener(); // or = null
publisher.get_default_datawriter_qos(writer_qos);
/* Change the writer QoS to publish asnychronously */
writer_qos.publish_mode.kind = PublishModeQosPolicyKind.ASYNCHRONOUS_PUBLISH_MODE_QOS;
/* Setup to use the previously created flow controller */
writer_qos.publish_mode.flow_controller_name = "my flow controller name";
/* Samples queued for asynchronous write are subject to the History Qos policy */
writer_qos.history.kind = HistoryQosPolicyKind.KEEP_ALL_HISTORY_QOS;
FooDataWriter writer = null;
try {
    writer = (FooDataWriter) publisher.create_datawriter(topic, writer_qos,
                                                         writer_listener,
                                                         StatusKind.STATUS_MASK_ALL);
    /* Send data asynchronously... */

    /* Wait for asynchronous send completes, if desired */
    writer.wait_for_asynchronous_publishing(timout);
} catch (RETCODE_ERROR err) {
    // handle exception
}
```

6.93.3 Using the built-in flow controllers

RTI Connext provides several built-in flow controllers.

The **com.rti.dds.publication.FlowController.DEFAULT_FLOW_CONTROLLER_NAME** (p. 76) built-in flow controller provides the basic asynchronous writer behavior. When calling **com.rti.ndds.example.FooDataWriter.write** (p. 1397),

the call signals the **com.rti.dds.publication.Publisher** (p. 1767) asynchronous publishing thread (**com.rti.dds.↩ publication.PublisherQos.asynchronous_publisher** (p. 1795)) to send the actual data. As with any com.rti.dds.↩ infrastructure.PublishModeQosPolicyKind.PublishModeQosPolicyKind.ASYNCHRONOUS_PUBLISH_MODE_QOS **com.rti.dds.publication.DataWriter** (p. 818), the **com.rti.ndds.example.FooDataWriter.write** (p. 1397) call returns immediately afterwards. The data is sent immediately in the context of the **com.rti.dds.publication.Publisher** (p. 1767) asynchronous publishing thread.

When using the **com.rti.dds.publication.FlowController.FIXED_RATE_FLOW_CONTROLLER_NAME** (p. 77) flow controller, data is also sent in the context of the **com.rti.dds.publication.Publisher** (p. 1767) asynchronous publishing thread, but at a regular fixed interval. The thread accumulates samples from different **com.rti.dds.publication.Data↩ Writer** (p. 818) instances and generates data on the wire only once per **com.rti.dds.publication.FlowController↩ TokenBucketProperty_t.period** (p. 1357).

In contrast, the **com.rti.dds.publication.FlowController.ON_DEMAND_FLOW_CONTROLLER_NAME** (p. 78) flow controller permits flow only when **com.rti.dds.publication.FlowController.trigger_flow** (p. 1350) is called. The data is still sent in the context of the **com.rti.dds.publication.Publisher** (p. 1767) asynchronous publishing thread. The thread accumulates samples from different **com.rti.dds.publication.DataWriter** (p. 818) instances (across any **com.rti.dds.↩ publication.Publisher** (p. 1767)) and sends all data since the previous trigger.

The properties of the built-in **com.rti.dds.publication.FlowController** (p. 1348) instances can be adjusted.

- **Set up participant** (p. 370)
- Lookup built-in flow controller

```
FlowController controller = null;
try {
    controller = participant.lookup_flowcontroller(
        FlowController.DEFAULT_FLOW_CONTROLLER_NAME);
} catch (RETCODE_ERROR err) {
    // This should never happen, built-in flow controllers are always created
    // handle exception
}
```

- Change property of built-in flow controller, if desired

```
FlowControllerProperty_t property = new FlowControllerProperty_t();
/* Get the property of the looked-up default flow controller */
controller.get_property(property);
/* Change the property value as desired */
property.token_bucket.period.sec = 2;
property.token_bucket.period.nanosec = 0;
/* Update the flow controller property */
controller.set_property(property);
```

- **Create a data writer using the correct flow controller name** (p. 372)

6.93.4 Shaping the network traffic for a particular transport

- **Set up participant** (p. 370)
- **Create the transports** (p. 383)
- **Create a separate flow controller for each transport** (p. 372)
- Configure **com.rti.dds.publication.DataWriter** (p. 818) instances to only use a single transport
- **Associate all data writers using the same transport to the corresponding flow controller** (p. 372)
- For each transport, the corresponding flow controller limits the network traffic based on the token bucket properties

6.93.5 Coalescing multiple samples in a single network packet

- **Set up participant** (p. 370)
- **Create a flow controller with a desired token bucket period** (p. 372)
- **Associate the data writer with the flow controller** (p. 372)
- Multiple samples written within the specified period will be coalesced into a single network packet (provided that `tokens_added_per_period` and `bytes_per_token` permit).

6.94 Publisher Use Cases

Working with publishers.

Working with publishers.

6.94.1 Setting up a publisher

- **Set up participant** (p. 370)
- Create a DDSPublisher

```
PublisherQos publisher_qos = new PublisherQos();
// MyPublisherListener is user defined and
// extends DDSPublisherListener
PublisherListener publisher_listener
    = new MyPublisherListener(); // or = null
participant.get_default_publisher_qos(publisher_qos);
Publisher publisher = null;
try {
    publisher = participant.create_publisher(publisher_qos,
                                             publisher_listener,
                                        StatusKind.STATUS_MASK_ALL);
} catch (RETCODE_ERROR err) {
    // respond to exception
}
```

6.94.2 Tearing down a publisher

- Delete DDSPublisher:

```
try {
    participant.delete_publisher(publisher);
} catch (RETCODE_ERROR err) {
    // respond to exception
}
```

6.95 DataWriter Use Cases

Working with data writers.

Working with data writers.

6.95.1 Setting up a data writer

- **Set up publisher** (p. 374)
- **Set up a topic** (p. 371)
- Create a data writer, FooDataWriter, of user data type `Foo`:

```
DataWriterQos writer_qos = new DataWriterQos();
// MyWriterListener is user defined and
// implements DataWriterListener
MyWriterListener writer_listener = new MyWriterListener(); // or = null
publisher.get_default_datawriter_qos(writer_qos);
FooDataWriter writer = null;
try {
    writer = (FooDataWriter) publisher.create_datawriter(topic, writer_qos,
                                                         writer_listener,
                                                    StatusKind.STATUS_MASK_ALL);
} catch (RETCODE_ERROR err) {
    // handle exception
}
```

6.95.2 Managing instances

- Getting an instance "key" value of user data type `Foo`

```
Foo data = ...;     // user data
try {
    writer.get_key_value(data, instance_handle);
} catch (RETCODE_ERROR err) {
    // ... check for cause of failure
}
```

- Registering an instance of type `Foo`

```
InstanceHandle_t instance_handle = InstanceHandle_t.HANDLE_NIL;
instance_handle = writer->register_instance(data);
```

- Unregistering an instance of type `Foo`

```
try {
    writer.unregister_instance(data, instance_handle);
} catch (RETCODE_ERROR err) {
    // ... check for cause of failure
}
```

- Disposing of an instance of type `Foo`

```
try {
    writer.dispose(data, instance_handle);
} catch (RETCODE_ERROR err) {
    // ... check for cause of failure
}
```

6.95.3 Sending data

- **Set up data writer** (p. 375)
- **Register instance** (p. 375)
- Write instance of type `Foo`

```
Foo data = new Foo();     // user data
InstanceHandle_t instance_handle
    = InstanceHandle_t.HANDLE_NIL; // or a valid registered handle
try {
    writer.write(data, instance_handle);
} catch (RETCODE_ERR err) {
    // ... check for cause of failure
}
```

6.95.4 Tearing down a data writer

- Delete DataWriter:

```
try {
    publisher.delete_datawriter(writer);
} catch (RETCODE_ERR err) {
    // ... check for cause of failure
}
```

6.96 Subscriber Use Cases

Working with subscribers.

Working with subscribers.

6.96.1 Setting up a subscriber

- **Set up participant** (p. 370)
- Create a Subscriber

```
SubscriberQos subscriber_qos = new SubscriberQos();
// MySubscriberListener is user defined and
// implements SubscriberListener
SubscriberListener subscriber_listener
    = new MySubscriberListener(); // or = null
participant.get_default_subscriber_qos(subscriber_qos);
Subscriber subscriber = null;
try {
    subscriber = participant.create_subscriber(subscriber_qos,
                                               subscriber_listener,
                                          StatusKind.STATUS_MASK_ALL);
} catch (RETCODE_ERROR err) {
    // respond to exception
}
```

6.96.2 Set up subscriber to access received data

- **Set up subscriber** (p. 376)
- Set up to handle the DATA_ON_READERS_STATUS status, in one or both of the following two ways.
- **Enable DATA_ON_READERS_STATUS for the SubscriberListener associated with the subscriber** (p. 381)
  - The processing to handle the status change is done in the **com.rti.dds.subscription.Subscriber↩ Listener.on_data_on_readers** (p. 2064) method of the attached listener.
  - Typical processing will **access the received data** (p. 377), either in arbitrary order or in a **coherent and ordered manner** (p. 377).
- **Enable DATA_ON_READERS_STATUS for the StatusCondition associated with the subscriber** (p. 382)
  - The processing to handle the status change is done **when the subscriber's attached status condition is triggered** (p. 383) and the DATA_ON_READERS_STATUS status on the subscriber is changed.
  - Typical processing will **access the received data** (p. 377), either in an arbitrary order or in a **coherent and ordered manner** (p. 377).

6.96.3 Access received data via a subscriber

- **Ensure subscriber is set up to access received data** (p. 376)
- Get the list of readers that have data samples available:
```
DataReaderSeq reader_seq = new DataReaderSeq(); // list of readers
int max_samples = DataReader.LENGTH_UNLIMITED;
int  sample_state_mask = SampleStateKind.NOT_READ_SAMPLE_STATE;
int  view_state_mask = ViewStateKind.ANY_VIEW_STATE;
int  instance_state_mask = InstanceStateKind.ANY_INSTANCE_STATE;

try {
    subscriber.get_datareaders(reader_seq,
                               sample_state_mask,
                               view_state_mask,
                               instance_state_mask);
} catch (RETCODE_ERROR err) {
    // handle exception
}
```
- Upon successfully getting the list of readers with data, process the data readers to either:
  - **Read the data in each reader** (p. 379), **OR**
  - **Take the data in each reader** (p. 379)

  If the intent is to access the data **coherently or in order** (p. 377), the list of data readers *must* be processed in the order returned:
```
for (int i = 0; i < reader_seq.size(); ++i) {
    FooDataReader reader = (FooDataReader) reader_seq.get(i);
    // Take the data from reader,
    //              OR
    // Read the data from reader
}
```
- **Alternatively**, call **com.rti.dds.subscription.Subscriber.notify_datareaders** (p. 2052) to invoke the Data↩ReaderListener for each of the data readers.
```
subscriber.notify_datareaders();
```

6.96.4 Access received data coherently and/or in order

To access the received data coherently and/or in an ordered manner, according to the settings of the **com.rti.dds.↩infrastructure.PresentationQosPolicy** (p. 1678) attached to a **com.rti.dds.subscription.Subscriber** (p. 2039):

- **Ensure subscriber is set up to access received data** (p. 376)
- Indicate that data will be accessed via the subscriber:
```
subscriber.begin_access();
```
- **Access received data via the subscriber, making sure that the data readers are processed in the order returned.** (p. 377)
- Indicate that the data access via the subscriber is done:
```
subscriber.end_access();
```

6.96.5 Tearing down a subscriber

- Delete Subscriber:
```
try {
    participant.delete_subscriber(subscriber);
} catch (RETCODE_ERROR err) {
    // handle exception
}
```

6.97 DataReader Use Cases

Working with data readers.

Working with data readers.

6.97.1 Setting up a data reader

- **Set up subscriber** (p. 376)
- **Set up a topic** (p. 371)
- Create a data reader, FooDataReader, of user data type `Foo`:

```
DataReaderQos reader_qos = new DataReaderQos();
// MyReaderListener is user defined and
// implements DataReaderListener
DataReaderListener reader_listener
    = new MyReaderListener(); // or = null
subscriber.get_default_datareader_qos(reader_qos);
FooDataReader reader = null;
try {
    reader = (FooDataReader) subscriber.create_datareader(topic,
                                                          reader_qos,
                                                          reader_listener,
                                                    StatusKind.STATUS_MASK_ALL);
} catch (RETCODE_ERROR err) {
    // respond to exception
}
```

6.97.2 Managing instances

- Given a data reader

```
FooDataReader reader = ...;
```

- Getting an instance "key" value of user data type `Foo`

```
Foo data = new Foo();     // user data of type Foo
// ...
try {
    reader.get_key_value(data, instance_handle);
} catch (RETCODE_ERROR err) {
    // ... check for cause of failure
}
```

6.97.3 Set up reader to access received data

- **Set up data reader** (p. 378)
- Set up to handle the DATA_AVAILABLE_STATUS status, in one or both of the following two ways.
- **Enable DATA_AVAILABLE_STATUS for the DataReaderListener associated with the data reader** (p. 381)
  - The processing to handle the status change is done in the **com.rti.dds.subscription.DataReader↩ Listener.on_data_available** (p. 760) method of the attached listener.
  - Typical processing will **access the received data** (p. 379).
- **Enable DATA_AVAILABLE_STATUS for the StatusCondition associated with the data reader** (p. 382)
  - The processing to handle the status change is done **when the data reader's attached status condition is triggered** (p. 383) and the DATA_AVAILABLE_STATUS status on the data reader is changed.
  - Typical processing will **access the received data** (p. 379).

6.97.4 Access received data via a reader

- **Ensure reader is set up to access received data** (p. 378)
- Access the received data, by either:
  - **Taking the received data in the reader** (p. 379), **OR**
  - **Reading the received data in the reader** (p. 379)

6.97.5 Taking data

- **Ensure reader is set up to access received data** (p. 378)
- Take samples of user data type `Foo`. The samples are removed from the Service. The caller is responsible for deallocating the buffers.

```
FooSeq        data_seq = new FooSeq();        // holder for sequence of user data type Foo
SampleInfoSeq info_seq = new SampleInfoSeq(); // holder for sequence of DDS_SampleInfo
int           max_samples;
int           sample_state_mask = SampleStateMask.ANY_SAMPLE_STATE;
int           view_state_mask = ViewStateMask.ANY_VIEW_STATE;
int           instance_state_mask = InstanceStateMask.ANY_INSTANCE_STATE;
try {
    reader.take(data_seq, info_seq,
                max_samples,
                sample_state_mask,
                view_state_mask,
                instance_state_mask);
} catch (RETCODE_ERROR) {
    // ... check for cause of failure
}
```

- Use the received data

```
// Use the received data samples 'data_seq' and associated
// information 'info_seq'
for (int i = 0; i < data_seq.size(); ++i) {
    // use... data_seq.get(i) ...
    // use... info_seq.get(i) ...
}
```

- Return the data samples and the information buffers back to the middleware. *IMPORTANT*: Once this call returns, you must not retain any pointers to any part of any sample or sample info object.

```
reader.return_loan(data_seq, info_seq);
```

6.97.6 Reading data

- **Ensure reader is set up to access received data** (p. 378)
- Read samples of user data type `Foo`. The samples are not removed from the Service. It remains responsible for deallocating the buffers.

```
FooSeq        data_seq = new FooSeq();        // holder for sequence of user data type Foo
SampleInfoSeq info_seq = new SampleInfoSeq)_; // holder for sequence of DDS_SampleInfo
int           max_samples;
int           sample_state_mask = SampleStateMask.ANY_SAMPLE_STATE;
int           view_state_mask = ViewStateMask.ANY_VIEW_STATE;
int           instance_state_mask = InstanceStateMask.ANY_INSTANCE_STATE;
try {
    reader.read(data_seq, info_seq,
                max_samples,
                sample_state_mask,
                view_state_mask,
                instance_state_mask);
} catch (RETCODE_ERROR) {
    // ... check for cause of failure
}
```

- Use the received data
```
// Use the received data samples 'data_seq' and associated
// information 'info_seq'
for (int i = 0; i < data_seq.size(); ++i) {
    // use... data_seq.get(i) ...
    // use... info_seq.get(i) ...
}
```

- Return the data samples and the information buffers back to the middleware
```
reader.return_loan(data_seq, info_seq);
```

6.97.7 Tearing down a data reader

- Delete DDSDataReader:
```
try {
    subscriber.delete_datareader(reader);
} catch (RETCODE_ERROR err) {
    // ... check for cause of failure
}
```

6.98 Entity Use Cases

Working with entities.

Working with entities.

6.98.1 Enabling an entity

- To enable an **com.rti.dds.infrastructure.Entity** (p. 1320)
```
try {
    entity.enable();
} catch (RETCODE_ERROR err) {
    System.out.println(
        "*** Error: failed to enable entity");
}
```

6.98.2 Checking if a status changed on an entity.

- Given an **com.rti.dds.infrastructure.Entity** (p. 1320) and a **com.rti.dds.infrastructure.StatusKind** (p. 2010) to check for, get the list of statuses that have changed since the last time they were respectively cleared.
```
int status_changes_list = entity.get_status_changes();
```

- Check if `status_kind` was changed since the last time it was cleared. A plain communication status change is cleared when the status is read using the entity's `get_<plain communication status>()` method. A read communication status change is cleared when the data is taken from the middleware via a TDataReader_↩ take() call [see **Changes in Status** (p. 516) for details].
```
if ((status_changes_list & status_kind) != 0) {
    return true;  /* ... YES, status_kind changed ... */
} else {
    return false;  /* ... NO, status_kind did NOT change ... */
}
```

6.98.3 Changing the QoS for an entity

The QoS for an entity can be specified at the entity creation time. Once an entity has been created, its QoS can be manipulated as follows.

- Get an entity's QoS settings using **get_qos (abstract)** (p. 1322)
```
try {
    entity.get_qos(qos);
} catch (RETCODE_ERROR err) {
    System.out.println("***Error: failed to get qos\n");
}
```
- Change the desired qos policy fields
```
/* Change the desired qos policies */
/* qos.policy.field = ... */
```
- Set the qos using **set_qos (abstract)** (p. 1321).
```
try {
    entity.set_qos(qos);
} catch (RETCODE_IMMUTABLE_POLICY immutable) {
    System.out.println(
            "***Error: tried changing a policy that can only be" +
            "          set at entity creation time\n");
} catch (RETCODE_INCONSISTENT_POLICY inconsistent) {
    System.out.println(
            "***Error: tried changing a policy to a value inconsistent" +
            "          with other policy settings\n");
} catch (RETCODE_ERROR other) {
    System.out.println(
            "***Error: tried changing a policy that can only be" +
            "          set at entity creation time\n");
}
```

6.98.4 Changing the listener and enabling/disabling statuses associated with it

The listener for an entity can be specified at the entity creation time. By default the listener is *enabled* for all the statuses supported by the entity.

Once an entity has been created, its listener and/or the statuses for which it is enabled can be manipulated as follows.

- User defines entity listener methods
```
/* ... methods defined by EntityListener ... */
public class MyEntityListener implements Listener {
    // ... methods defined by EntityListener ...
}
```
- Get an entity's listener using **get_listener (abstract)** (p. 1323)
```
entity_listener = entity.get_listener();
```
- Enable `status_kind` for the `listener`
```
enabled_status_list |= status_kind;
```
- Disable `status_kind` for the `listener`
```
enabled_status_list &= ~status_kind;
```
- Set an entity's listener to `entity_listener` using **set_listener (abstract)** (p. 1322). Only enable the listener for the statuses specified by the `enabled_status_list`.
```
try {
    entity.set_listener(entity_listener, enabled_status_list);
} catch (RETCODE_ERROR err) {
    // respond to failure
}
```

6.98.5 Enabling/Disabling statuses associated with a status condition

Upon entity creation, by default, all the statuses are *enabled* for the DDS_StatusCondition associated with the entity.

Once an entity has been created, the list of statuses for which the DDS_StatusCondition is triggered can be manipulated as follows.

- Given an `entity`, a `status_kind`, and the associated `status_condition`:
```
statuscondition = entity.get_statuscondition();
```
  - Get the list of statuses enabled for the `status_condition`
```
enabled_status_list = statuscondition.get_enabled_statuses();
```
- Check if the given `status_kind` is enabled for the `status_condition`
```
if ((enabled_status_list & status_kind) > 0) {
    /*... YES, status_kind is enabled ... */
} else {
    /* ... NO, status_kind is NOT enabled ... */
}
```
- Enable `status_kind` for the `status_condition`
```
try {
    statuscondition.set_enabled_statuses(enabled_status_list | status_kind);
} catch (RETCODE_ERROR err) {
    // ... check for cause of failure
}
```
- Disable `status_kind` for the `status_condition`
```
try {
    statuscondition.set_enabled_statuses(enabled_status_list & ~status_kind);
} catch (RETCODE_ERROR err) {
    // ... check for cause of failure
}
```

6.99 Waitset Use Cases

Using wait-sets and conditions.

Using wait-sets and conditions.

6.99.1 Setting up a wait-set

- Create a wait-set
```
WaitSet waitset = new WaitSet();
```
- Attach conditions
```
Condition cond1 = ...;
Condition cond2 = entity.get_statuscondition();
Condition cond3 = reader.create_readcondition(
    SampleStateKind.NOT_READ_SAMPLE_STATE,
    ViewStateKind.ANY_VIEW_STATE,
    InstanceStateKind.ANY_INSTANCE_STATE);
Condition cond4 = new GuardCondition();
Condition cond5 = ...;
waitset.attach_condition(cond1);
waitset.attach_condition(cond2);
waitset.attach_condition(cond3);
waitset.attach_condition(cond4);
waitset.attach_condition(cond5);
```

6.99.2 Waiting for condition(s) to trigger

- **Set up a wait-set** (p. 382)
- Wait for a condition to trigger or `timeout`, whichever occurs first

```
Duration_t timeout = new Duration_t(0, 1000000); // 1ms
ConditionSeq active_conditions = new ConditionSeq(); // list of active conditions
boolean is_cond1_triggered = false;
boolean is_cond2_triggered = false;
try {
    waitset.wait(active_conditions, timeout);
    // check if "cond1" or "cond2" are triggered:
    for (int i = 0; i < active_conditions.size(); ++i) {
        if (active_conditions.get(i) == cond1) {
            System.out.println("Cond1 was triggered!");
            is_cond1_triggered = true;
        }
        if (active_conditions.get(i) == cond2) {
            System.out.println("Cond2 was triggered!");
            is_cond2_triggered = true;
        }
    }
    if (is_cond1_triggered) {
        // ... do something because "cond1" was triggered ...
    }
    if (is_cond2_triggered) {
        // ... do something because "cond2" was triggered ...
    }
} catch (RETCODE_TIMEOUT timed_out) {
    // timeout!
    System.out.println(
        "Wait timed out!! None of the conditions was triggered.");
} catch (RETCODE_ERROR ex) {
    // ... check for cause of failure
     throw ex;
}
```

6.99.3 Tearing down a wait-set

- Delete the wait-set

```
waitset.delete();
waitset = null;
// let the wait set be garbage collected
```

6.100 Transport Use Cases

Working with pluggable transports.

Working with pluggable transports.

6.100.1 Changing the automatically registered built-in transports

- The **com.rti.dds.infrastructure.TransportBuiltinKind.MASK_DEFAULT** (p. 523) specifies the transport plugins that will be automatically registered with a newly created **com.rti.dds.domain.DomainParticipant** (p. 948) by default.
- This default can be changed by changing the value of the value of **TRANSPORT_BUILTIN** (p. 521) Qos Policy on the **com.rti.dds.domain.DomainParticipant** (p. 948)
- To change the **com.rti.dds.domain.DomainParticipantQos.transport_builtin** (p. 1078) Qos Policy:

```
DomainParticipantQos participant_qos = new DomainParticipantQos();

factory.get_default_participant_qos(participant_qos);

participant_qos.transport_builtin.mask = TransportBuiltinKind.SHMEM |
                                         TransportBuiltinKind.UDPv4;
```

6.100.2 Changing the properties of the automatically registered builtin transports

The behavior of the automatically registered builtin transports can be altered by changing their properties.

- Tell the **com.rti.dds.domain.DomainParticipantFactory** (p. 1039) to create the participants disabled, as described in **Turning off auto-enable of newly created participant(s)** (p. 370)
- Get the property of the desired builtin transport plugin, say **com.rti.ndds.transport.UDPv4Transport** (p. 2255)

```
UDPv4Transport.Property_t property = new UDPv4Transport.Property_t();

TransportSupport.get_builtin_transport_property(participant, property);
```

- Change the property fields as desired. Note that the properties should be changed carefully, as inappropriate values may prevent communications. For example, the **com.rti.ndds.transport.UDPv4Transport** (p. 2255) properties can be changed to support **large messages** (assuming the underlying operating system's UDPv4 stack supports the large message size). Note: if message_size_max is increased from the default for any of the built-in transports, then the DDS_ReceiverPoolQosPolicy::buffer_size on the DomainParticipant should also be changed.

```
/* Decrease the UDPv4 maximum message size to 64K (small messages). */
property.message_size_max        =  9216;
property.recv_socket_buffer_size =  9216;
property.send_socket_buffer_size =  9216;
```

- Set the property of the desired builtin transport plugin, say **com.rti.ndds.transport.UDPv4Transport** (p. 2255)

```
TransportSupport.set_builtin_transport_property(participant, property);
```

- **Enable the participant** (p. 380) to turn on communications with other participants in the domain using the new properties for the automatically registered builtin transport plugins.

6.101 Filter Use Cases

Working with data filters.

Working with data filters.

6.101.1 Introduction

RTI Connext supports filtering data either during the exchange from **com.rti.dds.publication.DataWriter** (p. 818) to **com.rti.dds.subscription.DataReader** (p. 707), or after the data has been stored at the **com.rti.dds.subscription.DataReader** (p. 707).

Filtering during the exchange process is performed by a **com.rti.dds.topic.ContentFilteredTopic** (p. 692), which is created by the **com.rti.dds.subscription.DataReader** (p. 707) as a way of specifying a subset of the data samples that it wishes to receive.

Filtering samples that have already been received by the **com.rti.dds.subscription.DataReader** (p. 707) is performed by creating a **com.rti.dds.subscription.QueryCondition** (p. 1812), which can then used to check for matching samples, be alerted when matching samples arrive, or retrieve matching samples through use of the **com.rti.ndds.example.FooDataReader.read_w_condition** (p. 1368) or **com.rti.ndds.example.FooDataReader.take_w_condition** (p. 1369) functions. (Conditions may also be used with the APIs **com.rti.ndds.example.FooDataReader.read_next_instance_w_condition** (p. 1383) and **com.rti.ndds.example.FooDataReader.take_next_instance_w_condition** (p. 1384).)

Filtering may be performed on any topic, either keyed or un-keyed, except the **Built-in Topics** (p. 53). Filtering may be perfomed on any field, subset of fields, or combination of fields, subject only to the limitations of the filter syntax, and some restrictions against filtering some *sparse value types* of the **Dynamic Data** (p. 67) API.

RTI Connext contains built in support for filtering using SQL syntax, described in the **Queries and Filters Syntax** (p. 108) module.

6.101.1.1 Overview of ContentFilteredTopic

Each **com.rti.dds.topic.ContentFilteredTopic** (p. 692) is created based on an existing **com.rti.dds.topic.Topic** (p. 2116). The **com.rti.dds.topic.Topic** (p. 2116) specifies the **field_names** and **field_types** of the data contained within the topic. The **com.rti.dds.topic.ContentFilteredTopic** (p. 692), by means of its `filter_expression` and `expression_parameters`, further specifies the *values* of the data which the **com.rti.dds.subscription.Data↩ Reader** (p. 707) wishes to receive.

Custom filters may also be constructed and utilized as described in the **Creating Custom Content Filters** (p. 387) module.

Once the **com.rti.dds.topic.ContentFilteredTopic** (p. 692) has been created, a **com.rti.dds.subscription.Data↩ Reader** (p. 707) can be created using the filtered topic. The filter's characteristics are exchanged between the **com.↩ rti.dds.subscription.DataReader** (p. 707) and any matching **com.rti.dds.publication.DataWriter** (p. 818) during the discovery process.

If the **com.rti.dds.publication.DataWriter** (p. 818) allows (by **com.rti.dds.infrastructure.DataWriterResource↩ LimitsQosPolicy.max_remote_reader_filters** (p. 894)), and the **com.rti.dds.subscription.DataReader** (p. 707) 's **com.rti.dds.infrastructure.TransportMulticastQosPolicy** (p. 2162) is empty, then the **com.rti.dds.publication.↩ DataWriter** (p. 818) will filter out samples that don't meet the filtering criteria.

If disallowed by the **com.rti.dds.publication.DataWriter** (p. 818), or the **com.rti.dds.subscription.DataReader** (p. 707) has set the **com.rti.dds.infrastructure.TransportMulticastQosPolicy** (p. 2162), then the **com.rti.dds.↩ publication.DataWriter** (p. 818) sends all samples to the **com.rti.dds.subscription.DataReader** (p. 707), and the **com.rti.dds.subscription.DataReader** (p. 707) discards any samples that do not meet the filtering criteria.

The `expression_parameters` can be modified using **com.rti.dds.topic.ContentFilteredTopic.set_↩ expression_parameters** (p. 695). Any changes made to the filtering criteria by means of **com.rti.dds.topic.Content↩ FilteredTopic.set_expression_parameters** (p. 695), will be conveyed to any connected **com.rti.dds.publication.↩ DataWriter** (p. 818). New samples will be subject to the modified filtering criteria, but samples that have already been accepted or rejected are unaffected. However, if the **com.rti.dds.subscription.DataReader** (p. 707) connects to a **com.rti.dds.publication.DataWriter** (p. 818) that *re-sends* its data, the re-sent samples will be subjected to the new filtering criteria.

6.101.1.2 Overview of QueryCondition

com.rti.dds.subscription.QueryCondition (p. 1812) combine aspects of the content filtering capabilities of **com.rti.↩ dds.topic.ContentFilteredTopic** (p. 692) with state filtering capabilities of **com.rti.dds.subscription.ReadCondition** (p. 1816) to create a reconfigurable means of filtering or searching data in the **com.rti.dds.subscription.DataReader** (p. 707) queue.

com.rti.dds.subscription.QueryCondition (p. 1812) may be created on a disabled **com.rti.dds.subscription.Data↩ Reader** (p. 707), or after the **com.rti.dds.subscription.DataReader** (p. 707) has been enabled. If the **com.rti.dds.↩ subscription.DataReader** (p. 707) is enabled, and has already recevied and stored samples in its queue, then all data samples in the are filtered against the **com.rti.dds.subscription.QueryCondition** (p. 1812) filter criteria at the time that the **com.rti.dds.subscription.QueryCondition** (p. 1812) is created. (Note that an exclusive lock is held on the **com.rti.dds.subscription.DataReader** (p. 707) sample queue for the duration of the **com.rti.dds.subscription.↩ QueryCondition** (p. 1812) creation).

Once created, incoming samples are filtered against all **com.rti.dds.subscription.QueryCondition** (p. 1812) filter criteria at the time of their arrival and storage into the **com.rti.dds.subscription.DataReader** (p. 707) queue.

The number of **com.rti.dds.subscription.QueryCondition** (p. 1812) filters that an individual **com.rti.dds.↩ subscription.DataReader** (p. 707) may create is set by **com.rti.dds.infrastructure.DataReaderResourceLimits↩ QosPolicy.max_query_condition_filters** (p. 803), to an upper maximum of 32.

6.101.2 Filtering with ContentFilteredTopic

- **Set up subscriber** (p. 376)
- **Set up a topic** (p. 371)
- Create a ContentFilteredTopic, of user data type `Foo`:

```
String cft_param_list[] = {"1", "100"};
StringSeq cft_parameters = new StringSeq(java.util.Arrays.asList(cft_param_list));
ContentFilteredTopic cft = participant.create_contentfilteredtopic(
                                "ContentFilteredTopic",
                                topic,
                                "value > %0 AND value < %1",
                                cft_parameters);
if (cft == null) {
    System.err.println("create_contentfilteredtopic error\n");
    return;
}
```

- Create a FooReader using the ContentFilteredTopic:

```
FooDataReader reader = (FooDataReader)
                           subscriber.create_datareader(
                               cft,
                               datareader_qos, // or Subscriber.DATAREADER_QOS_DEFAULT //
                               listener, // or null //
                               StatusKind.STATUS_MASK_ALL);
if (reader == null) {
    System.err.println("create_datareader error\n");
    return;
}
```

Once setup, reading samples with a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) is exactly the same as normal reads or takes, as decribed in **DataReader Use Cases** (p. 378).

- Changing filter crieria using set_expression_parameters:

```
cft_parameters.set(0, "5");
cft_parameters.set(1, "9");
cft.set_expression_parameters(cft_parameters);
```

6.101.3 Filtering with Query Conditions

- Given a data reader of type Foo

```
FooDataReader reader = ...;
```

- Creating a QueryCondition

```
QueryCondition queryCondition = null;
String qc_param_list[] = {"1", "100"};
StringSeq qc_parameters = new StringSeq(java.util.Arrays.asList(qc_param_list));
queryCondition = reader.create_querycondition(SampleStateKind.NOT_READ_SAMPLE_STATE,
                                              ViewStateKind.ANY_VIEW_STATE,
                                              InstanceStateKind.ANY_INSTANCE_STATE,
                                              "value > %0 AND value < %1",
                                              qc_parameters);
if (queryCondition == null) {
    System.err.println("create_querycondition error\n");
    return;
}
```

- Reading matching samples with a **com.rti.dds.subscription.QueryCondition** (p. 1812)

```
FooSeq _dataSeq = new FooSeq();
SampleInfoSeq _infoSeq = new SampleInfoSeq();
try {
    reader.read_w_condition(_dataSeq, _infoSeq,
                            ResourceLimitsQosPolicy.LENGTH_UNLIMITED,
                            queryCondition);
    for(int i = 0; i < _dataSeq.size(); ++i) {
        SampleInfo info = (SampleInfo)_infoSeq.get(i);
        if (info.valid_data) {
            // --- Process data here --- //
        }
    }
```

```
} catch (RETCODE_NO_DATA noData) {
    // No data to process
} finally {
    reader.return_loan(_dataSeq, _infoSeq);
}
```

- **com.rti.dds.subscription.QueryCondition.set_query_parameters** (p. 1813) is used similarly to **com.rti.dds.topic.ContentFilteredTopic.set_expression_parameters** (p. 695), and the same coding techniques can be used.
- Any **com.rti.dds.subscription.QueryCondition** (p. 1812) that have been created must be deleted before the **com.rti.dds.subscription.DataReader** (p. 707) can be deleted. This can be done using **com.rti.dds.subscription.DataReader.delete_contained_entities** (p. 728) or manually as in:
```
retcode = reader.delete_readcondition(queryCondition);
```

6.101.4 Filtering Performance

Although RTI Connext supports filtering on any field or combination of fields using the SQL syntax of the built-in filter, filters for keyed topics that filter solely on the contents of key fields have the potential for much higher performance. This is because for key-only filters, the **com.rti.dds.subscription.DataReader** (p. 707) caches the results of the filter (pass or not pass) for each instance. When another sample of the same instance is seen at the **com.rti.dds.subscription.DataReader** (p. 707), the filter results are retrieved from the cache, dispensing with the need to call the filter function.

This optimization applies to all filtering using the built-in SQL filter, performed by the **com.rti.dds.subscription.DataReader** (p. 707), for either **com.rti.dds.topic.ContentFilteredTopic** (p. 692) or **com.rti.dds.subscription.QueryCondition** (p. 1812). This does *not* apply to filtering perfomed for **com.rti.dds.topic.ContentFilteredTopic** (p. 692) by the **com.rti.dds.publication.DataWriter** (p. 818).

6.102 Creating Custom Content Filters

Working with custom content filters.

Working with custom content filters.

6.102.1 Introduction

By default, RTI Connext creates content filters with the DDS_SQL_FILTER, which implements a superset of the DDS-specified SQL WHERE clause. However, in many cases this filter may not be what you want. Some examples are:

- The default filter can only filter based on the content of a sample, not on a computation on the content of a sample. You can use a custom filter that is customized for a specific type and can filter based on a computation of the type members.
- You want to use a different filter language then SQL

This HOWTO explains how to write your own custom filter and is divided into the following sections:

- **The Custom Content Filter API** (p. 388)
- **Example Using C format strings** (p. 388)

6.102.2 The Custom Content Filter API

A custom content filter is created by calling the **com.rti.dds.domain.DomainParticipant.register_contentfilter** (p. 1018) function with a **com.rti.dds.topic.ContentFilter** (p. 689) that contains a **compile**, an **evaluate** function and a **finalize** function. **com.rti.dds.topic.ContentFilteredTopic** (p. 692) can be created with **com.rti.dds.domain.↩ DomainParticipant.create_contentfilteredtopic_with_filter** (p. 989) to use this filter.

A custom content filter is used by RTI Connext at the following times during the life-time of a **com.rti.dds.topic.↩ ContentFilteredTopic** (p. 692) (the function called is shown in parenthesis).

- When a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) is created (**compile** (p. 388))
- When the filter parameters are changed on the **com.rti.dds.topic.ContentFilteredTopic** (p. 692) (**compile** (p. 388)) with **com.rti.dds.topic.ContentFilteredTopic.set_expression_parameters** (p. 695)
- When a sample is filtered (**evaluate** (p. 388)). This function is called by the RTI Connext core with a de-serialized sample
- When a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) is deleted (**finalize** (p. 388))

6.102.2.1 The compile function

The **compile** (p. 389) function is used to **compile** a filter expression and expression parameters. Please note that the term **compile** is intentionally loosely defined. It is up to the user to decide what this function should do and return.

See **com.rti.dds.topic.ContentFilter.compile** (p. 690) for details.

6.102.2.2 The evaluate function

The **evaluate** (p. 389) function is called each time a sample is received to determine if a sample should be filtered out and discarded.

See **com.rti.dds.topic.ContentFilter.evaluate** (p. 691) for details.

6.102.2.3 The finalize function

The **finalize** (p. 389) function is called when an instance of the custom content filter is no longer needed. When this function is called, it is safe to free all resources used by this particular instance of the custom content filter.

See **com.rti.dds.topic.ContentFilter.finalize** (p. 692) for details.

6.102.3 Example Using C format strings

Assume that you have a type Foo.

You want to write a custom filter function that will drop all samples where the value of Foo.x $>$ x and x is a value determined by an expression parameter. The filter will **only** be used to filter samples of type Foo.

6.102.3.1 Writing the Compile Function

The first thing to note is that we can ignore the filter expression, since we already know what the expression is. The second is that x is a parameter that can be changed. By using this information, the compile function is very easy to implement. Simply return the parameter string. This string will then be passed to the evaluate function every time a sample of this type is filtered.

Below is the entire **compile** (p. 388) function.

```
public void compile(
    ObjectHolder new_compile_data, String expression,
    StringSeq parameters, TypeCode type_code, String type_class_name,
    Object old_compile_data) {
    new_compile_data.value = parameters.get(0);
}
```

6.102.3.2 Writing the Evaluate Function

The next step is to implement the **evaluate** function. The evaluate function receives the parameter string with the actual value to test against. Thus the evaluate function must read the actual value from the parameter string before evaluating the expression. Below is the entire **evaluate** (p. 388) function.

```
public boolean evaluate(
    Object compile_data, Object sample, FilterSampleInfo meta_data) {
    String parameter = (String)compile_data;
    int x;

    Foo foo_sample = (Foo)sample;

    x = Integer.parseInt(parameter);
    return (foo_sample.x > x ? false : true);
}
```

6.102.3.3 Writing the Finalize Function

The last function to write is the finalize function. It is safe to free all resources used by this particular instance of the custom content filter that is allocated in **compile**. Below is the entire **finalize** (p. 388) function.

```
public void finalize(
    Object compile_data) {
    /* nothing to do since no resource are allocated */
}
```

6.102.3.4 Registering the Filter

Before the custom filter can be used, it must be registered with RTI Connext:

```
ContentFilter myCustomFilter = new MyContentFilter();
participant.register_contentfilter("MyCustomFilter", myCustomFilter);
```

6.102.3.5 Unregistering the Filter

When the filter is no longer needed, it can be unregistered from RTI Connext:

```
participant.unregister_contentfilter("MyCustomFilter");
```

6.103 Large Data Use Cases

Working with large data types.

Working with large data types.

6.103.1 Introduction

RTI Connext supports data types whose size exceeds the maximum message size of the underlying transports. A **com.rti.dds.publication.DataWriter** (p. 818) will fragment data samples when required. Fragments are automatically reassembled at the receiving end.

Once all fragments of a sample have been received, the new sample is passed to the **com.rti.dds.subscription.↩ DataReader** (p. 707) which can then make it available to the user. Note that the new sample is treated as a regular sample at that point and its availability depends on standard QoS settings such as **com.rti.dds.infrastructure.↩ ResourceLimitsQosPolicy.max_samples** (p. 1896) and com.rti.dds.infrastructure.HistoryQosPolicyKind.HistoryQos↩ PolicyKind.KEEP_LAST_HISTORY_QOS.

The large data feature is fully supported by all DDS API's, so its use is mostly transparent. Some additional considerations apply as explained below.

6.103.2 Writing Large Data

In order to use the large data feature with the **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.RELIABLE↩ _RELIABILITY_QOS** (p. 1836) setting, the **com.rti.dds.publication.DataWriter** (p. 818) must be configured as an asynchronous writer (com.rti.dds.infrastructure.PublishModeQosPolicyKind.PublishModeQosPolicyKind.↩ ASYNCHRONOUS_PUBLISH_MODE_QOS) with associated **com.rti.dds.publication.FlowController** (p. 1348).

While the use of an asynchronous writer and flow controller is optional when using the **com.rti.dds.infrastructure.↩ ReliabilityQosPolicyKind.BEST_EFFORT_RELIABILITY_QOS** (p. 1836) setting, most large data use cases will benefit from the use of a flow controller to prevent flooding the network when fragments are being sent.

- **Set up writer** (p. 375)
- **Add flow control** (p. 372)

6.103.3 Receiving Large Data

Large data is supported by default and in most cases, no further changes are required.

The **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy** (p. 789) allows tuning the resources available to the **com.rti.dds.subscription.DataReader** (p. 707) for reassembling fragmented large data.

- **Set up reader** (p. 378)

6.104 Request-Reply Examples

Examples on how to use the request-reply API .

Examples on how to use the request-reply API .

Request-Reply code examples.

6.104.1 Request-Reply Examples

Requesters and Repliers provide a way to use the Request-Reply communication pattern on top of the DDS entities. An application uses a Requester to send requests to a Replier; another application using a Replier receives a request and can send one or more replies for that request. The Requester that sent the request (and only that one) will receive the reply (or replies).

DDS Types

RTI Connext uses DDS data types for sending and receiving requests and replies. Valid types are those generated by the rtiddsgen code generator, the DDS built-in types, and `DynamicData`. Refer to the `Core Libraries User's Manual` and the following links for more information:

- `Code Generator User's Manual`,
- **Using the DDS built-in types** (p. 62),
- **Using DynamicData** (p. 67)

Set up

- **Create a DomainParticipant** (p. 370)
- **Create a requester** (p. 392)
- **Create a requester with parameters** (p. 393)
- **Create a replier** (p. 396)

Requester: sending requests and receiving replies

- **Basic Requester example** (p. 393)
- **Taking loaned samples** (p. 394)
- **Taking samples by copy** (p. 395)
- **Correlation between requests and replies** (p. 395)

Replier: receiving requests and sending replies

- **Basic Replier example** (p. 397)
- **SimpleReplier example** (p. 397)
- **Taking loaned samples** (p. 394)
- **Taking samples by copy** (p. 395)

Error handling

- **Error handling example** (p. 398)

Note

To use Request-Reply you need to include the additional `rticonnextmsg.jar` to build your Java application.

6.104.2 Creating a Requester

- **Setting up a participant** (p. 370)
- Creating a Requester

```
// Note: error checking omitted for simplicity

// Create a DomainParticipant
DomainParticipant participant =
        DomainParticipantFactory.get_instance().create_participant(
            domainId, DomainParticipantFactory.PARTICIPANT_QOS_DEFAULT,
            null, StatusKind.STATUS_MASK_NONE);

// Create a Requester (if creation fails an exception is thrown)
// Foo is the request type and FooTypeSupport is its DDS TypeSupport
// Bar is the reply type and BarTypeSupport is its DDS TypeSupport
Requester<Foo, Bar> requester =
        new Requester<Foo, Bar>(
                participant, "TestService",
                FooTypeSupport.get_instance(),
                BarTypeSupport.get_instance());
```

- Finalizing a Requester

```
requester.close();
```

Configuring Request-Reply QoS profiles (p. 398)

6.104.3 Creating a Requester with optional parameters

- **Setting up a participant** (p. 370)
- Creating a Requester with optional parameters

```
// Note: error checking omitted for simplicity

// Create a DomainParticipant
DomainParticipant participant =
        DomainParticipantFactory.get_instance().create_participant(
                0, DomainParticipantFactory.PARTICIPANT_QOS_DEFAULT,
                null, StatusKind.STATUS_MASK_NONE);

// Create a Requester with a QoS profile (located for example in
// USER_QOS_PROFILES.xml, in the current working directory)
Requester<Foo, Bar> requester =
        new Requester<Foo, Bar>(
            new RequesterParams(
                participant,
                FooTypeSupport.get_instance(),
                BarTypeSupport.get_instance())
            .setServiceName("TestService")
            .setQosProfile("RequestReplyExampleProfiles",
                           "RequesterExampleProfile"));
```

See also

Creating a Requester (p. 392)

6.104.4 Basic Requester example

- **Creating a Requester** (p. 392)
- **Creating a Requester with optional parameters** (p. 393)
- Basic Requester example

```
// Send request
Foo request = new Foo();
request.message = "A request";
requester.sendRequest(request);

// Create reply Sample
Sample<Bar> reply = requester.createReplySample();

// Receive reply (wait for it and get the sample)
boolean received = requester.receiveReply(reply , MAX_WAIT);

if (received) {
    if (reply.getInfo().valid_data) {
        System.out.println("Received reply: " + reply.getData().message);
    } else {
        System.out.println("Received invalid reply");
    }
} else {
    System.out.println("Reply not received");
}
```

- Basic Requester example using the **String built-in type** (p. 537)

```
// Create a requester using the String
// type with the DDS StringTypeSupport
Requester<String, String> requester =
        new Requester<String, String>(
            new RequesterParams(
                participant,
                StringTypeSupport.get_instance(),
                StringTypeSupport.get_instance())
            .setServiceName("TestServiceString")
```

```
            .setQosProfile("MyLibrary", "RequesterProfile"));

// Send request
requester.sendRequest("A request");

// Create reply Sample
Sample<String> reply = requester.createReplySample();

// Receive reply (wait for it and get the sample)
boolean received = requester.receiveReply(reply , MAX_WAIT);

if (received && reply.getInfo().valid_data) {
    System.out.println("Received reply: " + reply.getData());
}
```

- Basic Requester example using **DynamicData** (p. 67).

```
// Instantiate DynamicData type support. For simplicity we create them
// from existing, generated TypeCode objects (Foo and Bar)
DynamicDataTypeSupport fooDynamicTypeSupport = new DynamicDataTypeSupport(
        FooTypeCode.VALUE, new DynamicDataTypeProperty_t());
DynamicDataTypeSupport barDynamicTypeSupport = new DynamicDataTypeSupport(
        BarTypeCode.VALUE, new DynamicDataTypeProperty_t());

// Create a requester using a DynamicData type support
Requester<DynamicData, DynamicData> requester =
        new Requester<DynamicData, DynamicData>(
                participant, "TestService",
                fooDynamicTypeSupport,
                barDynamicTypeSupport);

// Create a Foo instance
DynamicData foo = (DynamicData) fooDynamicTypeSupport.create_data();
foo.set_string("message", DynamicData.MEMBER_ID_UNSPECIFIED,
        "A dynamic request");

// Send request
requester.sendRequest(foo);

// Create reply Sample
Sample<DynamicData> reply = requester.createReplySample();

// Receive reply (wait for it and get the sample)
boolean received = requester.receiveReply(reply , MAX_WAIT);

if (received && reply.getInfo().valid_data) {
    System.out.println("Received reply: " +
        reply.getData().get_string("message", DynamicData.MEMBER_ID_UNSPECIFIED));
}
```

Basic Replier example (p. 397)

6.104.5 Taking loaned samples

- Get iterator to loaned replies (no copies)

```
// Take loaned samples
// Unlike receiveReplies(), takeReplies() doesn't block. It returns an
// empty collection if there are no replies at that moment.
// (before that we can call requester.wait_for_replies)
Sample.Iterator<Bar> replies = requester.takeReplies();
try {
    while (replies.hasNext()) {
        Sample<Bar> reply = replies.next();
        System.out.println("Received: " + reply.getData().message);
    }
} finally {
    replies.close();
}
```

A more compact version using a `try-with-resources` block (since Java 7):

```
try (Sample.Iterator<String> replies = requester.getReplies()) {
    while (replies.hasNext()) {
        Sample<String> reply = replies.next();
        System.out.println("Received: " + reply.getData());
    }
}
```

Taking samples by copy (p. 395)

6.104.6 Taking samples by copy

- Get copies of the replies:

```
ArrayList<Sample<Bar» replies = new ArrayList<Sample<Bar»();

// Add to existing list, reusing and overwriting any existing elements
requester.takeReplies(replies, 10);
for (Sample<Bar> reply : replies) {
    System.out.println("Received: " + reply.getData().message);
}

// Get replies in a newly created list
List<Sample<Bar» newList = requester.takeReplies(null, 10);
for (Sample<Bar> reply : newList) {
    System.out.println("Received: " + reply.getData().message);
}
```

Taking loaned samples (p. 394)

6.104.7 Correlating requests and replies

- **Creating a Requester** (p. 392)
- Example 1) Waiting for a reply for a specific request

```
// Create requests
WriteSample<Foo> request1 = requester.createRequestSample();
request1.getData().message = "Request 1";
WriteSample<Foo> request2 = requester.createRequestSample();
request2.getData().message = "Request 2";

// Send requests using WriteSample
requester.sendRequest(request1);
requester.sendRequest(request2);
// Wait for a reply to the second request
Sample<Bar> reply = requester.createReplySample();
requester.waitForReplies(1, MAX_WAIT, request2.getIdentity());
requester.takeReply(reply, request2.getIdentity());

assert reply.getRelatedIdentity().equals(request2.getIdentity());
```

```
System.out.println("Received reply: " + reply.getData().message);
// Wait for a reply to the first request
requester.waitForReplies(1, MAX_WAIT, request1.getIdentity());
requester.takeReply(reply, request1.getIdentity());

assert reply.getRelatedIdentity().equals(request1.getIdentity());
System.out.println("Received reply: " + reply.getData().message);
```

- Example 2) Correlate reply after receiving it

```
// Create requests
WriteSample<Foo> request1 = requester.createRequestSample();
request1.getData().message = "Request 1";
WriteSample<Foo> request2 = requester.createRequestSample();
request2.getData().message = "Request 2";

// Send requests using WriteSample
requester.sendRequest(request1);
requester.sendRequest(request2);
// Wait for two replies
boolean received = requester.waitForReplies(2, MAX_WAIT);
if (!received) {
    System.out.println("Replies not received");
    return;
}

Sample.Iterator<Bar> replies = requester.takeReplies();
try {
    while(replies.hasNext()) {
        Sample<Bar> reply = replies.next();
        if (reply.getRelatedIdentity().equals(
                request1.getIdentity())) {
            System.out.println(
                "Received reply for request 1: " + reply.getData().message);
        } else if (reply.getRelatedIdentity().equals(
                request2.getIdentity())) {
            System.out.println(
                "Received reply for request 2: " + reply.getData().message);
        } else {
            // Should not happen
            System.out.println("Received unexpected reply");
        }
    }
} finally {
    // Return the loan
    replies.close();
}
```

6.104.8 Creating a Replier

- **Setting up a participant** (p. 370)
- Creating a Replier

```
// Create a DomainParticipant
DomainParticipant participant =
        DomainParticipantFactory.get_instance().create_participant(
                domain_id, DomainParticipantFactory.PARTICIPANT_QOS_DEFAULT,
                null, StatusKind.STATUS_MASK_NONE);

// Create a Replier
Replier<Foo, Bar> replier =
        new Replier<Foo, Bar>(
                participant, "TestService",
                FooTypeSupport.get_instance(),
                BarTypeSupport.get_instance());
```

- Finalizing a Replier

```
replier.close();
```

6.104.9 Basic Replier example

- **Creating a Replier** (p. 396)
- Basic Replier example

```
// Create a Sample for reading
Sample<Foo> request = replier.createRequestSample();

// Receive one request
boolean received = replier.receiveRequest(request, MAX_WAIT);

if (!received) {
    System.out.println("Request not received");
    return false;
}

if (request.getInfo().valid_data) {
    // Send a reply for that request
    Bar reply = new Bar();
    reply.message = "Reply for " + request.getData().message;
    replier.sendReply(reply, request.getIdentity());
}

// Note: a replier can send more than one reply for the same request
```

Basic Requester example (p. 393)

6.104.10 SimpleReplier example

- Implement a listener

```
class MySimpleReplierListener implements SimpleReplierListener<Foo, Bar> {
    private Bar reply = new Bar();

    public Bar onRequestAvailable(Sample<Foo> request) {
        if (request.getInfo().valid_data) {
            // Return a reply
            reply.message = "Simple reply for " + request.getData().message;
            return reply;
        } else {
            // Do not reply to dispose/unregister samples
            return null;
        }
    }
    public void returnLoan(Bar reply) {
        // nothing to do
    }

}
```

- And create a SimpleReplier with the listener:

```
// Create a SimpleReplier using a DomainParticipant, service name and
// the a SimpleReplierListener implementation
SimpleReplier<Foo, Bar> replier =
        new SimpleReplier<Foo, Bar>(
                participant, "TestService",
                new MySimpleReplierListener(),
                FooTypeSupport.get_instance(),
                BarTypeSupport.get_instance());

// After creation the SimpleReplier is already active and may call
// the listener
```

Basic Requester example (p. 393)

6.104.11 Error handling example

- Catching an exception from the request-reply API

```
// All the operations in the request-reply API
// throw exceptions in case of error.
// You can also set the verbosity level to warning for
// additional information
Logger.get_instance().set_verbosity(
        LogVerbosity.NDDS_CONFIG_LOG_VERBOSITY_WARNING);
//
// For example, this replier is sending a reply for a nonexistent request
//
WriteSample<Bar> reply = replier.createReplySample();
SampleIdentity_t invalidRequestId = new SampleIdentity_t();

try {
    replier.sendReply(reply, invalidRequestId);
} catch (RETCODE_BAD_PARAMETER ex) {
    // You can also catch RETCODE_ERROR, which is more generic
    System.out.println("Exception while sending reply: " + ex);
}
```

6.104.12 Configuring Request-Reply QoS profiles

If you do not specify your own quality of service parameters (in **com.rti.connext.requestreply.Requester↩ Params** (p. 1890) and com.rti.connext.requestreply.ReplierParams<TReq,TRep>), a com.rti.connext.requestreply.↩ Requester<TReq,TRep> and com.rti.connext.requestreply.Replier<TReq,TRep> are created using a default configuration defined in the built-in profile **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_PATTERN_RPC** (p. 438). You use this built-in profile as the base for your own profiles:

```
<?xml version="1.0" encoding="UTF-8"?>
<!--
Description
Example XML QoS Profile for HelloWorld

(c) Copyright, Real-Time Innovations, 2012.  All rights reserved.
RTI grants Licensee a license to use, modify, compile, and create derivative
works of the software solely for use with RTI Connext DDS. Licensee may

under no obligation to maintain or support the software. RTI shall not be
liable for any incidental or consequential damages arising out of the use
or inability to use the software.

The QoS configuration of the DDS entities in the generated example is loaded
from this file.

This file is used only when it is in the current working directory, the
environment variable NDDS_QOS_PROFILES is defined and points to this file, or
if the filename is specified in code.

QoS profiles are a tool for pre-specifying behavior of DDS entities (e.g.
DomainParticipants, DataReaders, and DataWriters).  For Domain Participants, this
means primarily configuring platform resources (e.g. UDP buffers sizes). For
DataReaders and DataWriters, it is aligning their behavior with the required
design patterns and ensuring the QoS for DataWriters and DataReaders are
compatible at runtime.

The profiles in this file use inheritance from built-in QoS Profiles and
```

```
composition from "QoS Snippets", which are provided in this product, to create
Four example profiles.  One for a DomainParticipant, and three additional profiles
which specify DataReader and DataWriter behavior for common communication design
Patterns.

The profiles will require optimization for networks that are highly variable in
throughput, latency, and/or sample loss, or have other unique characteristics.
Applications with special resource, latency or throughput requirements will also
require optimized profiles.

A collection of built-in profiles can be found in the
BuiltinProfiles.documentationONLY.xml file located in the
$NDDSHOME/resource/xml/ directory.

Any of these "base" QoS configurations may be employed by referring to them by
the name shown in the BuiltinProfiles.documentationONLY.xml file.

There is also a library that contains a collection of
QoS Snippets that set some specific features or configurations. They are
also located in the BuiltinProfiles.documentationONLY.xml file.
https://community.rti.com/best-practices/qos-profile-inheritance-and-composition-guidance

The file BuiltinProfiles.documentationONLY.xml is not intended to
be changed by users. To modify any of the values in a built-in profile,
the example in this file which inherits from a built-in profile should be
used, with changes applied as needed.

The "Configuring QoS with XML" chapter in the RTI Connext DDS Core Libraries User's Manual
has more information about managing QoS using XML QoS Profiles.

                <!-- To have a unique name for each DomainParticipant, the name may be set in code for the
       DomainParticipant QoS, or in an environment variable referenced in the name tag.  -->
                <participant_name>
                    <name>HelloWorld_LV_Participant</name>
                </participant_name>
                <transport_builtin>
                    <udpv4>
                        <!-- For high throughput implementations or cases where there are
                             many DDS Entities to be discovered, larger UDP buffer sizes
                             are essential for discovery, latency, and/or throughput performance,
                             especially for non-RTOS operating systems like Linux or Windows.
                             UDP receive socket buffers are especially important. Linux, for
                             example, has small default values and should be configured to support buffers equal
       to or greater than these QoS values. Reference
       https://community.rti.com/howto/improve-rti-connext-dds-network-performance-linux for additional
           details.  Windows does not usually require special configuration.
                        <send_socket_buffer_size>10485760</send_socket_buffer_size>
                        <recv_socket_buffer_size>2097152</recv_socket_buffer_size> -->
                        <!-- Connext will try to use all available networks on a given host.
                             An allow list (white list) helps Connext use only the specified
                             interface(s) and prevents duplicate sending of data. For more information:

6.105 Documentation Roadmap

This section contains a roadmap for the new user with pointers on what to read first.

If you are new to RTI Connext, we recommend starting in the following order:

- See the `Getting Started Guide`. This document provides download and installation instructions. It also lays out the core value and concepts behind the product and takes you step-by-step through the creation of a simple example application.
- The `User's Manual` describes the features of the product and how to use them. It is organized around the structure of the DDS APIs and certain common high-level tasks.

- The documentation in the **RTI Connext DDS API Reference** (p. 404) provides an overview of API classes and modules for the DDS data-centric publish-subscribe (DCPS) package from a programmer's perspective. Start by reading the documentation on the main page.
- After reading the high level module documentation, look at the **Publication Example** (p. 367) and **Subscription Example** (p. 368) for step-by-step examples of creating a publication and subscription. These are hyperlinked code snippets to the full API documentation, and provide a good place to begin learning the APIs.

- Next, work through your own application using the example code files generated by rtiddsgen. See the `Code Generator User's Manual`.
- To integrate similar code into your own application and build system, you will likely need to refer to the `Platform Notes`.

6.106 Conventions

This section describes the conventions used in the API documentation.

6.106.1 Unsupported Features

[Not supported (optional)] This note means that the optional feature from the DDS specification is not supported in the current release.

6.106.2 API Documentation Terms

In the API documentation, the term module refers to a logical grouping of documentation and elements in the API.

6.106.3 Stereotypes

Commonly used stereotypes in the API documentation include the following.

6.106.3.1 Basic Qos

- *<<**basic**>> (p. 123)*
  - A QoS that Connext considers Basic.
  - See **Basic QoS** (p. 123) for a full list.

6.106.3.2 Extensions

- <<***spec***>> *(*p. *132)*
  - Part of a DDS standard specification.
  - See **DDS Specification QoS** (p. 132) for a full list of the QoS policies and fields that are part of a DDS standard specification.
- <<***extension***>> *(*p. *403)*
  - An RTI Connext product extension to the DDS standard specification.
  - The extension APIs complement the standard APIs specified by the OMG DDS specification. They are provided to improve product usability and enable access to product-specific features such as pluggable transports.
  - See **DDS Extension QoS** (p. 138) for a full list of QoS policies and fields that are extensions.

6.106.3.3 Experimental

- <<***experimental***>> *(*p. *403)*
  - RTI Connext experimental features are used to evaluate new features and get user feedback.
  - These features are not guaranteed to be fully supported and might be implemented only of some of the programming languages supported bt RTI Connext
  - The functional APIs corresponding to experimental features can be distinguished from other APIs by the suffix '_exp'.
  - Experimental features may or may not appear in future product releases.
  - The name of the experimental features APIs will change if they become officially supported. At the very least the suffix '_exp' will be removed.
  - Experimental features should not be used in production.

6.106.3.4 Types

- <<***interface***>> *(*p. *403)*
  - Pure interface type with *no state*.
  - Languages such as Java natively support the concept of an *interface* type, which is a collection of method signatures devoid of any dynamic state.
  - In C++, this is achieved via a class with all *pure virtual* methods and devoid of any instance variables (ie no dynamic state).
  - Interfaces are generally organized into a type hierarchy. Static typecasting along the interface type hierarchy is "safe" for valid objects.
- <<***generic***>> *(*p. *403)*
  - A *generic* type is a *skeleton* class written in terms of generic parameters. Type-specific instantiations of such types are conventionally referred to in this documentation in terms of the hypothetical type "Foo"; for example: FooSeq, FooDataType, FooDataWriter, and FooDataReader.
- <<***singleton***>> *(*p. *403)*
  - Singleton class. There is a single instance of the class.
  - Generally acccessed via a `get_instance()` static method.

6.106.3.5 Method Parameters

- <<***in***>> *(*p. *404)*
  - An *input* parameter.
- <<***out***>> *(*p. *404)*
  - An *output* parameter.
- <<***inout***>> *(*p. *404)*
  - An *input* and *output* parameter.

6.107 RTI Connext DDS API Reference

RTI Connext modules following the DDS module definitions.

Modules

- **Domain Module**

  *Contains the **com.rti.dds.domain.DomainParticipant** (*p. *948) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **com.rti.dds.domain.DomainParticipant** (*p. *948) also acts as a container for the other objects that make up RTI Connext.*
- **Topic Module**

  *Contains the **com.rti.dds.topic.Topic** (*p. *2116), **com.rti.dds.topic.ContentFilteredTopic** (*p. *692), and **com.rti.dds.topic.MultiTopic** (*p. *1618) classes, the **com.rti.dds.topic.TopicListener** (*p. *2131) interface, and more generally, all that is needed by an application to define **com.rti.dds.topic.Topic** (*p. *2116) objects and attach QoS policies to them.*
- **Publication Module**

  *Contains the **com.rti.dds.publication.FlowController** (*p. *1348), **com.rti.dds.publication.Publisher** (*p. *1767), and **com.rti.dds.publication.DataWriter** (*p. *818) classes as well as the **com.rti.dds.publication.PublisherListener** (*p. *1789) and **com.rti.dds.publication.DataWriterListener** (*p. *853) interfaces, and more generally, all that is needed on the publication side.*
- **Subscription Module**

  *Contains the **com.rti.dds.subscription.Subscriber** (*p. *2039), **com.rti.dds.subscription.DataReader** (*p. *707), **com.rti.dds.subscription.ReadCondition** (*p. *1816), **com.rti.dds.subscription.QueryCondition** (*p. *1812), and **com.rti.dds.subscription.TopicQuery** (*p. *2139) classes, as well as the **com.rti.dds.subscription.SubscriberListener** (*p. *2063) and **com.rti.dds.subscription.DataReaderListener** (*p. *757) interfaces, and more generally, all that is needed on the subscription side.*
- **Infrastructure Module**

  Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.
- **Transports**

  APIs related to RTI Connext pluggable transports.
- **Queries and Filters Syntax**
- **Logging and Version**

  APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.
- **General Utilities and Compliance Configuration**

  API of general utilities used in the RTI Connext distribution.

- **Observability Framework**

  RTI Connext Observability Framework modules and APIs.
- **Durability and Persistence**

  APIs related to RTI Connext Durability and Persistence.
- **System Properties**

  System Properties.
- **Configuring QoS Profiles with XML**

  APIs related to XML QoS Profiles.
- **Additional RTI Connext Communication Patterns**

  Extensions to the RTI Connext publish-subscribe functionality.

6.107.1 Detailed Description

RTI Connext modules following the DDS module definitions.

6.107.2 Overview

Information flows with the aid of the following constructs: **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.publication.DataWriter** (p. 818) on the sending side, **com.rti.dds.subscription.Subscriber** (p. 2039) and **com.rti.dds.subscription.DataReader** (p. 707) on the receiving side.

- A **com.rti.dds.publication.Publisher** (p. 1767) is an object responsible for data distribution. It may publish data of different data types. A TDataWriter acts as a *typed* (i.e. each **com.rti.dds.publication.DataWriter** (p. 818) object is dedicated to one application data type) accessor to a publisher. A **com.rti.dds.publication.DataWriter** (p. 818) is the object the application must use to communicate to a publisher the existence and value of data objects of a given type. When data object values have been communicated to the publisher through the appropriate data-writer, it is the publisher's responsibility to perform the distribution (the publisher will do this according to its own QoS, or the QoS attached to the corresponding data-writer). A *publication* is defined by the association of a data-writer to a publisher. This association expresses the intent of the application to publish the data described by the data-writer in the context provided by the publisher.
- A **com.rti.dds.subscription.Subscriber** (p. 2039) is an object responsible for receiving published data and making it available (according to the Subscriber's QoS) to the receiving application. It may receive and dispatch data of different specified types. To access the received data, the application must use a *typed* TDataReader attached to the subscriber. Thus, a *subscription* is defined by the association of a data-reader with a subscriber. This association expresses the intent of the application to subscribe to the data described by the data-reader in the context provided by the subscriber.

com.rti.dds.topic.Topic (p. 2116) objects conceptually fit between publications and subscriptions. Publications must be known in such a way that subscriptions can refer to them unambiguously. A **com.rti.dds.topic.Topic** (p. 2116) is meant to fulfill that purpose: it associates a name (unique in the domain i.e. the set of applications that are communicating with each other), a data type, and QoS related to the data itself. In addition to the topic QoS, the QoS of the **com.rti.dds.publication.DataWriter** (p. 818) associated with that Topic and the QoS of the **com.rti.dds.publication.Publisher** (p. 1767) associated to the **com.rti.dds.publication.DataWriter** (p. 818) control the behavior on the publisher's side, while the corresponding **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.subscription.DataReader** (p. 707) and **com.rti.dds.subscription.Subscriber** (p. 2039) QoS control the behavior on the subscriber's side.

When an application wishes to publish data of a given type, it must create a **com.rti.dds.publication.Publisher** (p. 1767) (or reuse an already created one) and a **com.rti.dds.publication.DataWriter** (p. 818) with all the characteristics of the desired publication. Similarly, when an application wishes to receive data, it must create a **com.rti.dds.subscription.Subscriber** (p. 2039) (or reuse an already created one) and a **com.rti.dds.subscription.DataReader** (p. 707) to define the subscription.

6.107.3 Conceptual Model

The overall conceptual model is shown below.

Notice that all the main communication objects (the specializations of Entity) follow unified patterns of:

- Supporting QoS (made up of several QosPolicy); QoS provides a generic mechanism for the application to control the behavior of the Service and tailor it to its needs. Each **com.rti.dds.infrastructure.Entity** (p. 1320) supports its own specialized kind of QoS policies (see **All QoS Policies** (p. 501)).
- Accepting a **com.rti.dds.infrastructure.Listener** (p. 1528); listeners provide a generic mechanism for the middleware to notify the application of relevant asynchronous events, such as arrival of data corresponding to a subscription, violation of a QoS setting, etc. Each **com.rti.dds.infrastructure.Entity** (p. 1320) supports its own specialized kind of listener. Listeners are related to changes in status conditions (see **Status Kinds** (p. 514)).

  Note that only one Listener per entity is allowed (instead of a list of them). The reason for that choice is that this allows a much simpler (and, thus, more efficient) implementation as far as the middleware is concerned. Moreover, if it were required, the application could easily implement a listener that, when triggered, triggers in return attached 'sub-listeners'.
- Accepting a **com.rti.dds.infrastructure.StatusCondition** (p. 2008) (and a set of **com.rti.dds.subscription.↩ ReadCondition** (p. 1816) objects for the **com.rti.dds.subscription.DataReader** (p. 707)); conditions (in conjunction with **com.rti.dds.infrastructure.WaitSet** (p. 2287) objects) provide support for an alternate communication style between the middleware and the application (i.e., wait-based rather than notification-based).

All DCPS entities are attached to a **com.rti.dds.domain.DomainParticipant** (p. 948). A domain participant represents the local membership of the application in a domain. A *domain* is a distributed concept that links all the applications able to communicate with each other. It represents a communication plane: only the publishers and the subscribers attached to the same domain may interact.

com.rti.dds.infrastructure.DomainEntity (p. 947) is an intermediate object whose only purpose is to state that a DomainParticipant cannot contain other domain participants.

At the DCPS level, data types represent information that is sent atomically. For performance reasons, only plain data structures are handled by this level.

By default, each data modification is propagated individually, independently, and uncorrelated with other modifications. However, an application may request that several modifications be sent as a whole and interpreted as such at the recipient side. This functionality is offered on a Publisher/Subscriber basis. That is, these relationships can only be specified among **com.rti.dds.publication.DataWriter** (p. 818) objects attached to the same **com.rti.dds.publication.Publisher** (p. 1767) and retrieved among **com.rti.dds.subscription.DataReader** (p. 707) objects attached to the same **com.rti.↩ dds.subscription.Subscriber** (p. 2039).

By definition, a **com.rti.dds.topic.Topic** (p. 2116) corresponds to a single data type. However, several topics may refer to the same data type. Therefore, a **com.rti.dds.topic.Topic** (p. 2116) identifies data of a single type, ranging from one single instance to a whole collection of instances of that given type. This is shown below for the hypothetical data type `Foo`.

In case a set of instances is gathered under the same topic, different instances must be distinguishable. This is achieved by means of the values of some data fields that form the **key** to that data set. The *key description* (i.e., the list of data fields whose value forms the key) has to be indicated to the middleware. The rule is simple: *different data samples with the same key value represent successive values for the same instance, while different data samples with different key values represent different instances*. If no key is provided, the data set associated with the **com.rti.dds.topic.Topic** (p. 2116) is restricted to a *single instance*.

Topics need to be known by the middleware and potentially propagated. Topic objects are created using the create operations provided by **com.rti.dds.domain.DomainParticipant** (p. 948).

The interaction style is straightforward on the publisher's side: when the application decides that it wants to make data available for publication, it calls the appropriate operation on the related **com.rti.dds.publication.DataWriter** (p. 818) (this, in turn, will trigger its **com.rti.dds.publication.Publisher** (p. 1767)).

On the subscriber's side however, there are more choices: relevant information may arrive when the application is busy doing something else or when the application is just waiting for that information. Therefore, depending on the way the application is designed, asynchronous notifications or synchronous access may be more appropriate. Both interaction modes are allowed, a **com.rti.dds.infrastructure.Listener** (p. 1528) is used to provide a callback for synchronous access and a **com.rti.dds.infrastructure.WaitSet** (p. 2287) associated with one or several **com.rti.dds.infrastructure.Condition** (p. 686) objects provides asynchronous data access.

The same synchronous and asynchronous interaction modes can also be used to access changes that affect the middleware communication status (see **Status Kinds** (p. 514)). For instance, this may occur when the middleware asynchronously detects an inconsistency. In addition, other middleware information that may be relevant to the application (such as the list of the existing topics) is made available by means of **built-in topics** (p. 53) that the application can access as plain application data, using built-in data-readers.

6.107.4 Modules

DCPS consists of five modules:

- **Infrastructure module** (p. 94) defines the abstract classes and the interfaces that are refined by the other modules. It also provides support for the two interaction styles (notification-based and wait-based) with the middleware.
- **Domain module** (p. 43) contains the **com.rti.dds.domain.DomainParticipant** (p. 948) class that acts as an entrypoint of the Service and acts as a factory for many of the classes. The **com.rti.dds.domain.DomainParticipant** (p. 948) also acts as a container for the other objects that make up the Service.
- **Topic module** (p. 55) contains the **com.rti.dds.topic.Topic** (p. 2116) class, the **com.rti.dds.topic.TopicListener** (p. 2131) interface, and more generally, all that is needed by the application to define **com.rti.dds.topic.Topic** (p. 2116) objects and attach QoS policies to them.
- **Publication module** (p. 71) contains the **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.publication.DataWriter** (p. 818) classes as well as the **com.rti.dds.publication.PublisherListener** (p. 1789) and **com.rti.dds.publication.DataWriterListener** (p. 853) interfaces, and more generally, all that is needed on the publication side.
- **Subscription module** (p. 79) contains the **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.subscription.DataReader** (p. 707), **com.rti.dds.subscription.ReadCondition** (p. 1816), and **com.rti.dds.subscription.QueryCondition** (p. 1812) classes, as well as the **com.rti.dds.subscription.SubscriberListener** (p. 2063) and **com.rti.dds.subscription.DataReaderListener** (p. 757) interfaces, and more generally, all that is needed on the subscription side.

6.108 Additional RTI Connext Communication Patterns

Extensions to the RTI Connext publish-subscribe functionality.

Modules

- **Request-Reply Pattern**

  Support for the request-reply communication pattern.
- **Infrastructure**

  Infrastructure types for Request-Reply.
- **Utilities**

  Utilities for the RTI Connext Messaging module.

6.108.1 Detailed Description

Extensions to the RTI Connext publish-subscribe functionality.

This section includes the **Request-Reply API** (p. 115).

6.109 Programming How-To's

These "How To"s illustrate how to apply RTI Connext APIs to common use cases.

Modules

- **Publication Example**

  A data publication example.
- **Subscription Example**

  A data subscription example.
- **Participant Use Cases**

  Working with domain participants.
- **Topic Use Cases**

  Working with topics.
- **FlowController Use Cases**

  Working with flow controllers.
- **Publisher Use Cases**

  Working with publishers.
- **DataWriter Use Cases**

  Working with data writers.
- **Subscriber Use Cases**

  Working with subscribers.
- **DataReader Use Cases**

  Working with data readers.
- **Entity Use Cases**

  Working with entities.

- **Waitset Use Cases**

  Using wait-sets and conditions.
- **Transport Use Cases**

  Working with pluggable transports.
- **Filter Use Cases**

  Working with data filters.
- **Creating Custom Content Filters**

  Working with custom content filters.
- **Large Data Use Cases**

  Working with large data types.
- **Request-Reply Examples**

  Examples on how to use the request-reply API .

6.109.1 Detailed Description

These "How To"s illustrate how to apply RTI Connext APIs to common use cases.

These are a good starting point to familiarize yourself with DDS. You can use these code fragments as "templates" for writing your own code.

6.110 Participant Built-in Topics

Builtin topic for accessing information about the DomainParticipants discovered by RTI Connext.

Classes

- class **ParticipantBuiltinTopicData**

  *Entry created when a **DomainParticipant** (p. 948) object is discovered.*
- class **ParticipantBuiltinTopicDataDataReader**

  Instantiates `DataReader` *<* ***com.rti.dds.domain.builtin.ParticipantBuiltinTopicData*** *(p. 1647) >.*
- class **ParticipantBuiltinTopicDataSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *<* ***com.rti.dds.domain.builtin.ParticipantBuiltinTopicData*** *(p. 1647) >.*
- class **ParticipantBuiltinTopicDataTypeSupport**

  Instantiates `TypeSupport` *<* ***com.rti.dds.domain.builtin.ParticipantBuiltinTopicData*** *(p. 1647) >.*

Variables

- static final String **PARTICIPANT_TOPIC_NAME** = DDS_PARTICIPANT_TOPIC_NAME()

  Participant topic name.

6.110.1 Detailed Description

Builtin topic for accessing information about the DomainParticipants discovered by RTI Connext.

6.110.2 Variable Documentation

6.110.2.1 PARTICIPANT_TOPIC_NAME

```
final String PARTICIPANT_TOPIC_NAME = DDS_PARTICIPANT_TOPIC_NAME()  [static]
```

Participant topic name.

Topic name of **builtin.ParticipantBuiltinTopicDataDataReader** (p. 1653)

See also

com.rti.dds.domain.builtin.ParticipantBuiltinTopicData (p. 1647)

builtin.ParticipantBuiltinTopicDataDataReader (p. 1653)

6.111 Publication Built-in Topics

Builtin topic for accessing information about the Publications discovered by RTI Connext.

Classes

- class **PublicationBuiltinTopicData**

  *Entry created when a **com.rti.dds.publication.DataWriter** (p. 818) is discovered in association with its **Publisher** (p. 1767).*
- class **PublicationBuiltinTopicDataDataReader**

  Instantiates `DataReader` *<* ***com.rti.dds.publication.builtin.PublicationBuiltinTopicData*** *(p. 1753) >.*
- class **PublicationBuiltinTopicDataSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *<* ***com.rti.dds.publication.builtin.PublicationBuiltinTopicData*** *(p. 1753) >.*
- class **PublicationBuiltinTopicDataTypeSupport**

  Instantiates `TypeSupport` *<* ***com.rti.dds.publication.builtin.PublicationBuiltinTopicData*** *(p. 1753) >.*

Variables

- static final String **PUBLICATION_TOPIC_NAME** = DDS_PUBLICATION_TOPIC_NAME()

  Publication topic name.

6.111.1 Detailed Description

Builtin topic for accessing information about the Publications discovered by RTI Connext.

6.111.2 Variable Documentation

6.111.2.1 PUBLICATION_TOPIC_NAME

```
final String PUBLICATION_TOPIC_NAME = DDS_PUBLICATION_TOPIC_NAME()  [static]
```

Publication topic name.

Topic name of **builtin.PublicationBuiltinTopicDataDataReader** (p. 1762)

See also

com.rti.dds.publication.builtin.PublicationBuiltinTopicData (p. 1753)

builtin.PublicationBuiltinTopicDataDataReader (p. 1762)

6.112 Subscription Built-in Topics

Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.

Classes

- class **SubscriptionBuiltinTopicData**

  *Entry created when a **com.rti.dds.subscription.DataReader** (p. 707) is discovered in association with its **Subscriber** (p. 2039).*
- class **SubscriptionBuiltinTopicDataDataReader**

  *Instantiates **DataReader** (p. 707) < **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) > .*
- class **SubscriptionBuiltinTopicDataSeq**

  *Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) > .*
- class **SubscriptionBuiltinTopicDataTypeSupport**

  *Instantiates TypeSupport < **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) > .*

Variables

- static final String **SUBSCRIPTION_TOPIC_NAME** = DDS_SUBSCRIPTION_TOPIC_NAME()

  Subscription topic name.

6.112.1 Detailed Description

Builtin topic for accessing information about the Subscriptions discovered by RTI Connext.

6.112.2 Variable Documentation

6.112.2.1 SUBSCRIPTION_TOPIC_NAME

```
final String SUBSCRIPTION_TOPIC_NAME = DDS_SUBSCRIPTION_TOPIC_NAME()  [static]
```

Subscription topic name.

Topic name of **builtin.SubscriptionBuiltinTopicDataDataReader** (p. 2079)

See also

com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData (p. 2070)
builtin.SubscriptionBuiltinTopicDataDataReader (p. 2079)

6.113 Topic Built-in Topics

Classes

- class **TopicBuiltinTopicData**
  *Entry created when a **Topic** (p. 2116) object discovered.*
- class **TopicBuiltinTopicDataDataReader**
  Instantiates `DataReader` < ***builtin.TopicBuiltinTopicData*** *(p. 2122)* > .
- class **TopicBuiltinTopicDataSeq**
  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < ***builtin.TopicBuiltin↩ TopicData*** *(p. 2122)* > .
- class **TopicBuiltinTopicDataTypeSupport**
  Instantiates ***`TypeSupport`*** *(p. 2252)* < ***builtin.TopicBuiltinTopicData*** *(p. 2122)* > .

Variables

- static final String **TOPIC_TOPIC_NAME** = DDS_TOPIC_TOPIC_NAME()
  ***Topic** (p. 2116) topic name.*

6.113.1 Detailed Description

Builtin topic for accessing information about the Topics discovered by RTI Connext.

6.113.2 Variable Documentation

6.113.2.1 TOPIC_TOPIC_NAME

```
final String TOPIC_TOPIC_NAME = DDS_TOPIC_TOPIC_NAME()  [static]
```

Topic (p. 2116) topic name.

Topic (p. 2116) name of **builtin.TopicBuiltinTopicDataDataReader** (p. 2126)

See also

builtin.TopicBuiltinTopicData (p. 2122)
builtin.TopicBuiltinTopicDataDataReader (p. 2126)

6.114 ServiceRequest Built-in Topic

Builtin topic for accessing requests from different services within RTI Connext.

Classes

- class **ServiceRequest**
  A request coming from one of the built-in services.
- class **ServiceRequestDataReader**
  Instantiates `DataReader` < ***com.rti.dds.topic.builtin.ServiceRequest*** *(p. 1985)* > .
- class **ServiceRequestSeq**
  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < ***com.rti.dds.topic.builtin.ServiceRequest*** *(p. 1985)* > .
- class **ServiceRequestTypeSupport**
  Instantiates ***`TypeSupport`*** *(p. 2252)* < ***com.rti.dds.topic.builtin.ServiceRequest*** *(p. 1985)* > .

Variables

- static final int **UNKNOWN_SERVICE_ID**
  An invalid Service Id.
- static final int **TOPIC_QUERY_SERVICE_ID**
  Service Id for the ***com.rti.dds.subscription.TopicQuery*** *(p. 2139) Service.*
- static final int **LOCATOR_REACHABILITY_SERVICE_ID**
  Service Id for the Locator Reachability Service.
- static final int **INSTANCE_STATE_SERVICE_ID**
  Service Id for the Instance State Request service.
- static final int **MONITORING_LIBRARY_COMMAND_SERVICE_REQUEST_ID**
  Service Id for RTI Monitoring Library 2.0 Command Service Request.
- static final int **MONITORING_LIBRARY_REPLY_SERVICE_REQUEST_ID**
  Service Id for RTI Monitoring Library 2.0 Reply Service Requests.
- static final String **SERVICE_REQUEST_TOPIC_NAME** = DDS_SERVICE_REQUEST_TOPIC_NAME()
  Service Request topic name.

6.114.1 Detailed Description

Builtin topic for accessing requests from different services within RTI Connext.

Currently, the **com.rti.dds.subscription.TopicQuery** (p. 2139), Locator Reachability Instance State Consistency and Controlability (part of Observability) all rely on this topic.

See also

Topic Queries (p. 86) for an explanation of how TopicQueries use ServiceRequests and how you can access the ServiceRequests for debugging purposes in the section **The Built-in ServiceRequest DataReader** (p. 89).

6.114.2 Variable Documentation

6.114.2.1 UNKNOWN_SERVICE_ID

```
final int UNKNOWN_SERVICE_ID  [static]
```

An invalid Service Id.

6.114.2.2 TOPIC_QUERY_SERVICE_ID

```
final int TOPIC_QUERY_SERVICE_ID  [static]
```

Service Id for the **com.rti.dds.subscription.TopicQuery** (p. 2139) Service.

6.114.2.3 LOCATOR_REACHABILITY_SERVICE_ID

```
final int LOCATOR_REACHABILITY_SERVICE_ID  [static]
```

Service Id for the Locator Reachability Service.

6.114.2.4 INSTANCE_STATE_SERVICE_ID

```
final int INSTANCE_STATE_SERVICE_ID  [static]
```

Service Id for the Instance State Request service.

6.114.2.5 MONITORING_LIBRARY_COMMAND_SERVICE_REQUEST_ID

```
final int MONITORING_LIBRARY_COMMAND_SERVICE_REQUEST_ID  [static]
```

Service Id for RTI Monitoring Library 2.0 Command Service Request.

RTI Monitoring Library 2.0 remote commands are sent using this service.

6.114.2.6 MONITORING_LIBRARY_REPLY_SERVICE_REQUEST_ID

```
final int MONITORING_LIBRARY_REPLY_SERVICE_REQUEST_ID  [static]
```

Service Id for RTI Monitoring Library 2.0 Reply Service Requests.

Replies to RTI Monitoring Library 2.0 remote commands are sent using this service.

6.114.2.7 SERVICE_REQUEST_TOPIC_NAME

```
final String SERVICE_REQUEST_TOPIC_NAME = DDS_SERVICE_REQUEST_TOPIC_NAME()  [static]
```

Service Request topic name.

Topic (p. 2116) name of the **builtin.ServiceRequestDataReader** (p. 1989)

See also

com.rti.dds.topic.builtin.ServiceRequest (p. 1985)
builtin.ServiceRequestDataReader (p. 1989)

6.115 Common types and functions

Types and functions related to the built-in topics.

Classes

- class **ContentFilterProperty_t**

  *<<**extension**>> (p. 403) Type used to provide all the required information to enable content filtering.*
- class **Locator_t**

  *<<**extension**>> (p. 138) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.*
- class **LocatorSeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.Locator_t** (p. 1546) >*
- class **ProductVersion_t**

  *<<**extension**>> (p. 403) Type used to represent the current version of RTI Connext.*
- class **ProtocolVersion_t**

  *<<**extension**>> (p. 403) Type used to represent the version of the RTPS protocol.*
- class **TransportInfo_t**

  Contains the class_id and message_size_max of an installed transport.
- class **TransportInfoSeq**

  *Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.infrastructure.↩ TransportInfo_t** (p. 2154) > .*
- class **VendorId_t**

  *<<**extension**>> (p. 403) Type used to represent the vendor of the service implementing the RTPS protocol.*
- class **BuiltinTopicKey_t**

  The key type of the built-in topic types.

6.115.1 Detailed Description

Types and functions related to the built-in topics.

6.116 ASYNCHRONOUS_PUBLISHER

<<***extension***>> *(*p. *138)* Specifies the asynchronous publishing settings of the **com.rti.dds.publication.Publisher** (p. 1767) instances.

Classes

- class **AsynchronousPublisherQosPolicy**
  <<***extension***>> *(*p. *138) Configures the mechanism that sends user data in an external middleware thread.*

Variables

- static final **QosPolicyId_t ASYNCHRONOUSPUBLISHER_QOS_POLICY_ID**
  <<***extension***>> *(*p. *138) Identifier for* ***com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy*** *(*p. *593)*

6.116.1 Detailed Description

<<***extension***>> *(*p. *138)* Specifies the asynchronous publishing settings of the **com.rti.dds.publication.Publisher** (p. 1767) instances.

6.116.2 Variable Documentation

6.116.2.1 ASYNCHRONOUSPUBLISHER_QOS_POLICY_ID

```
final  QosPolicyId_t ASYNCHRONOUSPUBLISHER_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy** (p. 593)

6.117 AVAILABILITY

<<***extension***>> *(*p. *138)* Configures the availability of data.

Classes

- class **AvailabilityQosPolicy**

  <<***extension***>> *(*p. *138) Configures the availability of data.*
- class **EndpointGroup_t**

  Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum.
- class **EndpointGroupSeq**

  A sequence of ***com.rti.dds.infrastructure.EndpointGroup_t*** *(*p. *1313).*

Variables

- static final **QosPolicyId_t AVAILABILITY_QOS_POLICY_ID**

  <<***extension***>> *(*p. *138) Identifier for* ***com.rti.dds.infrastructure.AvailabilityQosPolicy*** *(*p. *597)*

6.117.1 Detailed Description

<<***extension***>> *(*p. *138)* Configures the availability of data.

6.117.2 Variable Documentation

6.117.2.1 AVAILABILITY_QOS_POLICY_ID

```
final  QosPolicyId_t AVAILABILITY_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.AvailabilityQosPolicy** (p. 597)

6.118 BATCH

<<***extension***>> *(*p. *138)* Batch QoS policy used to enable batching in **com.rti.dds.publication.DataWriter** (p. 818) instances.

Classes

- class **BatchQosPolicy**

  <<***extension***>> *(*p. *138) Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.*

Variables

- static final **QosPolicyId_t BATCH_QOS_POLICY_ID**

  <<***extension***>> *(*p. *138) Identifier for* ***com.rti.dds.infrastructure.BatchQosPolicy*** *(*p. *607)*

6.118.1 Detailed Description

<<***extension***>> *(*p. *138)* Batch QoS policy used to enable batching in **com.rti.dds.publication.DataWriter** (p. 818) instances.

6.118.2 Variable Documentation

6.118.2.1 BATCH_QOS_POLICY_ID

```
final  QosPolicyId_t BATCH_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.BatchQosPolicy** (p. 607)

6.119 Builtin Qos Profiles

<<***extension***>> *(*p. *403)* QoS libraries, profiles, and snippets that are automatically built into RTI Connext.

Classes

- class **BuiltinQosProfiles**

  The available built-in QoS libraries, profiles, and snippets.

Variables

- static final String **BUILTIN_QOS_LIB**

  A library of non-experimental QoS profiles.
- static final String **PROFILE_BASELINE_ROOT**

  The root baseline QoS values from which all other Baseline.X.X.X profiles inherit.
- static final String **PROFILE_BASELINE**

  The most up-to-date QoS default values.
- static final String **PROFILE_BASELINE_5_0_0**

  The QoS default values for version 5.0.0.
- static final String **PROFILE_BASELINE_5_1_0**

  The QoS default values for version 5.1.0.
- static final String **PROFILE_BASELINE_5_2_0**

  The QoS default values for version 5.2.0.
- static final String **PROFILE_BASELINE_5_3_0**

  The QoS default values for version 5.3.0.
- static final String **PROFILE_BASELINE_6_0_0**

  The QoS default values for version 6.0.0.
- static final String **PROFILE_BASELINE_6_1_0**

  The QoS default values for version 6.1.0.
- static final String **PROFILE_BASELINE_7_0_0**

  The QoS default values for version 7.0.0.
- static final String **PROFILE_BASELINE_7_1_0**

  The QoS default values for version 7.1.0.
- static final String **PROFILE_GENERIC_COMMON**

  A common Participant base profile.
- static final String **PROFILE_GENERIC_MONITORING_COMMON**

  Enables RTI Monitoring Library.
- static final String **PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY**

  Sets the values necessary to communicate with RTI Connext Micro.
- static final String **PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9**

  Sets the values necessary to communicate with RTI Connext Micro versions 2.4.4 through at least 2.4.9.
- static final String **PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3**

  Sets the values necessary to communicate with RTI Connext Micro versions 2.4.3 and ealier.
- static final String **PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY**

  Sets the values necessary to interoperate with other DDS vendors.
- static final String **PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY**

  Sets the values necessary to interoperate with RTI Connext 5.1.0 using the UDPv6 and/or SHMEM transports.
- static final String **PROFILE_GENERIC_SECURITY**

  Loads the DDS Secure builtin plugins.
- static final String **BUILTIN_QOS_LIB_EXP**

  A library of experimental QoS profiles.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE**

  Enables strict reliability.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE**

  Enables keep-last reliability.
- static final String **PROFILE_GENERIC_BEST_EFFORT**

Enables best-effort reliability kind.

- static final String **PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT**

  A profile that can be used to achieve high throughput.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY**

  A profile that can be used to achieve low latency.
- static final String **PROFILE_GENERIC_PARTICIPANT_LARGE_DATA**

  A common Participant base profile to facilitate sending large data.
- static final String **PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING**

  Configures Participants for large data and monitoring.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA**

  Configures endpoints for sending large data with strict reliability.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA**

  Configures endpoints for sending large data with keep-last reliability.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW**

  Configures strictly reliable communication for large data with a fast flow controller.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW**

  Configures strictly reliable communication for large data with a medium flow controller.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW**

  Configures strictly reliable communication for large data with a slow flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW**

  Configures keep-last reliable communication for large data with a fast flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW**

  Configures keep-last reliable communication for large data with a medium flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW**

  Configures keep-last reliable communication for large data with a slow flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL**

  Persists the samples of a DataWriter as long as the entity exists.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT**

  Persists samples using RTI Persistence Service.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT**

  Persists samples in permanent storage, like a disk, using RTI Persistence Service.
- static final String **PROFILE_GENERIC_AUTO_TUNING**

  Enables the Turbo Mode batching and Auto Throttle experimental features.
- static final String **PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT**

  Uses a set of QoS which reduces the memory footprint of the application.
- static final String **PROFILE_GENERIC_MONITORING2**

  The default QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use.
- static final String **PROFILE_GENERIC_MONITORING2_WAN**

  The QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use to communicate over WAN with a Collector Service.
- static final String **PROFILE_PATTERN_RPC**

  This profile contains the default RPC and Request-Reply QoS settings.
- static final String **PROFILE_PATTERN_PERIODIC_DATA**

  Used for applications that expect periodic data.
- static final String **PROFILE_PATTERN_STREAMING**

  Used for applications that stream data.
- static final String **PROFILE_PATTERN_RELIABLE_STREAMING**

Used for applications that stream data and require reliable communication.

- static final String **PROFILE_PATTERN_EVENT**

  Used for applications that handle events.
- static final String **PROFILE_PATTERN_ALARM_EVENT**

  Used for applications that handle alarm events.
- static final String **PROFILE_PATTERN_STATUS**

  Used for applications whose samples represent statuses.
- static final String **PROFILE_PATTERN_ALARM_STATUS**

  Used for applications in which samples represent alarm statuses.
- static final String **PROFILE_PATTERN_LAST_VALUE_CACHE**

  Used for applications that only need the last published value.
- static final String **BUILTIN_QOS_SNIPPET_LIB**

  A library of QoS Snippets.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON**

  QoS Snippet that configures the reliability protocol with a common configuration.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL**

  QoS Snippet that configures the reliability protocol for KEEP_ALL.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST**

  QoS Snippet that configures the reliability protocol for KEEP_LAST.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE**

  QoS Snippet that configures the reliability protocol for sending data at a high rate.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY**

  QoS Snippet that configures the reliability protocol for sending data at low latency.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA**

  QoS Snippet that configures the reliability protocol for large data.
- static final String **SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC**

  Configures the DataWriter and DataReader caches to use dynamic memory allocation for Large Data samples.
- static final String **SNIPPET_OPTIMIZATION_DISCOVERY_COMMON**

  QoS Snippet that optimizes discovery with a common configuration.
- static final String **SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT**

  QoS Snippet that optimizes the Participant QoS to send less discovery information.
- static final String **SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST**

  QoS Snippet that optimizes the Endpoint Discovery to be faster.
- static final String **SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS**

  QoS Snippet that increases the Participant default buffer that shmem and udpv4 use.
- static final String **SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE**

  QoS Snippet that sets RELIABILITY QoS to RELIABLE.
- static final String **SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT**

  QoS Snippet that sets RELIABILITY QoS to BEST_EFFORT.
- static final String **SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1**

  QoS Snippet that sets HISTORY QoS to KEEP_LAST kind with depth 1.
- static final String **SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL**

  *QoS Snippet that sets HISTORY **QosPolicy** (p. 1802) to KEEP_ALL kind.*
- static final String **SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS**

  *QoS Snippet that sets PUBLISH_MODE **QosPolicy** (p. 1802) to ASYNCHRONOUS kind.*
- static final String **SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL**

  *QoS Snippet that sets DURABILITY **QosPolicy** (p. 1802) to TRANSIENT_LOCAL kind.*

- static final String **SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT**

  *QoS Snippet that sets DURABILITY **QosPolicy** (p. 1802) to TRANSIENT kind.*
- static final String **SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT**

  *QoS Snippet that sets DURABILITY **QosPolicy** (p. 1802) to PERSISTENT kind.*
- static final String **SNIPPET_QOS_POLICY_BATCHING_ENABLE**

  *QoS Snippet that sets BATCH **QosPolicy** (p. 1802) to true.*
- static final String **SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS**

  QoS Snippet that configures and set a FlowController of 838 Mbps.
- static final String **SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS**

  QoS Snippet that configures and sets a FlowController of 209 Mbps.
- static final String **SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS**

  QoS Snippet that configures and sets a FlowController of 52 Mbps.
- static final String **SNIPPET_FEATURE_AUTO_TUNING_ENABLE**

  QoS Snippet that enables auto_throttle and turbo_mode to true.
- static final String **SNIPPET_FEATURE_MONITORING_ENABLE**

  QoS Snippet that enables the use of the RTI Monitoring Library.
- static final String **SNIPPET_FEATURE_MONITORING2_ENABLE**

  QoS Snippet that enables the use of the RTI Monitoring Library 2.0.
- static final String **SNIPPET_FEATURE_SECURITY_ENABLE**

  QoS Snippet that enables security using the Builtin Security Plugins.
- static final String **SNIPPET_FEATURE_TOPIC_QUERY_ENABLE**

  QoS Snippet that enables Topic Query.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V1_ENABLE**

  QoS Snippet that enables TypeObject V1 propagation.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V1_DISABLE**

  QoS Snippet that disables TypeObject V1 propagation.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V2_ENABLE**

  QoS Snippet that enables TypeObject V2 propagation.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V2_DISABLE**

  QoS Snippet that disables TypeObject V2 propagation.
- static final String **SNIPPET_TRANSPORT_TCP_LAN_CLIENT** = "Transport.TCP.LAN.Client"

  QoS Snippet that configures a TCP LAN Client over DDS.
- static final String **SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT**

  QoS Snippet that configures a symmetric WAN TCP Client over DDS.
- static final String **SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER**

  QoS Snippet that an asymmetric WAN TCP Server over DDS.
- static final String **SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT**

  QoS Snippet that configures an asymmetric WAN TCP Client over DDS.
- static final String **SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION**

  QoS Snippet that configures RTI Connext and the UDP built-in transports (UDPv4, UDPv6, UDPv4_WAN) to avoid IP fragmentation.
- static final String **SNIPPET_TRANSPORT_UDP_WAN**

  QoS Snippet that enables the RTI Real-Time WAN Transport (UDPv4_WAN).
- static final String **SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3**

  QoS Snippet that configures sets LIVELINESS QoS to be compatible with RTI Connext Micro 2.4.3.
- static final String **SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE**

  QoS Snippet that configures RTI Connext to interoperate with other DDS vendors.
- static final String **SNIPPET_5_1_0_TRANSPORT_ENABLE**

  QoS Snippet that configures RTI Connext to interoperate with RTI Connext 5.1.0 and below for UDPv6 and SHMEM transports.

6.119.1 Detailed Description

<<***extension***>> *(*p. *403)* QoS libraries, profiles, and snippets that are automatically built into RTI Connext.

The built-in profiles can be accessed in QoS XML configuration files and by using any of the APIs that accept library and profiles names by using the constants or string versions as documented on this page.

The built-in profiles are provided as a way to quickly and easily configure RTI Connext applications with a set of QoS values aimed at achieving a specific behavior.

There are three built-in QoS libraries:

- BuiltinQosLib: A library containing built-in QoS Profiles.
- BuiltinQosLibExp: A library containing experimental QoS Profiles. Experimental QoS Profiles are new QoS Profiles that have been tested internally but have not gone through an extensive validation period. Therefore, some of the settings may change in future releases based on customer and internal feedback. After validation, experimental QoS Profiles will be moved into the non-experimental library.
- BuiltinQosSnippetLib: A library containing QoS Snippets that are ready to use as elements for the QoS Profile composition pattern. For further information about this pattern visit the following article: `https://community.rti.com/best-practices/qos-profile-inheritance-and-composition-guidance`

There are three types of profiles:

- Baseline.X.X.X: These profiles represent the QoS defaults for /ndds version X.X.X. To access the defaults for the latest RTI Connext version, use the BuiltinQosLib::Baseline profile.
- Generic.X: These profiles allow you to easily configure different features and communication use-cases with RTI Connext. For example, there is a Generic.StrictReliable profile for use when your application has a requirement for no data loss.
- Pattern.X: These profiles inherit from the Generic.X profiles and allow you to configure various domain-specific communication use cases. For example, there is a Pattern.Alarm profile that can be used to manage the generation and consumption of alarm events.

There are several types of QoS Snippets. These are the current QoS Snippets available:

- Optimization.X: these QoS Snippets optimize one or more parameters related to the X QoS Policy or a specific use-case.
- QosPolicy.X.Y: these QoS Snippets set a specific QoS Policy X to the value Y.
- Feature.X: these QoS Snippets set all the needed QoS values to enable/modify a specific feature.
- Transport.X: these QoS Snippets set a specific transport defined by X. This transport may have specific scenarios that are also specified in the name.
- Compatibility.X: these QoS Snippets change the specific QoS policies to ensure compatibility with specific products or versions specified by X.

These QoS Profiles can be used as base profiles in XML configuration, then QoS Snippets can modify specific aspects of this base QoS Profile, and finally files and values can be modified to fit a specific system's needs. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.Common">

   <domain_participant_qos base_name="BuiltinQosLib::Generic.Monitoring.Common">

     <base_name>

       <element>BuiltinQosSnippetLib::Feature.Monitoring.Enable</element>

     </base_name>

     <!-- Override and add values -->

   </domain_participant_qos>

</qos_profile>
```

The QoS Profiles can also be used in any APIs that call for a QoS library and profile name, for example, the create_∗_with_profile() APIs. To create a **com.rti.dds.publication.DataWriter** (p. 818) configured to send large data asynchronously:

```
writer = DDS_DomainParticipant_create_datawriter_with_profile(

                participant, topic,

                com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB,

       com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW,

                NULL, com.rti.dds.infrastructure.StatusKind.STATUS_MASK_NONE);
```

All the built-in QoS Profiles and QoS Snippets are documented in the BaselineRoot.documentationONLY.xml and BuiltinProfiles.documentationONLY.xml files that are included in the NDDSHOME/xml directory of the RTI Connext installation.

- BaselineRoot.documentationONLY.xml contains the root baseline QoS profile that corresponds to the default values of RTI Connext 5.0.0.

- BuiltinProfiles.documentationONLY.xml contains the rest of the built-in **Qos** (p. 1802) Profiles and QoS Snippets.

6.119.2 Variable Documentation

6.119.2.1 BUILTIN_QOS_LIB

```
final String BUILTIN_QOS_LIB  [static]
```

A library of non-experimental QoS profiles.

String-version: "BuiltinQosLib"

6.119.2.2 PROFILE_BASELINE_ROOT

```
final String PROFILE_BASELINE_ROOT  [static]
```

The root baseline QoS values from which all other Baseline.X.X.X profiles inherit.

This profile contains the root baseline QoS values from which all other Baseline.X.X.X profiles inherit. These values correspond to the default values for RTI Connext 5.0.0.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Baseline.Root"

6.119.2.3 PROFILE_BASELINE

```
final String PROFILE_BASELINE  [static]
```

The most up-to-date QoS default values.

You can use this profile if you want your application to pick up and use any new QoS default settings each time a new RTI Connext version is released – without changing your application code.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Baseline"

6.119.2.4 PROFILE_BASELINE_5_0_0

```
final String PROFILE_BASELINE_5_0_0  [static]
```

The QoS default values for version 5.0.0.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Baseline.5.0.0"

6.119.2.5 PROFILE_BASELINE_5_1_0

String-version: "Baseline.7.0.0"

6.119.2.11 PROFILE_BASELINE_7_1_0

```
final String PROFILE_BASELINE_7_1_0  [static]
```

The QoS default values for version 7.1.0.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Baseline.7.1.0"

6.119.2.12 PROFILE_GENERIC_COMMON

```
final String PROFILE_GENERIC_COMMON  [static]
```

A common Participant base profile.

All Generic.X and Pattern.X profiles inherit from this profile.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.Common"

6.119.2.13 PROFILE_GENERIC_MONITORING_COMMON

```
final String PROFILE_GENERIC_MONITORING_COMMON  [static]
```

Enables RTI Monitoring Library.

Generic Base participant QoS Profile that enables RTI Monitoring Library.

Use of this QoS Profile is deprecated. It is included for backwards compatibility.

Instead of using the (deprecated) "BuiltinQosLib::Generic.Monitoring.Common", apply the QoS Snippet "BuiltinQos↩ SnippetLib::Feature.Monitoring.Enable" via composition. For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosSnippetLib::Feature.Monitoring.Enable</element>

    </base_name>

</qos_profile>
```

Legacy applications may use this QoS Profile via inheritance. To do this, create a derived QoS Profile that inherits from this one. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.StrictReliable">

    <domain_participant_qos base_name="BuiltinQosLib::Generic.Monitoring.Common">

</qos_profile>
```

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.Monitoring.Common"

6.119.2.14 PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY

```
final String PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY  [static]
```

Sets the values necessary to communicate with RTI Connext Micro.

This profile will always represent the QoS values required for interoperability between the most recent version of RTI Connext Micro at the time of release of the most recent version of RTI Connext.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.ConnextMicroCompatibility"

6.119.2.15 PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9

```
final String PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9  [static]
```

Sets the values necessary to communicate with RTI Connext Micro versions 2.4.4 through at least 2.4.9.

At the time of the release of RTI Connext 5.3.0 it was not necessary to set any QoS values in order to interoperate with RTI Connext Micro. This applies to RTI Connext Micro versions 2.4.4 and later. The most recent version of RTI Connext Micro at the time of release of RTI Connext 5.3.0 was 2.4.9. There is no guarantee that this profile will interoperate with versions of RTI Connext Micro after 2.4.9.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.ConnextMicroCompatibility.2.4.9"

6.119.2.16 PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3

```
final String PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3  [static]
```

Sets the values necessary to communicate with RTI Connext Micro versions 2.4.3 and ealier.

RTI Connext Micro versions 2.4.3 and earlier only supported the com.rti.dds.infrastructure.LivelinessQosPolicyKind.↩ LivelinessQosPolicyKind.MANUAL_BY_TOPIC_LIVELINESS_QOS LivelinessQos kind. In order to be compatible with these versions of RTI Connext Micro, the **com.rti.dds.subscription.DataReader** (p. 707) and **com.rti.dds.↩ publication.DataWriter** (p. 818) must have their Liveliness kind changed to this value because the default kind in RTI Connext is com.rti.dds.infrastructure.LivelinessQosPolicyKind.LivelinessQosPolicyKind.AUTOMATIC_LIVELINESS_↩ QOS.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.ConnextMicroCompatibility.2.4.3"

6.119.2.17 PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY

```
final String PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY  [static]
```

Sets the values necessary to interoperate with other DDS vendors.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.OtherDDSVendorCompatibility"

6.119.2.18 PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY

```
final String PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY  [static]
```

Sets the values necessary to interoperate with RTI Connext 5.1.0 using the UDPv6 and/or SHMEM transports.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.510TransportCompatibility"

6.119.2.19 PROFILE_GENERIC_SECURITY

```
final String PROFILE_GENERIC_SECURITY  [static]
```

Loads the DDS Secure builtin plugins.

Generic Base Participant Profile that enables the builtin DDS Security Plugins.

Use of this QoS Profile is deprecated. It is included for backwards compatibility.

Instead of using the (deprecated) "BuiltinQosLib::Generic.Security", apply the QoS Snippet "BuiltinQosSnippetLib::↩ Feature.Security.Enable" via composition. For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosSnippetLib::Feature.Security.Enable</element>

    </base_name>

</qos_profile>
```

Legacy applications may use this QoS Profile via inheritance. To do this, create a derived QoS Profile that inherits from this one. For example:

```
<qos_profile name="MyProfile" base_name="BuiltinQosLib::Generic.StrictReliable">

    <domain_participant_qos base_name="BuiltinQosLib::Generic.Security">

</qos_profile>
```

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424)

String-version: "Generic.Security"

6.119.2.20 BUILTIN_QOS_LIB_EXP

```
final String BUILTIN_QOS_LIB_EXP  [static]
```

A library of experimental QoS profiles.

Experimental profiles are new profiles that have been tested internally but have not gone through an extensive validation period. Therefore some of the settings may change in future releases based on customer and internal feedback. After validation, experimental profiles will be moved into the non-experimental library.

QoS Profiles in this library are deprecated. They have been moved to "BuiltinQosLib". You should use the QoS Profiles from "BuiltinQosLib" instead of the ones in "BuiltinQosLibExp". The experimental profiles are still defined here to avoid backward compatibility issues.

String-version: "BuiltinQosLibExp"

6.119.2.21 PROFILE_GENERIC_STRICT_RELIABLE

```
final String PROFILE_GENERIC_STRICT_RELIABLE  [static]
```

Enables strict reliability.

Configures communication to be "strict reliable" where every sample is reliably delivered.

Combines the use of the **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836) for **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829) with a com.rti.dds.infrastructure.HistoryQos↩ PolicyKind.HistoryQosPolicyKind.KEEP_ALL_HISTORY_QOS for the **com.rti.dds.infrastructure.HistoryQosPolicy↩ Kind** (p. 1439).

This QoS Profile also optimizes the reliability protocol setting for this configuration.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.StrictReliable"

6.119.2.22 PROFILE_GENERIC_KEEP_LAST_RELIABLE

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE  [static]
```

Enables keep-last reliability.

Like the Generic.StrictReliable profile, this profile ensures in-order delivery of samples. However, new data can overwrite data that has not yet been acknowledged by the reader, therefore causing possible sample loss.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable"

6.119.2.23 PROFILE_GENERIC_BEST_EFFORT

```
final String PROFILE_GENERIC_BEST_EFFORT [static]
```

Enables best-effort reliability kind.

This profile enables best-effort communication. No effort or resources are spent to track whether or not sent samples are received. Minimal resources are used. This is the most deterministic method of sending data since there is no indeterministic delay that can be introduced by resending data. Data samples may be lost. This setting is good for periodic data.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.BestEffort"

6.119.2.24 PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT

```
final String PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT [static]
```

A profile that can be used to achieve high throughput.

This QoS Profile extends the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT_↩ RELIABLE** (p. 430) QoS Profile to perform additional, fine-grained performance tuning specific to applications that send continuously streaming data. The parameters specified here add to and/or override the parameters specified in the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT_RELIABLE** (p. 430) QoS Profile..

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.StrictReliable.HighThroughput"

6.119.2.25 PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY

```
final String PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY [static]
```

A profile that can be used to achieve low latency.

This QoS Profile extends the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT_↩ RELIABLE** (p. 430) QoS Profile to perform additional, fine-grained performance tuning specific to applications that send continuously streaming data. The parameters specified here add to and/or override the parameters specified in the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT_RELIABLE** (p. 430) QoS Profile.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.StrictReliable.LowLatency"

6.119.2.26 PROFILE_GENERIC_PARTICIPANT_LARGE_DATA

```
final String PROFILE_GENERIC_PARTICIPANT_LARGE_DATA [static]
```

A common Participant base profile to facilitate sending large data.

This is a common Participant base QoS Profile that configures 3 different flow controllers: 838, 209, and 52 Mbps that can each be used to throttle application data flow at different rates.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.Participant.LargeData"

6.119.2.27 PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING

```
final String PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING [static]
```

Configures Participants for large data *and* monitoring.

This is a common base Participant QoS Profile to configure Participants to both handle large data and use RTI Monitoring Library.

This QoS Profile is deprecated. It is included for backwards compatibility.

It is recommended that instead of inheriting from this QoS Profile, new applications apply the following QoS Snippets to their application-specific QoS Profiles:

Enable Monitoring

- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_FEATURE_MONITORING_ENABLE** (p. 453)

Enable Large Data optimizations

- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA** (p. 444)
- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC** (p. 445) In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.Participant.LargeData.Monitoring"

See also

com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_PARTICIPANT_LARGE_DATA (p. 431)

com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_MONITORING_COMMON (p. 427)

6.119.2.28 PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA

```
final String PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA [static]
```

Configures endpoints for sending large data with strict reliability.

This QoS Profile extends the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_PARTICIPANT_↩ LARGE_DATA** (p. 431) QoS Profile to handle sending large samples reliably. This QoS Profile optimizes memory usage per sample within RTI Connext. You can use this QoS Profile directly, which doesn't perform any flow control, or you can use one of the three QoS Profiles below (Generic.StrictReliable.LargeData.∗Flow), which use this QoS Profile as a common base QoS Profile, but additionally enable asynchronous publication. Each of these three QoS Profiles uses one of the three flow controllers defined in **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_↩ PARTICIPANT_LARGE_DATA** (p. 431) in order to throttle application data flow.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.StrictReliable.LargeData"

6.119.2.29 PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA [static]
```

Configures endpoints for sending large data with keep-last reliability.

This QoS Profile is similar to the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_KEEP_LAST↩ _RELIABLE** (p. 430) QoS Profile, but also adds QoS Snippets to handle sending large samples reliably. You can use this QoS Profile directly, which doesn't perform any flow control, or you can use one of the three QoS Profiles below (Generic.KeepLastReliable.LargeData.∗Flow), which use this QoS Profile as a common base QoS Profile, but additionally enable asynchronous publication. Each of these three QoS Profiles uses one of the three flow controllers defined in **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_PARTICIPANT_LARGE_DATA** (p. 431) in order to throttle application data flow.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable.LargeData"

6.119.2.30 PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW

```
final String PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW [static]
```

Configures strictly reliable communication for large data with a fast flow controller.

Strictly reliable communication for large data with a 838 Mbps ($\sim$ 100 MB/sec) flow controller.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.StrictReliable.LargeData.FastFlow"

6.119.2.31 PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW

```
final String PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW [static]
```

Configures strictly reliable communication for large data with a medium flow controller.

Strictly reliable communication for large data with a 209Mbps (∼ 25 MB/sec) flow controller.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.StrictReliable.LargeData.MediumFlow"

6.119.2.32 PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW

```
final String PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW [static]
```

Configures strictly reliable communication for large data with a slow flow controller.

Strictly reliable communication for large data with a 52 MB/sec (∼ 6.25 MB/sec) flow controller.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.StrictReliable.LargeData.SlowFlow"

6.119.2.33 PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW [static]
```

Configures keep-last reliable communication for large data with a fast flow controller.

Keep-last reliable communication for large data with a 838 Mbps (∼ 100 MB/sec) flow controller.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable.LargeData.FastFlow"

6.119.2.34 PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW [static]
```

Configures keep-last reliable communication for large data with a medium flow controller.

Keep-last reliable communication for large data with a 209Mbps (∼ 25 MB/sec) flow controller.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable.LargeData.MediumFlow"

6.119.2.35 PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW [static]
```

Configures keep-last reliable communication for large data with a slow flow controller.

Keep-last reliable communication for large data with a 52 MB/sec ($\sim$ 6.25 MB/sec) flow controller.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable.LargeData.SlowFlow"

6.119.2.36 PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL [static]
```

Persists the samples of a DataWriter as long as the entity exists.

This profile extends the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 430) profile, but persists the samples of a **com.rti.dds.publication.DataWriter** (p. 818) as long as the entity exists in order to deliver them to late-joining DataReaders.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable.TransientLocal"

6.119.2.37 PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT [static]
```

Persists samples using RTI Persistence Service.

This profile extends the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 430) profile, but persists samples using Persistence Service in order to deliver them to late-joining DataReaders.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable.Transient"

6.119.2.38 PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT

```
final String PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT [static]
```

Persists samples in permanent storage, like a disk, using RTI Persistence Service.

This profile extends the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_KEEP_LAST_↩ RELIABLE** (p. 430) profile, but persists samples in permanent storage, such as a disk, using Persistence Service in order to deliver them to late-joining DataReaders.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.KeepLastReliable.Persistent"

6.119.2.39 PROFILE_GENERIC_AUTO_TUNING

```
final String PROFILE_GENERIC_AUTO_TUNING [static]
```

Enables the Turbo Mode batching and Auto Throttle experimental features.

Turbo Mode batching adjusts the maximum number of bytes of a batch based on how frequently samples are being written. Auto Throttle auto-adjusts the speed at which a writer will write samples, based on the number of unacknowledged samples in its queue.

These features are designed to auto-adjust the publishing behavior within a system in order to achieve the best possible performance with regards to throughput and latency.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.AutoTuning"

6.119.2.40 PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT

```
final String PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT [static]
```

Uses a set of QoS which reduces the memory footprint of the application.

Uses a set of QoS which reduces the memory footprint of the application.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Generic.MinimalMemoryFootprint"

6.119.2.41 PROFILE_GENERIC_MONITORING2

```
final String PROFILE_GENERIC_MONITORING2  [static]
```

The default QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use.

This profile inherits from **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_MINIMAL_MEMORY↩ _FOOTPRINT** (p. 436).

The following DomainParticipant QoS policy of this profile cannot be modified and it is overwritten by the RTI Monitoring Library 2.0:

- Discovery Config Built-in Channel Kind.

The following DataWriter and DataReader QoS policies of this profile cannot be modified and they are overwritten by the RTI Monitoring Library 2.0:

- Reliability Kind.
- Durability Kind.
- History Kind.
- Publish Mode Kind.
- Protocol -> RTPS Reliable Writer -> Max Heartbeat Retries.

This profile uses Topic Filters to select the DataWriter and DataReader QoS depending on the Observability Distribution Topic.

You should be using this profile or a profile inheriting from it when you configure the distribution of telemetry data using the <distribution_settings> tag under <monitoring> for the <participant_factory_qos>.

Note: This profile does not enable the use of the RTI Monitoring Library 2.0. To do that you can use the Snippet **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_FEATURE_MONITORING2_ENABLE** (p. 453).

String-version: "Generic.Monitoring2"

6.119.2.43 PROFILE_PATTERN_RPC

```
final String PROFILE_PATTERN_RPC [static]
```

This profile contains the default RPC and Request-Reply QoS settings.

This profile contains the QoS that is used to create the DataReaders and DataWriters in a Requester, a Replier, a Client or a Service.

Use this profile as the base profile if you need to customize the QoS settings of any of these entities.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Pattern.RPC"

6.119.2.44 PROFILE_PATTERN_PERIODIC_DATA

```
final String PROFILE_PATTERN_PERIODIC_DATA [static]
```

Used for applications that expect periodic data.

This QoS Profile is intended to be used for applications that expect periodic data such as sensor data. The deadline that is set in this profile can be used to detect when DataWriters are not publishing data with the expected periodicity.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.PeriodicData"

6.119.2.45 PROFILE_PATTERN_STREAMING

```
final String PROFILE_PATTERN_STREAMING  [static]
```

Used for applications that stream data.

The data sent in streaming applications is commonly periodic. Therefore this profile simply inherits from the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_PATTERN_PERIODIC_DATA** (p. 438) profile. Note: With this QoS Profile, the application may lose data, which may be acceptable in use cases such as video conferencing.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.Streaming"

6.119.2.46 PROFILE_PATTERN_RELIABLE_STREAMING

```
final String PROFILE_PATTERN_RELIABLE_STREAMING  [static]
```

Used for applications that stream data *and* require reliable communication.

Sometimes streaming applications require reliable communication while still tolerating some data loss. In this case, we inherit from the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_KEEP_LAST_RELIABLE** (p. 430) QoS Profile and the following QoS Snippets:

- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE** (p. 447)
- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1** (p. 448)
- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST** (p. 443)

This QoS Snippet also increases the **com.rti.dds.infrastructure.HistoryQosPolicy.depth** (p. 1438) to reduce the probability of losing samples.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.ReliableStreaming"

6.119.2.47 PROFILE_PATTERN_EVENT

```
final String PROFILE_PATTERN_EVENT  [static]
```

Used for applications that handle events.

This QoS Profile can be used by applications in which samples represent events such as button pushes or alerts. When events are triggered, the system should almost always do something, meaning that you don't want the system to lose the event. This means that the system requires strictly reliable communication. To enable it, use the following QoS Snippets:

- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE** (p. 447)
- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL** (p. 448)
- **com.rti.dds.infrastructure.BuiltinQosProfiles.SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_↩ KEEP_ALL** (p. 442)

Since events and alerts are critical and non-periodic data, it is important to detect situations in which communication between a **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) is broken. This is why this profile sets the **com.rti.dds.infrastructure.LivelinessQosPolicy** (p. 1535). If the **com.rti.dds.↩ publication.DataWriter** (p. 818) does not assert its liveliness in a timely manner, the **com.rti.dds.subscription.Data↩ Reader** (p. 707) will report 'loss of liveliness' to the application.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.Event"

6.119.2.48 PROFILE_PATTERN_ALARM_EVENT

```
final String PROFILE_PATTERN_ALARM_EVENT  [static]
```

Used for applications that handle alarm events.

An alarm is a type of event; therefore this profile simply inherits from **com.rti.dds.infrastructure.BuiltinQosProfiles.↩ PROFILE_PATTERN_EVENT** (p. 439).

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.↩ infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.AlarmEvent"

6.119.2.49 PROFILE_PATTERN_STATUS

```
final String PROFILE_PATTERN_STATUS [static]
```

Used for applications whose samples represent statuses.

This QoS Profile can be used by applications in which samples represent state variables whose values remain valid as long as they don't explicitly change. State variables typically do not change periodically. State variables and their values should also be available to applications that appear after the value originally changed because it is unreasonable to have to wait until the next change of state, which may be indeterminate.

Whether to use this QoS Profile or **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_PATTERN_PERIODIC_DATA** (p. 438) can often be an application choice. For example, if a DataWriter is publishing temperature sensor data, it could use the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_PATTERN_PERIODIC_DATA** (p. 438) QoS Profile and publish the data at a fixed rate or it could use the **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_PATTERN_STATUS** (p. 440) QoS Profile and only publish the temperature when it changes more than 1 degree.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.Status"

6.119.2.50 PROFILE_PATTERN_ALARM_STATUS

```
final String PROFILE_PATTERN_ALARM_STATUS [static]
```

Used for applications in which samples represent alarm statuses.

An alarm status is a type of status; therefore this QoS Profile simply inherits from **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_PATTERN_STATUS** (p. 440).

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.AlarmStatus"

6.119.2.51 PROFILE_PATTERN_LAST_VALUE_CACHE

```
final String PROFILE_PATTERN_LAST_VALUE_CACHE [static]
```

Used for applications that only need the last published value.

With this QoS Profile, a **com.rti.dds.publication.DataWriter** (p. 818) will keep in its queue the last value that was published for each sample instance. Late-joining DataReaders will get that value when they join the system. This QoS Profile inherits from **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL** (p. 435) because the use case requires delivery to late-joiners.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB** (p. 424) and **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_LIB_EXP** (p. 429)

String-version: "Pattern.LastValueCache"

6.119.2.52 BUILTIN_QOS_SNIPPET_LIB

```
final String BUILTIN_QOS_SNIPPET_LIB  [static]
```

A library of QoS Snippets.

String-version: "BuiltinQosSnippetLib"

6.119.2.53 SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON

```
final String SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON  [static]
```

QoS Snippet that configures the reliability protocol with a common configuration.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet defines parameters common to a set of "alternative" QoS Snippets that configure the reliability protocol.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.rtps_reliable_writer** (p. 865)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.rtps_reliable_reader** (p. 765)

This QoS Snippet configures the reliability protocol parameters for more aggressive (faster) heartbeats so that sample loss is detected and repaired faster.

This QoS Snippet also sets the **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.max_heartbeat_retries** (p. 1917), which works in combination with the heartbeat rate to determine when the **com.rti.dds.publication.DataWriter** (p. 818) considers a **com.rti.dds.subscription.DataReader** (p. 707) non-responsive. This QoS Snippet configures the **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.rtps_reliable_writer** (p. 865) parameters so that the **com.rti.dds.publication.DataWriter** (p. 818) considers the **com.rti.dds.subscription.DataReader** (p. 707) to be "inactive" after 500 unresponded heartbeats.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.ReliabilityProtocol.Common"

6.119.2.54 SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL

```
final String SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL [static]
```

QoS Snippet that configures the reliability protocol for KEEP_ALL.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **com.rti.dds.publication.DataWriter** (p. 818) reliable protocol parameters for a reliable **com.rti.dds.publication.DataWriter** (p. 818) with **com.rti.dds.infrastructure.HistoryQosPolicyKind** (p. 1439) set to com.rti.dds.infrastructure.HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_ALL_HISTORY_QOS.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.rtps_reliable_writer** (p. 865)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.rtps_reliable_reader** (p. 765)

Note that this QoS Snippet does not configure the **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829) or **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435) QoS policies. It is intended to be used in combination with other QoS Snippets that configure those policies.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.ReliabilityProtocol.KeepAll"

6.119.2.55 SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST

```
final String SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST [static]
```

QoS Snippet that configures the reliability protocol for KEEP_LAST.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **com.rti.dds.publication.DataWriter** (p. 818) reliable protocol parameters for a reliable **com.rti.dds.publication.DataWriter** (p. 818) with **com.rti.dds.infrastructure.HistoryQosPolicyKind** (p. 1439) set to com.rti.dds.infrastructure.HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_QOS.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.rtps_reliable_writer** (p. 865)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.rtps_reliable_reader** (p. 765)

Note that this QoS Snippet does not configure the **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829) or **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435) QoS policies. It is intended to be used in combination with other QoS Snippets that configure those policies.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.ReliabilityProtocol.KeepLast"

6.119.2.56 SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE

```
final String SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE [static]
```

QoS Snippet that configures the reliability protocol for sending data at a high rate.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet optimizes the **com.rti.dds.publication.DataWriter** (p. 818) reliable protocol parameters for a reliable **com.rti.dds.publication.DataWriter** (p. 818) that is writing messages at high rates, especially in situations where throughput is favored over latency.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.rtps_reliable_writer** (p. 865)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.rtps_reliable_reader** (p. 765)

This QoS Snippet sets a fast rate of heartbeats so that errors are detected and repaired more swiftly.

Note that to get the highest thoughout you may need to apply additional changes to the final QoS Profile. See the QoS Profile **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT_RELIABLE_HIGH_↩ THROUGHPUT** (p. 431) for further information.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.ReliabilityProtocol.HighRate"

6.119.2.57 SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY

```
final String SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY [static]
```

QoS Snippet that configures the reliability protocol for sending data at low latency.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

This QoS Snippet modifies the Reliable Protocol parameters to accomplish low latency.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.rtps_reliable_writer** (p. 865)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.rtps_reliable_reader** (p. 765)

Note that to get the lowest latency you may need to apply additional changes to the final QoS Profile. See the QoS Profile **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY** (p. 431) for further information.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.ReliabilityProtocol.LowLatency"

6.119.2.58 SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA

```
final String SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA [static]
```

QoS Snippet that configures the reliability protocol for large data.

The QoS Snippets starting with "Optimization.ReliabilityProtocol." provide alternative configurations of the same QoS Policies. Choose just one QoS Snippet of the alternatives when defining a new QoS Profile or QoS Snippet.

Modifies the Reliable Protocol parameters and Resource Limits to work better with Large Data.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.rtps_reliable_writer** (p. 865)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.rtps_reliable_reader** (p. 765)

Note that, to send large data, it is recommended to apply additional changes that configure the data caches, transport buffers, etc. See, for example, **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_KEEP_LAST_↩ RELIABLE_LARGE_DATA** (p. 433), and derivatives for fully functional Large Data QoS Profiles.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.ReliabilityProtocol.LargeData"

6.119.2.59 SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC

```
final String SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC [static]
```

Configures the DataWriter and DataReader caches to use dynamic memory allocation for Large Data samples.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.data_writer.history.memory_manager.*"
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)
- **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy** (p. 789)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.data_reader.history.memory_manager.*"

This configuration is needed to handle data that contains unbounded sequences or strings. This QoS Snippet is also recommended if samples can have very different sizes and the bigger samples can be very large.

If dynamic memory allocation is not used for the larger samples, then all samples are allocated to their maximum size which can consume a lot of resources.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.DataCache.LargeData.DynamicMemAlloc"

6.119.2.60 SNIPPET_OPTIMIZATION_DISCOVERY_COMMON

```
final String SNIPPET_OPTIMIZATION_DISCOVERY_COMMON [static]
```

QoS Snippet that optimizes discovery with a common configuration.

Optimizes the **com.rti.dds.domain.DomainParticipantQos** (p. 1073) to detect faster discovery changes. This QoS Snippet increases the speed moderately so that it fits the normal scenarios.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.participant_liveliness_lease_duration** (p. 918)
- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.participant_liveliness_assert_period** (p. 919)
- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.max_liveliness_loss_detection_period** (p. 920)
- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.initial_participant_announcements** (p. 921)
- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.publication_writer** (p. 924)
- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.subscription_writer** (p. 925)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.Discovery.Common"

6.119.2.61 SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT

```
final String SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT [static]
```

QoS Snippet that optimizes the Participant QoS to send less discovery information.

Modified QoS Parameters:

- **com.rti.dds.domain.DomainParticipantQos** (p. 1073) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.participant.inter_participant.∗"
- **com.rti.dds.domain.DomainParticipantQos** (p. 1073) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.sys_info.∗"

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.Discovery.Participant.Compact"

6.119.2.62 SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST

```
final String SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST [static]
```

QoS Snippet that optimizes the Endpoint Discovery to be faster.

This is useful when using security, to prevent a noticeable delay.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.publication_writer** (p. 924)
- **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.subscription_writer** (p. 925)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.Discovery.Endpoint.Fast"

6.119.2.63 SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS

```
final String SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS [static]
```

QoS Snippet that increases the Participant default buffer that shmem and udpv4 use.

This is useful when using Large Data

Modified QoS Parameters:

- **com.rti.dds.infrastructure.ReceiverPoolQosPolicy** (p. 1826)
- **com.rti.dds.infrastructure.TransportBuiltinQosPolicy** (p. 2152)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Optimization.Transport.LargeBuffers"

6.119.2.64 SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE

```
final String SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE [static]
```

QoS Snippet that sets RELIABILITY QoS to RELIABLE.

This also configures a blocking time in case the **com.rti.dds.publication.DataWriter** (p. 818) writes faster than the DataReaders can accommodate.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829)

Note that by itself enabling reliability does not ensure that every sample written is delivered to the DataReaders. This is because the **com.rti.dds.publication.DataWriter** (p. 818) and/or **com.rti.dds.subscription.DataReader** (p. 707) can be configured to override samples in its cache based on the configuration of the **com.rti.dds.infrastructure.History↩ QosPolicy** (p. 1435) QoS policy.

To ensure delivery of every sample (at the expense of potentially blocking the **com.rti.dds.publication.Data↩ Writer** (p. 818)), use the QoS Profile **com.rti.dds.infrastructure.BuiltinQosProfiles.PROFILE_GENERIC_STRICT↩ _RELIABLE** (p. 430) or one of the derived QoS Profiles.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.Reliability.Reliable"

6.119.2.65 SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT

```
final String SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT  [static]
```

QoS Snippet that sets RELIABILITY QoS to BEST_EFFORT.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829)

With best-effort, there are no resources spent to confirm delivery of samples nor repairs of any samples that may be lost.

Best-effort communication reduces jitter; therefore, the delay between sending data and receiving it is more deterministic for the samples that are actually received. Best-effort is good for periodic data where it may be better to get the next value than to wait for the previous one to be repaired.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.Reliability.BestEffort"

6.119.2.66 SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1

```
final String SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1  [static]
```

QoS Snippet that sets HISTORY QoS to KEEP_LAST kind with depth 1.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.History.KeepLast_1"

6.119.2.67 SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL

```
final String SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL [static]
```

QoS Snippet that sets HISTORY **QosPolicy** (p. 1802) to KEEP_ALL kind.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.History.KeepAll"

6.119.2.68 SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS

```
final String SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS [static]
```

QoS Snippet that sets PUBLISH_MODE **QosPolicy** (p. 1802) to ASYNCHRONOUS kind.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797)

Asynchronous Publish mode decouples the application thread that calls the **com.rti.dds.publication.DataWriter** (p. 818) "write" operation from the thread used to send the data on the network. See `https://community.rti.com/glossary/asynchronous-writer`

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.PublishMode.Asynchronous"

6.119.2.69 SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL

```
final String SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL [static]
```

QoS Snippet that sets DURABILITY **QosPolicy** (p. 1802) to TRANSIENT_LOCAL kind.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)

DataWriters will store and send previously published DDS samples for delivery to newly discovered DataReaders as long as the **com.rti.dds.publication.DataWriter** (p. 818) still exists. For this setting to be effective, you must also set the **com.rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835) to **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836) (not Best Effort). Which particular DDS samples are kept depends on other QoS settings such as **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435) and **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894).

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.Durability.TransientLocal"

6.119.2.70 SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT

```
final String SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT [static]
```

QoS Snippet that sets DURABILITY **QosPolicy** (p. 1802) to TRANSIENT kind.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)

RTI Connext will store previously published DDS samples in memory using Persistence Service, which will send the stored data to newly discovered DataReaders. Which particular DDS samples are kept and sent by Persistence Service depends on the **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435) and **com.rti.dds.infrastructure.Resource↩ LimitsQosPolicy** (p. 1894) of the Persistence Service DataWriters. These QosPolicies can be configured in the Persistence Service configuration file or through the **com.rti.dds.infrastructure.DurabilityQosPolicyKind** (p. 1121) of the DataWriters configured with com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT↩ _DURABILITY_QOS.

You need a Persistence Service instance running to use this behavior.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.Durability.Transient"

6.119.2.71 SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT

```
final String SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT [static]
```

QoS Snippet that sets DURABILITY **QosPolicy** (p. 1802) to PERSISTENT kind.

Modified QoS Parameters:

- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)
- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)

RTI Connext will store previously published DDS samples in permanent storage, like a disk, using Persistence Service, which will send the stored data to newly discovered DataReaders. Which particular DDS samples are kept and sent by Persistence Service depends on the **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435) and **com.rti.dds.↩ infrastructure.ResourceLimitsQosPolicy** (p. 1894) in the Persistence Service DataWriters. These QosPolicies can be configured in the Persistence Service configuration file or through the **com.rti.dds.infrastructure.DurabilityQos↩ PolicyKind** (p. 1121) of the DataWriters configured with com.rti.dds.infrastructure.DurabilityQosPolicyKind.Durability↩ QosPolicyKind.PERSISTENT_DURABILITY_QOS.

You need a Persistence Service instance running to use this behavior.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.Durability.Persistent"

6.119.2.72 SNIPPET_QOS_POLICY_BATCHING_ENABLE

```
final String SNIPPET_QOS_POLICY_BATCHING_ENABLE  [static]
```

QoS Snippet that sets BATCH **QosPolicy** (p. 1802) to true.

Modified QoS Parameters:

- **com.rti.dds.infrastructure.BatchQosPolicy** (p. 607)

This QoS Snippet specifies and configures the mechanism that allows RTI Connext to collect multiple user data DDS samples to be sent in a single network packet, to take advantage of the efficiency of sending larger packets and thus increase effective throughput.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "QosPolicy.Batching.Enable"

6.119.2.73 SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS

```
final String SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS  [static]
```

QoS Snippet that configures and set a FlowController of 838 Mbps.

Defines a **com.rti.dds.publication.FlowController** (p. 1348) and configures the **com.rti.dds.publication.Data↩ WriterQos** (p. 878) with it.

This is a **com.rti.dds.publication.FlowController** (p. 1348) of 838 Mbps ($\sim$ 100 MB/sec)

Modified QoS Parameters:

- **com.rti.dds.domain.DomainParticipantQos** (p. 1073) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.flow_controller.token_bucket.$*$"
- **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.FlowController.838Mbps"

6.119.2.74 SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS

```
final String SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS [static]
```

QoS Snippet that configures and sets a FlowController of 209 Mbps.

Defines a **com.rti.dds.publication.FlowController** (p. 1348) and configures the **com.rti.dds.publication.Data↩ WriterQos** (p. 878) with it.

This is a **com.rti.dds.publication.FlowController** (p. 1348) of 209 Mbps ($\sim$ 25 MB/sec)

Modified QoS Parameters:

- **com.rti.dds.domain.DomainParticipantQos** (p. 1073) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.flow_controller.token_bucket.$*$"
- **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.FlowController.209Mbps"

6.119.2.75 SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS

```
final String SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS [static]
```

QoS Snippet that configures and sets a FlowController of 52 Mbps.

Defines a **com.rti.dds.publication.FlowController** (p. 1348) and configures the **com.rti.dds.publication.Data↩ WriterQos** (p. 878) with it.

This is a **com.rti.dds.publication.FlowController** (p. 1348) of 52 Mbps ($\sim$ 6.25 MB/sec)

Modified QoS Parameters:

- **com.rti.dds.domain.DomainParticipantQos** (p. 1073) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.flow_controller.token_bucket.$*$"
- **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797)

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.FlowController.52Mbps"

6.119.2.76 SNIPPET_FEATURE_AUTO_TUNING_ENABLE

```
final String SNIPPET_FEATURE_AUTO_TUNING_ENABLE  [static]
```

QoS Snippet that enables auto_throttle and turbo_mode to true.

Sets the **com.rti.dds.domain.DomainParticipantQos** (p. 1073) properties to enable auto_throttle and turbo_mode to true.

Modified QoS Parameters:

- **com.rti.dds.domain.DomainParticipantQos** (p. 1073) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.domain_participant.auto_throttle"
- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.data_writer.auto_throttle.enable"
- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) named "dds.data_writer.enable_turbo_mode"

The domain_participant.auto_throttle configures the **com.rti.dds.domain.DomainParticipant** (p. 948) to gather internal measurements (during **com.rti.dds.domain.DomainParticipant** (p. 948) creation) that are required for the Auto Throttle feature. This allows DataWriters belonging to this **com.rti.dds.domain.DomainParticipant** (p. 948) to use the Auto Throttle feature.

The turbo_mode adjusts the batch max_data_bytes based on how frequently the **com.rti.dds.publication.DataWriter** (p. 818) writes data.

Data_writer.auto_throttle enables automatic throttling in the **com.rti.dds.publication.DataWriter** (p. 818) so it can automatically adjust the writing rate and the send window size; this minimizes the need for repairing DDS samples and improves latency.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.AutoTuning.Enable"

6.119.2.77 SNIPPET_FEATURE_MONITORING_ENABLE

```
final String SNIPPET_FEATURE_MONITORING_ENABLE  [static]
```

QoS Snippet that enables the use of the RTI Monitoring Library.

To enable the use of RTI Monitoring Library apply this QoS Snippet to the QoS Profile used to create your **com.rti.↩ dds.domain.DomainParticipant** (p. 948). For example:

```
 <qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.Monitoring.Enable</element>

    </base_name>

</qos_profile>
```

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.Monitoring.Enable"

6.119.2.78 SNIPPET_FEATURE_MONITORING2_ENABLE

```
final String SNIPPET_FEATURE_MONITORING2_ENABLE  [static]
```

QoS Snippet that enables the use of the RTI Monitoring Library 2.0.

QoS Snippet to enable the use of the RTI Monitoring Library 2.0 with a dedicated DomainParticipant publishing telemetry data from your application in domain ID 2. All metrics are enabled for all resources in this profile.

To enable the use of RTI Monitoring Library 2.0, apply this QoS Snippet to the QoS Profile used to create your DomainParticipantFactory. For example:

```
<qos_profile name="MyProfile" is_default_participant_factory_profile="true">
  <base_name>
    <element>BuiltinQosSnippetLib::Feature.Monitoring2.Enable</element>
  </base_name>
</qos_profile>
```

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.Monitoring2.Enable"

6.119.2.79 SNIPPET_FEATURE_SECURITY_ENABLE

```
final String SNIPPET_FEATURE_SECURITY_ENABLE  [static]
```

QoS Snippet that enables security using the Builtin Security Plugins.

To enable the use of the Builtin DDS Security Library apply this QoS Snippet to the QoS Profile used to create your **com.rti.dds.domain.DomainParticipant** (p. 948). For example:

```
 <qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.Security.Enable</element>

    </base_name>

</qos_profile>
```

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.Security.Enable"

6.119.2.80 SNIPPET_FEATURE_TOPIC_QUERY_ENABLE

```
final String SNIPPET_FEATURE_TOPIC_QUERY_ENABLE  [static]
```

QoS Snippet that enables Topic Query.

To enable the use of the RTI Connext **com.rti.dds.subscription.TopicQuery** (p. 2139) feature, apply this QoS Snippet to the QoS Profile used to create your **com.rti.dds.publication.DataWriter** (p. 818). For example:

```
 <qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TopicQuery.Enable</element>

    </base_name>

</qos_profile>
```

For more information on Topic Query see the "Topic Queries" chapter in the `User's Manual`.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Feature.TopicQuery.Enable"

6.119.2.81 SNIPPET_FEATURE_TYPE_SUPPORT_V1_ENABLE

```
final String SNIPPET_FEATURE_TYPE_SUPPORT_V1_ENABLE  [static]
```

QoS Snippet that enables TypeObject V1 propagation.

To enable TypeObject V1 propagation apply this QoS Snippet to the QoS Profile used to create your **com.rti.dds.domain.DomainParticipant** (p. 948). For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V1.Enable</element>

    </base_name>

</qos_profile>
```

6.119.2.82 SNIPPET_FEATURE_TYPE_SUPPORT_V1_DISABLE

```
final String SNIPPET_FEATURE_TYPE_SUPPORT_V1_DISABLE  [static]
```

QoS Snippet that disables TypeObject V1 propagation.

To disable TypeObject V1 propagation apply this QoS Snippet to the QoS Profile used to create your **com.rti.dds.domain.DomainParticipant** (p. 948). For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V1.Disable</element>

    </base_name>

</qos_profile>
```

6.119.2.83 SNIPPET_FEATURE_TYPE_SUPPORT_V2_ENABLE

```
final String SNIPPET_FEATURE_TYPE_SUPPORT_V2_ENABLE  [static]
```

QoS Snippet that enables TypeObject V2 propagation.

To enable TypeObject V2 propagation apply this QoS Snippet to the QoS Profile used to create your **com.rti.dds.domain.DomainParticipant** (p. 948). For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V2.Enable</element>

    </base_name>

</qos_profile>
```

6.119.2.84 SNIPPET_FEATURE_TYPE_SUPPORT_V2_DISABLE

```
final String SNIPPET_FEATURE_TYPE_SUPPORT_V2_DISABLE  [static]
```

QoS Snippet that disables TypeObject V2 propagation.

To disable TypeObject V2 propagation apply this QoS Snippet to the QoS Profile used to create your **com.rti.dds.domain.DomainParticipant** (p. 948). For example:

```
<qos_profile name="MyProfile">

    <base_name>

        <element>BuiltinQosLib::Feature.TypeSupport.V2.Disable</element>

    </base_name>

</qos_profile>
```

6.119.2.85 SNIPPET_TRANSPORT_TCP_LAN_CLIENT

```
final String SNIPPET_TRANSPORT_TCP_LAN_CLIENT = "Transport.TCP.LAN.Client"  [static]
```

QoS Snippet that configures a TCP LAN Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the initial_peers and the property dds.transport.TCPv4.tcp1.server_bind_port are incorrect (just sample strings). Therefore, they must be modified:

- initial_peers: should point to the remote client IP and port.
- server_bind_port: is the port this application will be using.

This modification should be done in the QoS Profile that will be used to create the **com.rti.dds.infrastructure.Entity** (p. 1320). These new values will overwrite the current invalid values.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Transport.TCP.LAN.Client"

6.119.2.86 SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT

```
final String SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT  [static]
```

QoS Snippet that configures a symmetric WAN TCP Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the properties dds.transport.TCPv4.tcp1.public_address and dds.transport.TCPv4.tcp1.server_bind_port are incorrect (just sample strings). Also the initial_peers information is not correct. Therefore, the following must be modified:

- initial_peers: should point to the remote client IP and port.
- public_address: public IP address where this application can be reached.
- server_bind_port: port this application will be using.

This modification should be done in the QoS Profile that will be used to create the **com.rti.dds.infrastructure.Entity** (p. 1320). These new values will overwrite the current invalid values.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Transport.TCP.WAN.Symmetric.Client"

6.119.2.87 SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER

```
final String SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER [static]
```

QoS Snippet that an asymmetric WAN TCP Server over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The values of the properties dds.transport.TCPv4.tcp1.public_address and dds.transport.TCPv4.tcp1.server_bind_↩ port are incorrect (just sample strings). Therefore, they must be modified to the corresponding public_address and port_number. This modification should be done in the QoS Profile that will be used to create the **com.rti.dds.↩ infrastructure.Entity** (p. 1320). These new values will overwrite the current invalid values.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Transport.TCP.WAN.Asymmetric.Server"

6.119.2.88 SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT

```
final String SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT [static]
```

QoS Snippet that configures an asymmetric WAN TCP Client over DDS.

This QoS Snippet sets all the mandatory properties; however the final QoS Profile requires additional configuration.

The value of discovery.initial_peers and public_ip have to match the values set on the Server side (**com.rti.dds.↩ infrastructure.BuiltinQosProfiles.SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER** (p. 456)). This modification should be done in the QoS Profile that will be used to create the **com.rti.dds.infrastructure.Entity** (p. 1320). This new value will overwrite the current invalid value.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Transport.TCP.WAN.Asymmetric.Client"

6.119.2.89 SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION

```
final String SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION [static]
```

QoS Snippet that configures RTI Connext and the UDP built-in transports (UDPv4, UDPv6, UDPv4_WAN) to avoid IP fragmentation.

For WAN communications and, in general, for communications in third party networks, it is not a good idea to rely on IP fragmentation. IP fragmentation causes significant issues in UDP, where there is no integrated support for a path MTU (maximum transmission unit) discovery protocol as there is in TCP.

This snippet provides a way to avoid IP fragmentation in Connext applications using the built-in UDP transports. Instead, Connext will be responsible for fragmentation, which is done at the RTPS level.

Among other changes, this configuration changes the transport MTU (message_size_max) to be 1400 bytes. Notice that this change will affect other transports such as SHMEM since Connext chooses the minimum transport MTU across all enabled transports to determine the maximum size of outgoing RTPS messages.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Transport.UDP.AvoidIPFragmentation"

6.119.2.90 SNIPPET_TRANSPORT_UDP_WAN

```
final String SNIPPET_TRANSPORT_UDP_WAN [static]
```

QoS Snippet that enables the RTI Real-Time WAN Transport (UDPv4_WAN).

The snippet disables all the other built-in transports and avoids the use of IP fragmentation.

For WAN communications and, in general, for communications in third-party networks, it is not a good idea to rely on IP fragmentation. IP fragmentation causes significant issues in UDP, where there is no integrated support for a path MTU (maximum transmission unit) discovery protocol as there is in TCP.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Transport.UDP.WAN"

6.119.2.91 SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3

```
final String SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3 [static]
```

QoS Snippet that configures sets LIVELINESS QoS to be compatible with RTI Connext Micro 2.4.3.

QoS Snippet that sets the **com.rti.dds.subscription.DataReaderQos** (p. 777) and **com.rti.dds.publication.Data↩ WriterQos** (p. 878) **com.rti.dds.infrastructure.LivelinessQosPolicyKind** (p. 1539) to com.rti.dds.infrastructure.↩ LivelinessQosPolicyKind.LivelinessQosPolicyKind.MANUAL_BY_TOPIC_LIVELINESS_QOS It also disables the built-in shared memory transport.

Modified QoS Parameters:

- **com.rti.dds.subscription.DataReaderQos** (p. 777) => **com.rti.dds.infrastructure.LivelinessQosPolicy** (p. 1535)
- **com.rti.dds.publication.DataWriterQos** (p. 878) => **com.rti.dds.infrastructure.LivelinessQosPolicy** (p. 1535)
- **com.rti.dds.infrastructure.TransportBuiltinQosPolicy** (p. 2152)

RTI Connext Micro versions 2.4.3 and earlier only supported com.rti.dds.infrastructure.LivelinessQosPolicyKind.↩ LivelinessQosPolicyKind.MANUAL_BY_TOPIC_LIVELINESS_QOS **com.rti.dds.infrastructure.LivelinessQos↩ PolicyKind** (p. 1539). In order to be compatible with RTI Connext Micro 2.4.3, the **com.rti.dds.subscription.↩ DataReader** (p. 707) and **com.rti.dds.publication.DataWriter** (p. 818) must have their **com.rti.dds.infrastructure.↩ LivelinessQosPolicyKind** (p. 1539) changed to this value because the default kind in RTI Connext is com.rti.dds.↩ infrastructure.LivelinessQosPolicyKind.LivelinessQosPolicyKind.AUTOMATIC_LIVELINESS_QOS.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Compatibility.ConnextMicro.Version243"

6.119.2.92 SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE

```
final String SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE  [static]
```

QoS Snippet that configures RTI Connext to interoperate with other DDS vendors.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Compatibility.OtherDDSVendor.Enable"

6.119.2.93 SNIPPET_5_1_0_TRANSPORT_ENABLE

```
final String SNIPPET_5_1_0_TRANSPORT_ENABLE  [static]
```

QoS Snippet that configures RTI Connext to interoperate with RTI Connext 5.1.0 and below for UDPv6 and SHMEM transports.

In Library: **com.rti.dds.infrastructure.BuiltinQosProfiles.BUILTIN_QOS_SNIPPET_LIB** (p. 441)

String-version: "Compatibility.510Transport.Enable"

6.120 Conditions and WaitSets

com.rti.dds.infrastructure.Condition (p. 686) and **com.rti.dds.infrastructure.WaitSet** (p. 2287) and related items.

Classes

- interface **Condition**

  *<<**interface**>> (p. 403) Root class for all the conditions that may be attached to a **com.rti.dds.infrastructure.WaitSet** (p. 2287).*
- class **ConditionSeq**

  *Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.infrastructure.↩ Condition** (p. 686) >*
- class **GuardCondition**

  *<<**interface**>> (p. 403) A specific **com.rti.dds.infrastructure.Condition** (p. 686) whose `trigger_value` is completely under the control of the application.*
- interface **StatusCondition**

  *<<**interface**>> (p. 403) A specific **com.rti.dds.infrastructure.Condition** (p. 686) that is associated with each **com.↩ rti.dds.infrastructure.Entity** (p. 1320).*
- class **WaitSet**

  *<<**interface**>> (p. 403) Allows an application to wait until one or more of the attached **com.rti.dds.infrastructure.↩ Condition** (p. 686) objects has a `trigger_value` of com.rti.dds.infrastructure.true or else until the timeout expires.*
- class **WaitSetProperty_t**

  *<<**extension**>> (p. 403) Specifies the **com.rti.dds.infrastructure.WaitSet** (p. 2287) behavior for multiple trigger events.*

6.120.1 Detailed Description

com.rti.dds.infrastructure.Condition (p. 686) and **com.rti.dds.infrastructure.WaitSet** (p. 2287) and related items.

6.121 DATABASE

<<***extension***>> *(p. 138)* Various threads and resource limits settings used by RTI Connext to control its internal database.

Classes

- class **DatabaseQosPolicy**

  <<***extension***>> *(p. 138) Various threads and resource limits settings used by RTI Connext to control its internal database.*

Variables

- static final **QosPolicyId_t DATABASE_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for **com.rti.dds.infrastructure.DatabaseQosPolicy** (p. 702)*

6.121.1 Detailed Description

<<***extension***>> *(p. 138)* Various threads and resource limits settings used by RTI Connext to control its internal database.

6.121.2 Variable Documentation

6.121.2.1 DATABASE_QOS_POLICY_ID

```
final  QosPolicyId_t DATABASE_QOS_POLICY_ID  [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.DatabaseQosPolicy** (p. 702)

6.122 DATA_READER_PROTOCOL

<<***extension***>> *(p. 138)* Specifies the DataReader-specific protocol QoS.

Classes

- class **DataReaderProtocolQosPolicy**

  *<<**extension**>> (p. 138) Along with **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299) and **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy** (p. 860), this QoS policy configures the DDS on-the-network protocol (RTPS).*

Variables

- static final **QosPolicyId_t DATAREADERPROTOCOL_QOS_POLICY_ID**

  *<<**extension**>> (p. 138) Identifier for **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy** (p. 761)*

6.122.1 Detailed Description

*<<**extension**>> (p. 138)* Specifies the DataReader-specific protocol QoS.

6.122.2 Variable Documentation

6.122.2.1 DATAREADERPROTOCOL_QOS_POLICY_ID

```
final  QosPolicyId_t DATAREADERPROTOCOL_QOS_POLICY_ID  [static]
```

*<<**extension**>> (p. 138)* Identifier for **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy** (p. 761)

6.123 DATA_READER_RESOURCE_LIMITS

*<<**extension**>> (p. 138)* Various settings that configure how DataReaders allocate and use physical memory for internal resources.

Classes

- class **DataReaderInstanceRemovalKind**

  *Sets the kinds of instances that can be replaced when instance resource limits (**com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896)) are reached.*
- class **DataReaderResourceLimitsInstanceReplacementSettings**

  Instance replacement kind applied to each instance state.
- class **DataReaderResourceLimitsQosPolicy**

  *<<**extension**>> (p. 138) Various settings that configure how a **com.rti.dds.subscription.DataReader** (p. 707) allocates and uses physical memory for internal resources.*

Variables

- static final int **AUTO_MAX_TOTAL_INSTANCES**

  <<***extension***>> *(p. 138) This value is used to make* ***com.rti.dds.infrastructure.DataReaderResourceLimitsQos↩ Policy.max_total_instances*** *(p. 799) equal to* ***com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances*** *(p. 1896).*
- static final **QosPolicyId_t DATAREADERRESOURCELIMITS_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for* ***com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy*** *(p. 789)*

6.123.1 Detailed Description

<<***extension***>> *(p. 138)* Various settings that configure how DataReaders allocate and use physical memory for internal resources.

6.123.2 Variable Documentation

6.123.2.1 AUTO_MAX_TOTAL_INSTANCES

```
final int AUTO_MAX_TOTAL_INSTANCES [static]
```

<<***extension***>> *(p. 138)* This value is used to make **com.rti.dds.infrastructure.DataReaderResourceLimits↩ QosPolicy.max_total_instances** (p. 799) equal to **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_↩ instances** (p. 1896).

6.123.2.2 DATAREADERRESOURCELIMITS_QOS_POLICY_ID

```
final QosPolicyId_t DATAREADERRESOURCELIMITS_QOS_POLICY_ID [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy** (p. 789)

6.124 DATA_REPRESENTATION

<<***spec***>> *(p. 132)* A list of data representations and compression methods supported by a **com.rti.dds.↩ publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707).

Classes

- class **DataRepresentationQosPolicy**

  <<***spec***>> *(p. 132) This QoS policy contains a list of representation identifiers and compression settings used by* ***com.rti.dds.publication.DataWriter*** *(p. 818) and* ***com.rti.dds.subscription.DataReader*** *(p. 707) entities to negotiate which data representation and compression settings to use.*

Variables

- static final short **XCDR_DATA_REPRESENTATION** = 0

  Corresponds to the Extended Common Data Representation encoding version 1.
- static final short **XML_DATA_REPRESENTATION** = 1

  Corresponds to the XML Data Representation (unsupported).
- static final short **XCDR2_DATA_REPRESENTATION** = 2

  Corresponds to the Extended Common Data Representation encoding version 2.
- static final short **AUTO_DATA_REPRESENTATION** = -1

  Representation is automatically chosen based on the type.
- static final **QosPolicyId_t DATA_REPRESENTATION_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.DataRepresentationQosPolicy*** *(p. 810)*

6.124.1 Detailed Description

<<***spec***>> *(p. 132)* A list of data representations and compression methods supported by a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707).

6.124.2 Variable Documentation

6.124.2.1 XCDR_DATA_REPRESENTATION

```
final short XCDR_DATA_REPRESENTATION = 0  [static]
```

Corresponds to the Extended Common Data Representation encoding version 1.

6.124.2.2 XML_DATA_REPRESENTATION

```
final short XML_DATA_REPRESENTATION = 1  [static]
```

Corresponds to the XML Data Representation (unsupported).

Note

This value is currently not supported.

6.124.2.3 XCDR2_DATA_REPRESENTATION

```
final short XCDR2_DATA_REPRESENTATION = 2  [static]
```

Corresponds to the Extended Common Data Representation encoding version 2.

6.124.2.4 AUTO_DATA_REPRESENTATION

```
final short AUTO_DATA_REPRESENTATION = -1  [static]
```

Representation is automatically chosen based on the type.

For plain language binding, if the allowed_data_representation annotation is not specified or if it contains the value XCDR, RTI Connext translates this field to **com.rti.dds.infrastructure.DataRepresentationQosPolicy.XCDR_DATA_REPRESENTATION** (p. 463). Otherwise, it translates this field to **com.rti.dds.infrastructure.DataRepresentationQosPolicy.XCDR2_DATA_REPRESENTATION** (p. 463).

For the **FlatData language binding** (p. 57), RTI Connext translates this field to **com.rti.dds.infrastructure.DataRepresentationQosPolicy.XCDR2_DATA_REPRESENTATION** (p. 463).

Referenced by **TypeCode.cdr_serialized_sample_key_max_size()**, **TypeCode.cdr_serialized_sample_max_size()**, **TypeCode.cdr_serialized_sample_min_size()**, **DynamicData.to_cdr_buffer()**, and **DynamicDataTypeSupport.to_cdr_buffer()**.

6.124.2.5 DATA_REPRESENTATION_QOS_POLICY_ID

```
final  QosPolicyId_t DATA_REPRESENTATION_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.DataRepresentationQosPolicy** (p. 810)

6.125 DATA_TAG

<<***spec***>> *(p. 132)* Stores (name, value) pairs that can be used to determine access permissions.

Classes

- class **DataTagQosPolicy**

  <<***spec***>> *(p. 132) Stores (name, value) pairs that can be used to determine access permissions.*
- class **DataTagQosPolicyHelper**

  Policy helpers that facilitate management of the data tags in the input policy.
- class **Tag**

  Tags are name/value pair objects.
- class **TagSeq**

  Declares IDL `sequence` *<* ***com.rti.dds.infrastructure.Tag*** *(p. 2092) >*

Variables

- static final **QosPolicyId_t DATATAG_QOS_POLICY_ID**

  *Identifier for **com.rti.dds.infrastructure.DataTagQosPolicy** (p. 813).*

6.125.1 Detailed Description

<<***spec***>> *(p. 132)* Stores (name, value) pairs that can be used to determine access permissions.

The **com.rti.dds.infrastructure.DataTagQosPolicy** (p. 813) can be used to associate a set of tags in the form of (name, value) pairs with a **com.rti.dds.subscription.DataReader** (p. 707) or **com.rti.dds.publication.DataWriter** (p. 818). This is similar to the **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739), except you cannot select whether or not a particular pair should be propagated (included in the built-in topic). Data tags are always propagated. The Access Control plugin may use the tags to determine publish and subscribe permissions.

6.125.2 Variable Documentation

6.125.2.1 DATATAG_QOS_POLICY_ID

```
final QosPolicyId_t DATATAG_QOS_POLICY_ID [static]
```

Identifier for **com.rti.dds.infrastructure.DataTagQosPolicy** (p. 813).

6.126 DATA_WRITER_PROTOCOL

<<***extension***>> *(p. 138)* Along with **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299) and **com.rti.↩ dds.infrastructure.DataReaderProtocolQosPolicy** (p. 761), this QoS policy configures the DDS on-the-network protocol (RTPS).

Classes

- class **DataWriterProtocolQosPolicy**

  <<***extension***>> *(p. 138) Protocol that applies only to **com.rti.dds.publication.DataWriter** (p. 818) instances.*

Variables

- static final **QosPolicyId_t DATAWRITERPROTOCOL_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy** (p. 860)*

6.126.1 Detailed Description

<<***extension***>> *(*p. *138)* Along with **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299) and **com.rti.↩ dds.infrastructure.DataReaderProtocolQosPolicy** (p. 761), this QoS policy configures the DDS on-the-network protocol (RTPS).

6.126.2 Variable Documentation

6.126.2.1 DATAWRITERPROTOCOL_QOS_POLICY_ID

```
final  QosPolicyId_t DATAWRITERPROTOCOL_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy** (p. 860)

6.127 DATA_WRITER_RESOURCE_LIMITS

<<***extension***>> *(*p. *138)* Various settings that configure how a **com.rti.dds.publication.DataWriter** (p. 818) allocates and uses physical memory for internal resources.

Classes

- class **DataWriterResourceLimitsInstanceReplacementKind**

  Sets the kinds of instances that can be replaced when instance resource limits are reached.
- class **DataWriterResourceLimitsQosPolicy**

  <<***extension***>> *(*p. *138) Various settings that configure how a* ***com.rti.dds.publication.DataWriter*** *(*p. *818) allocates and uses physical memory for internal resources.*

6.129.2.1 DESTINATIONORDER_QOS_POLICY_ID

```
final  QosPolicyId_t DESTINATIONORDER_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.DestinationOrderQosPolicy** (p. 903)

6.130 DISCOVERY_CONFIG

<<***extension***>> *(p. 138)* Specifies the discovery configuration QoS.

Classes

- class **BuiltinTopicReaderResourceLimits_t**

  *<<**extension**>> (p. 138) Built-in topic reader's resource limits.*
- class **DiscoveryConfigBuiltinChannelKind**

  Built-in channels that can be enabled.
- class **DiscoveryConfigBuiltinPluginKind**

  Built-in discovery plugins that can be used.
- class **DiscoveryConfigQosPolicy**

  Settings for discovery configuration.
- class **RemoteParticipantPurgeKind**

  Available behaviors for halting communication with remote participants (and their contained entities) with which discovery communication has been lost.

Variables

- static final int **MASK_NONE**

  *No bits are set, indicating that all channels that can be disabled, are disabled. Not all builtin channels can be disabled by the user. Only builtin channels represented by **com.rti.dds.infrastructure.DiscoveryConfigBuiltinChannelKind** (p. 911) are able to be enabled or disabled by the user.*
- static final int **MASK_ALL**

  All bits are set, indicating that all channels are enabled.
- static final int **MASK_DEFAULT**

  *The default value of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.enabled_builtin_channels** (p. 928).*
- static final int **MASK_NONE**

  No bits are set.
- static final int **MASK_DEFAULT**

  *The default value of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.builtin_discovery_plugins** (p. 927).*
- static final **QosPolicyId_t DISCOVERYCONFIG_QOS_POLICY_ID**

  *<<**extension**>> (p. 138) Identifier for **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy** (p. 915)*

6.130.1 Detailed Description

*<<**extension**>> (p. 138)* Specifies the discovery configuration QoS.

6.130.2 Variable Documentation

6.130.2.1 MASK_NONE [1/2]

```
final int MASK_NONE  [static]
```

No bits are set, indicating that all channels that can be disabled, are disabled. Not all builtin channels can be disabled by the user. Only builtin channels represented by **com.rti.dds.infrastructure.DiscoveryConfigBuiltinChannelKind** (p. 911) are able to be enabled or disabled by the user.

6.130.2.2 MASK_ALL

```
final int MASK_ALL  [static]
```

All bits are set, indicating that all channels are enabled.

6.130.2.3 MASK_DEFAULT [1/2]

```
final int MASK_DEFAULT  [static]
```

The default value of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.enabled_builtin_channels** (p. 928).

6.130.2.4 MASK_NONE [2/2]

```
final int MASK_NONE  [static]
```

No bits are set.

6.130.2.5 MASK_DEFAULT [2/2]

```
final int MASK_DEFAULT  [static]
```

The default value of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.builtin_discovery_plugins** (p. 927).

6.130.2.6 DISCOVERYCONFIG_QOS_POLICY_ID

```
final  QosPolicyId_t DISCOVERYCONFIG_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy** (p. 915)

6.131 DISCOVERY

<<***extension***>> *(*p. *138)* Specifies the attributes required to discover participants in the domain.

Modules

- **NDDS_DISCOVERY_PEERS**

  *Environment variable or a file that specifies the default values of **com.rti.dds.infrastructure.DiscoveryQosPolicy.initial_peers** (p. 945) and **com.rti.dds.infrastructure.DiscoveryQosPolicy.multicast_receive_addresses** (p. 944) contained in the **com.rti.dds.domain.DomainParticipantQos.discovery** (p. 1078) qos policy.*

Classes

- class **DiscoveryQosPolicy**

  *<<**extension**>> (p. 138) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications.*

Variables

- static final **QosPolicyId_t DISCOVERY_QOS_POLICY_ID**

  *<<**extension**>> (p. 138) Identifier for **com.rti.dds.infrastructure.DiscoveryQosPolicy** (p. 943)*

6.131.1 Detailed Description

*<<**extension**>> (p. 138)* Specifies the attributes required to discover participants in the domain.

6.131.2 Variable Documentation

6.131.2.1 DISCOVERY_QOS_POLICY_ID

```
final  QosPolicyId_t DISCOVERY_QOS_POLICY_ID  [static]
```

*<<**extension**>> (p. 138)* Identifier for **com.rti.dds.infrastructure.DiscoveryQosPolicy** (p. 943)

6.132 NDDS_DISCOVERY_PEERS

Environment variable or a file that specifies the default values of **com.rti.dds.infrastructure.DiscoveryQosPolicy.↩ initial_peers** (p. 945) and **com.rti.dds.infrastructure.DiscoveryQosPolicy.multicast_receive_addresses** (p. 944) contained in the **com.rti.dds.domain.DomainParticipantQos.discovery** (p. 1078) qos policy.

Environment variable or a file that specifies the default values of **com.rti.dds.infrastructure.DiscoveryQosPolicy.↩ initial_peers** (p. 945) and **com.rti.dds.infrastructure.DiscoveryQosPolicy.multicast_receive_addresses** (p. 944) contained in the **com.rti.dds.domain.DomainParticipantQos.discovery** (p. 1078) qos policy.

The default value of the **com.rti.dds.domain.DomainParticipantQos** (p. 1073) is obtained by calling **com.rti.dds.↩ domain.DomainParticipantFactory.get_default_participant_qos()** (p. 1045).

NDDS_DISCOVERY_PEERS specifies the default value of the **com.rti.dds.infrastructure.DiscoveryQosPolicy.↩ initial_peers** (p. 945) and **com.rti.dds.infrastructure.DiscoveryQosPolicy.multicast_receive_addresses** (p. 944) fields, when the default participant QoS policies have not been explictly set by the user (i.e., **com.rti.dds.domain.↩ DomainParticipantFactory.set_default_participant_qos()** (p. 1046) has never been called or was called using **com.↩ rti.dds.domain.DomainParticipantFactory.PARTICIPANT_QOS_DEFAULT** (p. 44)).

If NDDS_DISCOVERY_PEERS does *not* contain a multicast address, then the string sequence **com.rti.dds.↩ infrastructure.DiscoveryQosPolicy.multicast_receive_addresses** (p. 944) is cleared and the RTI discovery process will not listen for discovery messages via multicast.

If NDDS_DISCOVERY_PEERS contains one or more multicast addresses, the addresses will be stored in **com.rti.↩ dds.infrastructure.DiscoveryQosPolicy.multicast_receive_addresses** (p. 944), starting at element 0. They will be stored in the order in which they appear in NDDS_DISCOVERY_PEERS.

Note: IPv4 multicast addresses must have a prefix. Therefore, when using the UDPv6 transport: if there are any IPv4 multicast addresses in the peers list, make sure they have "udpv4://" in front of them (such as udpv4://239.255.0.1).

Note: Currently, RTI Connext will only listen for discovery traffic on the first multicast address (element 0) in **com.rti.↩ dds.infrastructure.DiscoveryQosPolicy.multicast_receive_addresses** (p. 944).

NDDS_DISCOVERY_PEERS provides a mechanism to dynamically switch the discovery configuration of an RTI Connext application without recompilation. The application programmer is free to not use the default values; instead use values supplied by other means.

NDDS_DISCOVERY_PEERS can be specified either in an environment variable as comma (',') separated "peer descriptors" (see **Peer Descriptor Format** (p. 473)) or in a file. These formats are described below.

6.132.1 Peer Descriptor Format

A **peer descriptor** string specifies a range of participants at a given `locator`. Peer descriptor strings are used in the **com.rti.dds.infrastructure.DiscoveryQosPolicy.initial_peers** (p. 945) field and the **com.rti.dds.domain.DomainParticipant.add_peer()** (p. 1007) operation.

The anatomy of a `peer` descriptor is illustrated below using a UDPv4 transport and a custom "StarFabric" transport example.

A peer descriptor consists of:

optional **Participant ID Limit**. If a simple integer is specified, it indicates the maximum participant ID to be contacted by the RTI Connext discovery mechanism at the given locator. If that integer is enclosed in square brackets (e.g.: [2]) *only* that Participant ID will be used. You can also specify a range in the form of [a-b]: in this case only the Participant IDs in that specific range are contacted. If omitted, a default value of 4 is implied: participant IDs 0,1,2,3, and 4 will be contacted.

- **Locator**. See **Locator Format** (p. 473).

These are separated by the '@' character. The separator may be omitted if a participant ID limit is not explictly specified.

Note that the "participant ID limit" only applies to unicast locators; it is ignored for multicast locators (and therefore should be omitted for multicast peer descriptors).

6.132.1.1 Locator Format

A **locator** string specifies a transport and an address in string format. Locators are used to form peer descriptors. A locator is equivalent to a peer descriptor with the default maximum participant ID.

A locator consists of:

optional **Transport name** (**alias** or class). This identifies the set of transport plugins (**Transport Aliases** (p. 98)) that may be used to parse the `address` portion of the locator. Note that a transport class name is an implicit alias that is used to refer to all the transport plugin instances of that class.

optional **Address**. See **Address Format** (p. 474).

These are separated by the "//:" string. The separator is specified if and only if a transport name is specified.

If a transport name is specified, the address may be omitted; in that case, all the unicast addresses (across all transport plugin instances) associated with the transport class are implied. Thus, a locator string may specify several addresses.

If an address is specified, the transport name and the separator string may be omitted; in that case all the available transport plugins (for the **com.rti.dds.infrastructure.Entity** (p. 1320)) may be used to parse the address string.

6.132.1.2 Address Format

An **address** string specifies a transport-independent network address that qualifies a **transport-dependent** address string. Addresses are used to form locators. Addresses are also used in **com.rti.dds.infrastructure.Discovery↩ QosPolicy.multicast_receive_addresses** (p. 944), and **com.rti.dds.infrastructure.TransportMulticastSettings_t.↩ receive_address** (p. 2167) fields. An address is equivalent to a locator in which the transport name and separator are omitted.

An address consists of:

optional **Network Address**. An address in IPv4 or IPv6 string notation. If omitted, the network address of the transport is implied (**Transport Network Address** (p. 102)).

optional **Transport Address**. A string that is passed to the transport for processing. The transport maps this string into **com.rti.ndds.transport.Transport.Property_t.address_bit_count** (p. 1703) bits. If omitted the network address is used as the fully qualified address.

These are separated by the '#' character. If a separator is specified, it must be followed by a non-empty string which is passed to the transport plugin. If the separator is omitted, it is treated as a transport address with an implicit network address (of the transport plugin). The implicit network address is the address used when registering the transport: e.g, the UDPv4 implicit network address is 0.0.0.0.0.0.0.0.0.0.0.0.

The bits resulting from the transport address string are combined with the network address. The least or most significant **com.rti.ndds.transport.Transport.Property_t.address_bit_count** (p. 1703) bits of the network address are ignored and replaced with the transport address. The sign of the **com.rti.ndds.transport.Transport.Property_t.address_↩ bit_count** (p. 1703) value determines whether the most significant bits (negative sign) or least significant bits (positive sign) are ignored (**Transport Network Address** (p. 102)).

You can use a hostname instead of a transport address. If a hostname is used, the transport will attempt to resolve the hostname upon enabling the DomainParticipant. Changes to the hostname resolution will only be detected if the DNS tracker is enabled (it is enabled by default); see `Using DNS Tracker to Keep Peer List Updated`, in the Core Libraries User's Manual. For example:

```
<domain_participant_qos>
    <discovery>
        <initial_peers>
            <element>udpv4://myhostname</element>
        </initial_peers>
    </discovery>
</domain_participant_qos>
```

In this example, the DomainParticipant will attempt to resolve "myhostname" using the UDPv4 transport.

6.132.2 NDDS_DISCOVERY_PEERS Environment Variable Format

NDDS_DISCOVERY_PEERS can be specified via an environment variable of the same name, consisting of a sequence of peer descriptors separated by the comma (',') character.

Examples

Multicast (maximum participant ID is irrelevant)

- 239.255.0.1

Default maximum participant ID on localhost

- localhost

Default maximum participant ID on host 192.168.1.1 (IPv4)

- 192.168.1.1

Default maximum participant ID on host FAA0::0 (IPv6)

- FAA0::1

Default maximum participant ID on host himalaya accessed using the "udpv4" transport plugin(s) (IPv4)

- udpv4://himalaya

Default maximum participant ID on localhost using the "udpv4" transport plugin(s) registered at network address FAA0::0

- udpv4://FAA0::0#localhost

Default maximum participant ID on host 0/0/R (StarFabric)

- 0/0/R
- #0/0/R

Default maximum participant ID on host 0/0/R (StarFabric) using the "starfabric" (StarFabric) transport plugin(s)

- starfabric://0/0/R
- starfabric://#0/0/R

Default maximum participant ID on host 0/0/R (StarFabric) using the "starfabric" (StarFabric) transport plugin(s) registered at network address FAA0::0

- starfabric://FBB0::0#0/0/R

Default maximum participant ID on all unicast addresses accessed via the "starfabric" (StarFabric) transport plugin(s)

- starfabric://

Default maximum participant ID on all unicast addresses accessed via the "shmem" (shared memory) transport plugin(s) registered at network address FCC0::0

- shmem://FCC0::0

Default maximum participant ID on hosts himalaya and gangotri

- himalaya,gangotri

Maximum participant ID of 1 on hosts himalaya and gangotri

- 1@himalaya,1@gangotri

Combinations of above

- 239.255.0.1,localhost,192.168.1.1,0/0/R
- FAA0::1,FAA0::0#localhost,FBB0::0#0/0/R
- udpv4://himalaya,udpv4://FAA0::0#localhost,#0/0/R
- starfabric://0/0/R,starfabric://FBB0::0#0/0/R,shmem://
- starfabric://,shmem://FCC0::0,1@himalaya,1@gangotri

6.132.3 NDDS_DISCOVERY_PEERS File Format

NDDS_DISCOVERY_PEERS can be specified via a file of the same name in the program's current working directory. A NDDS_DISCOVERY_PEERS file would contain a sequence of peer descriptors separated by whitespace or the comma (',') character. The file may also contain comments starting with a semicolon (';') character till the end of the line.

Example:

```
;; NDDS_DISCOVERY_PEERS - Discovery Configuration File
;;
;;
;; NOTE:
;;   1. This file must be in the current working directory, i.e.
;;      in the folder from which the application is launched.
;;
;;   2. This file takes precedence over the environment variable NDDS_DISCOVERY_PEERS
;;
;; Multicast
239.255.0.1                 ; The default dds discovery multicast address
;; Unicast
localhost,192.168.1.1       ; A comma can be used a separator
FAA0::1  FAA0::0#localhost  ; Whitespace can be used as a separator
1@himalaya                  ; Maximum participant ID of 1 on 'himalaya'
1@gangotri
;; UDPv4
udpv4://himalaya            ; 'himalaya' via 'udpv4' transport plugin(s)
udpv4://FAA0::0#localhost   ; 'localhost' via 'updv4' transport
                            ;  plugin registered at network address FAA0::0
;; Shared Memory
shmem://                    ; All 'shmem' transport plugin(s)
builtin.shmem://            ; The builtin 'shmem' transport plugin
shmem://FCC0::0             ; Shared memory transport plugin registered
                            ;                at network address FCC0::0
;; StarFabric
0/0/R                       ; StarFabric node 0/0/R
starfabric://0/0/R          ; 0/0/R accessed via 'starfabric'
                            ;             transport plugin(s)
starfabric://FBB0::0#0/0/R  ; StarFabric transport plugin registered
                            ;             at network address FBB0::0
starfabric://               ; All 'starfabric' transport plugin(s)
```

6.132.4 NDDS_DISCOVERY_PEERS Precedence

If the current working directory from which the RTI Connext application is launched contains a file called NDDS_↩ DISCOVERY_PEERS, and an environment variable named NDDS_DISCOVERY_PEERS is also defined, the file takes precedence; the environment variable is ignored.

6.132.5 NDDS_DISCOVERY_PEERS Default Value

If NDDS_DISCOVERY_PEERS is not specified (either as a file in the current working directory, or as an environment variable), it implicitly defaults to the following.

```
;; Multicast (only on platforms which allow UDPv4 multicast out of the box)
;;
;; This allows any dds applications anywhere on the local network to
;; discover each other over UDPv4.
builtin.udpv4://239.255.0.1  ; dds's default discovery multicast address
                             ; This is also the default multicast receive address
;; Unicast - UDPv4 (on all platforms)
;;
;; This allows two dds applications using participant IDs up to the maximum
;; default participant ID on the local host and domain to discover each
;; other over UDP/IPv4.
builtin.udpv4://127.0.0.1
;; Unicast - Shared Memory (only on platforms that support shared memory)
;;
;; This allows two dds applications using participant IDs up to the maximum
;; default participant ID on the local host and domain to discover each
;; other over shared memory.
builtin.shmem://
```

6.132.6 Builtin Transport Class Names

The class names for the builtin transport plugins are:

- `shmem` - **com.rti.ndds.transport.ShmemTransport** (p. 1990)
- `udpv4` - **com.rti.ndds.transport.UDPv4Transport** (p. 2255)
- `udpv6` - **com.rti.ndds.transport.UDPv6Transport** (p. 2265)

These may be used as the transport names in the **Locator Format** (p. 473).

6.132.7 NDDS_DISCOVERY_PEERS and Local Host Communication

Suppose you want to communicate with other RTI Connext applications on the same host and you are setting NDDS↩ _DISCOVERY_PEERS explicitly (generally in order to use unicast discovery with applications on other hosts).

If the local host platform does not support the shared memory transport, then you can include the name of the local host in the NDDS_DISCOVERY_PEERS list.

If the local host platform supports the shared memory transport, then you can do one of the following:

- Include "shmem://" in the NDDS_DISCOVERY_PEERS list. This will cause shared memory to be used for discovery and data traffic for applications on the same host.

or:

- Include the name of the local host in the NDDS_DISCOVERY_PEERS list and disable the shared memory transport in the **com.rti.dds.infrastructure.TransportBuiltinQosPolicy** (p. 2152) of the **com.rti.dds.domain.↩ DomainParticipant** (p. 948). This will cause UDP loopback to be used for discovery and data traffic for applications on the same host.

(To check if your platform supports shared memory, see the `Platform Notes`.)

6.133 DOMAIN_PARTICIPANT_RESOURCE_LIMITS

<<***extension***>> *(p. 138)* Various settings that configure how a **com.rti.dds.domain.DomainParticipant** (p. 948) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

Classes

- class **AllocationSettings_t**

  Resource allocation settings.
- class **DomainParticipantResourceLimitsIgnoredEntityReplacementKind**

  Available replacement policies for the ignored entities.
- class **DomainParticipantResourceLimitsQosPolicy**

  <<***extension***>> *(p. 138) Various settings that configure how a **com.rti.dds.domain.DomainParticipant** (p. 948) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.*

Variables

- static final **DomainParticipantResourceLimitsIgnoredEntityReplacementKind NO_REPLACEMENT_IGNORED_ENTITY_REPLACEMENT** = new **DomainParticipantResourceLimitsIgnoredEntityReplacementKind**("NO_REPLACEMENT_IGNORED_ENTITY_REPLACEMENT", 0)

  Available replacement policies for the ignored entities.
- static final **DomainParticipantResourceLimitsIgnoredEntityReplacementKind NOT_ALIVE_FIRST_IGNORED_ENTITY_REPLACEMENT** = new **DomainParticipantResourceLimitsIgnoredEntityReplacementKind**("NOT_ALIVE_FIRST_IGNORED_ENTITY_REPLACEMENT", 1)

  Available replacement policies for the ignored entities.
- static final **QosPolicyId_t DOMAINPARTICIPANTRESOURCELIMITS_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for* ***com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy*** *(p. 1081)*

6.133.1 Detailed Description

<<***extension***>> *(p. 138)* Various settings that configure how a **com.rti.dds.domain.DomainParticipant** (p. 948) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.

6.133.2 Variable Documentation

6.133.2.1 NO_REPLACEMENT_IGNORED_ENTITY_REPLACEMENT

```
final DomainParticipantResourceLimitsIgnoredEntityReplacementKind NO_REPLACEMENT_IGNORED_ENTITY_REPLACEMENT = new DomainParticipantResourceLimitsIgnoredEntityReplacementKind("NO_REPLACEMENT_IGNORED_ENTITY_REPLACEMENT", 0) [static]
```

Available replacement policies for the ignored entities.

QoS:

com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy.NO_REPLACEMENT_IGNORED_ENTITY_REPLACEMENT

6.133.2.2 NOT_ALIVE_FIRST_IGNORED_ENTITY_REPLACEMENT

```
final DomainParticipantResourceLimitsIgnoredEntityReplacementKind NOT_ALIVE_FIRST_IGNORED_ENTITY_REPLACEMENT = new DomainParticipantResourceLimitsIgnoredEntityReplacementKind("NOT_ALIVE_FIRST_IGNORED_ENTITY_REPLACEMENT", 1) [static]
```

Available replacement policies for the ignored entities.

QoS:

com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy.NOT_ALIVE_FIRST_IGNORED_ENTITY_REPLACEMENT

6.133.2.3 DOMAINPARTICIPANTRESOURCELIMITS_QOS_POLICY_ID

```
final QosPolicyId_t DOMAINPARTICIPANTRESOURCELIMITS_QOS_POLICY_ID [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy** (p. 1081)

6.134 DURABILITY

<<***spec***>> *(p. 132)* This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **com.rti.dds.subscription.DataReader** (p. 707) entities that join the network later.

Classes

- class **DurabilityQosPolicy**

  <<***spec***>> *(p. 132) This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **com.rti.dds.subscription.DataReader** (p. 707) entities that join the network later.*
- class **DurabilityQosPolicyKind**

  Kinds of durability.
- class **PersistentJournalKind**

  Sets the journal mode of the persistent storage.
- class **PersistentStorageSettings**

  Configures durable writer history and durable reader state.

Variables

- static final int **AUTO_WRITER_DEPTH**

  *A special value used as the default value for **com.rti.dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119).*
- static final **QosPolicyId_t** **DURABILITY_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)*

6.134.1 Detailed Description

<<***spec***>> *(p. 132)* This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **com.rti.dds.subscription.DataReader** (p. 707) entities that join the network later.

6.134.2 Variable Documentation

6.134.2.1 AUTO_WRITER_DEPTH

```
final int AUTO_WRITER_DEPTH  [static]
```

A special value used as the default value for **com.rti.dds.infrastructure.DurabilityQosPolicy.writer_depth** (p. 1119).

This values resolves to the following:

- **com.rti.dds.infrastructure.HistoryQosPolicy.depth** (p. 1438) if the history kind is com.rti.dds.infrastructure.↩ HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_QOS.
- **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_samples_per_instance** (p. 1897) in the **com.↩ rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894) if the history kind is com.rti.dds.infrastructure.↩ HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_ALL_HISTORY_QOS.

6.134.2.2 DURABILITY_QOS_POLICY_ID

```
final  QosPolicyId_t DURABILITY_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116)

6.135 DURABILITY_SERVICE

<<***spec***>> *(p. 132)* Various settings to configure the external *RTI Persistence Service* used by RTI Connext for DataWriters with a **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116) setting of com.rti.dds.infrastructure.↩ DurabilityQosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_DURABILITY_QOS or com.rti.dds.infrastructure.↩ DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT_DURABILITY_QOS.

Classes

- class **DurabilityServiceQosPolicy**

  <<***spec***>> *(p. 132) Various settings to configure the external RTI Persistence Service used by RTI Connext for Data↩ Writers with a **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116) setting of com.rti.dds.infrastructure.Durability↩ QosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_DURABILITY_QOS or com.rti.dds.infrastructure.DurabilityQos↩ PolicyKind.DurabilityQosPolicyKind.TRANSIENT_DURABILITY_QOS.*

Variables

- static final **QosPolicyId_t DURABILITY_SERVICE_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for **com.rti.dds.infrastructure.DurabilityServiceQosPolicy** (p. 1123)*

6.135.1 Detailed Description

<<***spec***>> *(p. 132)* Various settings to configure the external *RTI Persistence Service* used by RTI Connext for DataWriters with a **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116) setting of com.rti.dds.infrastructure.↩ DurabilityQosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_DURABILITY_QOS or com.rti.dds.infrastructure.↩ DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT_DURABILITY_QOS.

6.135.2 Variable Documentation

6.135.2.1 DURABILITY_SERVICE_QOS_POLICY_ID

```
final  QosPolicyId_t DURABILITY_SERVICE_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.DurabilityServiceQosPolicy** (p. 1123)

6.136 Time Support

Time and duration types and defines.

Classes

- class **Duration_t**

  Type for duration representation.
- class **Time_t**

  Type for time representation.

6.136.1 Detailed Description

Time and duration types and defines.

6.137 Entity Support

com.rti.dds.infrastructure.Entity (p. 1320), **com.rti.dds.infrastructure.Listener** (p. 1528) and related items.

Classes

- interface **DomainEntity**

  *<<**interface**>> (p. 403) Abstract base class for all DDS entities except for the **com.rti.dds.domain.DomainParticipant** (p. 948).*
- interface **Entity**

  *<<**interface**>> (p. 403) Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition.*
- interface **Listener**

  *<<**interface**>> (p. 403) Abstract base class for all **Listener** (p. 1528) interfaces.*

6.137.1 Detailed Description

com.rti.dds.infrastructure.Entity (p. 1320), **com.rti.dds.infrastructure.Listener** (p. 1528) and related items.

com.rti.dds.infrastructure.Entity (p. 1320) subtypes are created and destroyed by factory objects. With the exception of **com.rti.dds.domain.DomainParticipant** (p. 948), whose factory is **com.rti.dds.domain.DomainParticipant↩ Factory** (p. 1039), all **com.rti.dds.infrastructure.Entity** (p. 1320) factory objects are themselves **com.rti.dds.↩ infrastructure.Entity** (p. 1320) subtypes as well.

Important: all **com.rti.dds.infrastructure.Entity** (p. 1320) delete operations are inherently thread-unsafe. The user must take extreme care that a given **com.rti.dds.infrastructure.Entity** (p. 1320) is not destroyed in one thread while being used concurrently (including being deleted concurrently) in another thread. An operation's effect in the presence of the concurrent deletion of the operation's target **com.rti.dds.infrastructure.Entity** (p. 1320) is undefined.

6.138 ENTITY_FACTORY

*<<**spec**>> (p. 132)* A QoS policy for all **com.rti.dds.infrastructure.Entity** (p. 1320) types that can act as factories for one or more other **com.rti.dds.infrastructure.Entity** (p. 1320) types.

Classes

- class **EntityFactoryQosPolicy**

  *<<**spec**>> (p. 132) A QoS policy for all **com.rti.dds.infrastructure.Entity** (p. 1320) types that can act as factories for one or more other **com.rti.dds.infrastructure.Entity** (p. 1320) types.*

Variables

- static final **QosPolicyId_t ENTITYFACTORY_QOS_POLICY_ID**

  *<<**spec**>> (p. 132) Identifier for **com.rti.dds.infrastructure.EntityFactoryQosPolicy** (p. 1326)*

6.138.1 Detailed Description

*<<**spec**>> (p. 132)* A QoS policy for all **com.rti.dds.infrastructure.Entity** (p. 1320) types that can act as factories for one or more other **com.rti.dds.infrastructure.Entity** (p. 1320) types.

6.138.2 Variable Documentation

6.138.2.1 ENTITYFACTORY_QOS_POLICY_ID

```
final QosPolicyId_t ENTITYFACTORY_QOS_POLICY_ID [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.EntityFactoryQosPolicy** (p. 1326)

6.139 ENTITY_NAME

<<***extension***>> *(p. 138)* Assigns a name to a **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707). Except for **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.

Classes

- class **EntityNameQosPolicy**

  <<***extension***>> *(p. 138) Assigns a name and a role name to a **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707). Except for **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system.*

6.139.1 Detailed Description

<<***extension***>> *(p. 138)* Assigns a name to a **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707). Except for **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.

6.140 EVENT

<<***extension***>> *(p. 138)* Configures the internal thread in a DomainParticipant that handles timed events.

Classes

- class **EventQosPolicy**

  <<***extension***>> *(p. 138) Settings for event.*

Variables

- static final **QosPolicyId_t EVENT_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for* ***com.rti.dds.infrastructure.EventQosPolicy*** *(p. 1335)*

6.140.1 Detailed Description

<<***extension***>> *(p. 138)* Configures the internal thread in a DomainParticipant that handles timed events.

6.140.2 Variable Documentation

6.140.2.1 EVENT_QOS_POLICY_ID

```
final  QosPolicyId_t EVENT_QOS_POLICY_ID  [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.EventQosPolicy** (p. 1335)

6.141 GROUP_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.

Classes

- class **GroupDataQosPolicy**

  Attaches a buffer of opaque data that is distributed by means of ***Built-in Topics*** *(p. 53) during discovery.*

Variables

- static final **QosPolicyId_t GROUPDATA_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.GroupDataQosPolicy*** *(p. 1419)*

6.141.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.

6.141.2 Variable Documentation

6.141.2.1 GROUPDATA_QOS_POLICY_ID

```
final  QosPolicyId_t GROUPDATA_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.GroupDataQosPolicy** (p. 1419)

6.142 GUID Support

<<***extension***>> *(p. 403)* GUID type and defines.

Classes

- class **GUID_t**

  Type for GUID (Global Unique Identifier) representation.

6.142.1 Detailed Description

<<***extension***>> *(p. 403)* GUID type and defines.

6.143 HISTORY

<<***spec***>> *(p. 132)* Specifies the behavior of RTI Connext in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

Classes

- class **HistoryQosPolicy**

  <<***spec***>> *(p. 132) Specifies the behavior of RTI Connext in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers.*
- class **HistoryQosPolicyKind**

  Kinds of history.

Variables

- static final **QosPolicyId_t HISTORY_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435)*

6.143.1 Detailed Description

<<***spec***>> *(p. 132)* Specifies the behavior of RTI Connext in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.

6.143.2 Variable Documentation

6.143.2.1 HISTORY_QOS_POLICY_ID

```
final QosPolicyId_t HISTORY_QOS_POLICY_ID [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435)

6.144 LATENCY_BUDGET

<<***spec***>> *(p. 132)* Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

Classes

- class **LatencyBudgetQosPolicy**

  <<***spec***>> *(p. 132) Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.*

Variables

- static final **QosPolicyId_t LATENCYBUDGET_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for **com.rti.dds.infrastructure.LatencyBudgetQosPolicy** (p. 1523)*

6.144.1 Detailed Description

<<***spec***>> *(p. 132)* Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.

6.144.2 Variable Documentation

6.144.2.1 LATENCYBUDGET_QOS_POLICY_ID

```
final QosPolicyId_t LATENCYBUDGET_QOS_POLICY_ID [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.LatencyBudgetQosPolicy** (p. 1523)

6.145 LIFESPAN

<<***spec***>> *(p. 132)* Specifies how long the data written by the **com.rti.dds.publication.DataWriter** (p. 818) is considered valid.

Classes

- class **LifespanQosPolicy**

  <<***spec***>> (p. *132) Specifies how long the data written by the **com.rti.dds.publication.DataWriter** (p. 818) is considered valid.*

Variables

- static final **QosPolicyId_t LIFESPAN_QOS_POLICY_ID**

  <<***spec***>> (p. *132) Identifier for **com.rti.dds.infrastructure.LifespanQosPolicy** (p. 1526)*

6.145.1 Detailed Description

<<***spec***>> *(p. 132)* Specifies how long the data written by the **com.rti.dds.publication.DataWriter** (p. 818) is considered valid.

6.145.2 Variable Documentation

6.145.2.1 LIFESPAN_QOS_POLICY_ID

```
final  QosPolicyId_t LIFESPAN_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.LifespanQosPolicy** (p. 1526)

6.146 LIVELINESS

<<***spec***>> *(p. 132)* Specifies and configures the mechanism that allows **com.rti.dds.subscription.DataReader** (p. 707) entities to detect when **com.rti.dds.publication.DataWriter** (p. 818) entities become disconnected or "dead."

Classes

- class **LivelinessQosPolicy**

  *Specifies and configures the mechanism that allows **com.rti.dds.subscription.DataReader** (p. 707) entities to detect when **com.rti.dds.publication.DataWriter** (p. 818) entities become disconnected or "dead.".*
- class **LivelinessQosPolicyKind**

  Kinds of liveliness.

Variables

- static final **QosPolicyId_t LIVELINESS_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.LivelinessQosPolicy*** *(p. 1535)*

6.146.1 Detailed Description

<<***spec***>> *(p. 132)* Specifies and configures the mechanism that allows **com.rti.dds.subscription.DataReader** (p. 707) entities to detect when **com.rti.dds.publication.DataWriter** (p. 818) entities become disconnected or "dead."

6.146.2 Variable Documentation

6.146.2.1 LIVELINESS_QOS_POLICY_ID

```
final  QosPolicyId_t LIVELINESS_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.LivelinessQosPolicy** (p. 1535)

6.147 LOCATORFILTER

<<***extension***>> *(p. 138)* The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753).

Classes

- class **LocatorFilter_t**

  <<***extension***>> *(p. 138) Specifies the configuration of an individual channel within a MultiChannel DataWriter.*
- class **LocatorFilterQosPolicy**

  <<***extension***>> *(p. 138) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of* ***com.rti.dds.publication.builtin.PublicationBuiltinTopicData*** *(p. 1753).*
- class **LocatorFilterSeq**

  Declares IDL `sequence<` ***com.rti.dds.infrastructure.LocatorFilter_t*** *(p. 1551)* `>`.

Variables

- static final **QosPolicyId_t LOCATORFILTER_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for* ***com.rti.dds.infrastructure.LocatorFilterQosPolicy*** *(p. 1553)*

6.147.1 Detailed Description

<<***extension***>> *(*p. *138)* The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753).

6.147.2 Variable Documentation

6.147.2.1 LOCATORFILTER_QOS_POLICY_ID

```
final  QosPolicyId_t LOCATORFILTER_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.LocatorFilterQosPolicy** (p. 1553)

6.148 LOGGING

<<***extension***>> *(*p. *138)* Configures the RTI Connext logging facility.

Classes

- class **LoggingQosPolicy**
  <<***extension***>> *(*p. *138) Configures the RTI Connext logging facility.*

Variables

- static final **QosPolicyId_t LOGGING_QOS_POLICY_ID**
  <<***extension***>> *(*p. *138) Identifier for **com.rti.dds.infrastructure.LoggingQosPolicy** (*p. *1568)*

6.148.1 Detailed Description

<<***extension***>> *(*p. *138)* Configures the RTI Connext logging facility.

6.148.2 Variable Documentation

6.148.2.1 LOGGING_QOS_POLICY_ID

```
final QosPolicyId_t LOGGING_QOS_POLICY_ID [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.LoggingQosPolicy** (p. 1568)

6.149 MONITORING

<<***extension***>> *(p. 138)* Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.

Classes

- class **MonitoringDedicatedParticipantSettings**

  <<***extension***>> *(p. 138) Configures the use of a dedicated **com.rti.dds.domain.DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.*
- class **MonitoringDistributionSettings**

  <<***extension***>> *(p. 138) Configures the distribution of telemetry data.*
- class **MonitoringEventDistributionSettings**

  <<***extension***>> *(p. 138) Configures the distribution of event metrics.*
- class **MonitoringLoggingDistributionSettings**

  <<***extension***>> *(p. 138) Configures the distribution of log messages.*
- class **MonitoringLoggingForwardingSettings**

  <<***extension***>> *(p. 138) Configures the forwarding levels of log messages for the different **com.rti.ndds.config.LogFacility** (p. 1558).*
- class **MonitoringMetricSelection**

  <<***extension***>> *(p. 138) This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources.*
- class **MonitoringMetricSelectionSeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.MonitoringMetricSelection** (p. 1605) >*
- class **MonitoringPeriodicDistributionSettings**

  <<***extension***>> *(p. 138) Configures the distribution of periodic metrics.*
- class **MonitoringQosPolicy**

  <<***extension***>> *(p. 138) Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.*
- class **MonitoringTelemetryData**

  <<***extension***>> *(p. 138) Configures the telemetry data that will be distributed.*

Variables

- static final **QosPolicyId_t MONITORING_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for **com.rti.dds.infrastructure.MonitoringQosPolicy** (p. 1611)*

6.149.1 Detailed Description

<<***extension***>> *(*p. *138)* Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.

6.149.2 Variable Documentation

6.149.2.1 MONITORING_QOS_POLICY_ID

```
final  QosPolicyId_t MONITORING_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.MonitoringQosPolicy** (p. 1611)

6.150 MULTICHANNEL

<<***extension***>> *(*p. *138)* Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

Classes

- class **ChannelSettings_t**

  <<***extension***>> (p. *138) Type used to configure the properties of a channel.*
- class **ChannelSettingsSeq**

  Declares IDL `sequence<` ***com.rti.dds.infrastructure.ChannelSettings_t*** *(*p. *666)* `>`
- class **MultiChannelQosPolicy**

  <<***extension***>> (p. *138) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.*

Variables

- static final **QosPolicyId_t MULTICHANNEL_QOS_POLICY_ID**

  <<***extension***>> *(*p. *138) Identifier for* ***com.rti.dds.infrastructure.MultiChannelQosPolicy*** *(*p. *1616)*

6.150.1 Detailed Description

<<***extension***>> *(*p. *138)* Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.

6.150.2 Variable Documentation

6.150.2.1 MULTICHANNEL_QOS_POLICY_ID

```
final  QosPolicyId_t MULTICHANNEL_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.MultiChannelQosPolicy** (p. 1616)

6.151 Object Support

<<***extension***>> *(*p. *403)* Object related items.

Classes

- interface **Copyable**

  <<***extension***>> *(*p. *403)* <<***interface***>> *(*p. *403) Interface for all the user-defined data type classes that support copy.*
- class **ObjectHolder**

  <<***extension***>> *(*p. *403) Holder of object instance*

6.151.1 Detailed Description

<<***extension***>> *(*p. *403)* Object related items.

A user-defined type class implements this interface to indicate that the class can be copied. This is typically used in **com.rti.ndds.example.FooDataReader.take_next_sample** (p. 1371) or **com.rti.ndds.example.FooDataReader.↩ read_next_sample** (p. 1370).

6.152 OWNERSHIP

<<***spec***>> *(*p. *132)* Specifies whether it is allowed for multiple **com.rti.dds.publication.DataWriter** (p. 818) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

Classes

- class **OwnershipQosPolicy**

  <<***spec***>> *(*p. *132) Specifies whether it is allowed for multiple **com.rti.dds.publication.DataWriter** (p. 818) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.*
- class **OwnershipQosPolicyKind**

  Kinds of ownership.

Variables

- static final **QosPolicyId_t OWNERSHIP_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.OwnershipQosPolicy*** *(p. 1640)*

6.152.1 Detailed Description

<<***spec***>> *(p. 132)* Specifies whether it is allowed for multiple **com.rti.dds.publication.DataWriter** (p. 818) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.

6.152.2 Variable Documentation

6.152.2.1 OWNERSHIP_QOS_POLICY_ID

```
final  QosPolicyId_t OWNERSHIP_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.OwnershipQosPolicy** (p. 1640)

6.153 OWNERSHIP_STRENGTH

<<***spec***>> *(p. 132)* Specifies the value of the strength used to arbitrate among multiple **com.rti.dds.publication.↩ DataWriter** (p. 818) objects that attempt to modify the same instance of a data type (identified by **com.rti.dds.topic.↩ Topic** (p. 2116) + key).

Classes

- class **OwnershipStrengthQosPolicy**

  Specifies the value of the strength used to arbitrate among multiple ***com.rti.dds.publication.DataWriter*** *(p. 818) objects that attempt to modify the same instance of a data type (identified by* ***com.rti.dds.topic.Topic*** *(p. 2116) + key).*

Variables

- static final **QosPolicyId_t OWNERSHIPSTRENGTH_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.OwnershipStrengthQosPolicy*** *(p. 1646)*

6.153.1 Detailed Description

<<***spec***>> *(p. 132)* Specifies the value of the strength used to arbitrate among multiple **com.rti.dds.publication.↩ DataWriter** (p. 818) objects that attempt to modify the same instance of a data type (identified by **com.rti.dds.topic.↩ Topic** (p. 2116) + key).

6.153.2 Variable Documentation

6.153.2.1 OWNERSHIPSTRENGTH_QOS_POLICY_ID

```
final QosPolicyId_t OWNERSHIPSTRENGTH_QOS_POLICY_ID [static]
```

<<***spec***>> *(*p. *132)* Identifier for **com.rti.dds.infrastructure.OwnershipStrengthQosPolicy** (p. 1646)

6.154 Extended Qos Support

<<***extension***>> *(*p. *138)* Types and defines used in extended QoS policies.

Modules

- **Thread Settings**

  The properties of a thread of execution. Consult `Platform Notes` *for additional platform specific details.*

Classes

- class **RtpsReliableReaderProtocol_t**

  <<***extension***>> *(*p. *138)* ***Qos*** *(*p. *1802) related to reliable reader protocol defined in RTPS.*
- class **RtpsReliableWriterProtocol_t**

  <<***extension***>> *(*p. *138) QoS related to the reliable writer protocol defined in RTPS.*

6.154.1 Detailed Description

<<***extension***>> *(*p. *138)* Types and defines used in extended QoS policies.

6.155 PARTITION

<<***spec***>> *(*p. *132)* Set of strings that introduces logical partitions in **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), or **com.rti.dds.subscription.Subscriber** (p. 2039) entities.

Classes

- class **PartitionQosPolicy**

  <<***spec***>> *(*p. *132) Set of strings that introduces logical partitions in* ***com.rti.dds.domain.DomainParticipant*** *(*p. *948),* ***com.rti.dds.publication.Publisher*** *(*p. *1767), or* ***com.rti.dds.subscription.Subscriber*** *(*p. *2039) entities.*

Variables

- static final **QosPolicyId_t PARTITION_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.PartitionQosPolicy*** *(p. 1664)*

6.155.1 Detailed Description

<<***spec***>> *(p. 132)* Set of strings that introduces logical partitions in **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), or **com.rti.dds.subscription.Subscriber** (p. 2039) entities.

6.155.2 Variable Documentation

6.155.2.1 PARTITION_QOS_POLICY_ID

```
final  QosPolicyId_t PARTITION_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.PartitionQosPolicy** (p. 1664)

6.156 PRESENTATION

<<***spec***>> *(p. 132)* Specifies how the samples representing changes to data instances are presented to a subscribing application.

Classes

- class **PresentationQosPolicy**

  <<***spec***>> *(p. 132) Specifies how the samples representing changes to data instances are presented to a subscribing application.*
- class **PresentationQosPolicyAccessScopeKind**

  Kinds of presentation "access scope".

Variables

- static final **QosPolicyId_t PRESENTATION_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.PresentationQosPolicy*** *(p. 1678)*

6.156.1 Detailed Description

<<***spec***>> *(p. 132)* Specifies how the samples representing changes to data instances are presented to a subscribing application.

6.156.2 Variable Documentation

6.156.2.1 PRESENTATION_QOS_POLICY_ID

```
final QosPolicyId_t PRESENTATION_QOS_POLICY_ID [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.PresentationQosPolicy** (p. 1678)

6.157 PROFILE

<<***extension***>> *(p. 138)* Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.

Classes

- class **ProfileQosPolicy**
  <<***extension***>> *(p. 138) Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.*

Variables

- static final **QosPolicyId_t PROFILE_QOS_POLICY_ID**
  <<***extension***>> *(p. 138) Identifier for **com.rti.dds.infrastructure.ProfileQosPolicy** (p. 1692)*

6.157.1 Detailed Description

<<***extension***>> *(p. 138)* Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.

6.157.2 Variable Documentation

6.157.2.1 PROFILE_QOS_POLICY_ID

```
final QosPolicyId_t PROFILE_QOS_POLICY_ID [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.ProfileQosPolicy** (p. 1692)

6.158 PROPERTY

<<***extension***>> *(p. 138)* Stores (name, value) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

Classes

- class **Property_t**

  Properties are name/value pairs objects.
- class **PropertyQosPolicy**

  <<***extension***>> *(p. 138) Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.*
- class **PropertyQosPolicyHelper**

  Policy helpers that facilitate management of the properties in the input policy.
- class **PropertyQosPolicyMutability**

  Determines if, and when, the value of a property can change.
- class **PropertySeq**

  Declares IDL `sequence` < ***com.rti.dds.infrastructure.Property_t*** *(p. 1695)* >

6.158.1 Detailed Description

<<***extension***>> *(p. 138)* Stores (name, value) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.

RTI Connext will automatically set some system properties in the **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) associated with a **com.rti.dds.domain.DomainParticipantQos** (p. 1073). See **System Properties** (p. 364) for additional details.

6.158.2 This code contains trade secrets of Real-Time Innovations, Inc.

RTI Connext will automatically set some system properties in the **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) associated with a **com.rti.dds.domain.DomainParticipantQos** (p. 1073). See **System Properties** (p. 364) for additional details.

6.159 PUBLISH_MODE

<<***extension***>> *(p. 138)* Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread.

Classes

- interface **PublicationPriority**
- class **PublishModeQosPolicy**

  *<<**extension**>> (p. 138) Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its own thread to send data, instead of the user thread.*
- class **PublishModeQosPolicyKind**

  Kinds of publishing mode.

Variables

- static final int **UNDEFINED**

  *Initializer value for **com.rti.dds.infrastructure.PublishModeQosPolicy.priority** (p. 1799) and/or **com.rti.dds.infrastructure.ChannelSettings_t.priority** (p. 669).*
- static final int **AUTOMATIC**

  *Constant value for **com.rti.dds.infrastructure.PublishModeQosPolicy.priority** (p. 1799) and/or **com.rti.dds.infrastructure.ChannelSettings_t.priority** (p. 669).*
- static final **QosPolicyId_t** **PUBLISHMODE_QOS_POLICY_ID**

  *<<**extension**>> (p. 138) Identifier for **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797)*

6.159.1 Detailed Description

*<<**extension**>> (p. 138)* Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its *own* thread to send data, instead of the user thread.

6.159.2 Variable Documentation

6.159.2.1 UNDEFINED

```
final int UNDEFINED  [static]
```

Initializer value for **com.rti.dds.infrastructure.PublishModeQosPolicy.priority** (p. 1799) and/or **com.rti.dds.infrastructure.ChannelSettings_t.priority** (p. 669).

When assigned this value, the publication priority of the data writer, or channel of a multi-channel data writer, will be set to the lowest possible value. For muilti-channel data writers, if either the data writer or channel priority is NOT set to this value, then the publication priority of the entity will be set to the defined value.

6.159.2.2 AUTOMATIC

```
final int AUTOMATIC  [static]
```

Constant value for **com.rti.dds.infrastructure.PublishModeQosPolicy.priority** (p. 1799) and/or **com.rti.dds.infrastructure.ChannelSettings_t.priority** (p. 669).

When assigned this value, the publication priority of the data writer, or channel of a multi-channel data writer, will be set to the largest priority value of any sample currently queued for publication by the data writer or data writer channel.

6.159.2.3 PUBLISHMODE_QOS_POLICY_ID

```
final  QosPolicyId_t PUBLISHMODE_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797)

6.160 QoS

Quality of Service (QoS) policies.

Modules

- **All QoS Policies**

  All Quality of Service (QoS) policies.
- **QoS by Category**

  Quality of Service (QoS) organized into categories.

6.160.1 Detailed Description

Quality of Service (QoS) policies.

6.161 All QoS Policies

All Quality of Service (QoS) policies.

Modules

- **ASYNCHRONOUS_PUBLISHER**

  <<***extension***>> *(*p. *138) Specifies the asynchronous publishing settings of the **com.rti.dds.publication.Publisher** (*p. *1767) instances.*
- **AVAILABILITY**

  <<***extension***>> *(*p. *138) Configures the availability of data.*
- **BATCH**

  <<***extension***>> *(*p. *138) Batch QoS policy used to enable batching in **com.rti.dds.publication.DataWriter** (*p. *818) instances.*
- **DATABASE**

  <<***extension***>> *(*p. *138) Various threads and resource limits settings used by RTI Connext to control its internal database.*
- **DATA_READER_PROTOCOL**

  <<***extension***>> *(*p. *138) Specifies the DataReader-specific protocol QoS.*
- **DATA_READER_RESOURCE_LIMITS**

*<<**extension**>> (p. 138) Various settings that configure how DataReaders allocate and use physical memory for internal resources.*

- **DATA_REPRESENTATION**

  *<<**spec**>> (p. 132) A list of data representations and compression methods supported by a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707).*

- **DATA_TAG**

  *<<**spec**>> (p. 132) Stores (name, value) pairs that can be used to determine access permissions.*

- **DATA_WRITER_PROTOCOL**

  *<<**extension**>> (p. 138) Along with **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299) and **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy** (p. 761), this QoS policy configures the DDS on-the-network protocol (RTPS).*

- **DATA_WRITER_RESOURCE_LIMITS**

  *<<**extension**>> (p. 138) Various settings that configure how a **com.rti.dds.publication.DataWriter** (p. 818) allocates and uses physical memory for internal resources.*

- **DEADLINE**

  *<<**spec**>> (p. 132) Expresses the maximum duration (deadline) within which an instance is expected to be updated.*

- **DESTINATION_ORDER**

  *<<**spec**>> (p. 132) Controls the criteria used to determine the logical order among changes made by **com.rti.dds.publication.Publisher** (p. 1767) entities to the same instance of data (i.e., matching **com.rti.dds.topic.Topic** (p. 2116) and key).*

- **DISCOVERY_CONFIG**

  *<<**extension**>> (p. 138) Specifies the discovery configuration QoS.*

- **DISCOVERY**

  *<<**extension**>> (p. 138) Specifies the attributes required to discover participants in the domain.*

- **DOMAIN_PARTICIPANT_RESOURCE_LIMITS**

  *<<**extension**>> (p. 138) Various settings that configure how a **com.rti.dds.domain.DomainParticipant** (p. 948) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.*

- **DURABILITY**

  *<<**spec**>> (p. 132) This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **com.rti.dds.subscription.DataReader** (p. 707) entities that join the network later.*

- **DURABILITY_SERVICE**

  *<<**spec**>> (p. 132) Various settings to configure the external RTI Persistence Service used by RTI Connext for DataWriters with a **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116) setting of com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_DURABILITY_QOS or com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT_DURABILITY_QOS.*

- **ENTITY_FACTORY**

  *<<**spec**>> (p. 132) A QoS policy for all **com.rti.dds.infrastructure.Entity** (p. 1320) types that can act as factories for one or more other **com.rti.dds.infrastructure.Entity** (p. 1320) types.*

- **ENTITY_NAME**

  *<<**extension**>> (p. 138) Assigns a name to a **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707). Except for **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039), these names are visible during the discovery process and in RTI tools to help you visualize and debug your system.*

- **EVENT**

  *<<**extension**>> (p. 138) Configures the internal thread in a DomainParticipant that handles timed events.*

- **GROUP_DATA**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.*

- **HISTORY**

  *<<**spec**>> (p. 132) Specifies the behavior of RTI Connext in the case where the value of an instance changes (one or more times) before it can be successfully communicated to one or more existing subscribers.*

- **LATENCY_BUDGET**

  *<<**spec**>> (p. 132) Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.*

- **LIFESPAN**

  *<<**spec**>> (p. 132) Specifies how long the data written by the **com.rti.dds.publication.DataWriter** (p. 818) is considered valid.*

- **LIVELINESS**

  *<<**spec**>> (p. 132) Specifies and configures the mechanism that allows **com.rti.dds.subscription.DataReader** (p. 707) entities to detect when **com.rti.dds.publication.DataWriter** (p. 818) entities become disconnected or "dead."*

- **LOCATORFILTER**

  *<<**extension**>> (p. 138) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753).*

- **LOGGING**

  *<<**extension**>> (p. 138) Configures the RTI Connext logging facility.*

- **MONITORING**

  *<<**extension**>> (p. 138) Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.*

- **MULTICHANNEL**

  *<<**extension**>> (p. 138) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.*

- **OWNERSHIP**

  *<<**spec**>> (p. 132) Specifies whether it is allowed for multiple **com.rti.dds.publication.DataWriter** (p. 818) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.*

- **OWNERSHIP_STRENGTH**

  *<<**spec**>> (p. 132) Specifies the value of the strength used to arbitrate among multiple **com.rti.dds.publication.DataWriter** (p. 818) objects that attempt to modify the same instance of a data type (identified by **com.rti.dds.topic.Topic** (p. 2116) + key).*

- **Extended Qos Support**

  *<<**extension**>> (p. 138) Types and defines used in extended QoS policies.*

- **PARTITION**

  *<<**spec**>> (p. 132) Set of strings that introduces logical partitions in **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), or **com.rti.dds.subscription.Subscriber** (p. 2039) entities.*

- **PRESENTATION**

  *<<**spec**>> (p. 132) Specifies how the samples representing changes to data instances are presented to a subscribing application.*

- **PROFILE**

  *<<**extension**>> (p. 138) Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.*

- **PROPERTY**

  *<<**extension**>> (p. 138) Stores (name, value) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.*

- **PUBLISH_MODE**

  *<<**extension**>> (p. 138) Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its own thread to send data, instead of the user thread.*

- **READER_DATA_LIFECYCLE**

  *<<**spec**>> (p. 132) Controls how a DataReader manages the lifecycle of the data that it has received.*

- **RECEIVER_POOL**

  *<<**extension**>> (p. 138) Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).*

- **RELIABILITY**

<<**spec**>> (p. 132) Indicates the level of reliability offered/requested by RTI Connext.

- **RESOURCE_LIMITS**

  <<**spec**>> (p. 132) Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

- **SERVICE**

  <<**extension**>> (p. 138) Service QoS policy is used to indicate what kind of service or tool is associated with the DDS entity.

- **SYSTEM_RESOURCE_LIMITS**

  <<**extension**>> (p. 138) Configures DomainParticipant-independent resources used by RTI Connext.

- **TIME_BASED_FILTER**

  <<**spec**>> (p. 132) Filter that allows a **com.rti.dds.subscription.DataReader** (p. 707) to specify that it is interested only in (potentially) a subset of the values of the data.

- **TOPIC_DATA**

  Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.

- **TOPIC_QUERY_DISPATCH**

  <<**extension**>> (p. 138) Configures the ability of a **com.rti.dds.publication.DataWriter** (p. 818) to publish historical samples

- **TRANSPORT_BUILTIN**

  <<**extension**>> (p. 138) Specifies which built-in transports are used.

- **TRANSPORT_MULTICAST_MAPPING**

  <<**extension**>> (p. 138) Specifies a list of topic expressions and addresses that can be used by an Entity with a specific topic name to receive data.

- **TRANSPORT_MULTICAST**

  <<**extension**>> (p. 138) Specifies the multicast address on which a **com.rti.dds.subscription.DataReader** (p. 707) wants to receive its data. It can also specify a port number, as well as a subset of the available (at the **com.rti.dds.domain.DomainParticipant** (p. 948) level) transports with which to receive the multicast data.

- **TRANSPORT_PRIORITY**

  <<**spec**>> (p. 132) This QoS policy allows the application to take advantage of transport that are capable of sending messages with different priorities.

- **TRANSPORT_SELECTION**

  <<**extension**>> (p. 138) Specifies the physical transports that a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707) may use to send or receive data.

- **TRANSPORT_UNICAST**

  <<**extension**>> (p. 138) Specifies a subset of transports and a port number that can be used by an Entity to receive data.

- **TYPE_CONSISTENCY_ENFORCEMENT**

  <<**spec**>> (p. 132) Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.

- **TYPESUPPORT**

  [DEPRECATED] **(p. 358)** <<**extension**>> (p. 138) Allows you to attach application-specific values to a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.

- **USER_DATA**

  Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.

- **WIRE_PROTOCOL**

  <<**extension**>> (p. 138) Specifies the wire protocol related attributes for the **com.rti.dds.domain.DomainParticipant** (p. 948).

- **WRITER_DATA_LIFECYCLE**

  <<**spec**>> (p. 132) Controls how a DataWriter handles the lifecycle of the instances (keys) that it is registered to manage.

Classes

- class **Qos**

  An abstract base class for all QoS types.
- class **QosPolicy**

  The base class for all QoS policies.
- class **QosPolicyCount**

  *Type to hold a counter for a **com.rti.dds.infrastructure.QosPolicyId_t** (p. 1806).*
- class **QosPolicyCountSeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.QosPolicyCount** (p. 1804) >*
- class **QosPolicyId_t**

  Type to identify `QosPolicies`.
- class **QosPrintFormat**

  A collection of attributes used to configure how a QoS appears when printed.

6.161.1 Detailed Description

All Quality of Service (QoS) policies.

Data Distribution Service (DDS) relies on the use of QoS. A QoS is a set of characteristics that controls some aspect of the behavior of DDS. A QoS is comprised of individual QoS policies (objects conceptually deriving from an *abstract* `QosPolicy` class).

"Supported QoS policies"

The QosPolicy provides the basic mechanism for an application to specify quality of service parameters. It has an attribute name that is used to uniquely identify each `QosPolicy`.

QosPolicy implementation is comprised of a name, an ID, and a type. The type of a `QosPolicy` value may be atomic, such as an integer or float, or compound (a structure). Compound types are used whenever multiple parameters must be set coherently to define a consistent value for a QosPolicy.

QoS (i.e., a list of `QosPolicy` objects) may be associated with all **com.rti.dds.infrastructure.Entity** (p. 1320) objects in the system such as **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.publication.DataWriter** (p. 818), **com.rti.dds.subscription.DataReader** (p. 707), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), and **com.rti.dds.domain.DomainParticipant** (p. 948).

6.161.2 Specifying QoS on entities

QosPolicies can be set programmatically when an **com.rti.dds.infrastructure.Entity** (p. 1320) is created, or modified with the **com.rti.dds.infrastructure.Entity** (p. 1320)'s **set_qos (abstract)** (p. 1321) method.

QosPolicies can also be configured from XML resources (files, strings). With this approach, you can change the QoS without recompiling the application. For more information, see **Configuring QoS Profiles with XML** (p. 365).

To customize a **com.rti.dds.infrastructure.Entity** (p. 1320)'s QoS before creating the entity, the correct pattern is:

- First, initialize a QoS object with the appropriate INITIALIZER constructor.
- Call the relevant get_<entity>_default_qos() method.
- Modify the QoS values as desired.
- Finally, create the entity.

Each `QosPolicy` is treated independently from the others. This approach has the advantage of being very extensible. However, there may be cases where several policies are in conflict. Consistency checking is performed each time the policies are modified via the **set_qos (abstract)** (p. 1321) operation, or when the **com.rti.dds.infrastructure.Entity** (p. 1320) is created.

When a policy is changed after being set to a given value, it is not required that the new value be applied instantaneously; RTI Connext is allowed to apply it after a transition phase. In addition, some `QosPolicy` have immutable semantics, meaning that they can only be specified either at **com.rti.dds.infrastructure.Entity** (p. 1320) creation time or else prior to calling the **com.rti.dds.infrastructure.Entity.enable** (p. 1323) operation on the entity.

Each **com.rti.dds.infrastructure.Entity** (p. 1320) can be configured with a list of `QosPolicy` objects. However, not all QosPolicies are supported by each **com.rti.dds.infrastructure.Entity** (p. 1320). For instance, a **com.rti.dds.↩ domain.DomainParticipant** (p. 948) supports a different set of QosPolicies than a **com.rti.dds.topic.Topic** (p. 2116) or a **com.rti.dds.publication.Publisher** (p. 1767).

Additional properties that are not exposed through the formal QoS policies can also be set for an **com.rti.dds.↩ infrastructure.Entity** (p. 1320) via the **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739). These properties are described in the `Property Reference Guide`.

6.161.3 QoS compatibility

In several cases, for communications to occur properly (or efficiently), a QosPolicy on the publisher side must be compatible with a corresponding policy on the subscriber side. For example, if a **com.rti.dds.subscription.Subscriber** (p. 2039) requests to receive data reliably while the corresponding **com.rti.dds.publication.Publisher** (p. 1767) defines a best-effort policy, communication will not happen as requested.

To address this issue and maintain the desirable decoupling of publication and subscription as much as possible, the QosPolicy specification follows the **subscriber-requested, publisher-offered pattern**.

In this pattern, the subscriber side can specify a "requested" value for a particular `QosPolicy`. The publisher side specifes an "offered" value for that `QosPolicy`. RTI Connext will then determine whether the value requested by the subscriber side is compatible with what is offered by the publisher side. If the two policies are compatible, then communication will be established. If the two policies are not compatible, RTI Connext will not establish communications between the two **com.rti.dds.infrastructure.Entity** (p. 1320) objects and will record this fact by means of the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS on the publisher end and com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS on the subscriber end. The application can detect this fact by means of a **com.rti.dds.infrastructure.Listener** (p. 1528) or a **com.rti.↩ dds.infrastructure.Condition** (p. 686).

The following **properties** are defined on a QosPolicy.

- **RxO (**p. **506) property**
  The QosPolicy objects that need to be set in a compatible manner between the **publisher** and **subscriber** end are indicated by the setting of the **RxO** (p. 506) property:

  - **RxO** (p. 506) = **YES**
    indicates that the policy can be set both at the publishing and subscribing ends and the values must be set in a compatible manner. In this case the compatible values are explicitly defined.
  - **RxO** (p. 506) = **NO**
    indicates that the policy can be set both at the publishing and subscribing ends but the two settings are independent. That is, all combinations of values are compatible.
  - **RxO** (p. 506) = **N/A**
    indicates that the policy can only be specified at either the publishing or the subscribing end, but not at both ends. So compatibility does not apply.

- **Changeable (**p. **507)property**
  Determines whether a QosPolicy can be changed.
  - **NO (**p. **507)** -- policy can only be specified at **com.rti.dds.infrastructure.Entity** (p. 1320) creation time.
  - **UNTIL ENABLE (**p. **507)** -- policy can only be changed before the **com.rti.dds.infrastructure.Entity** (p. 1320) is enabled.
  - **YES (**p. **507)** -- policy can be changed at any time.

6.162 QoS by Category

Quality of Service (QoS) organized into categories.

Modules

- **Basic QoS**

  QoS that are considered basic and fundamental to RTI Connext.
- **DDS Specification QoS**

  QoS that are defined in one of the OMG DDS Specifications.
- **DDS Extension QoS**

  QoS that are RTI extensions to the DDS standard.
- **Functional Categories**

  These categories help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in ***Sending Large Data*** *(*p. *237), then looking at any QoS in that category will be helpful.*
- **QoS Mutability**

  Some QoS are mutable after an entity is enabled, and others are not.
- **Other QoS Attributes**

  These attributes are characteristics of the QoS – for example if they are ***mutable*** *(*p. *338) or* ***immutable*** *(*p. *292), or if they* ***apply per-instance*** *(*p. *346).*
- **Deprecated QoS**

  Deprecated QoS.

6.162.1 Detailed Description

Quality of Service (QoS) organized into categories.

The QoS have been grouped into a number of different categories.

These categories can help you to discover which QoS may be relevant or related to a desired functionality or feature. For example, if you are interested in **Sending Large Data** (p. 237), then looking at any QoS in that category will be helpful. The different functional categories are listed on **Functional Categories** (p. 188).

Some categories are not necessarily related to achieving a specific functionality, but are characteristics of the QoS – for example if they are **mutable** (p. 338) or **immutable** (p. 292), or if they **apply per-instance** (p. 346). These categories are listed under **QoS Mutability** (p. 291) and **Other QoS Attributes** (p. 346).

6.163 READER_DATA_LIFECYCLE

<<***spec***>> *(p. 132)* Controls how a DataReader manages the lifecycle of the data that it has received.

Classes

- class **ReaderDataLifecycleQosPolicy**
  <<***spec***>> *(p. 132) Controls how a DataReader manages the lifecycle of the data that it has received.*

Variables

- static final **QosPolicyId_t READERDATALIFECYCLE_QOS_POLICY_ID**
  <<***spec***>> *(p. 132) Identifier for **com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy** (p. 1822)*

6.163.1 Detailed Description

<<***spec***>> *(p. 132)* Controls how a DataReader manages the lifecycle of the data that it has received.

6.163.2 Variable Documentation

6.163.2.1 READERDATALIFECYCLE_QOS_POLICY_ID

```
final  QosPolicyId_t READERDATALIFECYCLE_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy** (p. 1822)

6.164 RECEIVER_POOL

<<***extension***>> *(*p. *138)* Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).

Classes

- class **ReceiverPoolQosPolicy**

  <<***extension***>> *(*p. *138) Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).*

Variables

- static final **QosPolicyId_t RECEIVERPOOL_QOS_POLICY_ID**

  <<***extension***>> *(*p. *138) Identifier for* ***com.rti.dds.infrastructure.ReceiverPoolQosPolicy*** *(*p. *1826)*
- static final int **LENGTH_AUTO**

  A special value indicating that the actual value will be automatically resolved.
- static final int **LENGTH_AUTO**

  A special value indicating that the actual value will be automatically resolved.

6.164.1 Detailed Description

<<***extension***>> *(*p. *138)* Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).

6.164.2 Variable Documentation

6.164.2.1 RECEIVERPOOL_QOS_POLICY_ID

```
final  QosPolicyId_t RECEIVERPOOL_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.ReceiverPoolQosPolicy** (p. 1826)

6.164.2.2 LENGTH_AUTO [1/2]

```
final int LENGTH_AUTO  [static]
```

A special value indicating that the actual value will be automatically resolved.

6.164.2.3 LENGTH_AUTO [2/2]

```
final int LENGTH_AUTO  [static]
```

A special value indicating that the actual value will be automatically resolved.

6.165 RELIABILITY

<<***spec***>> *(p. 132)* Indicates the level of reliability offered/requested by RTI Connext.

Classes

- class **InstanceStateConsistencyKind**

  <<***extension***>> *(p. 138) Whether instance state consistency is enabled.*
- class **PersistentSynchronizationKind**

  <<***extension***>> *(p. 138) Whether instance state consistency is enabled.*
- class **ReliabilityQosPolicy**

  <<***extension***>> *(p. 138)* <<***spec***>> *(p. 132) Indicates the level of reliability offered/requested by RTI Connext.*
- class **ReliabilityQosPolicyAcknowledgmentModeKind**

  <<***extension***>> *(p. 138) Kinds of acknowledgment.*
- class **ReliabilityQosPolicyKind**

  Kinds of reliability.

Variables

- static final **QosPolicyId_t RELIABILITY_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.ReliabilityQosPolicy*** *(p. 1829)*

6.165.1 Detailed Description

<<***spec***>> *(p. 132)* Indicates the level of reliability offered/requested by RTI Connext.

6.165.2 Variable Documentation

6.165.2.1 RELIABILITY_QOS_POLICY_ID

```
final  QosPolicyId_t RELIABILITY_QOS_POLICY_ID  [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829)

6.166 RESOURCE_LIMITS

<<***spec***>> *(p. 132)* Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

Classes

- class **ResourceLimitsQosPolicy**

  <<***spec***>> *(p. 132) Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.*

Variables

- static final **QosPolicyId_t RESOURCELIMITS_QOS_POLICY_ID**

  <<***spec***>> *(p. 132) Identifier for* ***com.rti.dds.infrastructure.ResourceLimitsQosPolicy*** *(p. 1894)*
- static final int **LENGTH_UNLIMITED**

  A special value indicating an unlimited quantity.

6.166.1 Detailed Description

<<***spec***>> *(p. 132)* Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.

6.166.2 Variable Documentation

6.166.2.1 RESOURCELIMITS_QOS_POLICY_ID

```
final QosPolicyId_t RESOURCELIMITS_QOS_POLICY_ID [static]
```

<<***spec***>> *(p. 132)* Identifier for **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894)

6.166.2.2 LENGTH_UNLIMITED

```
final int LENGTH_UNLIMITED [static]
```

A special value indicating an unlimited quantity.

Referenced by **Requester< TReq, TRep >.readReplies()**, **Replier< TReq, TRep >.readRequests()**, **Requester< TReq, TRep >.receiveReplies()**, **Replier< TReq, TRep >.receiveRequests()**, **Requester< TReq, TRep >.take↩ Replies()**, and **Replier< TReq, TRep >.takeRequests()**.

6.167 Return Codes

Types of return codes.

Classes

- class **RETCODE_ALREADY_DELETED**

  The object target of this operation has already been deleted.
- class **RETCODE_BAD_PARAMETER**

  Illegal parameter value.
- class **RETCODE_ERROR**

  Generic, unspecified error.
- class **RETCODE_ILLEGAL_OPERATION**

  The operation was called under improper circumstances.
- class **RETCODE_IMMUTABLE_POLICY**

  Application attempted to modify an immutable QoS policy.
- class **RETCODE_INCONSISTENT_POLICY**

  Application specified a set of QoS policies that are not consistent with each other.
- class **RETCODE_NO_DATA**

  Indicates a transient situation where the operation did not return any data but there is no inherent error.
- class **RETCODE_NOT_ALLOWED_BY_SECURITY**

  An operation on the DDS API that fails because the security plugins do not allow it.
- class **RETCODE_NOT_ENABLED**

  *Operation invoked on a **com.rti.dds.infrastructure.Entity*** (p. 1320) *that is not yet enabled.*
- class **RETCODE_OUT_OF_RESOURCES**

  RTI Connext ran out of the resources needed to complete the operation.
- class **RETCODE_PRECONDITION_NOT_MET**

  A pre-condition for the operation was not met.
- class **RETCODE_TIMEOUT**

  The operation timed out.
- class **RETCODE_UNSUPPORTED**

  Unsupported operation. Only returned by operations that are unsupported.

6.167.1 Detailed Description

Types of return codes.

6.167.2 Standard Return Codes

Any void operation that documents that it may throw an exception of type may throw exactly **com.rti.dds.infrastructure.RETCODE_ERROR** (p. 1900) or **com.rti.dds.infrastructure.RETCODE_ILLEGAL_OPERATION** (p. 1900). Any such operation that takes one or more input parameters may additionally throw the subclass **com.rti.dds.infrastructure.RETCODE_BAD_PARAMETER** (p. 1899). Any operation on an object created from any of the factories may additionally throw the subclass **com.rti.dds.infrastructure.RETCODE_ALREADY_DELETED** (p. 1899). Any operation that is stated as optional may additionally throw the subclass **com.rti.dds.infrastructure.RETCODE_UNSUPPORTED** (p. 1904). com.rti.dds.infrastructure.RETCODE_OK **com.rti.dds.infrastructure.RETCODE_ERROR** (p. 1900) or **com.rti.dds.infrastructure.RETCODE_ILLEGAL_OPERATION** (p. 1900). Any operation that takes one or more input parameters may additionally return **com.rti.dds.infrastructure.RETCODE_BAD_PARAMETER** (p. 1899). Any operation on an object created from any of the factories may additionally return **com.rti.dds.infrastructure.RETCODE_ALREADY_DELETED** (p. 1899). Any operation that is stated as optional may additionally return **com.rti.dds.infrastructure.RETCODE_UNSUPPORTED** (p. 1904).

Thus, the standard return codes are:

- com.rti.dds.infrastructure.RETCODE_OK
- **com.rti.dds.infrastructure.RETCODE_ERROR** (p. 1900)
- **com.rti.dds.infrastructure.RETCODE_ILLEGAL_OPERATION** (p. 1900)
- **com.rti.dds.infrastructure.RETCODE_ALREADY_DELETED** (p. 1899)
- **com.rti.dds.infrastructure.RETCODE_BAD_PARAMETER** (p. 1899)
- **com.rti.dds.infrastructure.RETCODE_UNSUPPORTED** (p. 1904)

Operations that may throw any other exception type will state so explicitly.

6.168 Sequence Number Support

<<***extension***>> *(p. 403)* Sequence number type and defines.

Classes

- class **SequenceNumber_t**

  Type for sequence number representation.

6.168.1 Detailed Description

<<***extension***>> *(p. 403)* Sequence number type and defines.

6.169 SERVICE

<<***extension***>> *(*p. *138)* Service QoS policy is used to indicate what kind of service or tool is associated with the DDS entity.

Classes

- class **ServiceQosPolicy**

  <<***extension***>> *(*p. *138) Service or tool associated with a DDS entity.*
- class **ServiceQosPolicyKind**

  Kinds of service.

Variables

- static final **QosPolicyId_t SERVICE_QOS_POLICY_ID**

  <<***extension***>> *(*p. *138) Identifier for* ***com.rti.dds.infrastructure.ServiceQosPolicy*** *(*p. *1981)*

6.169.1 Detailed Description

<<***extension***>> *(*p. *138)* Service QoS policy is used to indicate what kind of service or tool is associated with the DDS entity.

6.169.2 Variable Documentation

6.169.2.1 SERVICE_QOS_POLICY_ID

```
final  QosPolicyId_t SERVICE_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.ServiceQosPolicy** (p. 1981)

6.170 Status Kinds

Kinds of communication status.

Classes

- class **StatusKind**

  Type for status kinds.

Variables

- static final int **STATUS_MASK_NONE**

  No bits are set.
- static final int **STATUS_MASK_ALL**

  All bits are set.

6.170.1 Detailed Description

Kinds of communication status.

Entity:

com.rti.dds.infrastructure.Entity (p. 1320)

QoS:

All QoS Policies (p. 501)

Listener:

com.rti.dds.infrastructure.Listener (p. 1528)

Each concrete **com.rti.dds.infrastructure.Entity** (p. 1320) is associated with a set of Status objects whose value represents the communication status of that entity. Each status value can be accessed with a corresponding method on the **com.rti.dds.infrastructure.Entity** (p. 1320).

When these status values change, the corresponding **com.rti.dds.infrastructure.StatusCondition** (p. 2008) objects are activated and the proper **com.rti.dds.infrastructure.Listener** (p. 1528) objects are invoked to asynchronously inform the application.

An application is notified of communication status by means of the **com.rti.dds.infrastructure.Listener** (p. 1528) or the **com.rti.dds.infrastructure.WaitSet** (p. 2287) / **com.rti.dds.infrastructure.Condition** (p. 686) mechanism. The two mechanisms may be combined in the application (e.g., using **com.rti.dds.infrastructure.WaitSet** (p. 2287) (s) / **com.↩ rti.dds.infrastructure.Condition** (p. 686) (s) to access the data and **com.rti.dds.infrastructure.Listener** (p. 1528) (s) to be warned asynchronously of erroneous communication statuses).

It is likely that the application will choose one or the other mechanism for each particular communication status (not both). However, if both mechanisms are enabled, then the **com.rti.dds.infrastructure.Listener** (p. 1528) mechanism is used first and then the **com.rti.dds.infrastructure.WaitSet** (p. 2287) objects are signalled.

The statuses may be classified into:

- *read communication statuses*: i.e., those that are related to arrival of data, namely com.rti.dds.infrastructure.↩ StatusKind.StatusKind.DATA_ON_READERS_STATUS and com.rti.dds.infrastructure.StatusKind.StatusKind.↩ DATA_AVAILABLE_STATUS.

- *plain communication statuses*: i.e., all the others.

Read communication statuses are treated slightly differently than the others because they don't change independently. In other words, at least two changes will appear at the same time (com.rti.dds.infrastructure.StatusKind.StatusKind.↩ DATA_ON_READERS_STATUS and com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS) and even several of the last kind may be part of the set. This 'grouping' has to be communicated to the application.

For each plain communication status, there is a corresponding structure to hold the status value. These values contain the information related to the change of status, as well as information related to the statuses themselves (e.g., contains cumulative counts).

"Status Values"

6.170.2 Changes in Status

Associated with each one of an **com.rti.dds.infrastructure.Entity** (p. 1320)'s communication status is a logical `StatusChangedFlag`. This flag indicates whether that particular communication status has changed since the last time the status was read by the application. The way the status changes is slightly different for the Plain Communication Status and the Read Communication status.

"\p StatusChangedFlag indicates if status has changed"

6.170.2.1 Changes in plain communication status

For the plain communication status, the `StatusChangedFlag` flag is initially set to FALSE. It becomes TRUE whenever the plain communication status changes and it is reset to com.rti.dds.infrastructure.false each time the application accesses the plain communication status via the proper `get_<plain communication status>()` operation on the **com.rti.dds.infrastructure.Entity** (p. 1320).

The communication status is also reset to FALSE whenever the associated listener operation is called as the listener implicitly accesses the status which is passed as a parameter to the operation. The fact that the status is reset prior to calling the listener means that if the application calls the get_<plain communication status> from inside the listener it will see the status already reset.

An exception to this rule is when the associated listener is the 'nil' listener. The 'nil' listener is treated as a NOOP and the act of calling the 'nil' listener does not reset the communication status.

For example, the value of the `StatusChangedFlag` associated with the com.rti.dds.infrastructure.StatusKind.↩ StatusKind.REQUESTED_DEADLINE_MISSED_STATUS will become TRUE each time new deadline occurs (which increases **com.rti.dds.subscription.RequestedDeadlineMissedStatus.total_count** (p. 1864)). The value changes to FALSE when the application accesses the status via the corresponding **com.rti.dds.subscription.DataReader.get_↩ requested_deadline_missed_status** (p. 719) method on the proper Entity

"Changes in \p StatusChangedFlag for plain communication status"

6.170.2.2 Changes in read communication status

For the read communication status, the `StatusChangedFlag` flag is initially set to FALSE. The `Status↩ ChangedFlag` becomes TRUE when either a data-sample arrives or else the **com.rti.dds.subscription.ViewState↩ Kind** (p. 2283), **com.rti.dds.subscription.SampleStateKind** (p. 1972), or **com.rti.dds.subscription.InstanceState↩ Kind** (p. 1451) of any existing sample changes for any reason other than a call to **com.rti.ndds.example.FooData↩ Reader.read** (p. 1361), **com.rti.ndds.example.FooDataReader.take** (p. 1363) or their variants. Specifically any of the following events will cause the `StatusChangedFlag` to become TRUE:

- The arrival of new data.
- A change in the **com.rti.dds.subscription.InstanceStateKind** (p. 1451) of a contained instance. This can be caused by either:
  - The arrival of the notification that an instance has been disposed by:
    - the **com.rti.dds.publication.DataWriter** (p. 818) that owns it if **OWNERSHIP** (p. 494) QoS kind= **com.rti.dds.infrastructure.OwnershipQosPolicyKind.EXCLUSIVE_OWNERSHIP_QOS** (p. 1646)

    * or by any **com.rti.dds.publication.DataWriter** (p. 818) if **OWNERSHIP** (p. 494) QoS kind= **com.rti.dds.infrastructure.OwnershipQosPolicyKind.SHARED_OWNERSHIP_QOS** (p. 1646)
  - The loss of liveliness of the **com.rti.dds.publication.DataWriter** (p. 818) of an instance for which there is no other **com.rti.dds.publication.DataWriter** (p. 818).
  - The arrival of the notification that an instance has been unregistered by the only **com.rti.dds.publication.DataWriter** (p. 818) that is known to be writing the instance.

Depending on the kind of `StatusChangedFlag`, the flag transitions to FALSE again as follows:

- The com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS `StatusChangedFlag` becomes FALSE when either the corresponding listener operation (on_data_available) is called or the read or take operation (or their variants) is called on the associated **com.rti.dds.subscription.DataReader** (p. 707).
- The com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_ON_READERS_STATUS `StatusChangedFlag` becomes FALSE when any of the following events occurs:
  - The corresponding listener operation (on_data_on_readers) is called.
  - The on_data_available listener operation is called on any **com.rti.dds.subscription.DataReader** (p. 707) belonging to the **com.rti.dds.subscription.Subscriber** (p. 2039).
  - The read or take operation (or their variants) is called on any **com.rti.dds.subscription.DataReader** (p. 707) belonging to the **com.rti.dds.subscription.Subscriber** (p. 2039).

6.171 SYSTEM_RESOURCE_LIMITS

<<***extension***>> *(*p. *138)* Configures DomainParticipant-independent resources used by RTI Connext.

Classes

- class **SystemResourceLimitsQosPolicy**

  <<***extension***>> *(*p. *138) Configures* ***com.rti.dds.domain.DomainParticipant*** *(*p. *948)-independent resources used by RTI Connext. Mainly used to change the maximum number of* ***com.rti.dds.domain.DomainParticipant*** *(*p. *948) entities that can be created within a single process (address space).*

Variables

- static final **QosPolicyId_t SYSTEMRESOURCELIMITS_QOS_POLICY_ID**

  <<***extension***>> *(*p. *138) Identifier for* ***com.rti.dds.infrastructure.SystemResourceLimitsQosPolicy*** *(*p. *2090)*

6.171.1 Detailed Description

<<***extension***>> *(*p. *138)* Configures DomainParticipant-independent resources used by RTI Connext.

6.171.2 Variable Documentation

6.171.2.1 SYSTEMRESOURCELIMITS_QOS_POLICY_ID

```
final  QosPolicyId_t SYSTEMRESOURCELIMITS_QOS_POLICY_ID  [static]
```

<<***extension***>> *(*p. *138)* Identifier for **com.rti.dds.infrastructure.SystemResourceLimitsQosPolicy** (p. 2090)

6.172 Thread Settings

The properties of a thread of execution. Consult `Platform Notes` for additional platform specific details.

Classes

- class **ThreadSettings_t**

  The properties of a thread of execution.
- class **ThreadSettingsCpuRotationKind**

  Determines how ***com.rti.dds.infrastructure.ThreadSettings_t.cpu_list*** *(*p. *2103) affects processor affinity for thread-related QoS policies that apply to multiple threads.*
- class **ThreadSettingsKind**

  A collection of flags used to configure threads of execution.

Variables

- static final int **THREAD_SETTINGS_KIND_MASK_DEFAULT**

  The mask of default thread options.

6.172.1 Detailed Description

The properties of a thread of execution. Consult `Platform Notes` for additional platform specific details.

6.172.2 Variable Documentation

6.172.2.1 THREAD_SETTINGS_KIND_MASK_DEFAULT

```
final int THREAD_SETTINGS_KIND_MASK_DEFAULT  [static]
```

The mask of default thread options.

6.173 TIME_BASED_FILTER

<<***spec***>> *(*p. *132)* Filter that allows a **com.rti.dds.subscription.DataReader** (p. 707) to specify that it is interested only in (potentially) a subset of the values of the data.

Classes

- class **TimeBasedFilterQosPolicy**

  <<***spec***>> *(*p. *132) Filter that allows a* ***com.rti.dds.subscription.DataReader*** *(*p. *707) to specify that it is interested only in (potentially) a subset of the values of the data.*

Variables

- static final **QosPolicyId_t TIMEBASEDFILTER_QOS_POLICY_ID**

  <<***spec***>> *(*p. *132) Identifier for* ***com.rti.dds.infrastructure.TimeBasedFilterQosPolicy*** *(*p. *2113)*

6.173.1 Detailed Description

<<***spec***>> *(*p. *132)* Filter that allows a **com.rti.dds.subscription.DataReader** (p. 707) to specify that it is interested only in (potentially) a subset of the values of the data.

6.175 TOPIC_QUERY_DISPATCH

<<***extension***>> *(p. 138)* Configures the ability of a **com.rti.dds.publication.DataWriter** (p. 818) to publish historical samples

Classes

- class **TopicQueryDispatchQosPolicy**

  <<***extension***>> *(p. 138) Configures the ability of a **com.rti.dds.publication.DataWriter** (p. 818) to publish samples in response to a **com.rti.dds.subscription.TopicQuery** (p. 2139)*

Variables

- static final **QosPolicyId_t TOPICQUERYDISPATCH_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for **com.rti.dds.infrastructure.TopicQueryDispatchQosPolicy** (p. 2142)*

6.175.1 Detailed Description

<<***extension***>> *(p. 138)* Configures the ability of a **com.rti.dds.publication.DataWriter** (p. 818) to publish historical samples

6.175.2 Variable Documentation

6.175.2.1 TOPICQUERYDISPATCH_QOS_POLICY_ID

```
final QosPolicyId_t TOPICQUERYDISPATCH_QOS_POLICY_ID [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.TopicQueryDispatchQosPolicy** (p. 2142)

6.176 TRANSPORT_BUILTIN

<<***extension***>> *(p. 138)* Specifies which built-in transports are used.

Classes

- class **TransportBuiltinKind**

  Built-in transport kind.

- class **TransportBuiltinQosPolicy**

  <<***extension***>> *(p. 138) Specifies which built-in transports are used.*

Variables

- static final **QosPolicyId_t TRANSPORTBUILTIN_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for* ***com.rti.dds.infrastructure.TransportBuiltinQosPolicy*** *(p. 2152)*
- static final String **UDPv4_ALIAS**

  Alias name for the UDPv4 built-in transport: "builtin.udpv4".
- static final String **SHMEM_ALIAS**

  Alias name for the shared memory built-in transport: "builtin.shmem".
- static final String **UDPv6_ALIAS**

  Alias name for the UDPv6 built-in transport: "builtin.udpv6".
- static final String **UDPv4_WAN_ALIAS**

  Alias name for the UDPv4 asymmetric built-in transport: "builtin.udpv4_wan".
- static final int **MASK_NONE**

  None of the built-in transports will be registered automatically when the ***com.rti.dds.domain.DomainParticipant*** *(p. 948) is enabled.*
- static final int **MASK_DEFAULT**

  The default value of ***com.rti.dds.infrastructure.TransportBuiltinQosPolicy.mask*** *(p. 2153).*
- static final int **MASK_ALL**

  All the available built-in transports are registered automatically when the ***com.rti.dds.domain.DomainParticipant*** *(p. 948) is enabled.*

6.176.1 Detailed Description

<<***extension***>> *(p. 138)* Specifies which built-in transports are used.

6.184 USER_DATA

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.

Classes

- class **UserDataQosPolicy**

  Attaches a buffer of opaque data that is distributed by means of ***Built-in Topics*** *(*p. *53) during discovery.*

Variables

- static final **QosPolicyId_t USERDATA_QOS_POLICY_ID**

  <<***spec***>> *(*p. *132) Identifier for* ***com.rti.dds.infrastructure.UserDataQosPolicy*** *(*p. *2272)*

6.184.1 Detailed Description

Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.

6.184.2 Variable Documentation

6.184.2.1 USERDATA_QOS_POLICY_ID

```
final  QosPolicyId_t USERDATA_QOS_POLICY_ID  [static]
```

<<***spec***>> *(*p. *132)* Identifier for **com.rti.dds.infrastructure.UserDataQosPolicy** (p. 2272)

6.185 Exception Codes

<<***extension***>> *(*p. *403)* Exception codes.

Classes

- class **BAD_PARAM**

  Exception thrown when a parameter passed to a call is considered illegal.
- class **BAD_TYPECODE**

  The exception ***BadKind*** *(*p. *602) is thrown when an inappropriate operation is invoked on a TypeCode object.*
- class **BadKind**

  The exception ***BadKind*** *(*p. *602) is thrown when an inappropriate operation is invoked on a TypeCode object.*
- class **BadMemberId**

  The specified ***com.rti.dds.typecode.TypeCode*** *(*p. *2183) member ID is invalid.*
- class **BadMemberName**

  The specified ***com.rti.dds.typecode.TypeCode*** *(*p. *2183) member name is invalid.*
- class **Bounds**

  A user exception thrown when a parameter is not within the legal bounds.
- class **NO_MEMORY**

  Exception thrown when there is not enough memory for a dynamic memory allocation.
- class **SystemException**

  System exception.
- class **UserException**

  User exception.

6.185.1 Detailed Description

<<***extension***>> *(p. 403)* Exception codes.

These exceptions are used for error handling by the **Type Code Support** (p. 59) API.

6.186 WIRE_PROTOCOL

<<***extension***>> *(p. 138)* Specifies the wire protocol related attributes for the **com.rti.dds.domain.Domain↩ Participant** (p. 948).

Classes

- class **RtpsReservedPortKind**

  RTPS reserved port kind, used to identify the types of ports that can be reserved on domain participant enable.
- class **RtpsWellKnownPorts_t**

  <<***extension***>> *(p. 138) RTPS well-known port mapping configuration.*
- class **WireProtocolQosPolicy**

  <<***extension***>> *(p. 138) Specifies the wire-protocol-related attributes for the **com.rti.dds.domain.DomainParticipant** (p. 948).*
- class **WireProtocolQosPolicyAutoKind**

  Mechanism to automatically calculate the GUID prefix.

Variables

- static final **QosPolicyId_t** **WIREPROTOCOL_QOS_POLICY_ID**

  <<***extension***>> *(p. 138) Identifier for **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299)*
- static final int **MASK_DEFAULT** = **BUILTIN_UNICAST** | **BUILTIN_MULTICAST** | **USER_UNICAST**

  *The default value of **com.rti.dds.infrastructure.WireProtocolQosPolicy.rtps_reserved_port_mask** (p. 2306).*
- static final int **MASK_NONE**

  No bits are set.
- static final int **MASK_ALL**

  All bits are set.
- static final **RtpsWellKnownPorts_t** **RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS**

  Assign to use well-known port mappings which are compatible with previous versions of the RTI Connext middleware.
- static final **RtpsWellKnownPorts_t** **INTEROPERABLE_RTPS_WELL_KNOWN_PORTS**

  Assign to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.
- static final **WireProtocolQosPolicyAutoKind** **RTPS_AUTO_ID_FROM_IP** = new **WireProtocolQosPolicy↩ AutoKind**("RTPS_AUTO_ID_FROM_IP", 0)

  Mechanism to automatically calculate the GUID prefix.
- static final **WireProtocolQosPolicyAutoKind** **RTPS_AUTO_ID_FROM_MAC** = new **WireProtocolQos↩ PolicyAutoKind**("RTPS_AUTO_ID_FROM_MAC", 1)

  Mechanism to automatically calculate the GUID prefix.
- static final **WireProtocolQosPolicyAutoKind** **RTPS_AUTO_ID_FROM_UUID** = new **WireProtocolQos↩ PolicyAutoKind**("RTPS_AUTO_ID_FROM_UUID", 2)

  Mechanism to automatically calculate the GUID prefix.

6.186.1 Detailed Description

<<***extension***>> *(p. 138)* Specifies the wire protocol related attributes for the **com.rti.dds.domain.Domain↩ Participant** (p. 948).

6.186.2 Variable Documentation

6.186.2.1 WIREPROTOCOL_QOS_POLICY_ID

```
final QosPolicyId_t WIREPROTOCOL_QOS_POLICY_ID [static]
```

<<***extension***>> *(p. 138)* Identifier for **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299)

6.186.2.2 MASK_DEFAULT

```
final int MASK_DEFAULT = BUILTIN_UNICAST | BUILTIN_MULTICAST | USER_UNICAST [static]
```

The default value of **com.rti.dds.infrastructure.WireProtocolQosPolicy.rtps_reserved_port_mask** (p. 2306).

Most of the ports that may be needed by DDS will be reserved by the transport when the participant is enabled. With this value set, failure to allocate a port that is computed based on the **com.rti.dds.infrastructure.RtpsWellKnownPorts_t** (p. 1931) will be detected at this time and the enable operation will fail.

This setting will avoid reserving the **usertraffic** multicast port, which is not actually used unless there are DataReaders that enable multicast but fail to specify a port.

Automatic participant ID selection will be based on finding a participant index with both the discovery (metatraffic) unicast port and usertraffic unicast port available.

See also

com.rti.dds.infrastructure.RtpsReservedPortKindMask

6.186.2.3 MASK_NONE

```
final int MASK_NONE  [static]
```

No bits are set.

None of the ports that are needed by DDS will be allocated until they are specifically required. With this value set, automatic participant Id selection will be based on selecting a port for discovery (metatraffic) unicast traffic on a single transport.

See also

com.rti.dds.infrastructure.RtpsReservedPortKindMask

6.186.2.4 MASK_ALL

```
final int MASK_ALL  [static]
```

All bits are set.

All of the ports that may be needed by DDS will be reserved when the participant is enabled. With this value set, failure to allocate a port that is computed based on the **com.rti.dds.infrastructure.RtpsWellKnownPorts_t** (p. 1931) will be detected at this time, and the enable operation will fail.

Note that this will also reserve the **usertraffic** multicast port which is not actually used unless there are DataReaders that enable multicast but fail to specify a port. To avoid unnecesary resource usage for these ports, use RTPS_↩ RESERVED_PORT_MASK_DEFAULT.

Automatic participant ID selection will be based on finding a participant index with both the discovery (metatraffic) unicast port and usertraffic unicast port available.

com.rti.dds.infrastructure.RtpsReservedPortKindMask

6.186.2.5 RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS

```
final RtpsWellKnownPorts_t RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS [static]
```

Assign to use well-known port mappings which are compatible with previous versions of the RTI Connext middleware.

Assign **com.rti.dds.infrastructure.WireProtocolQosPolicy.rtps_well_known_ports** (p. 2304) to this value to remain compatible with previous versions of the RTI Connext middleware that used fixed port mappings.

The following are the `rtps_well_known_ports` values for **com.rti.dds.infrastructure.RtpsWellKnownPorts_t.RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS** (p. 534):

`port_base` = 7400
`domain_id_gain` = 10
`participant_id_gain` = 1000
`builtin_multicast_port_offset` = 2
`builtin_unicast_port_offset` = 0
`user_multicast_port_offset` = 1
`user_unicast_port_offset` = 3

These settings are *not* compliant with OMG's DDS Interoperability Wire Protocol. To comply with the specification, please use **com.rti.dds.infrastructure.RtpsWellKnownPorts_t.INTEROPERABLE_RTPS_WELL_KNOWN_PORTS** (p. 535).

See also

com.rti.dds.infrastructure.WireProtocolQosPolicy.rtps_well_known_ports (p. 2304)

com.rti.dds.infrastructure.RtpsWellKnownPorts_t.INTEROPERABLE_RTPS_WELL_KNOWN_PORTS (p. 535)

6.186.2.6 INTEROPERABLE_RTPS_WELL_KNOWN_PORTS

```
final RtpsWellKnownPorts_t INTEROPERABLE_RTPS_WELL_KNOWN_PORTS [static]
```

Assign to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.

Assign **com.rti.dds.infrastructure.WireProtocolQosPolicy.rtps_well_known_ports** (p. 2304) to this value to use well-known port mappings which are compliant with OMG's DDS Interoperability Wire Protocol.

The following are the `rtps_well_known_ports` values for **com.rti.dds.infrastructure.RtpsWellKnownPorts_t.INTEROPERABLE_RTPS_WELL_KNOWN_PORTS** (p. 535):

`port_base` = 7400
`domain_id_gain` = 250
`participant_id_gain` = 2
`builtin_multicast_port_offset` = 0
`builtin_unicast_port_offset` = 10
`user_multicast_port_offset` = 1
`user_unicast_port_offset` = 11

Assuming a maximum port number of 65535 (UDPv4), the above settings enable the use of about 230 domains with up to 120 Participants per node per domain.

These settings are *not* backwards compatible with previous versions of the RTI Connext middleware that used fixed port mappings. For backwards compability, please use **com.rti.dds.infrastructure.RtpsWellKnownPorts_t.RTI_BACKWARDS_COMPATIBLE_RTPS_WELL_KNOWN_PORTS** (p. 534).

- class **StringTypeSupport**

  *<<**interface**>>* (p. *403*) *String type support.*

6.188.1 Detailed Description

Built-in type consisting of a single character string.

6.189 KeyedString Built-in Type

Built-in type consisting of a string payload and a second string that is the key.

Classes

- class **KeyedString**

  Keyed string built-in type.
- class **KeyedStringDataReader**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataReader` *<* *com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString* *>*.
- class **KeyedStringDataWriter**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataWriter` *<* *com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString* *>*.
- class **KeyedStringSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *<* *com.rti.dds.type.builtin.*↩*com.rti.dds.type.builtin.KeyedString* *>* *.*
- class **KeyedStringTypeSupport**

  *<<**interface**>>* (p. *403*) *Keyed string type support.*

6.189.1 Detailed Description

Built-in type consisting of a string payload and a second string that is the key.

6.190 Octets Built-in Type

Built-in type consisting of a variable-length array of opaque bytes.

Classes

- class **Bytes**

  Built-in type consisting of a variable-length array of opaque bytes.
- class **BytesDataReader**

  *<<**interface**>> (p. 403) Instantiates* `DataReader` *< com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes >.*
- class **BytesDataWriter**

  *<<**interface**>> (p. 403) Instantiates* `DataWriter` *< com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes >.*
- class **BytesSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< com.rti.dds.type.builtin.↩ com.rti.dds.type.builtin.Bytes > .*
- class **BytesTypeSupport**

  *<<**interface**>> (p. 403) com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type support.*

6.190.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes.

6.191 KeyedOctets Built-in Type

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

Classes

- class **KeyedBytes**

  Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.
- class **KeyedBytesDataReader**

  *<<**interface**>> (p. 403) Instantiates* `DataReader` *< com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes >.*
- class **KeyedBytesDataWriter**

  *<<**interface**>> (p. 403) Instantiates* `DataWriter` *< com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes >.*
- class **KeyedBytesSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< com.rti.dds.type.builtin.↩ com.rti.dds.type.builtin.KeyedBytes >.*
- class **KeyedBytesTypeSupport**

  *<<**interface**>> (p. 403) com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes type support.*

6.191.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.

6.192 Sequence Support

The com.rti.dds.infrastructure.com.rti.dds.util.Sequence interface allows you to work with variable-length collections of homogeneous data.

Modules

- **Built-in Sequences**

  Defines sequences of primitive data type. .

Classes

- class **FooSeq**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **com.rti.ndds.example.Foo** (p. 1358).*
- interface **Sequence**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **com.rti.ndds.example.Foo** (p. 1358).*

6.192.1 Detailed Description

The com.rti.dds.infrastructure.com.rti.dds.util.Sequence interface allows you to work with variable-length collections of homogeneous data.

This interface is a minimal extension to the standard `java.util.List` interface, making it easier to use RTI Connext alongside other Java APIs.

The `java.util.List` interface does not provide direct support for lists of primitive types. The **Built-in Sequences** (p. 95) provide extension APIs for working with collections of primitive elements without the overhead of boxing the unboxing.

When you use the rtiddsgen code generation tool, it will automatically generate concrete sequence instantiations for each of your own custom types.

See also

`http://java.sun.com/javase/6/docs/api/java/util/List.html`

6.193 Activity Context

Add contextual information to log messages.

Classes

- class **ActivityContext**

  Activity Context APIs.
- class **ActivityContextAttributeKind**

  *The resources of the **Activity Context** (p. 540) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.*

Functions

- static void **set_attribute_mask** (int attribute_mask)

  Set the com.rti.ndds.config.ActivityContextAttributeKindMask of the Activity Context.

6.193.1 Detailed Description

Add contextual information to log messages.

The Activity Context is a group of resources and activities associated with an action such as the creation of an entity.

- A resource is a abstraction of an entity. It can contain attributes such as Topic or domain ID.
- An activity is a general task that the resource is doing, such as "Getting QoS".

Logging context is one of the formats RTI Connext logging infrastructure supports. It is used by default in **com.rti.ndds.config.LogPrintFormat.NDDS_CONFIG_LOG_PRINT_FORMAT_DEFAULT** (p. 1577). It provides information about resources and activities. The activity context is used in two places:

- Logging: activity context is one of the **com.rti.ndds.config.LogPrintFormat** (p. 1576) DDS logging infrastructure supports. If that format is set every time RTI Connext logs a message, it will contain the contextual information.
- Heap monitoring: every time memory is allocated and heap monitoring is enabled, the string representation of the activity context will be associated with the allocation. This information will be available when taking the snapshot.

For example, in the creation of a DataWriter, the activity context will provide information about:

- Resource: the Publisher creating the DataWriter. Attributes of the publisher will be GUID, kind, name and domain ID.
- Activity: entity creation. It will have two parameters, the entity kind and the Topic. In the example below, these are "Writer" and "TestTopic".

The string representation of the above activity context would be:

```
[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000088{Entity=Pu,Name=TestPublisher,Domain=1}|CREATE Writer WITH TOPIC
       TestTopic]
```

Another example could be when a DataWriter writes a sample. The activity context will provide information about:

- Resource: the DataWriter writing the sample. The attributes of the DataWriter will be GUID, name, kind, Topic, data type, and the domain ID.
- Activity will be "write a sample".

The string representation of the activity context will be:

```
[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]
```

6.193.2 Function Documentation

6.193.2.1 set_attribute_mask()

```
static void set_attribute_mask (
             int attribute_mask )  [static]
```

Set the com.rti.ndds.config.ActivityContextAttributeKindMask of the Activity Context.

6.194 Logging

Configure how much debugging information is reported during runtime and where it is logged.

Modules

- **Activity Context**

  Add contextual information to log messages.

Classes

- class **LogCategory**

  Categories of logged messages.
- class **LogFacility**

  A number that identifies the source of a log message.
- class **Logger**

  *<<**interface**>> (p. 403) The singleton type used to configure RTI Connext logging.*
- interface **LoggerDevice**

  *<<**interface**>> (p. 403) Logging device interface. Use for user-defined logging devices.*
- class **LogLevel**

  Level category assigned to RTI Connext log messages returned to an output device.
- class **LogMessage**

  A log message's input parameter to a logging device, including the text and additional information.
- class **LogPrintFormat**

  The format used to output RTI Connext diagnostic information.
- class **LogVerbosity**

  The verbosities at which RTI Connext diagnostic information is logged.
- class **SyslogLevel**

  Syslog level category assigned to RTI Connext log messages. See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information.
- class **SyslogVerbosity**

  *The Syslog verbosities at which RTI Connext diagnostic information is logged. These Syslog verbosities are mapped to **com.rti.ndds.config.LogVerbosity** (p. 1579). See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information.*

6.194.1 Detailed Description

Configure how much debugging information is reported during runtime and where it is logged.

6.195 Version

Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.

Classes

- class **LibraryVersion_t**

  The version of a single library shipped as part of an RTI Connext distribution.
- class **Version**

  *<<**interface**>> (*p. *403) The version of an RTI Connext distribution.*

6.195.1 Detailed Description

Retrieve information for the RTI Connext product, the core library, and the C, C++ or Java libraries.

There are three ways to obtain version information: looking at the revision files, using Visual Studio or the command line, or programmatically at run time. This HTML documentation includes a reference for consulting the APIs that allow you to get version information programmatically. For more information see the RTI Connext DDS Core Libraries User's Manual.

The version information includes four fields:

- Major product version.
- Minor product version.
- Release letter for product version.
- Revision number of product.

6.196 Heap Monitoring

Monitor memory allocations done by the middleware on the native heap.

Classes

- class **HeapMonitoring**

  Heap Monitoring APIs.
- class **HeapMonitoringParams**

  Input parameters for enabling heap monitoring. They will be used for configuring the format of the snapshot.
- class **HeapMonitoringSnapshotContentFormat**

  Bitmap used to decide which information of the snapshot will be displayed.
- class **HeapMonitoringSnapshotOutputFormat**

  Specify the format of the output of the snapshot. RTI Connext.

6.196.1 Detailed Description

Monitor memory allocations done by the middleware on the native heap.

RTI Connext allows you to monitor the memory allocations done by the middleware on the native heap. This feature can be used to analyze and debug unexpected memory growth.

After **com.rti.ndds.utility.HeapMonitoring.enable** (p. 1427) is called, you may invoke **com.rti.ndds.utility.Heap↩ Monitoring.take_heap_snapshot** (p. 1429) to save the current heap memory usage to a file. By comparing two snapshots, you can tell if new memory has been allocated and, in many cases, where.

6.197 Network Capture

Save network traffic into a capture file for further analysis.

Classes

- class **NetworkCapture**

  Network Capture APIs.
- class **NetworkCaptureContentKind**

  Bitmap used to specify a content type, i.e., a part of the RTPS frame.
- class **NetworkCaptureParams**

  Input parameters for starting network capture.
- class **NetworkCaptureTrafficKind**

  Bitmap used to specify whether we want to capture inbound or outbound traffic.

6.197.1 Detailed Description

Save network traffic into a capture file for further analysis.

RTI Connext allows you to capture the network traffic that one or more DomainParticipants send or receive. This feature can be used to analyze and debug communication problems between your DDS applications. When network capture is enabled, each DomainParticipant will generate a pcap-based file that can then be opened by a packet analyzer like Wireshark, provided the right dissectors are installed.

To some extent, network capture can be used as an alternative to existing pcap-based network capture software (such as Wireshark). This will be the case when you are only interested in analyzing the traffic a DomainParticipant sends/receives. In this scenario, network capture will actually have some advantages over using more general pcap-based network capture applications: RTI's network capture includes additional information such as security-related data; it also removes information that is not needed, such as user data, when you want to reduce the capture size. That said, RTI's network capture is not a replacement for other pcap-based network capture applications: it only captures the traffic exchanged by the DomainParticipants, but it does not capture any other traffic exchanged through the system network interfaces.

To capture network traffic **com.rti.ndds.utility.NetworkCapture.enable** (p. 1622) must be invoked before creating any DomainParticipant. Similarly, **com.rti.ndds.utility.NetworkCapture.disable** (p. 1622) must be called after deleting all participants. In between these calls, you may start, stop, pause or resume capturing traffic for one or all participants.

6.197.2 Capturing

Shared Memory Traffic

Every RTPS frame in network capture has a source and a destination associated with it. In the case of shared memory traffic, a process identifier and a port determine the source and destination endpoints.

Access to the process identifier (PID) of the source for inbound traffic requires changes in the shared memory segments. These changes would break shared memory compatibility with previous versions of RTI Connext. For this reason, by default, network capture will not populate the value of the source PID for inbound shared memory traffic.

If interoperability with previous versions of RTI Connext is not necessary, you can generate capture files containing the source PID for inbound traffic. To do so, configure the value of the *'dds.transport.minimum_compatibility_version'* property to 6.1.0. (See **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739)).

```
<domain_participant_qos>

    <property>

        <value>

            <element>

                <name>dds.transport.minimum_compatibility_version</name>

                <value>6.1.0</value>

                <propagate>false</propagate>

            </element>

        </value>

    </property>

</domain_participant_qos>
```

This property is never propagated, so it must be consistently configured throughout the whole system.

Note: Changing the value of this property affects the type of shared memory segments that RTI Connext uses. For that reason, you may see the following warning, resulting from leftover shared memory segments:

```
[0xC733A001,0xB248F671,0xAEC4A0C1:0x000001C1{Domain=200}|CREATE DP|ENABLE]
       NDDS_Transport_Shmem_is_segment_compatible:incompatible shared memory protocol detected.

Current version 4.0 not compatible with 2.0.
```

The leftover shared memory segments can be removed using the `ipcrm` command. See `https://community.rti.com/kb/what-are-possible-solutions-common-shared-memory-issues` for more information.

6.198 Monitoring Library 2.0

RTI Monitoring Library 2.0 public API.

RTI Monitoring Library 2.0 public API.

RTI Monitoring Library 2.0 is one component of the RTI Connext Observability Framework which allows collecting and distributing telemetry data (metrics and logs) associated with the observable resources created by an RTI Connext application.

In this release, the only Observable resources are the following entities: **com.rti.dds.publication.DataWriter** (p. 818), **com.rti.dds.subscription.DataReader** (p. 707), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.topic.Topic** (p. 2116) and Application (a process running RTI Connext).

The library also accepts remote commands to change the set of distributed telemetry data at run-time.

The data distributed by RTI Monitoring Library 2.0 is sent to an RTI Observability Collector Service instance, which forwards the data to other RTI Observability Collector Service instances or stores the data in third-party observability backends such as Prometheus or Grafana Loki.

RTI Monitoring Library 2.0 is a separate library (rtimonitoring2), and applications can use it in three different modes:

- **Dynamically loaded:** This is the default mode, and it requires that the rtimonitoring2 shared library is in the library search path.
- **Dynamic linking:** The application is linked with the rtimonitoring2 shared library.
- **Static linking:** The application is linked with the rtimonitoring2 static library.

Dynamic and static linking are only supported in C and C++ applications.

To enable use of RTI Monitoring Library 2.0 and configure its behavior, use the **com.rti.dds.infrastructure.MonitoringQosPolicy** (p. 1611) QoS policy on the **com.rti.dds.domain.DomainParticipantFactory** (p. 1039). This QoS policy can be configured programmatically or via XML.

6.199 Other Utilities

Other Utilities, such as com.rti.ndds.utility.Utility.spin.

Classes

- class **Utility**

  Other Utilities APIs.

6.199.1 Detailed Description

Other Utilities, such as com.rti.ndds.utility.Utility.spin.

Chapter 7

Namespace Documentation

7.1 Package com.rti

RTI.

Packages

- package **connext**

  RTI Connext Messaging communication patterns.
- package **dds**

  DDS.

7.1.1 Detailed Description

RTI.

7.2 Package com.rti.connext

RTI Connext Messaging communication patterns.

Packages

- package **requestreply**

  Support for the request-reply communication pattern.

7.2.1 Detailed Description

RTI Connext Messaging communication patterns.

7.3 Package com.rti.connext.requestreply

Support for the request-reply communication pattern.

Classes

- class **Replier**

  Allows receiving requests and sending replies.
- interface **ReplierListener**

  Called when a com.rti.connext.requestreply.Replier<TReq,TRep> has new available requests.
- class **ReplierParams**

  Contains the parameters for creating a com.rti.connext.requestreply.Replier<TReq,TRep>.
- class **Requester**

  Allows sending requests and receiving replies.
- class **RequesterParams**

  Contains the parameters for creating a com.rti.connext.requestreply.Requester<TReq,TRep>
- class **SimpleReplier**

  A callback-based replier.
- interface **SimpleReplierListener**

  *The listener called by a **SimpleReplier** (p. 2001).*
- class **SimpleReplierParams**

  Contains the parameters for creating a com.rti.connext.requestreply.SimpleReplier<TReq,TRep>

7.3.1 Detailed Description

Support for the request-reply communication pattern.

There are two basic entities that enable this pattern:

- com.rti.connext.requestreply.Requester<TReq,TRep>
- com.rti.connext.requestreply.Replier<TReq,TRep> (and a simpler version com.rti.connext.requestreply.Simple↩ Replier<TReq,TRep>)

This functionality is built on top of RTI Connext.

A **Requester** (p. 1867) publishes a request topic and subscribes to a reply topic. A **Replier** (p. 1846) subscribes to the request topic and publishes the reply topic.

You can find more information about this pattern in `Request-Reply`, in the Core Libraries User's Manual.

See also

Request-Reply Examples (p. 391).

7.4 Package com.rti.dds

DDS.

Packages

- package **domain**

  *Contains the **com.rti.dds.domain.DomainParticipant** (p. 948) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **com.rti.dds.domain.DomainParticipant** (p. 948) also acts as a container for the other objects that make up RTI Connext.*
- package **dynamicdata**

  *<<**extension**>> (p. 403) The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.*
- package **infrastructure**

  Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.
- package **publication**

  *Contains the **com.rti.dds.publication.FlowController** (p. 1348), **com.rti.dds.publication.Publisher** (p. 1767), and **com.rti.dds.publication.DataWriter** (p. 818) classes as well as the **com.rti.dds.publication.PublisherListener** (p. 1789) and **com.rti.dds.publication.DataWriterListener** (p. 853) interfaces, and more generally, all that is needed on the publication side.*
- package **subscription**
- package **topic**

  *Contains the **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.topic.ContentFilteredTopic** (p. 692), and **com.rti.dds.topic.MultiTopic** (p. 1618) classes, the **com.rti.dds.topic.TopicListener** (p. 2131) interface, and more generally, all that is needed by an application to define **com.rti.dds.topic.Topic** (p. 2116) objects and attach QoS policies to them.*
- package **typecode**
- package **util**

  Utility types that support the DDS API.

7.4.1 Detailed Description

DDS.

7.5 Package com.rti.dds.domain

Contains the **com.rti.dds.domain.DomainParticipant** (p. 948) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **com.rti.dds.domain.DomainParticipant** (p. 948) also acts as a container for the other objects that make up RTI Connext.

Classes

- interface **DomainParticipant**

  *<<**interface**>> (p. 403) Container for all **com.rti.dds.infrastructure.DomainEntity** (p. 947) objects.*
- class **DomainParticipantAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)*
- class **DomainParticipantFactory**

  *<<**singleton**>> (p. 403) <<**interface**>> (p. 403) Allows creation and destruction of **com.rti.dds.domain.DomainParticipant** (p. 948) objects.*
- class **DomainParticipantFactoryQos**

  *QoS policies supported by a **com.rti.dds.domain.DomainParticipantFactory** (p. 1039).*
- interface **DomainParticipantListener**

  *<<**interface**>> (p. 403) Listener for participant status.*
- class **DomainParticipantProtocolStatus**

  *<<**extension**>> (p. 403) The status of a participant's protocol related metrics, like the number of corrupted messages, change in corrupted messages and timestamp of the last corrupted message.*
- class **DomainParticipantQos**

  *QoS policies supported by a **com.rti.dds.domain.DomainParticipant** (p. 948) entity.*

7.5.1 Detailed Description

Contains the **com.rti.dds.domain.DomainParticipant** (p. 948) class that acts as an entrypoint of RTI Connext and acts as a factory for many of the classes. The **com.rti.dds.domain.DomainParticipant** (p. 948) also acts as a container for the other objects that make up RTI Connext.

7.6 Package com.rti.dds.dynamicdata

*<<**extension**>> (p. 403)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

Classes

- class **DynamicData**

  A sample of any complex data type, which can be inspected and manipulated reflectively.
- class **DynamicDataInfo**

  *A descriptor for a **com.rti.dds.dynamicdata.DynamicData** (p. 1134) object.*
- class **DynamicDataMemberInfo**

  A descriptor for a single member (i.e. field) of dynamically defined data type.
- class **DynamicDataProperty_t**

  *A collection of attributes used to configure **com.rti.dds.dynamicdata.DynamicData** (p. 1134) objects.*
- class **DynamicDataReader**

  *Reads (subscribes to) objects of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134).*
- class **DynamicDataSeq**

  *An ordered collection of **com.rti.dds.dynamicdata.DynamicData** (p. 1134) elements.*

- class **DynamicDataTypeProperty_t**

  *A collection of attributes used to configure **com.rti.dds.dynamicdata.DynamicData** (p. 1134) objects.*
- class **DynamicDataTypeSerializationProperty_t**

  Properties that govern how data of a certain type will be serialized on the network.
- class **DynamicDataTypeSupport**

  *A factory for registering a dynamically defined type and creating **com.rti.dds.dynamicdata.DynamicData** (p. 1134) objects.*
- class **DynamicDataWriter**

  *Writes (publishes) objects of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134).*

7.6.1 Detailed Description

<<***extension***>> *(p. 403)* The Dynamic Data API provides a way to interact with arbitrarily complex data types at runtime without the need for code generation.

This API allows you to define new data types, modify existing data types, and interact reflectively with samples. To use it, you will take the following steps:

1. Obtain a com.rti.dds.typecode.TypeCode (p. 2183) (see Type Code Support (p. 59)) that defines the type definition you want to use.
A **com.rti.dds.typecode.TypeCode** (p. 2183) includes a type's *kind* (**com.rti.dds.typecode.TCKind** (p. 2094)), *name*, and *members* (that is, fields). You can create your own **com.rti.dds.typecode.TypeCode** (p. 2183) using the **com.rti.dds.typecode.TypeCodeFactory** (p. 2232) class – see, for example, the **com.rti.dds.typecode.TypeCodeFactory.create_struct_tc** (p. 2235) method. Alternatively, you can use a remote **com.rti.dds.typecode.TypeCode** (p. 2183) that you discovered on the network (see **Built-in Topics** (p. 53)) or one generated by rtiddsgen (see the `Code Generator User's Manual`). If you are relying on discovering TypeCodes on the network and are using TypeObject v2 (TypeObject v2 is the default behavior, see **com.rti.dds.infrastructure.DiscoveryConfigBuiltinChannelKind.TYPE_LOOKUP_SERVICE_CHANNEL** (p. 912)), you must set **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.request_types_filter** (p. 942) to a string filter containing all of the topic names for which you want to dynamically discover types ("∗" to request all types). Otherwise, types will only be discovered if a local endpoint is already created on the topic and the local endpoint matches the remote endpoint.

2. Wrap the com.rti.dds.typecode.TypeCode (p. 2183) in a com.rti.dds.dynamicdata.DynamicDataTypeSupport (p. 1286) object.
See the constructor com.rti.dds.dynamicdata.DynamicDataTypeSupport.DynamicDataTypeSupport.DynamicDataTypeSupport. This object lets you connect the type definition to a **com.rti.dds.domain.DomainParticipant** (p. 948) and manage data samples (of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134)).

3. Register the com.rti.dds.dynamicdata.DynamicDataTypeSupport (p. 1286) with one or more domain participants.
See **com.rti.dds.dynamicdata.DynamicDataTypeSupport.register_type** (p. 1288). This action associates the data type with a logical name that you can use to create topics. (Starting with this step, working with a dynamically defined data type is almost exactly the same as working with a generated one.)

4. Create a com.rti.dds.topic.Topic (p. 2116) from the com.rti.dds.domain.DomainParticipant (p. 948).
Use the name under which you registered your data type – see **com.rti.dds.domain.DomainParticipant.create_topic** (p. 984). This **com.rti.dds.topic.Topic** (p. 2116) is what you will use to produce and consume data.

5. Create a com.rti.dds.dynamicdata.DynamicDataWriter (p. 1294) and/or com.rti.dds.dynamicdata.DynamicDataReader (p. 1249).
These objects will produce and/or consume data (of type **com.rti.dds.dynamicdata.DynamicData** (p. 1134)) on the

com.rti.dds.topic.Topic (p. 2116). You can create these objects directly from the **com.rti.dds.domain.Domain↩ Participant** (p. 948) – see **com.rti.dds.domain.DomainParticipant.create_datawriter** (p. 978) and **com.rti.dds.↩ domain.DomainParticipant.create_datareader** (p. 981) – or by first creating intermediate **com.rti.dds.publication.↩ Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039) objects – see **com.rti.dds.domain.Domain↩ Participant.create_publisher** (p. 971) and **com.rti.dds.domain.DomainParticipant.create_subscriber** (p. 975).

6. Write and/or read the data of interest.

7. Tear down the objects described above.
You should delete them in the reverse order in which you created them. Note that unregistering your data type with the **com.rti.dds.domain.DomainParticipant** (p. 948) is optional; all types are automatically unregistered when the **com.↩ rti.dds.domain.DomainParticipant** (p. 948) itself is deleted.

7.7 Package com.rti.dds.infrastructure

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

Classes

- class **AckResponseData_t**

  Data payload of an application-level acknowledgment.
- class **AllocationSettings_t**

  Resource allocation settings.
- class **AsynchronousPublisherQosPolicy**

  *<<**extension**>> (p. 138) Configures the mechanism that sends user data in an external middleware thread.*
- class **AvailabilityQosPolicy**

  *<<**extension**>> (p. 138) Configures the availability of data.*
- class **BAD_PARAM**

  Exception thrown when a parameter passed to a call is considered illegal.
- class **BAD_TYPECODE**

  *The exception **BadKind** (p. 602) is thrown when an inappropriate operation is invoked on a TypeCode object.*
- class **BadKind**

  *The exception **BadKind** (p. 602) is thrown when an inappropriate operation is invoked on a TypeCode object.*
- class **BadMemberId**

  *The specified **com.rti.dds.typecode.TypeCode** (p. 2183) member ID is invalid.*
- class **BadMemberName**

  *The specified **com.rti.dds.typecode.TypeCode** (p. 2183) member name is invalid.*
- class **BatchQosPolicy**

  *<<**extension**>> (p. 138) Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.*
- class **BooleanSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < *boolean* >
- class **Bounds**

  A user exception thrown when a parameter is not within the legal bounds.
- class **BuiltinQosProfiles**

The available built-in QoS libraries, profiles, and snippets.

- class **BuiltinTopicReaderResourceLimits_t**

  *<<**extension**>> (p. 138) Built-in topic reader's resource limits.*
- class **ByteSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < byte >
- class **CdrPaddingKind**

  The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization.
- class **ChannelSettings_t**

  *<<**extension**>> (p. 138) Type used to configure the properties of a channel.*
- class **ChannelSettingsSeq**

  *Declares IDL `sequence`< **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) >*
- class **CharSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < char >
- class **CoherentSetInfo_t**

  *<<**extension**>> (p. 403) Type definition for a coherent set info.*
- class **CompressionSettings_t**

  *<<**extension**>> (p. 138) Settings related to compressing user data.*
- interface **Condition**

  *<<**interface**>> (p. 403) Root class for all the conditions that may be attached to a **com.rti.dds.infrastructure.WaitSet** (p. 2287).*
- class **ConditionSeq**

  *Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.infrastructure.↩ Condition** (p. 686) >*
- class **ContentFilterProperty_t**

  *<<**extension**>> (p. 403) Type used to provide all the required information to enable content filtering.*
- class **Cookie_t**

  *<<**extension**>> (p. 403) Sequence of bytes.*
- class **CookieSeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.Cookie_t** (p. 699) > .*
- interface **Copyable**

  *<<**extension**>> (p. 403) <<**interface**>> (p. 403) Interface for all the user-defined data type classes that support copy.*
- class **DatabaseQosPolicy**

  *<<**extension**>> (p. 138) Various threads and resource limits settings used by RTI Connext to control its internal database.*
- class **DataReaderInstanceRemovalKind**

  *Sets the kinds of instances that can be replaced when instance resource limits (**com.rti.dds.infrastructure.Resource↩ LimitsQosPolicy.max_instances** (p. 1896)) are reached.*
- class **DataReaderProtocolQosPolicy**

  *<<**extension**>> (p. 138) Along with **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299) and **com.rti.dds.↩ infrastructure.DataWriterProtocolQosPolicy** (p. 860), this QoS policy configures the DDS on-the-network protocol (RTPS).*
- class **DataReaderResourceLimitsInstanceReplacementSettings**

  Instance replacement kind applied to each instance state.
- class **DataReaderResourceLimitsQosPolicy**

  *<<**extension**>> (p. 138) Various settings that configure how a **com.rti.dds.subscription.DataReader** (p. 707) allocates and uses physical memory for internal resources.*
- class **DataRepresentationQosPolicy**

*<<**spec**>> (p. 132) This QoS policy contains a list of representation identifiers and compression settings used by **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) entities to negotiate which data representation and compression settings to use.*

- class **DataTagQosPolicy**

  *<<**spec**>> (p. 132) Stores (name, value) pairs that can be used to determine access permissions.*
- class **DataTagQosPolicyHelper**

  Policy helpers that facilitate management of the data tags in the input policy.
- class **DataWriterProtocolQosPolicy**

  *<<**extension**>> (p. 138) Protocol that applies only to **com.rti.dds.publication.DataWriter** (p. 818) instances.*
- class **DataWriterResourceLimitsInstanceReplacementKind**

  Sets the kinds of instances that can be replaced when instance resource limits are reached.
- class **DataWriterResourceLimitsQosPolicy**

  *<<**extension**>> (p. 138) Various settings that configure how a **com.rti.dds.publication.DataWriter** (p. 818) allocates and uses physical memory for internal resources.*
- class **DeadlineQosPolicy**

  *<<**spec**>> (p. 132) Expresses the maximum duration (deadline) within which an instance is expected to be updated.*
- class **DestinationOrderQosPolicy**

  *<<**spec**>> (p. 132) Controls how the middleware will deal with data sent by multiple **com.rti.dds.publication.DataWriter** (p. 818) entities for the same instance of data (i.e., same **com.rti.dds.topic.Topic** (p. 2116) and key).*
- class **DestinationOrderQosPolicyKind**

  Kinds of destination order.
- class **DestinationOrderQosPolicyScopeKind**

  Scope of source destination order.
- class **DiscoveryBuiltinReaderFragmentationResourceLimits_t**
- class **DiscoveryConfigBuiltinChannelKind**

  Built-in channels that can be enabled.
- class **DiscoveryConfigBuiltinPluginKind**

  Built-in discovery plugins that can be used.
- class **DiscoveryConfigQosPolicy**

  Settings for discovery configuration.
- class **DiscoveryQosPolicy**

  *<<**extension**>> (p. 138) Configures the mechanism used by the middleware to automatically discover and connect with new remote applications.*
- interface **DomainEntity**

  *<<**interface**>> (p. 403) Abstract base class for all DDS entities except for the **com.rti.dds.domain.DomainParticipant** (p. 948).*
- class **DomainParticipantConfigParams_t**

  *<<**extension**>> (p. 403) Input paramaters for creating a participant from configuration. It allows to modify or override some of the properties of the entities defined in the configuration.*
- class **DomainParticipantResourceLimitsIgnoredEntityReplacementKind**

  Available replacement policies for the ignored entities.
- class **DomainParticipantResourceLimitsQosPolicy**

  *<<**extension**>> (p. 138) Various settings that configure how a **com.rti.dds.domain.DomainParticipant** (p. 948) allocates and uses physical memory for internal resources, including the maximum sizes of various properties.*
- class **DoubleSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< double >*
- class **DurabilityQosPolicy**

  *<<**spec**>> (p. 132) This QoS policy specifies whether or not RTI Connext will store and deliver previously published data samples to new **com.rti.dds.subscription.DataReader** (p. 707) entities that join the network later.*

- class **DurabilityQosPolicyKind**

  Kinds of durability.
- class **DurabilityServiceQosPolicy**

  *<<**spec**>> (p. 132) Various settings to configure the external RTI Persistence Service used by RTI Connext for DataWriters with a **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116) setting of com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_DURABILITY_QOS or com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT_DURABILITY_QOS.*
- class **Duration_t**

  Type for duration representation.
- class **EndpointGroup_t**

  Specifies a group of endpoints that can be collectively identified by a name and satisfied by a quorum.
- class **EndpointGroupSeq**

  *A sequence of **com.rti.dds.infrastructure.EndpointGroup_t** (p. 1313).*
- class **EndpointTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered endpoint.
- class **EndpointTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered endpoint.
- class **EndpointTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered endpoint.
- interface **Entity**

  *<<**interface**>> (p. 403) Abstract base class for all the DDS objects that support QoS policies, a listener, and a status condition.*
- class **EntityFactoryQosPolicy**

  *<<**spec**>> (p. 132) A QoS policy for all **com.rti.dds.infrastructure.Entity** (p. 1320) types that can act as factories for one or more other **com.rti.dds.infrastructure.Entity** (p. 1320) types.*
- class **EntityNameQosPolicy**

  *<<**extension**>> (p. 138) Assigns a name and a role name to a **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), **com.rti.dds.subscription.Subscriber** (p. 2039), **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707). Except for **com.rti.dds.publication.Publisher** (p. 1767) and **com.rti.dds.subscription.Subscriber** (p. 2039), these names will be visible during the discovery process and in RTI tools to help you visualize and debug your system.*
- class **EventQosPolicy**

  *<<**extension**>> (p. 138) Settings for event.*
- class **FloatSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < float >
- class **GroupDataQosPolicy**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.*
- class **GuardCondition**

  *<<**interface**>> (p. 403) A specific **com.rti.dds.infrastructure.Condition** (p. 686) whose `trigger_value` is completely under the control of the application.*
- class **GUID_t**

  Type for GUID (Global Unique Identifier) representation.
- class **HistoryQosPolicy**

  *<<**spec**>> (p. 132) Specifies the behavior of RTI Connext in the case where the value of a sample changes (one or more times) before it can be successfully communicated to one or more existing subscribers.*
- class **HistoryQosPolicyKind**

  Kinds of history.
- class **IMMUTABLE_TYPECODE**

  *An attempt was made to modify a **com.rti.dds.typecode.TypeCode** (p. 2183) that was received from a remote object.*

- class **InetAddressSeq**

  Declares IDL `sequence<` *com.rti.dds.infrastructure.java.net.InetAddress* `>`
- class **InstanceHandle_t**

  Type definition for an instance handle.
- class **InstanceHandleSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence<` ***com.rti.dds.infrastructure.InstanceHandle_t*** *(p. 1443)* `>` .
- class **InstanceStateConsistencyKind**

  *<<**extension**>> (p. 138) Whether instance state consistency is enabled.*
- class **IntSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence<` *com.rti.dds.infrastructure.int* `>`
- class **LatencyBudgetQosPolicy**

  *<<**spec**>> (p. 132) Provides a hint as to the maximum acceptable delay from the time the data is written to the time it is received by the subscribing applications.*
- class **LifespanQosPolicy**

  *<<**spec**>> (p. 132) Specifies how long the data written by the **com.rti.dds.publication.DataWriter** (p. 818) is considered valid.*
- interface **Listener**

  *<<**interface**>> (p. 403) Abstract base class for all **Listener** (p. 1528) interfaces.*
- class **LivelinessQosPolicy**

  *Specifies and configures the mechanism that allows **com.rti.dds.subscription.DataReader** (p. 707) entities to detect when **com.rti.dds.publication.DataWriter** (p. 818) entities become disconnected or "dead.".*
- class **LivelinessQosPolicyKind**

  Kinds of liveliness.
- class **Locator_t**

  *<<**extension**>> (p. 138) Type used to represent the addressing information needed to send a message to an RTPS Endpoint using one of the supported transports.*
- class **LocatorFilter_t**

  *<<**extension**>> (p. 138) Specifies the configuration of an individual channel within a MultiChannel DataWriter.*
- class **LocatorFilterQosPolicy**

  *<<**extension**>> (p. 138) The QoS policy used to report the configuration of a MultiChannel DataWriter as part of **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753).*
- class **LocatorFilterSeq**

  Declares IDL `sequence<` ***com.rti.dds.infrastructure.LocatorFilter_t*** *(p. 1551)* `>`.
- class **LocatorSeq**

  Declares IDL `sequence <` ***com.rti.dds.infrastructure.Locator_t*** *(p. 1546)* `>`
- class **LoggingQosPolicy**

  *<<**extension**>> (p. 138) Configures the RTI Connext logging facility.*
- class **LongDoubleSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence<` *com.rti.dds.infrastructure.LongDouble* `>`
- class **LongSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence<` *long* `>`
- class **MonitoringDedicatedParticipantSettings**

  *<<**extension**>> (p. 138) Configures the use of a dedicated **com.rti.dds.domain.DomainParticipant** (p. 948) to distribute the RTI Connext application telemetry data.*
- class **MonitoringDistributionSettings**

  *<<**extension**>> (p. 138) Configures the distribution of telemetry data.*

- class **MonitoringEventDistributionSettings**

  *<<**extension**>> (p. 138) Configures the distribution of event metrics.*
- class **MonitoringLoggingDistributionSettings**

  *<<**extension**>> (p. 138) Configures the distribution of log messages.*
- class **MonitoringLoggingForwardingSettings**

  *<<**extension**>> (p. 138) Configures the forwarding levels of log messages for the different **com.rti.ndds.config.Log↩ Facility** (p. 1558).*
- class **MonitoringMetricSelection**

  *<<**extension**>> (p. 138) This data structure is used to configure event and periodic metrics collection and distribution for a specific set of observable resources.*
- class **MonitoringMetricSelectionSeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.MonitoringMetricSelection** (p. 1605) >*
- class **MonitoringPeriodicDistributionSettings**

  *<<**extension**>> (p. 138) Configures the distribution of periodic metrics.*
- class **MonitoringQosPolicy**

  *<<**extension**>> (p. 138) Configures the use of RTI Monitoring Library 2.0 to collect and distribute RTI Connext telemetry data.*
- class **MonitoringTelemetryData**

  *<<**extension**>> (p. 138) Configures the telemetry data that will be distributed.*
- class **MultiChannelQosPolicy**

  *<<**extension**>> (p. 138) Configures the ability of a DataWriter to send data on different multicast groups (addresses) based on the value of the data.*
- class **NO_MEMORY**

  Exception thrown when there is not enough memory for a dynamic memory allocation.
- class **ObjectHolder**

  *<<**extension**>> (p. 403) Holder of object instance*
- class **OwnershipQosPolicy**

  *<<**spec**>> (p. 132) Specifies whether it is allowed for multiple **com.rti.dds.publication.DataWriter** (p. 818) (s) to write the same instance of the data and if so, how these modifications should be arbitrated.*
- class **OwnershipQosPolicyKind**

  Kinds of ownership.
- class **OwnershipStrengthQosPolicy**

  *Specifies the value of the strength used to arbitrate among multiple **com.rti.dds.publication.DataWriter** (p. 818) objects that attempt to modify the same instance of a data type (identified by **com.rti.dds.topic.Topic** (p. 2116) + key).*
- class **ParticipantTrustAlgorithmInfo**

  Trust Plugins algorithm information associated with the discovered DomainParticipant.
- class **ParticipantTrustInterceptorAlgorithmInfo**

  Trust Plugins interception algorithm information associated with the discovered DomainParticipant.
- class **ParticipantTrustKeyEstablishmentAlgorithmInfo**

  Trust Plugins key establishment algorithm information associated with the discovered DomainParticipant.
- class **ParticipantTrustProtectionInfo**

  Trust Plugins Protection information associated with the discovered DomainParticipant.
- class **ParticipantTrustSignatureAlgorithmInfo**

  Trust Plugins signature algorithm information associated with the discovered DomainParticipant.
- class **PartitionQosPolicy**

  *<<**spec**>> (p. 132) Set of strings that introduces logical partitions in **com.rti.dds.domain.DomainParticipant** (p. 948), **com.rti.dds.publication.Publisher** (p. 1767), or **com.rti.dds.subscription.Subscriber** (p. 2039) entities.*
- class **PersistentJournalKind**

Sets the journal mode of the persistent storage.

- class **PersistentStorageSettings**

  Configures durable writer history and durable reader state.

- class **PersistentSynchronizationKind**

  *<<**extension**>> (p. 138) Whether instance state consistency is enabled.*

- class **PresentationQosPolicy**

  *<<**spec**>> (p. 132) Specifies how the samples representing changes to data instances are presented to a subscribing application.*

- class **PresentationQosPolicyAccessScopeKind**

  Kinds of presentation "access scope".

- class **ProductVersion_t**

  *<<**extension**>> (p. 403) Type used to represent the current version of RTI Connext.*

- class **ProfileQosPolicy**

  *<<**extension**>> (p. 138) Configures the way that XML documents containing QoS profiles are loaded by RTI Connext.*

- class **Property_t**

  Properties are name/value pairs objects.

- class **PropertyQosPolicy**

  *<<**extension**>> (p. 138) Stores name/value(string) pairs that can be used to configure certain parameters of RTI Connext that are not exposed through formal QoS policies. Can also be used to store and propagate application-specific name/value pairs that can be retrieved by user code during discovery.*

- class **PropertyQosPolicyHelper**

  Policy helpers that facilitate management of the properties in the input policy.

- class **PropertyQosPolicyMutability**

  Determines if, and when, the value of a property can change.

- class **PropertySeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.Property_t** (p. 1695) >*

- class **ProtocolVersion_t**

  *<<**extension**>> (p. 403) Type used to represent the version of the RTPS protocol.*

- interface **PublicationPriority**

- class **PublishModeQosPolicy**

  *<<**extension**>> (p. 138) Specifies how RTI Connext sends application data on the network. This QoS policy can be used to tell RTI Connext to use its own thread to send data, instead of the user thread.*

- class **PublishModeQosPolicyKind**

  Kinds of publishing mode.

- class **Qos**

  An abstract base class for all QoS types.

- class **QosPolicy**

  The base class for all QoS policies.

- class **QosPolicyCount**

  *Type to hold a counter for a **com.rti.dds.infrastructure.QosPolicyId_t** (p. 1806).*

- class **QosPolicyCountSeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.QosPolicyCount** (p. 1804) >*

- class **QosPolicyId_t**

  Type to identify `QosPolicies`.

- class **QosPrintFormat**

  A collection of attributes used to configure how a QoS appears when printed.

- class **ReaderDataLifecycleQosPolicy**

  *<<**spec**>> (p. 132) Controls how a DataReader manages the lifecycle of the data that it has received.*

- class **ReceiverPoolQosPolicy**

  *<<**extension**>> (p. 138) Configures threads used by RTI Connext to receive and process data from transports (for example, UDP sockets).*
- class **ReliabilityQosPolicy**

  *<<**extension**>> (p. 138) <<**spec**>> (p. 132) Indicates the level of reliability offered/requested by RTI Connext.*
- class **ReliabilityQosPolicyAcknowledgmentModeKind**

  *<<**extension**>> (p. 138) Kinds of acknowledgment.*
- class **ReliabilityQosPolicyKind**

  Kinds of reliability.
- class **RemoteParticipantPurgeKind**

  Available behaviors for halting communication with remote participants (and their contained entities) with which discovery communication has been lost.
- class **ResourceLimitsQosPolicy**

  *<<**spec**>> (p. 132) Controls the amount of physical memory allocated for DDS entities, if dynamic allocations are allowed, and how they occur. Also controls memory usage among different instance values for keyed topics.*
- class **RETCODE_ALREADY_DELETED**

  The object target of this operation has already been deleted.
- class **RETCODE_BAD_PARAMETER**

  Illegal parameter value.
- class **RETCODE_ERROR**

  Generic, unspecified error.
- class **RETCODE_ILLEGAL_OPERATION**

  The operation was called under improper circumstances.
- class **RETCODE_IMMUTABLE_POLICY**

  Application attempted to modify an immutable QoS policy.
- class **RETCODE_INCONSISTENT_POLICY**

  Application specified a set of QoS policies that are not consistent with each other.
- class **RETCODE_NO_DATA**

  Indicates a transient situation where the operation did not return any data but there is no inherent error.
- class **RETCODE_NOT_ALLOWED_BY_SECURITY**

  An operation on the DDS API that fails because the security plugins do not allow it.
- class **RETCODE_NOT_ENABLED**

  *Operation invoked on a **com.rti.dds.infrastructure.Entity** (p. 1320) that is not yet enabled.*
- class **RETCODE_OUT_OF_RESOURCES**

  RTI Connext ran out of the resources needed to complete the operation.
- class **RETCODE_PRECONDITION_NOT_MET**

  A pre-condition for the operation was not met.
- class **RETCODE_TIMEOUT**

  The operation timed out.
- class **RETCODE_UNSUPPORTED**

  Unsupported operation. Only returned by operations that are unsupported.
- class **RtpsReliableReaderProtocol_t**

  *<<**extension**>> (p. 138) **Qos** (p. 1802) related to reliable reader protocol defined in RTPS.*
- class **RtpsReliableWriterProtocol_t**

  *<<**extension**>> (p. 138) QoS related to the reliable writer protocol defined in RTPS.*
- class **RtpsReservedPortKind**

  RTPS reserved port kind, used to identify the types of ports that can be reserved on domain participant enable.
- class **RtpsWellKnownPorts_t**

*<<**extension**>> (p. 138) RTPS well-known port mapping configuration.*

- class **SampleFlagBits**

  Type to identify the sample flags reserved by RTI.

- class **SampleIdentity_t**

  Type definition for a Sample Identity.

- class **SequenceNumber_t**

  Type for sequence number representation.

- class **ServiceQosPolicy**

  *<<**extension**>> (p. 138) Service or tool associated with a DDS entity.*

- class **ServiceQosPolicyKind**

  Kinds of service.

- class **ShortSeq**

  *Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **short** >*

- interface **StatusCondition**

  *<<**interface**>> (p. 403) A specific **com.rti.dds.infrastructure.Condition** (p. 686) that is associated with each **com.rti.dds.infrastructure.Entity** (p. 1320).*

- class **StatusKind**

  Type for status kinds.

- class **StringSeq**

  Declares IDL `sequence` < com.rti.dds.infrastructure.String > .

- class **SystemException**

  System exception.

- class **SystemResourceLimitsQosPolicy**

  *<<**extension**>> (p. 138) Configures **com.rti.dds.domain.DomainParticipant** (p. 948)-independent resources used by RTI Connext. Mainly used to change the maximum number of **com.rti.dds.domain.DomainParticipant** (p. 948) entities that can be created within a single process (address space).*

- class **Tag**

  Tags are name/value pair objects.

- class **TagSeq**

  *Declares IDL `sequence` < **com.rti.dds.infrastructure.Tag** (p. 2092) >*

- class **ThreadSettings_t**

  The properties of a thread of execution.

- class **ThreadSettingsCpuRotationKind**

  *Determines how **com.rti.dds.infrastructure.ThreadSettings_t.cpu_list** (p. 2103) affects processor affinity for thread-related QoS policies that apply to multiple threads.*

- class **ThreadSettingsKind**

  A collection of flags used to configure threads of execution.

- class **Time_t**

  Type for time representation.

- class **TimeBasedFilterQosPolicy**

  *<<**spec**>> (p. 132) Filter that allows a **com.rti.dds.subscription.DataReader** (p. 707) to specify that it is interested only in (potentially) a subset of the values of the data.*

- class **TopicDataQosPolicy**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.*

- class **TopicQueryDispatchQosPolicy**

  *<<**extension**>> (p. 138) Configures the ability of a **com.rti.dds.publication.DataWriter** (p. 818) to publish samples in response to a **com.rti.dds.subscription.TopicQuery** (p. 2139)*

- class **TransportBuiltinKind**

Built-in transport kind.

- class **TransportBuiltinQosPolicy**

  *<<**extension**>> (p. 138) Specifies which built-in transports are used.*

- class **TransportInfo_t**

  Contains the class_id and message_size_max of an installed transport.

- class **TransportInfoSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *< **com.rti.dds.infrastructure.↩ TransportInfo_t** (p. 2154) > .*

- class **TransportMulticastMapping_t**

  *<<**extension**>> (p. 138) Type representing a list of multicast mapping elements.*

- class **TransportMulticastMappingFunction_t**

  Type representing an external mapping function.

- class **TransportMulticastMappingQosPolicy**

  *<<**extension**>> (p. 138) Specifies the multicast address on which a **com.rti.dds.subscription.DataReader** (p. 707) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **com.rti.dds.↩ domain.DomainParticipant** (p. 948) level) transports with which to receive the multicast data.*

- class **TransportMulticastMappingSeq**

  Declares IDL `sequence` *< **com.rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) >*

- class **TransportMulticastQosPolicy**

  *<<**extension**>> (p. 138) Specifies the multicast address on which a **com.rti.dds.subscription.DataReader** (p. 707) wants to receive its data. It can also specify a port number as well as a subset of the available (at the **com.rti.dds.↩ domain.DomainParticipant** (p. 948) level) transports with which to receive the multicast data.*

- class **TransportMulticastQosPolicyKind**

  Transport Multicast Policy Kind.

- class **TransportMulticastSettings_t**

  Type representing a list of multicast locators.

- class **TransportMulticastSettingsSeq**

  Declares IDL `sequence` *< **com.rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) >*

- class **TransportPriorityQosPolicy**

  *<<**spec**>> (p. 132) This QoS policy allows the application to take advantage of transports that are capable of sending messages with different priorities.*

- class **TransportSelectionQosPolicy**

  *<<**extension**>> (p. 138) Specifies the physical transports a **com.rti.dds.publication.DataWriter** (p. 818) or **com.↩ rti.dds.subscription.DataReader** (p. 707) may use to send or receive data.*

- class **TransportUdpWanCommPortsMappingInfo_t**

  Type for storing UDP WAN communication ports.

- class **TransportUdpWanCommPortsMappingInfoSeq**

  *List of < **com.rti.dds.infrastructure.TransportUdpWanCommPortsMappingInfo_t** (p. 2174) > .*

- class **TransportUnicastQosPolicy**

  *<<**extension**>> (p. 138) Specifies a subset of transports and a port number that can be used by an **Entity** (p. 1320) to receive data.*

- class **TransportUnicastSettings_t**

  Type representing a list of unicast locators.

- class **TransportUnicastSettingsSeq**

  Declares IDL `sequence` *< **com.rti.dds.infrastructure.TransportUnicastSettings_t** (p. 2179) >*

- class **TrustAlgorithmRequirements**

  Type to describe Trust Plugins algorithm requirements for an entity.

- class **TypeConsistencyEnforcementQosPolicy**

*<<**spec**>> (p. 132) Defines the rules for determining whether the type used to publish a given topic is consistent with that used to subscribe to it.*

- class **TypeConsistencyKind**

  Kinds of type consistency.

- class **TypeSupportQosPolicy**

  ***[DEPRECATED] (p. 358)** <<**extension**>> (p. 138) Allows you to attach application-specific values to a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707), which are passed to the serialization or deserialization routine of the associated data type and choose whether to set padding bytes to zero during serialization.*

- class **UserDataQosPolicy**

  *Attaches a buffer of opaque data that is distributed by means of **Built-in Topics** (p. 53) during discovery.*

- class **UserException**

  User exception.

- class **VendorId_t**

  *<<**extension**>> (p. 403) Type used to represent the vendor of the service implementing the RTPS protocol.*

- class **WaitSet**

  *<<**interface**>> (p. 403) Allows an application to wait until one or more of the attached **com.rti.dds.infrastructure.Condition** (p. 686) objects has a `trigger_value` of com.rti.dds.infrastructure.true or else until the timeout expires.*

- class **WaitSetProperty_t**

  *<<**extension**>> (p. 403) Specifies the **com.rti.dds.infrastructure.WaitSet** (p. 2287) behavior for multiple trigger events.*

- class **WcharSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < com.rti.dds.infrastructure.char >

- class **WireProtocolQosPolicy**

  *<<**extension**>> (p. 138) Specifies the wire-protocol-related attributes for the **com.rti.dds.domain.DomainParticipant** (p. 948).*

- class **WireProtocolQosPolicyAutoKind**

  Mechanism to automatically calculate the GUID prefix.

- class **WriteParams_t**

  *<<**extension**>> (p. 403) Input parameters for writing with **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402), **com.rti.ndds.example.FooDataWriter.dispose_w_params** (p. 1406), **com.rti.ndds.example.FooDataWriter.register_instance_w_params** (p. 1392), **com.rti.ndds.example.FooDataWriter.unregister_instance_w_params** (p. 1396)*

- class **WriterDataLifecycleQosPolicy**

  *<<**spec**>> (p. 132) Controls how a **com.rti.dds.publication.DataWriter** (p. 818) handles the lifecycle of the instances (keys) that it is registered to manage.*

- class **WstringSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < com.rti.dds.infrastructure.char >*

7.7.1 Detailed Description

Defines the abstract classes and the interfaces that are refined by the other modules. Contains common definitions such as return codes, status values, and QoS policies.

"DCPS Infrastructure package"

7.8 Package com.rti.dds.publication

Contains the **com.rti.dds.publication.FlowController** (p. 1348), **com.rti.dds.publication.Publisher** (p. 1767), and **com.rti.dds.publication.DataWriter** (p. 818) classes as well as the **com.rti.dds.publication.PublisherListener** (p. 1789) and **com.rti.dds.publication.DataWriterListener** (p. 853) interfaces, and more generally, all that is needed on the publication side.

Classes

- class **AcknowledgmentInfo**

  Information about an application-level acknowledged sample.
- interface **DataWriter**

  *<<**interface**>> (p. 403) Allows an application to set the value of the data to be published under a given **com.rti.dds.topic.Topic** (p. 2116).*
- class **DataWriterAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods or functions.)*
- class **DataWriterCacheStatus**

  *<<**extension**>> (p. 403) The status of the **DataWriter** (p. 818)'s cache. Provides information on cache related metrics such as the number of samples and instances in the **DataWriter** (p. 818) queue.*
- interface **DataWriterListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for writer status.*
- class **DataWriterProtocolStatus**

  *<<**extension**>> (p. 403) The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.*
- class **DataWriterQos**

  *QoS policies supported by a **com.rti.dds.publication.DataWriter** (p. 818) entity.*
- interface **FlowController**

  *<<**interface**>> (p. 403) A flow controller is the object responsible for shaping the network traffic by determining when attached asynchronous **com.rti.dds.publication.DataWriter** (p. 818) instances are allowed to write data.*
- class **FlowControllerProperty_t**

  *Determines the flow control characteristics of the **com.rti.dds.publication.FlowController** (p. 1348).*
- class **FlowControllerSchedulingPolicy**

  Kinds of flow controller scheduling policy.
- class **FlowControllerTokenBucketProperty_t**

  ***com.rti.dds.publication.FlowController** (p. 1348) uses the popular token bucket approach for open loop network flow control. The flow control characteristics are determined by the token bucket properties.*
- class **LivelinessLostStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS
- class **OfferedDeadlineMissedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS
- class **OfferedIncompatibleQosStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS
- class **PublicationMatchedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS
- interface **Publisher**

  *<<**interface**>> (p. 403) A publisher is the object responsible for the actual dissemination of publications.*

- class **PublisherAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)*
- interface **PublisherListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for **com.rti.dds.publication.Publisher** (p. 1767) status.*
- class **PublisherQos**

  *QoS policies supported by a **com.rti.dds.publication.Publisher** (p. 1767) entity.*
- class **PublisherSeq**

  *Declares IDL `sequence` < **com.rti.dds.publication.Publisher** (p. 1767) > .*
- class **ReliableReaderActivityChangedStatus**

  *<<**extension**>> (p. 403) Describes the activity (i.e. are acknowledgements forthcoming) of reliable readers matched to a reliable writer.*
- class **ReliableWriterCacheChangedStatus**

  *<<**extension**>> (p. 403) A summary of the state of a data writer's cache of unacknowledged samples written.*
- class **ReliableWriterCacheEventCount**

  *<<**extension**>> (p. 403) The number of times the number of unacknowledged samples in the cache of a reliable writer hit a certain well-defined threshold.*
- class **ServiceRequestAcceptedStatus**

  ***com.rti.dds.infrastructure.StatusKind.SERVICE_REQUEST_ACCEPTED_STATUS** (p. 2018)*

7.8.1 Detailed Description

Contains the **com.rti.dds.publication.FlowController** (p. 1348), **com.rti.dds.publication.Publisher** (p. 1767), and **com.rti.dds.publication.DataWriter** (p. 818) classes as well as the **com.rti.dds.publication.PublisherListener** (p. 1789) and **com.rti.dds.publication.DataWriterListener** (p. 853) interfaces, and more generally, all that is needed on the publication side.

"DCPS Publication package"

7.9 Package com.rti.dds.subscription

Classes

- interface **DataReader**

  *<<**interface**>> (p. 403) Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **com.rti.dds.subscription.Subscriber** (p. 2039).*
- class **DataReaderAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)*
- class **DataReaderCacheStatus**

  *<<**extension**>> (p. 403) The status of the reader's cache.*
- interface **DataReaderListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for reader status.*
- class **DataReaderProtocolStatus**

*<<**extension**>> (p. 403) The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic.*

- class **DataReaderQos**

  *QoS policies supported by a **com.rti.dds.subscription.DataReader** (p. 707) entity.*

- class **DataReaderSeq**

  *Declares IDL `sequence` < **com.rti.dds.subscription.DataReader** (p. 707) > .*

- class **InstanceStateKind**

  *Indicates if the samples are from a live **com.rti.dds.publication.DataWriter** (p. 818) or not.*

- class **LivelinessChangedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS

- interface **QueryCondition**

  *<<**interface**>> (p. 403) These are specialised **com.rti.dds.subscription.ReadCondition** (p. 1816) objects that allow the application to also specify a filter on the locally available data.*

- class **QueryConditionParams**

  *<<**extension**>> (p. 403) Input parameters for **com.rti.dds.subscription.DataReader.create_querycondition_w_↩params** (p. 714)*

- interface **ReadCondition**

  *<<**interface**>> (p. 403) Conditions specifically dedicated to read operations and attached to one **com.rti.dds.↩subscription.DataReader** (p. 707).*

- class **ReadConditionParams**

  *<<**extension**>> (p. 403) Input parameters for **com.rti.dds.subscription.DataReader.create_readcondition_w_↩params** (p. 713)*

- class **RequestedDeadlineMissedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS

- class **RequestedIncompatibleQosStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS

- class **SampleInfo**

  Information that accompanies each sample that is `read` or `taken`.

- class **SampleInfoSeq**

  *Declares IDL `sequence` < **com.rti.dds.subscription.SampleInfo** (p. 1944) > .*

- class **SampleLostStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS

- class **SampleLostStatusKind**

  *<<**extension**>> (p. 403) Kinds of reasons why a sample was lost.*

- class **SampleRejectedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS

- class **SampleRejectedStatusKind**

  Kinds of reasons for rejecting a sample.

- class **SampleStateKind**

  Indicates whether or not a sample has ever been read.

- class **StreamKind**

  *Indicates if the samples are **TopicQuery** (p. 2139) samples or not.*

- interface **Subscriber**

  *<<**interface**>> (p. 403) A subscriber is the object responsible for actually receiving data from a subscription.*

- class **SubscriberAdapter**

  A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)

- interface **SubscriberListener**

*<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for status about a subscriber.*

- class **SubscriberQos**

  *QoS policies supported by a **com.rti.dds.subscription.Subscriber** (p. 2039) entity.*
- class **SubscriberSeq**

  *Declares IDL `sequence` < **com.rti.dds.subscription.Subscriber** (p. 2039) > .*
- class **SubscriptionMatchedStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS
- interface **TopicQuery**

  *<<**extension**>> (p. 403) Allows a **com.rti.dds.subscription.DataReader** (p. 707) to query the sample cache of its matching **com.rti.dds.publication.DataWriter** (p. 818).*
- class **TopicQueryData**

  *<<**extension**>> (p. 403) Provides information about a **com.rti.dds.subscription.TopicQuery** (p. 2139)*
- class **TopicQueryHelper**

  *Helpers to provide utility operations related to **com.rti.dds.subscription.TopicQuery** (p. 2139).*
- class **TopicQuerySelection**

  *<<**extension**>> (p. 403) Specifies the data query that defines a **com.rti.dds.subscription.TopicQuery** (p. 2139)*
- class **TopicQuerySelectionKind**

  *Kinds of **TopicQuerySelection** (p. 2145).*
- class **ViewStateKind**

  Indicates whether or not an instance is new.

7.9.1 Detailed Description

See **Subscription Module** (p. 79)

7.10 Package com.rti.dds.topic

Contains the **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.topic.ContentFilteredTopic** (p. 692), and **com.rti.dds.↩ topic.MultiTopic** (p. 1618) classes, the **com.rti.dds.topic.TopicListener** (p. 2131) interface, and more generally, all that is needed by an application to define **com.rti.dds.topic.Topic** (p. 2116) objects and attach QoS policies to them.

Classes

- class **BuiltinTopicKey_t**

  The key type of the built-in topic types.
- interface **ContentFilter**

  *<<**interface**>> (p. 403) Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692)*
- interface **ContentFilteredTopic**

  *<<**interface**>> (p. 403) Specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows for content-based subscriptions.*
- class **ExpressionProperty**

  *Provides additional information about the filter expression passed to **com.rti.dds.topic.WriterContentFilter.writer_↩ compile** (p. 2317) .*
- class **FilterSampleInfo**

Provides meta information associated with the sample.

- class **InconsistentTopicStatus**

  com.rti.dds.infrastructure.StatusKind.StatusKind.INCONSISTENT_TOPIC_STATUS

- interface **MultiTopic**

  [Not supported (optional)] *<<**interface**>> (p. 403) A specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows subscriptions that combine/filter/rearrange data coming from several topics.*

- class **PrintFormatKind**

  Format kinds available when converting data samples to string representations.

- class **PrintFormatProperty**

  A collection of attributes used to configure how data samples will be formatted when converted to a string.

- interface **Topic**

  *<<**interface**>> (p. 403) The most basic description of the data to be published and subscribed.*

- class **TopicAdapter**

  *<<**extension**>> (p. 403) A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)*

- interface **TopicDescription**

  ***com.rti.dds.topic.Topic** (p. 2116) entity and associated elements*

- interface **TopicListener**

  *<<**interface**>> (p. 403) **com.rti.dds.infrastructure.Listener** (p. 1528) for **com.rti.dds.topic.Topic** (p. 2116) entities.*

- class **TopicQos**

  *QoS policies supported by a **com.rti.dds.topic.Topic** (p. 2116) entity.*

- interface **TypeSupport**

  *<<**interface**>> (p. 403) An abstract marker interface that has to be specialized for each concrete user data type that will be used by the application.*

- interface **WriterContentFilter**

  *<<**interface**>> (p. 403) Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692).*

7.10.1 Detailed Description

Contains the **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.topic.ContentFilteredTopic** (p. 692), and **com.rti.dds.topic.MultiTopic** (p. 1618) classes, the **com.rti.dds.topic.TopicListener** (p. 2131) interface, and more generally, all that is needed by an application to define **com.rti.dds.topic.Topic** (p. 2116) objects and attach QoS policies to them.

7.11 Package com.rti.dds.type.builtin

Classes

- class **Bytes**

  Built-in type consisting of a variable-length array of opaque bytes.

- class **BytesDataReader**

  *<<**interface**>> (p. 403) Instantiates `DataReader` < com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes >.*

- class **BytesDataWriter**

  *<<**interface**>> (p. 403) Instantiates `DataWriter` < com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes >.*

- class **BytesSeq**

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *<* *com.rti.dds.type.builtin.↩ com.rti.dds.type.builtin.Bytes* *>* .

- class **BytesTypeSupport**

  *<<**interface**>>* (p. *403*) *com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type support.*
- class **KeyedBytes**

  Built-in type consisting of a variable-length array of opaque bytes and a string that is the key.
- class **KeyedBytesDataReader**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataReader` *<* *com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes* *>*.
- class **KeyedBytesDataWriter**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataWriter` *<* *com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes* *>*.
- class **KeyedBytesSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *<* *com.rti.dds.type.builtin.↩ com.rti.dds.type.builtin.KeyedBytes* *>*.
- class **KeyedBytesTypeSupport**

  *<<**interface**>>* (p. *403*) *com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedBytes type support.*
- class **KeyedString**

  Keyed string built-in type.
- class **KeyedStringDataReader**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataReader` *<* *com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString* *>*.
- class **KeyedStringDataWriter**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataWriter` *<* *com.rti.dds.type.builtin.com.rti.dds.type.builtin.KeyedString* *>*.
- class **KeyedStringSeq**

  Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` *<* *com.rti.dds.type.builtin.↩ com.rti.dds.type.builtin.KeyedString* *>* .
- class **KeyedStringTypeSupport**

  *<<**interface**>>* (p. *403*) *Keyed string type support.*
- class **StringDataReader**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataReader` *<* *com.rti.dds.infrastructure.String* *>*.
- class **StringDataWriter**

  *<<**interface**>>* (p. *403*) *Instantiates* `DataWriter` *<* *com.rti.dds.infrastructure.String* *>*.
- class **StringTypeSupport**

  *<<**interface**>>* (p. *403*) *String type support.*

7.11.1 Detailed Description

See **Built-in Types** (p. 62)

7.12 Package com.rti.dds.typecode

Classes

- class **EnumMember**

  A description of a member of an enumeration.
- class **ExtensibilityKind**

  Type to indicate the extensibility of a type.

- class **PRIVATE_MEMBER**

  Constant used to indicate that a value type member is private.
- class **PUBLIC_MEMBER**

  Constant used to indicate that a value type member is public.
- class **StructMember**

  A description of a member of a struct.
- class **TCKind**

  *Enumeration type for **com.rti.dds.typecode.TypeCode** (p. 2183) kinds.*
- class **TypeCode**

  The definition of a particular data type, which you can use to inspect the name, members, and other properties of types generated with rtiddsgen (see the `Code Generator User's Manual`) or to modify types you define yourself at runtime.
- class **TypeCodeFactory**

  A singleton factory for creating, copying, and deleting data type definitions dynamically.
- class **UnionMember**

  A description of a member of a union.
- class **ValueMember**

  A description of a member of a value type.
- class **VM_ABSTRACT**

  Constant used to indicate that a value type has the `abstract` modifier.
- class **VM_CUSTOM**

  Constant used to indicate that a value type has the `custom` modifier.
- class **VM_NONE**

  Constant used to indicate that a value type has no modifiers.
- class **VM_TRUNCATABLE**

  Constant used to indicate that a value type has the `truncatable` modifier.

7.12.1 Detailed Description

See **Type Code Support** (p. 59)

7.13 Package com.rti.dds.util

Utility types that support the DDS API.

Classes

- class **AbstractPrimitiveSequence**
- class **AbstractSequence**

  Abstract sequence.
- class **Base64**
- class **Enum**

  A superclass for all type-safe enumerated types.
- class **LoanableSequence**

  A sequence capable of storing its elements directly or taking out a loan on them from an internal middleware store.
- interface **Sequence**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **`com.rti.ndds.example.Foo`** (p. 1358).*
- class **Union**

7.13.1 Detailed Description

Utility types that support the DDS API.

7.14 Package com.rti.ndds.config

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

Classes

- class **ActivityContext**

  Activity Context APIs.
- class **ActivityContextAttributeKind**

  *The resources of the **Activity Context** (p. 540) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.*
- class **Compliance**

  This class contains methods to configure the compliance masks.
- class **LibraryVersion_t**

  The version of a single library shipped as part of an RTI Connext distribution.
- class **LogCategory**

  Categories of logged messages.
- class **LogFacility**

  A number that identifies the source of a log message.
- class **Logger**

  *<<**interface**>> (p. 403) The singleton type used to configure RTI Connext logging.*
- interface **LoggerDevice**

  *<<**interface**>> (p. 403) Logging device interface. Use for user-defined logging devices.*
- class **LogLevel**

  Level category assigned to RTI Connext log messages returned to an output device.
- class **LogMessage**

  A log message's input parameter to a logging device, including the text and additional information.
- class **LogPrintFormat**

  The format used to output RTI Connext diagnostic information.
- class **LogVerbosity**

  The verbosities at which RTI Connext diagnostic information is logged.
- class **SyslogLevel**

  Syslog level category assigned to RTI Connext log messages. See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information.
- class **SyslogVerbosity**

  *The Syslog verbosities at which RTI Connext diagnostic information is logged. These Syslog verbosities are mapped to **com.rti.ndds.config.LogVerbosity** (p. 1579). See `Syslog Level and Verbosity Mapping`, in the Core Libraries User's Manual, for more information.*
- class **Version**

  *<<**interface**>> (p. 403) The version of an RTI Connext distribution.*

7.14.1 Detailed Description

APIs of troubleshooting utilities and APIs designed to configure the overall behavior of RTI Connext.

7.15 Package com.rti.ndds.example

Programming HowTos: Code templates for common use cases.

Classes

- class **Foo**

  A representative user-defined data type.
- class **FooDataReader**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) User data type-specific data reader.*
- class **FooDataWriter**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) User data type specific data writer.*
- class **FooSeq**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) A type-safe, ordered collection of elements. The type of these elements is referred to in this documentation as **`com.rti.ndds.example.Foo`** (p. 1358).*
- class **FooTypeSupport**

  *<<**interface**>> (p. 403) <<**generic**>> (p. 403) User data type specific interface.*

7.15.1 Detailed Description

Programming HowTos: Code templates for common use cases.

7.16 com::rti::ndds::transport Namespace Reference

Classes

- interface **ShmemTransport**

  Built-in transport plug-in for inter-process communications using shared memory.
- interface **Transport**

  RTI Connext's abstract pluggable transport interface.
- class **TransportSupport**

  *<<**interface**>> (p. 403) The utility class used to configure RTI Connext pluggable transports.*
- interface **UDPv4Transport**

  ***Transport** (p. 2150) plug-in using UDP/IPv4.*
- interface **UDPv4WanTransport**

  ***Transport** (p. 2150) plug-in using UDP/IPv4 for WAN communications..*
- interface **UDPv6Transport**

  ***Transport** (p. 2150) plug-in using UDP/IPv6.*

7.16.1 Detailed Description

See **APIs related to RTI Connext pluggable transports** (p. 98).

7.17 Package com.rti.ndds.utility

API of general utilities used in the RTI Connext distribution.

Classes

- class **HeapMonitoring**

  Heap Monitoring APIs.
- class **HeapMonitoringParams**

  Input parameters for enabling heap monitoring. They will be used for configuring the format of the snapshot.
- class **HeapMonitoringSnapshotContentFormat**

  Bitmap used to decide which information of the snapshot will be displayed.
- class **HeapMonitoringSnapshotOutputFormat**

  Specify the format of the output of the snapshot. RTI Connext.
- class **NetworkCapture**

  Network Capture APIs.
- class **NetworkCaptureContentKind**

  Bitmap used to specify a content type, i.e., a part of the RTPS frame.
- class **NetworkCaptureParams**

  Input parameters for starting network capture.
- class **NetworkCaptureTrafficKind**

  Bitmap used to specify whether we want to capture inbound or outbound traffic.

7.17.1 Detailed Description

API of general utilities used in the RTI Connext distribution.

Chapter 8

Class Documentation

8.1 AbstractBuiltinTopicDataTypeSupport Class Reference

Inheritance diagram for AbstractBuiltinTopicDataTypeSupport:

Protected Member Functions

- final void **initialize_delegatel** (DataReaderDelegate delegate)

8.1.1 Detailed Description

Abstract superclass for all ∗TypeSupport classes for built-in types.

Author

rwarren

8.1.2 Member Function Documentation

8.1.2.1 initialize_delegatel()

```
final void initialize_delegateI (
            DataReaderDelegate delegate )  [protected]
```

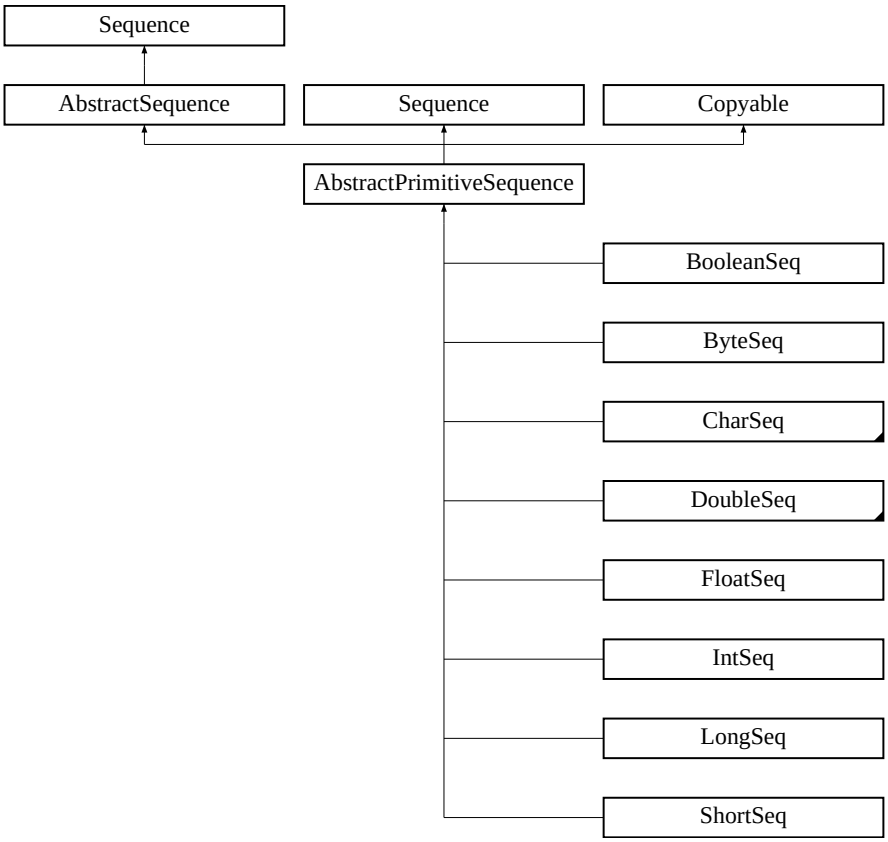
Subclasses should call this method immediately after chaining to the super constructor.

Exceptions

NullPointerException	if the delegate is null

8.2 AbstractPrimitiveSequence Class Reference

Inheritance diagram for AbstractPrimitiveSequence:



Public Member Functions

- final Class **getElementType** ()
- abstract void **add** (int index, Object element)

  Inserts the specified element at the specified position in this sequence.
- void **loan** (Object buffer, int new_length)

  Loan a contiguous buffer to this sequence.
- void **unloan** ()

  Return the loaned buffer in the sequence and set the maximum to 0.
- final boolean **hasOwnership** ()

  Return the value of the owned flag.
- final void **clear** ()
- final void **setSize** (int newSize)
- final int **size** ()
- final Object **copy_from** (Object src)

8.2.1 Detailed Description

A base class for sequences whose elements are of primitive types. Such sequences do not support null values.

8.2.2 Member Function Documentation

8.2.2.1 getElementType()

```
final Class getElementType ( )
```

Returns

the primitive type of this sequence, not the wrapper type.

See also

com.rti.dds.util.Sequence::getElementType() (p. 1976)

Reimplemented from **AbstractSequence** (p. 583).

8.2.2.2 add()

```
abstract void add (
             int index,
             Object element )  [abstract]
```

Inserts the specified element at the specified position in this sequence.

See also

java.util.List::add(int, java.lang.Object)

Reimplemented from **AbstractSequence** (p. 583).

Reimplemented in **BooleanSeq** (p. 618), **ByteSeq** (p. 655), **CharSeq** (p. 677), **DoubleSeq** (p. 1115), **FloatSeq** (p. 1347), **IntSeq** (p. 1459), **LongSeq** (p. 1589), and **ShortSeq** (p. 2001).

8.2.2.3 loan()

```
void loan (
             Object buffer,
             int new_length )
```

Loan a contiguous buffer to this sequence.

This operation changes the `owned` flag of the sequence to com.rti.dds.infrastructure.false and also sets the underlying buffer used by the sequence. See the `User's Manual` for more information about sequences and memory ownership.

Use this method if you want to manage the memory used by the sequence yourself. You must provide an array of elements and integers indicating how many elements are allocated in that array (i.e. the maximum) and how many elements are valid (i.e. the length). The sequence will subsequently use the memory you provide and will not permit it to be freed by a call to com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.setMaximum.

By default, a sequence you create owns its memory unless you explicitly loan memory of your own to it. In a very few cases, RTI Connext will return a sequence to you that has a loan; those cases are documented as such. For example, if you call **com.rti.ndds.example.FooDataReader.read** (p. 1361) or **com.rti.ndds.example.FooDataReader.take** (p. 1363) and pass in sequences with no loan and no memory allocated, RTI Connext will loan memory to your sequences which must be unloaned with **com.rti.ndds.example.FooDataReader.return_loan** (p. 1386). See the documentation of those methods for more information.

Precondition

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.getMaximum == 0; i.e. the sequence has no memory allocated to it.

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.AbstractPrimitiveSequence.hasOwnership == com.rti.dds.↩ infrastructure.true; i.e. the sequence does not already have an outstanding loan

Postcondition

The sequence will store its elements in the buffer provided.

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.AbstractPrimitiveSequence.hasOwnership == com.rti.dds.↩ infrastructure.false

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.size() == new_length

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.getMaximum == new_max

Parameters

buffer	The new buffer that the sequence will use. Must point to enough memory to hold new_max elements of type Foo. It may be NULL if new_max == 0.
new_length	The desired new length for the sequence.

See also

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.unloan , com.rti.dds.infrastructure.com.rti.dds.util.Sequence.↩ loan_discontiguous

References **Sequence.getMaximum()**.

8.2.2.4 unloan()

```
void unloan ( )
```

Return the loaned buffer in the sequence and set the maximum to 0.

This method affects only the state of this sequence; it does not change the contents of the buffer in any way.

Only the user who originally loaned a buffer should return that loan, as the user may have dependencies on that memory known only to them. Unloaning someone else's buffer may cause unspecified problems. For example, suppose a sequence is loaning memory from a custom memory pool. A user of the sequence likely has no way to release the memory back into the pool, so unloaning the sequence buffer would result in a resource leak. If the user were to then re-loan a different buffer, the original creator of the sequence would have no way to discover, when freeing the sequence, that the loan no longer referred to its own memory and would thus not free the user's memory properly, exacerbating the situation and leading to undefined behavior.

Precondition

owned == com.rti.dds.infrastructure.false

Postcondition

owned == com.rti.dds.infrastructure.true

maximum == 0

See also

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.AbstractPrimitiveSequence.loan(Object, int), com.rti.↩ dds.infrastructure.com.rti.dds.util.Sequence.loan_discontiguous, com.rti.dds.infrastructure.com.rti.dds.util.↩ Sequence.Sequence.setMaximum

8.2.2.5 hasOwnership()

```
final boolean hasOwnership ( )
```

Return the value of the owned flag.

Returns

com.rti.dds.infrastructure.true if sequence owns the underlying buffer, or com.rti.dds.infrastructure.false if it has an outstanding loan.

8.2.2.6 clear()

```
final void clear ( )
```

Set the logical size of this sequence to zero. This method does not generate any garbage for collection.

See also

java.util.Collection::clear()

Referenced by **AbstractPrimitiveSequence.copy_from()**.

8.2.2.7 setSize()

```
final void setSize (
            int newSize )
```

Set the logical size of this sequence to the given value.

Parameters

newSize	the new logical size of this sequence; it must be less than or equal to the maximum allocated length of the underlying array.

Exceptions

IndexOutOfBoundsException	if the new size is less than zero or greater than the allocated length of the array.

See also

AbstractSequence::getMaximum() (p. 1974)

References **Sequence.getMaximum()**.

Referenced by **DynamicData.get_uint8_seq()**, **DynamicData.get_uint_seq()**, **DynamicData.get_ushort_seq()**, **DynamicData.set_uint8_seq()**, **DynamicData.set_uint_seq()**, **DynamicData.set_ulong_seq()**, **DynamicData.set_ushort_seq()**, and **DynamicData.to_cdr_buffer()**.

8.2.2.8 size()

```
final int size ( )
```

The logical size of this sequence.

Referenced by **AbstractPrimitiveSequence.copy_from()**, **DynamicData.get_boolean_seq()**, **DynamicData.get_byte_seq()**, **DynamicData.get_char_seq()**, **DynamicData.get_double_seq()**, **DynamicData.get_float_seq()**, **DynamicData.get_int_seq()**, **DynamicData.get_long_seq()**, **DynamicData.get_short_seq()**, **DynamicData.get_uint8_seq()**, **DynamicData.get_uint_seq()**, **DynamicData.get_ulong_seq()**, **DynamicData.get_ushort_seq()**, **DynamicData.set_boolean_seq()**, **DynamicData.set_byte_seq()**, **DynamicData.set_char_seq()**, **DynamicData.set_double_seq()**, **DynamicData.set_float_seq()**, **DynamicData.set_int_seq()**, **DynamicData.set_long_seq()**, **DynamicData.set_short_seq()**, **DynamicData.set_uint8_seq()**, **DynamicData.set_uint_seq()**, **DynamicData.set_ulong_seq()**, **DynamicData.set_ushort_seq()**, **BytesDataWriter.write()**, **KeyedBytesDataWriter.write()**, **BytesDataWriter.write_w_timestamp()**, and **KeyedBytesDataWriter.write_w_timestamp()**.

8.2.2.9 copy_from()

```
final Object copy_from (
             Object src )
```

Implementation of the `Copyable` interface.

Parameters

src	An **AbstractPrimitiveSequence** (p. 576) which contains the data to be copied.

Returns

`this`

Exceptions

NullPointerException	If `src` is null.
ClassCastException	If `src` is not a **Sequence** (p. 1973) OR if one of the objects contained in the **Sequence** (p. 1973) is not of the expected type.

Implements **Copyable** (p. 701).

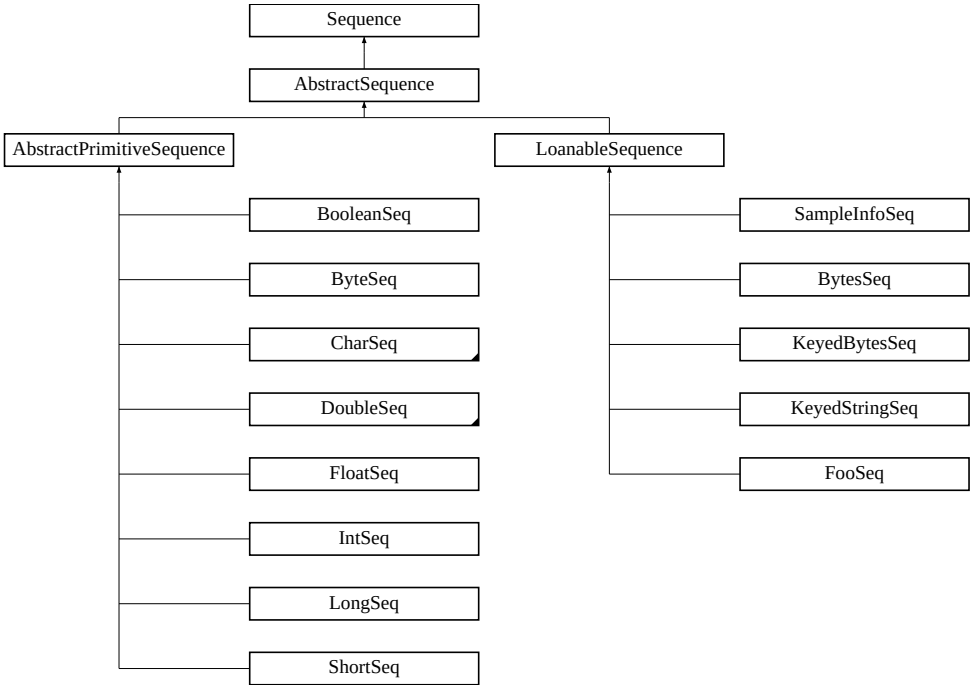
References **AbstractPrimitiveSequence.clear()**, and **AbstractPrimitiveSequence.size()**.

Referenced by **WriteParams_t.copy_from()**, and **WriteParams_t.WriteParams_t()**.

8.3 AbstractSequence Class Reference

Abstract sequence.

Inheritance diagram for AbstractSequence:



Public Member Functions

- void **setMaximum** (int new_max)

  Resize this sequence to a new desired maximum.
- Class **getElementType** ()
- void **add** (int index, Object element)

  Inserts the specified element at the specified position in this sequence.
- boolean **add** (Object element)

  Appends the specified element to the end of this sequence.
- final Object **remove** (int index)

  Remove the element at the given index by shifting all subsequent elements "left" by one.

8.3.1 Detailed Description

Abstract sequence.

8.3.2 Member Function Documentation

8.3.2.1 setMaximum()

```
void setMaximum (
            int new_max )
```

Resize this sequence to a new desired maximum.

This operation does nothing if the new desired maximum matches the current maximum.

Note: If you add an element with **add()** (p. 583), the sequence's size is increased implicitly.

Postcondition

length == MINIMUM(original length, new_max)

Parameters

new_max	Must be >= 0.

Implements **Sequence** (p. 1975).

Reimplemented in **LoanableSequence** (p. 1544).

Referenced by **DynamicData.get_uint8_seq()**, **DynamicData.get_uint_seq()**, **DynamicData.get_ushort_seq()**, and **DynamicData.to_cdr_buffer()**.

8.3.2.2 getElementType()

```
Class getElementType ( )
```

Returns

a common supertype for all elements in this sequence.

Implements **Sequence** (p. 1976).

Reimplemented in **AbstractPrimitiveSequence** (p. 577).

8.3.2.3 add() [1/2]

```
void add (
            int index,
            Object element )
```

Inserts the specified element at the specified position in this sequence.

See also

java.util.List::add(int, java.lang.Object)

Reimplemented in **BooleanSeq** (p. 618), **ByteSeq** (p. 655), **CharSeq** (p. 677), **DoubleSeq** (p. 1115), **FloatSeq** (p. 1347), **IntSeq** (p. 1459), **LongSeq** (p. 1589), **ShortSeq** (p. 2001), **AbstractPrimitiveSequence** (p. 577), and **LoanableSequence** (p. 1543).

8.3.2.4 add() [2/2]

```
boolean add (
            Object element )
```

Appends the specified element to the end of this sequence.

See also

java.util.List::add(java.lang.Object)

Reimplemented in **LoanableSequence** (p. 1542).

8.3.2.5 remove()

```
final Object remove (
            int index )
```

Remove the element at the given index by shifting all subsequent elements "left" by one.

See also

java.util.List::remove(int)

8.4 AcknowledgmentInfo Class Reference

Information about an application-level acknowledged sample.

Inherits Status.

Public Attributes

- final **InstanceHandle_t subscription_handle**

  Subscription handle of the acknowledging ***com.rti.dds.subscription.DataReader*** *(p. 707).*
- final **SampleIdentity_t sample_identity**

  Identity of the sample being acknowledged.
- boolean **valid_response_data**

  Flag indicating validity of the user response data in the acknowledgment.
- final **AckResponseData_t response_data**

  User data payload of application-level acknowledgment message.

8.4.1 Detailed Description

Information about an application-level acknowledged sample.

When acknowledging a sample, the reader provides the writer with information about the sample being acknowledged. The **AcknowledgmentInfo** (p. 584) structure provides the identity and cookie of the sample being acknowledged, as well as user data payload provided by the reader.

8.4.2 Member Data Documentation

8.4.2.1 subscription_handle

```
final  InstanceHandle_t subscription_handle
```

Subscription handle of the acknowledging **com.rti.dds.subscription.DataReader** (p. 707).

8.4.2.2 sample_identity

```
final  SampleIdentity_t sample_identity
```

Identity of the sample being acknowledged.

See also

com.rti.dds.infrastructure.SampleIdentity_t (p. 1942)

8.4.2.3 valid_response_data

```
boolean valid_response_data
```

Flag indicating validity of the user response data in the acknowledgment.

This flag is true when the **com.rti.dds.infrastructure.RtpsReliableReaderProtocol_t.min_app_ack_response_↩ keep_duration** (p. 1909) has not yet elapsed for the acknowledgment's response data.

The flag is false when that duration has elapsed for the response data.

8.4.2.4 response_data

```
final  AckResponseData_t response_data
```

User data payload of application-level acknowledgment message.

Response data set by **com.rti.dds.subscription.DataReader** (p. 707) when sample was acknowledged.

8.5 AckResponseData_t Class Reference

Data payload of an application-level acknowledgment.

Inherits Struct.

Public Attributes

- final **ByteSeq value**
  a sequence of octets

8.5.1 Detailed Description

Data payload of an application-level acknowledgment.

8.5.2 Member Data Documentation

8.5.2.1 value

```
final ByteSeq value
```

a sequence of octets

[default] empty (zero-length)

[range] Octet sequence of length [0, **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.max_app↩ _ack_response_length** (p. 803)],

8.6 ActivityContext Class Reference

Activity Context APIs.

Static Public Member Functions

- static void **set_attribute_mask** (int attribute_mask)
  Set the com.rti.ndds.config.ActivityContextAttributeKindMask of the Activity Context.

8.6.1 Detailed Description

Activity Context APIs.

8.7 ActivityContextAttributeKind Class Reference

The resources of the **Activity Context** (p. 540) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.

Static Public Attributes

- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_GUID_PREFIX** = 0x1
  Provide the entity GUID prefix to the resource of the Activity Context.
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TOPIC** = 0x2
  Provide the Topic to the resource of the Activity Context. The topic attribute is specified by "Topic".
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TYPE** = 0x4
  Provide the data type to the resource of the Activity Context. The type attribute is specified by "Type".
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_KIND** = 0x8
  Provide the entity kind to the resource of the Activity Context. The kind attribute is specified by "Entity".
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_DOMAIN_ID** = 0x10
  Provide the domain ID to the resource of the Activity Context. The domain attribute is specified by "Domain".
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_NAME** = 0x20
  Provide the entity name to the resource of the Activity Context. The name attribute is specified by "Name".
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_DEFAULT** = 0x3F
  Provide the default attributes of the resource of the Activity Context.
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_NONE** = 0x0
  Not provide any attribute of the resource of the Activity Context.
- static final int **NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_ALL** = 0x3F
  Provide all the possibles attributes of the resource of the Activity Context.

8.7.1 Detailed Description

The resources of the **Activity Context** (p. 540) can have multiple associated attributes. Those attributes provide extra information about the entity such as GUID prefix, Topic, data type, entity kind, entity name and domain ID. They are used to indicate what attributes of the resources are included in the activity context.

8.7.2 Member Data Documentation

8.7.2.1 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_GUID_PREFIX

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_GUID_PREFIX = 0x1  [static]
```

Provide the entity GUID prefix to the resource of the Activity Context.

For example:

- For the following string representation of the context:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`
- The GUID prefix is 0X101A76B,0X79E5D71,0X50EE914. If the bit **com.rti.ndds.config.ActivityContext↩ AttributeKind.NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_GUID_PREFIX** (p. 588) is not set, the string representation will not show the GUID prefix:
  `[:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`

8.7.2.2 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TOPIC

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TOPIC = 0x2  [static]
```

Provide the Topic to the resource of the Activity Context. The topic attribute is specified by "Topic".

For example:

- For the following string representation of the context:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`
- The Topic is "test." If the bit **com.rti.ndds.config.ActivityContextAttributeKind.NDDS_CONFIG_ACTIVITY_↩ CONTEXT_ATTRIBUTE_TOPIC** (p. 588) is not set, the string representation will not show the Topic:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Type=Foo,Domain=1}|Write]`

8.7.2.3 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TYPE

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_TYPE = 0x4  [static]
```

Provide the data type to the resource of the Activity Context. The type attribute is specified by "Type".

For example:

- For the following string representation of the context:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`
- The data type is "Foo." If the bit **com.rti.ndds.config.ActivityContextAttributeKind.NDDS_CONFIG_↩ ACTIVITY_CONTEXT_ATTRIBUTE_TYPE** (p. 588) is not set, the string representation will not show the data type:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Domain=1}|Write]`

8.7.2.4 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_KIND

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_KIND = 0x8  [static]
```

Provide the entity kind to the resource of the Activity Context. The kind attribute is specified by "Entity".

For example:

- For the following string representation of the context:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`
- The entity kind is "Writer." If the bit **com.rti.ndds.config.ActivityContextAttributeKind.NDDS_CONFIG_↩ ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_KIND** (p. 589) is not set, the string representation will not show the entity kind:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Topic=test,Type=Foo,Domain=1}|Write]`

8.7.2.5 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_DOMAIN_ID

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_DOMAIN_ID = 0x10  [static]
```

Provide the domain ID to the resource of the Activity Context. The domain attribute is specified by "Domain".

For example:

- For the following string representation of the context:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`
- The domain ID is "1." If the bit **com.rti.ndds.config.ActivityContextAttributeKind.NDDS_CONFIG_↩ ACTIVITY_CONTEXT_ATTRIBUTE_DOMAIN_ID** (p. 589) is not set, the string representation will not show the domain ID:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo}|Write]`

8.7.2.6 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_NAME

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_NAME = 0x20  [static]
```

Provide the entity name to the resource of the Activity Context. The name attribute is specified by "Name".

For example:

- For the following string representation of the context:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Name=testDataWriterName,Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`
- The entity name is "testDataWriterName." If the bit **com.rti.ndds.config.ActivityContextAttributeKind.NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_ENTITY_NAME** (p. 589) is not set, the string representation will not show the entity name:
  `[0X101A76B,0X79E5D71,0X50EE914:0X1C1:0X80000003{Entity=DW,Topic=test,Type=Foo,Domain=1}|Write]`

8.7.2.7 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_DEFAULT

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_DEFAULT = 0x3F  [static]
```

Provide the default attributes of the resource of the Activity Context.

8.7.2.8 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_NONE

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_NONE = 0x0  [static]
```

Not provide any attribute of the resource of the Activity Context.

8.7.2.9 NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_ALL

```
final int NDDS_CONFIG_ACTIVITY_CONTEXT_ATTRIBUTE_MASK_ALL = 0x3F  [static]
```

Provide all the possibles attributes of the resource of the Activity Context.

8.8 AllocationSettings_t Class Reference

Resource allocation settings.

Inherits Struct.

Public Member Functions

- **AllocationSettings_t** (int **initial_count**, int **max_count**, int **incremental_count**)
  Constructor with the given initial, maximum and incremental values.

Public Attributes

- int **initial_count**
  The initial count of resources.
- int **max_count**
  The maximum count of resources.
- int **incremental_count**
  The incremental count of resources.

8.8.1 Detailed Description

Resource allocation settings.

QoS:

com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy (p. 1081)

8.8.2 Constructor & Destructor Documentation

8.8.2.1 AllocationSettings_t()

```
AllocationSettings_t (
            int initial_count,
            int max_count,
            int incremental_count )
```

Constructor with the given initial, maximum and incremental values.

References **AllocationSettings_t.incremental_count**, **AllocationSettings_t.initial_count**, and **Allocation↩ Settings_t.max_count**.

8.8.3 Member Data Documentation

8.8.3.1 initial_count

```
int initial_count
```

The initial count of resources.

The initial resources to be allocated.

[default] It depends on the case.

[range] [0, 1 million], <= max_count

Referenced by **AllocationSettings_t.AllocationSettings_t()**.

8.8.3.2 max_count

```
int max_count
```

The maximum count of resources.

The maximum resources to be allocated.

[default] Depends on the case.

[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_count

Referenced by **AllocationSettings_t.AllocationSettings_t()**.

8.8.3.3 incremental_count

```
int incremental_count
```

The incremental count of resources.

The resource to be allocated when more resources are needed.

[default] Depends on the case.

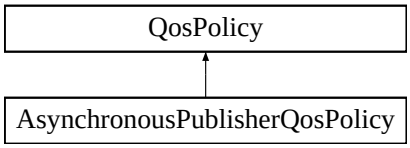
[range] -1 (Double the amount of extra memory allocated each time memory is needed) or [1,1 million] (or = 0 only if initial_count == max_count)

Referenced by **AllocationSettings_t.AllocationSettings_t()**.

8.9 AsynchronousPublisherQosPolicy Class Reference

*<<**extension**>> (p. 138)* Configures the mechanism that sends user data in an external middleware thread.

Inheritance diagram for AsynchronousPublisherQosPolicy:



Public Attributes

- boolean **disable_asynchronous_write**

  [DEPRECATED] *(p. **358**) <<**extension**>> (p. 138) Disable asynchronous publishing.*
- final **ThreadSettings_t thread**

  *<<**extension**>> (p. 138) Settings of the publishing thread.*
- boolean **disable_asynchronous_batch**

  [DEPRECATED] *(p. **358**) <<**extension**>> (p. 138) Disable asynchronous batch flushing.*
- final **ThreadSettings_t asynchronous_batch_thread**

  *<<**extension**>> (p. 138) Settings of the batch flushing thread.*
- boolean **disable_topic_query_publication**

  [DEPRECATED] *(p. **358**) <<**extension**>> (p. 138) Disable topic query publication.*
- final **ThreadSettings_t topic_query_publication_thread**

  *<<**extension**>> (p. 138) Settings of the **com.rti.dds.subscription.TopicQuery** (p. 2139) publication thread.*

8.9.1 Detailed Description

*<<**extension**>> (p. 138)* Configures the mechanism that sends user data in an external middleware thread.

Specifies the asynchronous publishing and asynchronous batch flushing settings of the **com.rti.dds.publication.Publisher** (p. 1767) instances.

The QoS policy specifies whether asynchronous publishing and asynchronous batch flushing are enabled for the **com.rti.dds.publication.DataWriter** (p. 818) entities belonging to this **com.rti.dds.publication.Publisher** (p. 1767). If so, the publisher will spawn up to two threads, one for asynchronous publishing and one for asynchronous batch flushing.

This policy also configures the settings of the **com.rti.dds.subscription.TopicQuery** (p. 2139) publication thread. The publisher will spawn this thread only if one or more DataWriters enable TopicQueries.

See also

com.rti.dds.infrastructure.BatchQosPolicy (p. 607).

com.rti.dds.infrastructure.PublishModeQosPolicy (p. 1797).

Entity:

com.rti.dds.publication.Publisher (p. 1767)

Properties:

RxO (p. 506) = N/A

Changeable (p. 507) = **NO** (p. 507)

8.9.2 Usage

You can use this QoS policy to reduce the amount of time your application thread spends sending data.

The asynchronous *publisher* thread is shared by all com.rti.dds.infrastructure.PublishModeQosPolicyKind.Publish↩ ModeQosPolicyKind.ASYNCHRONOUS_PUBLISH_MODE_QOS **com.rti.dds.publication.DataWriter** (p. 818) instances that belong to this publisher and handles their data transmission chores.

The asynchronous *batch flushing* thread is shared by all **com.rti.dds.publication.DataWriter** (p. 818) instances with batching enabled that belong to this publisher.

This QoS policy also allows you to adjust the settings of the asynchronous publishing and the asynchronous batch flushing threads. To use different threads for two different **com.rti.dds.publication.DataWriter** (p. 818) entities, the instances must belong to different **com.rti.dds.publication.Publisher** (p. 1767) instances.

A **com.rti.dds.publication.Publisher** (p. 1767) must have asynchronous publishing enabled for its **com.rti.dds.↩ publication.DataWriter** (p. 818) instances to write asynchronously.

A **com.rti.dds.publication.Publisher** (p. 1767) must have asynchronous batch flushing enabled in order to flush the batches of its **com.rti.dds.publication.DataWriter** (p. 818) instances asynchronously. However, no asynchronous batch flushing thread will be started until the first **com.rti.dds.publication.DataWriter** (p. 818) instance with batching enabled is created from this **com.rti.dds.publication.Publisher** (p. 1767).

8.9.3 Member Data Documentation

8.9.3.1 disable_asynchronous_write

```
boolean disable_asynchronous_write
```

[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Disable asynchronous publishing.

If set to com.rti.dds.infrastructure.true, any **com.rti.dds.publication.DataWriter** (p. 818) created with com.rti.dds.↩ infrastructure.PublishModeQosPolicyKind.PublishModeQosPolicyKind.ASYNCHRONOUS_PUBLISH_MODE_QOS will fail with **com.rti.dds.infrastructure.RETCODE_INCONSISTENT_POLICY** (p. 1901).

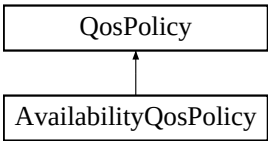
8.10 AvailabilityQosPolicy Class Reference

<<***extension***>> *(*p. *138)* Configures the availability of data.

Inheritance diagram for AvailabilityQosPolicy:



Public Attributes

- boolean **enable_required_subscriptions**

  <<***extension***>> *(*p. *138) Enables support for required subscriptions in a **com.rti.dds.publication.DataWriter** (*p. *818)*
- final **Duration_t max_data_availability_waiting_time**

  <<***extension***>> *(*p. *138) Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.*
- final **Duration_t max_endpoint_availability_waiting_time**

  <<***extension***>> *(*p. *138) Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).*
- final **EndpointGroupSeq required_matched_endpoint_groups**

  <<***extension***>> *(*p. *138) A sequence of endpoint groups.*

8.10.1 Detailed Description

<<***extension***>> *(*p. *138)* Configures the availability of data.

Entity:

com.rti.dds.subscription.DataReader (p. 707), **com.rti.dds.publication.DataWriter** (p. 818)

Properties:

RxO (p. 506) = NO
Changeable (p. 507) = **YES** (p. 507) (only on a **com.rti.dds.publication.DataWriter** (p. 818) except for the member **com.rti.dds.infrastructure.AvailabilityQosPolicy.enable_required_subscriptions** (p. 600))

8.10.2 Usage

This QoS policy is used in the context of two features:

- Collaborative DataWriters
- Required Subscriptions

Collaborative DataWriters

The Collaborative DataWriters feature allows having multiple DataWriters publishing samples from a common logical data source. The DataReaders will combine the samples coming from the DataWriters in order to reconstruct the correct order at the source.

This QoS policy allows you to configure the ordering and combination process in the DataReader and can be used to support two different use cases:

- **Ordered delivery of samples in high-availability scenarios** One example of this is RTI Persistence Service. When a late-joining DataReader configured with **com.rti.dds.infrastructure.DurabilityQosPolicy** (p. 1116) set to com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.PERSISTENT_DURABILITY_QOS or com.rti.dds.infrastructure.DurabilityQosPolicyKind.DurabilityQosPolicyKind.TRANSIENT_DURABILITY_QOS joins a DDS domain, it will start receiving historical samples from multiple DataWriters. For example, if the original DataWriter is still alive, the newly created DataReader will receive samples from the original DataWriter and one or more RTI Persistence Service DataWriters (PRSTDataWriters). This policy can be used to configure the sample ordering process on the DataReader.

- **Ordered delivery of samples in load-balanced scenarios** Multiple instances of the same application can work together to process and deliver samples. When the samples arrive through different data-paths out of order, the DataReader will be able to reconstruct the order at the destination. An example of this is when multiple instances of RTI Persistence Service are used to persist the data. Persisting data to a database on disk can be a bottleneck for throughput. You can improve scalability and performance by dividing the workload across different instances of RTI Persistence Service that use different databases. For example, samples larger than 10 are persisted by Persistence Service 1, samples less than or equal to 10 are persisted by Persistence Service 2.

- **Ordered delivery of samples with Group Ordered Access** This policy can also be used to configure the sample ordering process when the Subscriber is configured with **com.rti.dds.infrastructure.PresentationQosPolicy** (p. 1678) access_scope set to com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.Presentation↩ QosPolicyAccessScopeKind.GROUP_PRESENTATION_QOS. In this case, the Subscriber must deliver in order the samples published by a group of DataWriters that belong to the same Publisher and have access_scope set to com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScope↩ Kind.GROUP_PRESENTATION_QOS.

Each sample published in a DDS domain for a given logical data source is uniquely identified by a pair (virtual GUID, virtual sequence number). Samples from the same data source (same virtual GUID) can be published by different DataWriters. A DataReader will deliver a sample (VGUIDn, VSNm) to the application if one of the following conditions is satisfied:

- (VGUIDn, VSNm-1) has already been delivered to the application.
- All the known DataWriters publishing VGUIDn have announced that they do not have (VGUIDn, VSNm-1).
- None of the known DataWriters publishing GUIDn have announced potential availability of (VGUIDn, VSNm-1) and both timeouts in this QoS policy have expired.

A DataWriter announces potential availability of samples by using virtual heartbeats (HBs).

When **com.rti.dds.infrastructure.PresentationQosPolicy.access_scope** (p. 1682) is set to com.rti.dds.↩ infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.TOPIC_PRESENTATION↩ _QOS or com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScope↩ Kind.INSTANCE_PRESENTATION_QOS, the virtual HB contains information about the samples contained in the **com.rti.dds.publication.DataWriter** (p. 818) history.

When **com.rti.dds.infrastructure.PresentationQosPolicy.access_scope** (p. 1682) is set to com.rti.dds.↩ infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.GROUP_PRESENTATION↩ _QOS, the virtual HB contains information about all DataWriters in the **com.rti.dds.publication.Publisher** (p. 1767).

The frequency at which virtual HBs are sent is controlled by the protocol parameters **com.rti.dds.infrastructure.Rtps↩ ReliableWriterProtocol_t.virtual_heartbeat_period** (p. 1916) and **com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t.samples_per_virtual_heartbeat** (p. 1916).

Required Subscriptions

In the context of Required Subscriptions, this QoS policy can be used to configure a set of Required Subscriptions on a **com.rti.dds.publication.DataWriter** (p. 818).

Required subscriptions are preconfigured, named subscriptions that may leave and subsequently rejoin the network from time to time, at the same or different physical locations. Any time a required subscription is disconnected, any samples that would have been delivered to it are stored for delivery if and when the subscription rejoins the network.

8.10.3 Consistency

For a DataWriter, the setting of **AVAILABILITY** (p. 416) must be set consistenly with that of the **RELIABILITY** (p. 510) and **DURABILITY** (p. 481).

If **com.rti.dds.infrastructure.AvailabilityQosPolicy.enable_required_subscriptions** (p. 600) is set to com.rti.dds.↩ infrastructure.true, **com.rti.dds.infrastructure.ReliabilityQosPolicy.kind** (p. 1831) must be set to **com.rti.dds.↩ infrastructure.ReliabilityQosPolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836), **com.rti.dds.infrastructure.↩ DurabilityQosPolicy** (p. 1116) must be set to a value different than com.rti.dds.infrastructure.DurabilityQos↩ PolicyKind.DurabilityQosPolicyKind.VOLATILE_DURABILITY_QOS, and **com.rti.dds.infrastructure.Durability↩ QosPolicy.writer_depth** (p. 1119) must be set to either **com.rti.dds.infrastructure.DurabilityQosPolicy.AUTO↩ _WRITER_DEPTH** (p. 481) or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511).

8.10.4 Member Data Documentation

8.10.4.1 enable_required_subscriptions

```
boolean enable_required_subscriptions
```

<<***extension***>> *(*p. *138)* Enables support for required subscriptions in a **com.rti.dds.publication.DataWriter** (p. 818)

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Reliability** (p. 266), **Durability** (p. 221), **Data Availability** (p. 200)

8.10.4.2 max_data_availability_waiting_time

```
final Duration_t max_data_availability_waiting_time
```

<<***extension***>> *(*p. *138)* Defines how much time to wait before delivering a sample to the application without having received some of the previous samples.

Collaborative DataWriters

A sample identified by (VGUIDn, VSNm) will be delivered to the application if this timeout expires for the sample and the following two conditions are satisfied:

- None of the known DataWriters publishing VGUIDn have announced potential availability of (VGUIDn, VSNm-1).
- The DataWriters for all the endpoint groups specified in **required_matched_endpoint_groups** (p. 601) have been discovered or **max_endpoint_availability_waiting_time** (p. 600) has expired.

Required Subscriptions

This field is not applicable to Required Subscriptions.

[default] com.rti.dds.infrastructure.Duration_t.AUTO (**com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133) for com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScope↩Kind.GROUP_PRESENTATION_QOS. Otherwise, 0 seconds)

[range] [0, **com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133)], com.rti.dds.infrastructure.↩Duration_t.AUTO

Categories

Mutable (p. 338), **Reliability** (p. 266), **Durability** (p. 221), **Data Availability** (p. 200)

8.10.4.3 max_endpoint_availability_waiting_time

```
final Duration_t max_endpoint_availability_waiting_time
```

<<***extension***>> *(*p. *138)* Defines how much time to wait to discover DataWriters providing samples for the same data source (virtual GUID).

Collaborative DataWriters

The set of endpoint groups that are required to provide samples for a data source can be configured using **required_matched_endpoint_groups** (p. 601).

A non-consecutive sample identified by (VGUIDn, VSNm) cannot be delivered to the application unless DataWriters for all the endpoint groups in **required_matched_endpoint_groups** (p. 601) are discovered or this timeout expires.

Required Subscriptions

This field is not applicable to Required Subscriptions.

[default] com.rti.dds.infrastructure.Duration_t.AUTO (**com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133) for com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.GROUP_PRESENTATION_QOS. Otherwise, 0 seconds)

[range] [0, **com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133)], com.rti.dds.infrastructure.Duration_t.AUTO

Categories

Mutable (p. 338), **Reliability** (p. 266), **Durability** (p. 221), **Data Availability** (p. 200)

8.10.4.4 required_matched_endpoint_groups

```
final EndpointGroupSeq required_matched_endpoint_groups
```

<<***extension***>> *(*p. *138)* A sequence of endpoint groups.

Collaborative DataWriters

In the context of Collaborative DataWriters, it specifies the set of endpoint groups that are expected to provide samples for the same data source.

The quorum count in a group represents the number of DataWriters that must be discovered for that group before the DataReader is allowed to provide non consecutive samples to the application.

A DataWriter becomes a member of an endpoint group by configuring the role_name in **com.rti.dds.publication.DataWriterQos.publication_name** (p. 888).

Required Subscriptions

In the context of Required Subscriptions, it specifies the set of Required Subscriptions on a **com.rti.dds.publication.DataWriter** (p. 818).

Each Required Subscription is specified by a name and a quorum count.

The quorum count represents the number of DataReaders that have to acknowledge the sample before it can be considered fully acknowledged for that Required Subscription.

A DataReader is associated with a Required Subscription by configuring the role_name in **com.rti.dds.subscription.DataReaderQos.subscription_name** (p. 786).

[default] Empty sequence

- static final String **encodeToString** (byte[ ] sArr, boolean lineSep)
- static final byte[ ] **decode** (String str)
- static final byte[ ] **decodeFast** (String s)

8.16.1 Detailed Description

A wrapper for **Base64** (p. 604) encoding and decoding, kept for backwards compatibility.

The original implementation relied on the migbase64 library, which is no longer used. This class now uses the **Base64** (p. 604) MIME encoder/decoder built into the JDK.

This class is deprecated and should not be used in new code. Use the JDK's java.util.Base64 class directly instead.

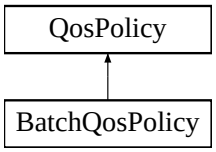
8.17 BatchQosPolicy Class Reference

*<<**extension**>> (p. 138)* Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.

Inheritance diagram for BatchQosPolicy:



Public Attributes

- boolean **enable**

  *<<**basic**>> (p. 123) <<**extension**>> (p. 138) Specifies whether or not batching is enabled.*
- int **max_data_bytes**

  *<<**basic**>> (p. 123) <<**extension**>> (p. 138) The maximum cumulative length of all serialized samples in a batch.*
- int **max_samples**

  *<<**basic**>> (p. 123) <<**extension**>> (p. 138) The maximum number of samples in a batch.*
- final **Duration_t max_flush_delay**

  *<<**extension**>> (p. 138) The maximum flush delay.*
- final **Duration_t source_timestamp_resolution**

  *<<**extension**>> (p. 138) Batch source timestamp resolution.*
- boolean **thread_safe_write**

  *<<**extension**>> (p. 138) Determines whether or not the write operation is thread safe.*

8.17.1 Detailed Description

<<***extension***>> *(*p. *138)* Used to configure batching of multiple samples into a single network packet in order to increase throughput for small samples.

This QoS policy configures the ability of the middleware to collect multiple user data samples to be sent in a single network packet, to take advantage of the efficiency of sending larger packets and thus increase effective throughput.

This QoS policy can be used to dramatically increase effective throughput for small data samples. Usually, throughput for small samples (size $<$ 2048 bytes) is limited by CPU capacity and not by network bandwidth. Batching many smaller samples to be sent in a single large packet will increase network utilization, and thus throughput, in terms of samples per second.

Entity:

com.rti.dds.publication.DataWriter (p. 818)

Properties:

RxO (p. 506) = NO
Changeable (p. 507) = **UNTIL ENABLE** (p. 507)

8.17.2 Member Data Documentation

8.17.2.1 enable

```
boolean enable
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Specifies whether or not batching is enabled.

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Batching** (p. 194), **Throughput** (p. 284)

8.17.2.2 max_data_bytes

```
int max_data_bytes
```

<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum cumulative length of all serialized samples in a batch.

A batch is flushed automatically when this maximum is reached.

max_data_bytes does not include the meta data associated with the batch samples. Each sample has at least 8 bytes of meta data containing information such as the timestamp and sequence number. The meta data can be as large as 52 bytes for keyed topics and 20 bytes for unkeyed topics.

Note: Batches must contain whole samples. If a new batch is started and its initial sample causes the serialized size to exceed max_data_bytes, RTI Connext will send the sample in a single batch.

[default] 1024

[range] [1,**com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)]

8.17.3 Consistency

The setting of **com.rti.dds.infrastructure.BatchQosPolicy.max_data_bytes** (p. 608) must be consistent with **com.rti.dds.infrastructure.BatchQosPolicy.max_samples** (p. 609). For these two values to be consistent, they cannot be both **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511).

Categories

Immutable (p. 292), **Batching** (p. 194), **Throughput** (p. 284)

8.17.3.1 max_samples

```
int max_samples
```

<<***basic***>> *(p. 123)* <<***extension***>> *(p. 138)* The maximum number of samples in a batch.

A batch is flushed automatically when this maximum is reached.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1,**com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)]

8.17.4 Consistency

The setting of **com.rti.dds.infrastructure.BatchQosPolicy.max_samples** (p. 609) must be consistent with **com.rti.dds.infrastructure.BatchQosPolicy.max_data_bytes** (p. 608). For these two values to be consistent, they cannot be both **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511).

Categories

Immutable (p. 292), **Batching** (p. 194), **Throughput** (p. 284)

8.17.4.1 max_flush_delay

```
final Duration_t max_flush_delay
```

<<***extension***>> *(p. 138)* The maximum flush delay.

A batch is flushed automatically after the delay specified by this parameter.

The delay is measured from the time the first sample in the batch is written by the application.

[default] com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE (p. 1133)

[range] [0,**com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133)]

8.17.5 Consistency

The setting of **com.rti.dds.infrastructure.BatchQosPolicy.max_flush_delay** (p. 610) must be consistent with **com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy.disable_asynchronous_batch** (p. 595) and **com.rti.dds.infrastructure.BatchQosPolicy.thread_safe_write** (p. 611). If the delay is different than **com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133), **com.rti.dds.infrastructure.AsynchronousPublisherQosPolicy.disable_asynchronous_batch** (p. 595) must be set to com.rti.dds.infrastructure.false and **com.rti.dds.infrastructure.BatchQosPolicy.thread_safe_write** (p. 611) must be set to com.rti.dds.infrastructure.true.

Categories

Immutable (p. 292), **Batching** (p. 194), **Throughput** (p. 284)

8.17.5.1 source_timestamp_resolution

```
final  Duration_t source_timestamp_resolution
```

<<***extension***>> *(*p. *138)* Batch source timestamp resolution.

The value of this field determines how the source timestamp is associated with the samples in a batch.

A sample written with timestamp 't' inherits the source timestamp 't2' associated with the previous sample unless ('t' - 't2') > source_timestamp_resolution.

If source_timestamp_resolution is set to **com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133), every sample in the batch will share the source timestamp associated with the first sample.

If source_timestamp_resolution is set to zero, every sample in the batch will contain its own source timestamp corresponding to the moment when the sample was written.

The performance of the batching process is better when source_timestamp_resolution is set to **com.rti.dds.↩ infrastructure.Duration_t.DURATION_INFINITE** (p. 1133).

[default] com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE (p. 1133)

[range] [0,**com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133)]

8.17.6 Consistency

The setting of **com.rti.dds.infrastructure.BatchQosPolicy.source_timestamp_resolution** (p. 610) must be consistent with **com.rti.dds.infrastructure.BatchQosPolicy.thread_safe_write** (p. 611). If **com.rti.dds.infrastructure.↩ BatchQosPolicy.thread_safe_write** (p. 611) is set to com.rti.dds.infrastructure.false, **com.rti.dds.infrastructure.↩ BatchQosPolicy.source_timestamp_resolution** (p. 610) must be set to **com.rti.dds.infrastructure.Duration_t.↩ DURATION_INFINITE** (p. 1133).

Categories

Immutable (p. 292), **Batching** (p. 194), **Throughput** (p. 284), **Data Availability** (p. 200)

8.17.6.1 thread_safe_write

```
boolean thread_safe_write
```

<<***extension***>> *(*p. *138)* Determines whether or not the write operation is thread safe.

If this parameter is set to com.rti.dds.infrastructure.true, multiple threads can call write on the **com.rti.dds.↩ publication.DataWriter** (p. 818) concurrently.

[default] com.rti.dds.infrastructure.true

8.17.7 Consistency

The setting of **com.rti.dds.infrastructure.BatchQosPolicy.thread_safe_write** (p. 611) must be consistent with **com.↩ rti.dds.infrastructure.BatchQosPolicy.source_timestamp_resolution** (p. 610). If **com.rti.dds.infrastructure.↩ BatchQosPolicy.thread_safe_write** (p. 611) is set to com.rti.dds.infrastructure.false, **com.rti.dds.infrastructure.↩ BatchQosPolicy.source_timestamp_resolution** (p. 610) must be set to **com.rti.dds.infrastructure.Duration_t.↩ DURATION_INFINITE** (p. 1133).

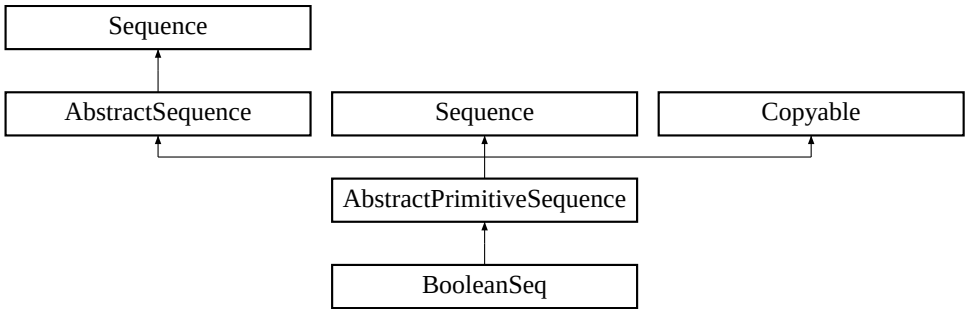
Categories

Immutable (p. 292), **Batching** (p. 194), **Throughput** (p. 284), **Concurrency** (p. 195)

8.18 BooleanSeq Class Reference

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < boolean >

Inheritance diagram for BooleanSeq:



Public Member Functions

- **BooleanSeq** ()

  Constructs an empty sequence of booleans with an initial maximum of zero.
- **BooleanSeq** (int initialMaximum)

  Constructs an empty sequence of booleans with the given initial maximum.
- **BooleanSeq** (boolean[ ] booleans)

  Constructs a new sequence containing the given booleans.
- boolean **addAllBoolean** (boolean[ ] elements, int offset, int length)

  Append `length` elements from the given array to this sequence, starting at index `offset` in that array.
- boolean **addAllBoolean** (boolean[ ] elements)
- void **addBoolean** (boolean element)

  Append the element to the end of the sequence.
- void **addBoolean** (int index, boolean element)

  Shift all elements in the sequence starting from the given index and add the element to the given index.
- boolean **getBoolean** (int index)

  Returns the boolean at the given index.
- boolean **setBoolean** (int index, boolean element)

Set the new boolean at the given index and return the old boolean.

- void **setBoolean** (int dstIndex, boolean[ ] elements, int srcIndex, int length)

  Copy a portion of the given array into this sequence.
- boolean[ ] **toArrayBoolean** (boolean[ ] array)

  Return an array containing copy of the contents of this sequence.
- int **getMaximum** ()

  Get the current maximum number of elements that can be stored in this sequence.
- Object **get** (int index)

  *A wrapper for **getBoolean(int)** (p. 615) that returns a java.lang.Boolean.*
- Object **set** (int index, Object element)

  *A wrapper for **setBoolean()** (p. 615).*
- void **add** (int index, Object element)

  A wrapper for addBoolean(int, int).

8.18.1 Detailed Description

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < boolean >

Instantiates:

<<***generic***>> *(p. 403)* com.rti.dds.infrastructure.com.rti.dds.util.Sequence

8.18.2 Constructor & Destructor Documentation

8.18.2.1 BooleanSeq() [1/3]

```
BooleanSeq ( )
```

Constructs an empty sequence of booleans with an initial maximum of zero.

8.18.2.2 BooleanSeq() [2/3]

```
BooleanSeq (
            int initialMaximum )
```

Constructs an empty sequence of booleans with the given initial maximum.

8.18.2.3 BooleanSeq() [3/3]

```
BooleanSeq (
            boolean[] booleans )
```

Constructs a new sequence containing the given booleans.

Parameters

booleans	the initial contents of this sequence

Exceptions

NullPointerException	if the input array is null

References **BooleanSeq.addAllBoolean()**.

8.18.3 Member Function Documentation

8.18.3.1 addAllBoolean() [1/2]

```
boolean addAllBoolean (
            boolean[] elements,
            int offset,
            int length )
```

Append `length` elements from the given array to this sequence, starting at index `offset` in that array.

Exceptions

NullPointerException	if the given array is null.

Referenced by **BooleanSeq.addAllBoolean()**, and **BooleanSeq.BooleanSeq()**.

8.18.3.2 addAllBoolean() [2/2]

```
boolean addAllBoolean (
            boolean[] elements )
```

Exceptions

NullPointerException	if the given array is null

References **BooleanSeq.addAllBoolean()**.

8.18.3.3 addBoolean() [1/2]

```
void addBoolean (
            boolean element )
```

Append the element to the end of the sequence.

Referenced by **BooleanSeq.add()**.

8.18.3.4 addBoolean() [2/2]

```
void addBoolean (
            int index,
            boolean element )
```

Shift all elements in the sequence starting from the given index and add the element to the given index.

8.18.3.5 getBoolean()

```
boolean getBoolean (
            int index )
```

Returns the boolean at the given index.

Exceptions

IndexOutOfBoundsException	if the index is out of bounds.

Referenced by **BooleanSeq.get()**.

8.18.3.6 setBoolean() [1/2]

```
boolean setBoolean (
            int index,
            boolean element )
```

Set the new boolean at the given index and return the old boolean.

Exceptions

IndexOutOfBoundsException	if the index is out of bounds.

Referenced by **BooleanSeq.set()**.

8.18.3.7 setBoolean() [2/2]

```
void setBoolean (
            int dstIndex,
            boolean[] elements,
            int srcIndex,
            int length )
```

Copy a portion of the given array into this sequence.

Parameters

dstIndex	the index at which to start copying into this sequence.
elements	an array of primitive elements.
srcIndex	the index at which to start copying from the given array.
length	the number of elements to copy.

Exceptions

IndexOutOfBoundsException	if copying would cause access of data outside array bounds.

8.18.3.8 toArrayBoolean()

```
boolean[] toArrayBoolean (
            boolean[] array )
```

Return an array containing copy of the contents of this sequence.

Parameters

array	The array into which this sequence should be copied. It may be null. If it is, or if array length is too small, the array will be ignored, and a new array of the necessary length will be created and copied into instead.

Returns

A non-null array containing a copy of the contents of this sequence.

8.18.3.9 getMaximum()

```
int getMaximum ( )
```

Get the current maximum number of elements that can be stored in this sequence.

The `maximum` of the sequence represents the maximum number of elements that the underlying buffer can hold. It does not represent the current number of elements.

The `maximum` is a non-negative number. It is initialized when the sequence is first created.

The `maximum` can be changed implicitly by adding an element to the sequence with **`add()`** (p. 618), or explicitly by calling com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.setMaximum.

Returns

the current maximum of the sequence.

See also

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.size()

Implements **Sequence** (p. 1974).

Referenced by **DynamicData.get_boolean_seq()**, and **DynamicData.set_boolean_seq()**.

8.18.3.10 get()

```
Object get (
             int index )
```

A wrapper for **getBoolean(int)** (p. 615) that returns a java.lang.Boolean.

See also

java.util.List::get(int)

Reimplemented from **AbstractPrimitiveSequence** (p. 576).

References **BooleanSeq.getBoolean()**.

8.18.3.11 set()

```
Object set (
             int index,
             Object element )
```

A wrapper for **setBoolean()** (p. 615).

Exceptions

ClassCastException	if the element is not of type Boolean.

See also

java.util.List::set(int, java.lang.Object)

Reimplemented from **AbstractPrimitiveSequence** (p. 576).

References **BooleanSeq.setBoolean()**.

8.18.3.12 add()

```
void add (
            int index,
            Object element )
```

A wrapper for addBoolean(int, int).

Exceptions

ClassCastException	if the element is not of type Boolean.

See also

java.util.List::add(int, java.lang.Object)

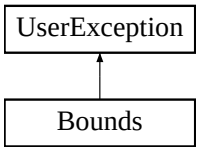
Reimplemented from **AbstractPrimitiveSequence** (p. 577).

References **BooleanSeq.addBoolean()**.

8.19 Bounds Class Reference

A user exception thrown when a parameter is not within the legal bounds.

Inheritance diagram for Bounds:



8.19.1 Detailed Description

A user exception thrown when a parameter is not within the legal bounds.

8.20 BuiltinQosProfiles Class Reference

The available built-in QoS libraries, profiles, and snippets.

Static Public Attributes

- static final String **BUILTIN_QOS_LIB**

  A library of non-experimental QoS profiles.
- static final String **PROFILE_BASELINE_ROOT**

  The root baseline QoS values from which all other Baseline.X.X.X profiles inherit.
- static final String **PROFILE_BASELINE**

  The most up-to-date QoS default values.
- static final String **PROFILE_BASELINE_5_0_0**

  The QoS default values for version 5.0.0.
- static final String **PROFILE_BASELINE_5_1_0**

  The QoS default values for version 5.1.0.
- static final String **PROFILE_BASELINE_5_2_0**

  The QoS default values for version 5.2.0.
- static final String **PROFILE_BASELINE_5_3_0**

  The QoS default values for version 5.3.0.
- static final String **PROFILE_BASELINE_6_0_0**

  The QoS default values for version 6.0.0.
- static final String **PROFILE_BASELINE_6_1_0**

  The QoS default values for version 6.1.0.
- static final String **PROFILE_BASELINE_7_0_0**

  The QoS default values for version 7.0.0.
- static final String **PROFILE_BASELINE_7_1_0**

  The QoS default values for version 7.1.0.
- static final String **PROFILE_GENERIC_COMMON**

  A common Participant base profile.
- static final String **PROFILE_GENERIC_MONITORING_COMMON**

  Enables RTI Monitoring Library.
- static final String **PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY**

  Sets the values necessary to communicate with RTI Connext Micro.
- static final String **PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_9**

  Sets the values necessary to communicate with RTI Connext Micro versions 2.4.4 through at least 2.4.9.
- static final String **PROFILE_GENERIC_CONNEXT_MICRO_COMPATIBILITY_2_4_3**

  Sets the values necessary to communicate with RTI Connext Micro versions 2.4.3 and ealier.
- static final String **PROFILE_GENERIC_OTHER_DDS_VENDOR_COMPATIBILITY**

  Sets the values necessary to interoperate with other DDS vendors.

- static final String **PROFILE_GENERIC_510_TRANSPORT_COMPATIBILITY**

  Sets the values necessary to interoperate with RTI Connext 5.1.0 using the UDPv6 and/or SHMEM transports.
- static final String **PROFILE_GENERIC_SECURITY**

  Loads the DDS Secure builtin plugins.
- static final String **BUILTIN_QOS_LIB_EXP**

  A library of experimental QoS profiles.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE**

  Enables strict reliability.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE**

  Enables keep-last reliability.
- static final String **PROFILE_GENERIC_BEST_EFFORT**

  Enables best-effort reliability kind.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_HIGH_THROUGHPUT**

  A profile that can be used to achieve high throughput.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LOW_LATENCY**

  A profile that can be used to achieve low latency.
- static final String **PROFILE_GENERIC_PARTICIPANT_LARGE_DATA**

  A common Participant base profile to facilitate sending large data.
- static final String **PROFILE_GENERIC_PARTICIPANT_LARGE_DATA_MONITORING**

  Configures Participants for large data and monitoring.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA**

  Configures endpoints for sending large data with strict reliability.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA**

  Configures endpoints for sending large data with keep-last reliability.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_FAST_FLOW**

  Configures strictly reliable communication for large data with a fast flow controller.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_MEDIUM_FLOW**

  Configures strictly reliable communication for large data with a medium flow controller.
- static final String **PROFILE_GENERIC_STRICT_RELIABLE_LARGE_DATA_SLOW_FLOW**

  Configures strictly reliable communication for large data with a slow flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_FAST_FLOW**

  Configures keep-last reliable communication for large data with a fast flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_MEDIUM_FLOW**

  Configures keep-last reliable communication for large data with a medium flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_LARGE_DATA_SLOW_FLOW**

  Configures keep-last reliable communication for large data with a slow flow controller.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT_LOCAL**

  Persists the samples of a DataWriter as long as the entity exists.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_TRANSIENT**

  Persists samples using RTI Persistence Service.
- static final String **PROFILE_GENERIC_KEEP_LAST_RELIABLE_PERSISTENT**

  Persists samples in permanent storage, like a disk, using RTI Persistence Service.
- static final String **PROFILE_GENERIC_AUTO_TUNING**

  Enables the Turbo Mode batching and Auto Throttle experimental features.
- static final String **PROFILE_GENERIC_MINIMAL_MEMORY_FOOTPRINT**

  Uses a set of QoS which reduces the memory footprint of the application.
- static final String **PROFILE_GENERIC_MONITORING2**

The default QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use.

- static final String **PROFILE_GENERIC_MONITORING2_WAN**

  The QoS profile that the DDS entities created by the RTI Monitoring Library 2.0 use to communicate over WAN with a Collector Service.
- static final String **PROFILE_PATTERN_RPC**

  This profile contains the default RPC and Request-Reply QoS settings.
- static final String **PROFILE_PATTERN_PERIODIC_DATA**

  Used for applications that expect periodic data.
- static final String **PROFILE_PATTERN_STREAMING**

  Used for applications that stream data.
- static final String **PROFILE_PATTERN_RELIABLE_STREAMING**

  Used for applications that stream data and require reliable communication.
- static final String **PROFILE_PATTERN_EVENT**

  Used for applications that handle events.
- static final String **PROFILE_PATTERN_ALARM_EVENT**

  Used for applications that handle alarm events.
- static final String **PROFILE_PATTERN_STATUS**

  Used for applications whose samples represent statuses.
- static final String **PROFILE_PATTERN_ALARM_STATUS**

  Used for applications in which samples represent alarm statuses.
- static final String **PROFILE_PATTERN_LAST_VALUE_CACHE**

  Used for applications that only need the last published value.
- static final String **BUILTIN_QOS_SNIPPET_LIB**

  A library of QoS Snippets.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_COMMON**

  QoS Snippet that configures the reliability protocol with a common configuration.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_ALL**

  QoS Snippet that configures the reliability protocol for KEEP_ALL.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_KEEP_LAST**

  QoS Snippet that configures the reliability protocol for KEEP_LAST.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_HIGH_RATE**

  QoS Snippet that configures the reliability protocol for sending data at a high rate.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LOW_LATENCY**

  QoS Snippet that configures the reliability protocol for sending data at low latency.
- static final String **SNIPPET_OPTIMIZATION_RELIABILITY_PROTOCOL_LARGE_DATA**

  QoS Snippet that configures the reliability protocol for large data.
- static final String **SNIPPET_OPTIMIZATION_DATACACHE_LARGE_DATA_DYNAMICMEMALLOC**

  Configures the DataWriter and DataReader caches to use dynamic memory allocation for Large Data samples.
- static final String **SNIPPET_OPTIMIZATION_DISCOVERY_COMMON**

  QoS Snippet that optimizes discovery with a common configuration.
- static final String **SNIPPET_OPTIMIZATION_DISCOVERY_PARTICIPANT_COMPACT**

  QoS Snippet that optimizes the Participant QoS to send less discovery information.
- static final String **SNIPPET_OPTIMIZATION_DISCOVERY_ENDPOINT_FAST**

  QoS Snippet that optimizes the Endpoint Discovery to be faster.
- static final String **SNIPPET_OPTIMIZATION_TRANSPORT_LARGE_BUFFERS**

  QoS Snippet that increases the Participant default buffer that shmem and udpv4 use.
- static final String **SNIPPET_QOS_POLICY_RELIABILITY_RELIABLE**

QoS Snippet that sets RELIABILITY QoS to RELIABLE.

- static final String **SNIPPET_QOS_POLICY_RELIABILITY_BEST_EFFORT**

  QoS Snippet that sets RELIABILITY QoS to BEST_EFFORT.
- static final String **SNIPPET_QOS_POLICY_HISTORY_KEEP_LAST_1**

  QoS Snippet that sets HISTORY QoS to KEEP_LAST kind with depth 1.
- static final String **SNIPPET_QOS_POLICY_HISTORY_KEEP_ALL**

  *QoS Snippet that sets HISTORY **QosPolicy** (*p. *1802) to KEEP_ALL kind.*
- static final String **SNIPPET_QOS_POLICY_PUBLISH_MODE_ASYNCHRONOUS**

  *QoS Snippet that sets PUBLISH_MODE **QosPolicy** (*p. *1802) to ASYNCHRONOUS kind.*
- static final String **SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT_LOCAL**

  *QoS Snippet that sets DURABILITY **QosPolicy** (*p. *1802) to TRANSIENT_LOCAL kind.*
- static final String **SNIPPET_QOS_POLICY_DURABILITY_TRANSIENT**

  *QoS Snippet that sets DURABILITY **QosPolicy** (*p. *1802) to TRANSIENT kind.*
- static final String **SNIPPET_QOS_POLICY_DURABILITY_PERSISTENT**

  *QoS Snippet that sets DURABILITY **QosPolicy** (*p. *1802) to PERSISTENT kind.*
- static final String **SNIPPET_QOS_POLICY_BATCHING_ENABLE**

  *QoS Snippet that sets BATCH **QosPolicy** (*p. *1802) to true.*
- static final String **SNIPPET_FEATURE_FLOW_CONTROLLER_838MBPS**

  QoS Snippet that configures and set a FlowController of 838 Mbps.
- static final String **SNIPPET_FEATURE_FLOW_CONTROLLER_209MBPS**

  QoS Snippet that configures and sets a FlowController of 209 Mbps.
- static final String **SNIPPET_FEATURE_FLOW_CONTROLLER_52MBPS**

  QoS Snippet that configures and sets a FlowController of 52 Mbps.
- static final String **SNIPPET_FEATURE_AUTO_TUNING_ENABLE**

  QoS Snippet that enables auto_throttle and turbo_mode to true.
- static final String **SNIPPET_FEATURE_MONITORING_ENABLE**

  QoS Snippet that enables the use of the RTI Monitoring Library.
- static final String **SNIPPET_FEATURE_MONITORING2_ENABLE**

  QoS Snippet that enables the use of the RTI Monitoring Library 2.0.
- static final String **SNIPPET_FEATURE_SECURITY_ENABLE**

  QoS Snippet that enables security using the Builtin Security Plugins.
- static final String **SNIPPET_FEATURE_TOPIC_QUERY_ENABLE**

  QoS Snippet that enables Topic Query.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V1_ENABLE**

  QoS Snippet that enables TypeObject V1 propagation.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V1_DISABLE**

  QoS Snippet that disables TypeObject V1 propagation.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V2_ENABLE**

  QoS Snippet that enables TypeObject V2 propagation.
- static final String **SNIPPET_FEATURE_TYPE_SUPPORT_V2_DISABLE**

  QoS Snippet that disables TypeObject V2 propagation.
- static final String **SNIPPET_TRANSPORT_TCP_LAN_CLIENT** = "Transport.TCP.LAN.Client"

  QoS Snippet that configures a TCP LAN Client over DDS.
- static final String **SNIPPET_TRANSPORT_TCP_WAN_SYMMETRIC_CLIENT**

  QoS Snippet that configures a symmetric WAN TCP Client over DDS.
- static final String **SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_SERVER**

  QoS Snippet that an asymmetric WAN TCP Server over DDS.

- static final String **SNIPPET_TRANSPORT_TCP_WAN_ASYMMETRIC_CLIENT**

  QoS Snippet that configures an asymmetric WAN TCP Client over DDS.
- static final String **SNIPPET_TRANSPORT_UDP_AVOID_IP_FRAGMENTATION**

  QoS Snippet that configures RTI Connext and the UDP built-in transports (UDPv4, UDPv6, UDPv4_WAN) to avoid IP fragmentation.
- static final String **SNIPPET_TRANSPORT_UDP_WAN**

  QoS Snippet that enables the RTI Real-Time WAN Transport (UDPv4_WAN).
- static final String **SNIPPET_COMPATIBILITY_CONNEXT_MICRO_VERSION_2_4_3**

  QoS Snippet that configures sets LIVELINESS QoS to be compatible with RTI Connext Micro 2.4.3.
- static final String **SNIPPET_COMPATIBILITY_OTHER_DDS_VENDORS_ENABLE**

  QoS Snippet that configures RTI Connext to interoperate with other DDS vendors.
- static final String **SNIPPET_5_1_0_TRANSPORT_ENABLE**

  QoS Snippet that configures RTI Connext to interoperate with RTI Connext 5.1.0 and below for UDPv6 and SHMEM transports.

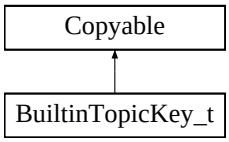
8.20.1 Detailed Description

The available built-in QoS libraries, profiles, and snippets.

8.21 BuiltinTopicKey_t Class Reference

The key type of the built-in topic types.

Inheritance diagram for BuiltinTopicKey_t:



Public Member Functions

- Object **copy_from** (Object src)

  Copy value of a data type from source.
- int[ ] **to_int_array** ()

  Returns an array of four integers that uniquely represents a remote ***com.rti.dds.infrastructure.Entity*** *(*p. *1320).*
- void **from_int_array** (int[ ] iValue)

  Initializes this key from an array of four integers that uniquely represents a remote ***com.rti.dds.infrastructure.Entity*** *(*p. *1320).*
- boolean **is_keyed_reader** ()

  Returns true if this key identifies a keyed DataReader.
- boolean **is_keyed_writer** ()

  Returns true if this key identifies a keyed DataWriter.

- boolean **is_unkeyed_reader** ()

  Returns true if this key identifies an unkeyed DataReader.
- boolean **is_unkeyed_writer** ()

  Returns true if this key identifies an unkeyed DataWriter.
- boolean **is_participant** ()

  Returns true if this key identifies a DomainParticipant.
- boolean **is_user_entity** ()

  Returns true if this key identifies an user Entity.
- boolean **is_builtin_entity** ()

  Returns true if this key identifies a built-in Entity.
- boolean **is_vendor_entity** ()

  Returns true if this key identifies a vendor Entity.
- boolean **is_vendor_builtin_entity** ()

  Returns true if this key identifies a built-in vendor Entity.
- int **get_entity_kind** ()

  Returns an integer identifying the entity kind for the key. The integer can take one of the following values:
- void **to_guid** (**GUID_t** dst)

  Converts this Key into a GUID.
- void **from_guid** (**GUID_t** src)

  Initializes this Key from the input GUID.

Public Attributes

- final int[ ] **value**

  An array of four integers that uniquely represents a remote ***com.rti.dds.infrastructure.Entity*** *(*p. *1320)**.*

Static Public Attributes

- static final int **KEYED_READER_ENTITY_KIND** = 0x07

  Constant representing a keyed DataReader.
- static final int **KEYED_WRITER_ENTITY_KIND** = 0x02

  Constant representing a keyed DataWriter.
- static final int **UNKEYED_READER_ENTITY_KIND** = 0x04

  Constant representing an unkeyed DataReader.
- static final int **UNKEYED_WRITER_ENTITY_KIND** = 0x03

  Constant representing an unkeyed DataWriter.
- static final int **PARTICIPANT_ENTITY_KIND** = 0x01

  Constant representing a DomainParticipant.

8.21.1 Detailed Description

The key type of the built-in topic types.

Each remote **com.rti.dds.infrastructure.Entity** (p. 1320) to be discovered can be uniquely identified by this key. This is the key of all the built-in topic data types.

8.21.2 Member Function Documentation

8.21.2.1 copy_from()

```
Object copy_from (
             Object src )
```

Copy value of a data type from source.

Copy data into *this* object from another. This copy is intended to be a deep copy, so that all data members (recursively) are copied (not just resetting Object references).

This operation returns the object that is copied if copy is successful.

Parameters

src	<<***in***>> *(*p. *404)* The Object which contains the data to be copied.

Returns

Generally, return *this* but special cases (such as Enum) exist.

Exceptions

NullPointerException	If *src* is null.
ClassCastException	If *src* is not the same type as *this*.

Implements **Copyable** (p. 701).

8.21.2.2 to_int_array()

```
int[] to_int_array ( )
```

Returns an array of four integers that uniquely represents a remote **com.rti.dds.infrastructure.Entity** (p. 1320).

References **BuiltinTopicKey_t.value**.

8.21.2.3 from_int_array()

```
void from_int_array (
             int[] iValue )
```

Initializes this key from an array of four integers that uniquely represents a remote **com.rti.dds.infrastructure.Entity** (p. 1320).

References **BuiltinTopicKey_t.value**.

8.21.2.4 is_keyed_reader()

```
boolean is_keyed_reader ( )
```

Returns true if this key identifies a keyed DataReader.

References **BuiltinTopicKey_t.get_entity_kind()**, and **BuiltinTopicKey_t.KEYED_READER_ENTITY_KIND**.

8.21.2.5 is_keyed_writer()

```
boolean is_keyed_writer ( )
```

Returns true if this key identifies a keyed DataWriter.

References **BuiltinTopicKey_t.get_entity_kind()**, and **BuiltinTopicKey_t.KEYED_WRITER_ENTITY_KIND**.

8.21.2.6 is_unkeyed_reader()

```
boolean is_unkeyed_reader ( )
```

Returns true if this key identifies an unkeyed DataReader.

References **BuiltinTopicKey_t.get_entity_kind()**, and **BuiltinTopicKey_t.UNKEYED_READER_ENTITY_KIND**.

8.21.2.7 is_unkeyed_writer()

```
boolean is_unkeyed_writer ( )
```

Returns true if this key identifies an unkeyed DataWriter.

References **BuiltinTopicKey_t.get_entity_kind()**, and **BuiltinTopicKey_t.UNKEYED_WRITER_ENTITY_KIND**.

8.21.2.8 is_participant()

```
boolean is_participant ( )
```

Returns true if this key identifies a DomainParticipant.

References **BuiltinTopicKey_t.value**.

8.21.2.9 is_user_entity()

```
boolean is_user_entity ( )
```

Returns true if this key identifies an user Entity.

References **BuiltinTopicKey_t.value**.

8.21.2.10 is_builtin_entity()

```
boolean is_builtin_entity ( )
```

Returns true if this key identifies a built-in Entity.

References **BuiltinTopicKey_t.value**.

8.21.2.11 is_vendor_entity()

```
boolean is_vendor_entity ( )
```

Returns true if this key identifies a vendor Entity.

References **BuiltinTopicKey_t.value**.

8.21.2.12 is_vendor_builtin_entity()

```
boolean is_vendor_builtin_entity ( )
```

Returns true if this key identifies a built-in vendor Entity.

References **BuiltinTopicKey_t.value**.

8.21.2.13 get_entity_kind()

```
int get_entity_kind ( )
```

Returns an integer identifying the entity kind for the key. The integer can take one of the following values:

- **builtin.BuiltinTopicKey_t.KEYED_READER_ENTITY_KIND** (p. 629)
- **builtin.BuiltinTopicKey_t.KEYED_WRITER_ENTITY_KIND** (p. 629)
- **builtin.BuiltinTopicKey_t.UNKEYED_READER_ENTITY_KIND** (p. 629)
- **builtin.BuiltinTopicKey_t.UNKEYED_WRITER_ENTITY_KIND** (p. 630)
- **builtin.BuiltinTopicKey_t.PARTICIPANT_ENTITY_KIND** (p. 630)

References **BuiltinTopicKey_t.value**.

Referenced by **BuiltinTopicKey_t.is_keyed_reader()**, **BuiltinTopicKey_t.is_keyed_writer()**, **BuiltinTopicKey_t.↩ is_unkeyed_reader()**, and **BuiltinTopicKey_t.is_unkeyed_writer()**.

8.21.2.14 to_guid()

```
void to_guid (
            GUID_t dst )
```

Converts this Key into a GUID.

Parameters

dst	<<***out***>> *(*p. *404)* The destination GUID.

References **GUID_t.value**, and **BuiltinTopicKey_t.value**.

8.21.2.15 from_guid()

```
void from_guid (
            GUID_t src )
```

Initializes this Key from the input GUID.

Parameters

src	<<***in***>> *(*p. *404)* The GUID to be used to initialize this Key.

References **GUID_t.value**, and **BuiltinTopicKey_t.value**.

8.21.3 Member Data Documentation

8.21.3.1 KEYED_READER_ENTITY_KIND

```
final int KEYED_READER_ENTITY_KIND = 0x07  [static]
```

Constant representing a keyed DataReader.

The user can use this constant to inspect the returned value of the method **builtin.BuiltinTopicKey_t.get_entity_kind** (p. 628).

Referenced by **BuiltinTopicKey_t.is_keyed_reader()**.

8.21.3.2 KEYED_WRITER_ENTITY_KIND

```
final int KEYED_WRITER_ENTITY_KIND = 0x02  [static]
```

Constant representing a keyed DataWriter.

The user can use this constant to inspect the returned value of the method **builtin.BuiltinTopicKey_t.get_entity_kind** (p. 628).

Referenced by **BuiltinTopicKey_t.is_keyed_writer()**.

8.21.3.3 UNKEYED_READER_ENTITY_KIND

```
final int UNKEYED_READER_ENTITY_KIND = 0x04  [static]
```

Constant representing an unkeyed DataReader.

The user can use this constant to inspect the returned value of the method **builtin.BuiltinTopicKey_t.get_entity_kind** (p. 628).

Referenced by **BuiltinTopicKey_t.is_unkeyed_reader()**.

8.21.3.4 UNKEYED_WRITER_ENTITY_KIND

```
final int UNKEYED_WRITER_ENTITY_KIND = 0x03  [static]
```

Constant representing an unkeyed DataWriter.

The user can use this constant to inspect the returned value of the method **builtin.BuiltinTopicKey_t.get_entity_kind** (p. 628).

Referenced by **BuiltinTopicKey_t.is_unkeyed_writer()**.

8.21.3.5 PARTICIPANT_ENTITY_KIND

```
final int PARTICIPANT_ENTITY_KIND = 0x01  [static]
```

Constant representing a DomainParticipant.

The user can use this constant to inspect the returned value of the method **builtin.BuiltinTopicKey_t.get_entity_kind** (p. 628).

8.21.3.6 value

```
final int [] value
```

An array of four integers that uniquely represents a remote **com.rti.dds.infrastructure.Entity** (p. 1320).

Referenced by **BuiltinTopicKey_t.from_guid()**, **BuiltinTopicKey_t.from_int_array()**, **BuiltinTopicKey_t.get_↩ entity_kind()**, **BuiltinTopicKey_t.is_builtin_entity()**, **BuiltinTopicKey_t.is_participant()**, **BuiltinTopicKey_t.is↩ _user_entity()**, **BuiltinTopicKey_t.is_vendor_builtin_entity()**, **BuiltinTopicKey_t.is_vendor_entity()**, **Builtin↩ TopicKey_t.to_guid()**, and **BuiltinTopicKey_t.to_int_array()**.

8.22 BuiltinTopicReaderResourceLimits_t Class Reference

<<***extension***>> *(*p. *138)* Built-in topic reader's resource limits.

Inherits Struct.

Public Member Functions

- **BuiltinTopicReaderResourceLimits_t** ()

  Constructor with default initial and maximum values.

  <<***extension***>> *(*p. *138) The maximum number of samples per remote writer for which a built-in topic* ***com.rti.dds.subscription.DataReader*** *(*p. *707) may store fragments.*
- int **max_fragments_per_sample**

  <<***extension***>> *(*p. *138) Maximum number of fragments for a single sample.*
- boolean **dynamically_allocate_fragmented_samples**

  <<***extension***>> *(*p. *138) Determines whether the built-in topic* ***com.rti.dds.subscription.DataReader*** *(*p. *707) pre-allocates storage for storing fragmented samples.*

8.22.1 Detailed Description

<<***extension***>> *(*p. *138)* Built-in topic reader's resource limits.

Defines the resources that can be used for a built-in-topic data reader.

A built-in topic data reader subscribes reliably to built-in topics containing declarations of new entities or updates to existing entities in the domain. Keys are used to differentiate among entities of the same type. RTI Connext assigns a unique key to each entity in a domain.

Properties:

RxO (p. 506) = N/A
Changeable (p. 507) = **NO** (p. 507)

QoS:

com.rti.dds.infrastructure.DiscoveryConfigQosPolicy (p. 915)

8.22.2 Constructor & Destructor Documentation

8.22.2.1 BuiltinTopicReaderResourceLimits_t() [1/2]

```
BuiltinTopicReaderResourceLimits_t ( )
```

Constructor with default initial and maximum values.

8.22.2.2 BuiltinTopicReaderResourceLimits_t() [2/2]

```
BuiltinTopicReaderResourceLimits_t (
            int initial_samples,
            int max_samples,
            int initial_infos,
            int max_infos,
            int initial_outstanding_reads,
            int max_outstanding_reads,
            int max_samples_per_read,
            boolean disable_fragmentation_support,
            int max_fragmented_samples,
            int initial_fragmented_samples,
            int max_fragmented_samples_per_remote_writer,
```

```
int max_fragments_per_sample,
boolean dynamically_allocate_fragmented_samples )
```

Constructor with the given initial and maximum values.

References **BuiltinTopicReaderResourceLimits_t.disable_fragmentation_support**, **BuiltinTopicReader↩ ResourceLimits_t.dynamically_allocate_fragmented_samples**, **BuiltinTopicReaderResourceLimits_t.initial_↩ fragmented_samples**, **BuiltinTopicReaderResourceLimits_t.initial_infos**, **BuiltinTopicReaderResourceLimits↩ _t.initial_samples**, **BuiltinTopicReaderResourceLimits_t.max_fragmented_samples**, **BuiltinTopicReader↩ ResourceLimits_t.max_fragmented_samples_per_remote_writer**, **BuiltinTopicReaderResourceLimits_t.max↩ _fragments_per_sample**, **BuiltinTopicReaderResourceLimits_t.max_infos**, and **BuiltinTopicReaderResource↩ Limits_t.max_samples**.

8.22.3 Member Data Documentation

8.22.3.1 initial_samples

```
int initial_samples
```

<<***extension***>> *(*p. *138)* Initial number of samples.

This should be a value between 1 and initial number of instance of the built-in-topic reader, depending on how many instances are sending data concurrently.

[default] 64

[range] [1, 1 million], <= max_samples

Categories

> **Immutable** (p. 292), **Sample Memory Management** (p. 276), **Middleware Memory Management** (p. 244), **Durability** (p. 221)

8.22.3.2 max_samples

```
int max_samples
```

<<***extension***>> *(*p. *138)* Maximum number of samples.

This should be a value between 1 and max number of instance of the built-in-topic reader, depending on how many instances are sending data concurrently. Also, it should not be less than initial_samples.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_samples

Categories

> **Immutable** (p. 292), **Sample Memory Management** (p. 276), **Middleware Memory Management** (p. 244), **Durability** (p. 221)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.3 initial_infos

```
int initial_infos
```

<<***extension***>> *(*p. *138)* Initial number of sample infos.

The initial number of info units that a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) can have. Info units are used to store **com.rti.dds.subscription.SampleInfo** (p. 1944).

[default] 64

[range] [1, 1 million] <= max_infos

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.4 max_infos

```
int max_infos
```

<<***extension***>> *(*p. *138)* Maximum number of sample infos.

The maximum number of info units that a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) can use to store **com.rti.dds.subscription.SampleInfo** (p. 1944).

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_infos

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.5 disable_fragmentation_support

```
boolean disable_fragmentation_support
```

[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Determines whether the built-in topic **com.rti.dds.subscription.↩ DataReader** (p. 707) can receive fragmented samples.

When fragmentation support is not needed, disabling fragmentation support will save some memory resources.

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.6 max_fragmented_samples

```
int max_fragmented_samples
```

<<***extension***>> *(*p. *138)* The maximum number of samples for which the built-in topic **com.rti.dds.subscription.↩ DataReader** (p. 707) may store fragments at a given point in time.

At any given time, a built-in topic **com.rti.dds.subscription.DataReader** (p. 707) may store fragments for up to `max_↩ fragmented_samples` samples while waiting for the remaining fragments. These samples need not have consecutive sequence numbers and may have been sent by different built-in topic **com.rti.dds.publication.DataWriter** (p. 818) instances.

Once all fragments of a sample have been received, the sample is treated as a regular sample and becomes subject to standard QoS settings such as **com.rti.dds.infrastructure.BuiltinTopicReaderResourceLimits_t.max_samples** (p. 633).

The middleware will drop fragments if the `max_fragmented_samples` limit has been reached. For best-effort communication, the middleware will accept a fragment for a new sample, but drop the oldest fragmented sample from the same remote writer. For reliable communication, the middleware will drop fragments for any new samples until all fragments for at least one older sample from that writer have been received.

Only applies if **com.rti.dds.infrastructure.BuiltinTopicReaderResourceLimits_t.disable_fragmentation_support** (p. 634) is com.rti.dds.infrastructure.false.

[default] 1024

[range] [1, 1 million]

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.7 initial_fragmented_samples

```
int initial_fragmented_samples
```

<<***extension***>> *(*p. *138)* The initial number of samples for which a built-in topic **com.rti.dds.subscription.Data↩ Reader** (p. 707) may store fragments.

Only applies if **com.rti.dds.infrastructure.BuiltinTopicReaderResourceLimits_t.disable_fragmentation_support** (p. 634) is com.rti.dds.infrastructure.false.

[default] 4

[range] [1,1024], <= max_fragmented_samples

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.8 max_fragmented_samples_per_remote_writer

```
int max_fragmented_samples_per_remote_writer
```

<<***extension***>> *(*p. *138)* The maximum number of samples per remote writer for which a built-in topic **com.rti.dds.↩ subscription.DataReader** (p. 707) may store fragments.

Logical limit so a single remote writer cannot consume all available resources.

Only applies if **com.rti.dds.infrastructure.BuiltinTopicReaderResourceLimits_t.disable_fragmentation_support** (p. 634) is com.rti.dds.infrastructure.false.

[default] 256

[range] [1, 1 million], <= max_fragmented_samples

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.9 max_fragments_per_sample

```
int max_fragments_per_sample
```

<<***extension***>> *(*p. *138)* Maximum number of fragments for a single sample.

Only applies if **com.rti.dds.infrastructure.BuiltinTopicReaderResourceLimits_t.disable_fragmentation_support** (p. 634) is com.rti.dds.infrastructure.false.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

Referenced by **BuiltinTopicReaderResourceLimits_t.BuiltinTopicReaderResourceLimits_t()**.

8.22.3.10 dynamically_allocate_fragmented_samples

```
boolean dynamically_allocate_fragmented_samples
```

<<***extension***>> *(*p. *138)* Determines whether the built-in topic **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.

By default, the middleware does not allocate memory upfront, but instead allocates memory from the heap upon receiving the first fragment of a new sample. The amount of memory allocated equals the amount of memory needed to store all fragments in the sample. Once all fragments of a sample have been received, the sample is deserialized and stored in the regular receive queue. At that time, the dynamically allocated memory is freed again.

This QoS setting is useful for large, but variable-sized data types where upfront memory allocation for multiple samples based on the maximum possible sample size may be expensive. The main disadvantage of not pre-allocating memory is that one can no longer guarantee the middleware will have sufficient resources at runtime.

If `dynamically_allocate_fragmented_samples` is set to com.rti.dds.infrastructure.false, the middleware will allocate memory upfront for storing fragments for up to **com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy.initial_fragmented_samples** (p. 797) samples. This memory may grow up to **com.rti.dds.↩ infrastructure.DataReaderResourceLimitsQosPolicy.max_fragmented_samples** (p. 797) if needed.

Only applies if **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.disable_fragmentation_support** (p. 796) is com.rti.dds.infrastructure.false.

[default] com.rti.dds.infrastructure.true

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

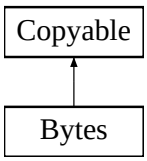
8.23 Bytes Class Reference

Built-in type consisting of a variable-length array of opaque bytes.

Inheritance diagram for Bytes:



Public Member Functions

- **Bytes** ()

  Default Constructor.
- **Bytes** (**Bytes** src)

  Copy constructor.
- **Bytes** (int theLength)

  Constructor that specifies the size of the allocated bytes array.
- **Bytes** (byte[ ] src)
- Object **copy_from** (Object src)

  Copy src into this object.

Public Attributes

- int **length**

  Number of bytes to serialize.
- int **offset**

  Offset from which to start serializing bytes.
- byte[ ] **value**

  com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes array value.

8.23.1 Detailed Description

Built-in type consisting of a variable-length array of opaque bytes.

8.23.2 Constructor & Destructor Documentation

8.23.2.1 Bytes() [1/4]

```
Bytes ( )
```

Default Constructor.

The default constructor initializes the newly created object with null value, zero length, and zero offset.

Referenced by **Bytes.copy_from()**.

8.23.2.2 Bytes() [2/4]

```
Bytes (
            Bytes src )
```

Copy constructor.

Parameters

src	<<***in***>> *(*p. *404)* Object to copy from.

Exceptions

NullPointerException	if src is null.

References **Bytes.copy_from()**.

8.23.2.3 Bytes() [3/4]

```
Bytes (
            int theLength )
```

Constructor that specifies the size of the allocated bytes array.

After this method is called, length and offset are set to zero.

Parameters

theLength	<<***in***>> *(*p. *404)* Size of the allocated bytes array bytes array

Exceptions

IllegalArgumentException	if size is negative

References **Bytes.length**, **Bytes.offset**, and **Bytes.value**.

8.23.2.4 Bytes() [4/4]

```
Bytes (
            byte[] src )
```

Create a new **Bytes** (p. 638) object to wrap the given array.

The `value` field will point to the given array. The `offset` will be set to 0. The `length` will be set to the length of the array unless the array is null, in which case the `length` will be set to 0 also.

References **Bytes.length**, **Bytes.offset**, and **Bytes.value**.

8.23.3 Member Function Documentation

8.23.3.1 copy_from()

```
Object copy_from (
            Object src )
```

Copy src into this object.

This method performs a deep copy of `src` and it allocates memory for the value if required.

Parameters

src	<<***in***>> *(p. 404)* Object to copy from.

Returns

this if success. Otherwise, null.

Exceptions

NullPointerException	if `src` is null.

Implements **Copyable** (p. 701).

References **Bytes.Bytes()**, **Bytes.length**, **Bytes.offset**, and **Bytes.value**.

Referenced by **Bytes.Bytes()**.

8.23.4 Member Data Documentation

8.23.4.1 length

```
int length
```

Number of bytes to serialize.

Referenced by **Bytes.Bytes()**, **Bytes.copy_from()**, **BytesDataWriter.write()**, and **BytesDataWriter.write_w_↩ timestamp()**.

8.23.4.2 offset

```
int offset
```

Offset from which to start serializing bytes.

The first position of the bytes array has offset 0.

Referenced by **Bytes.Bytes()**, **Bytes.copy_from()**, **BytesDataWriter.write()**, and **BytesDataWriter.write_w_↩ timestamp()**.

8.23.4.3 value

```
byte [] value
```

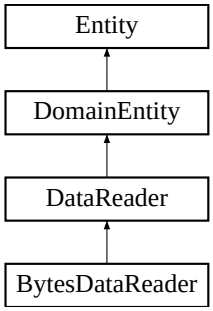
com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes array value.

Referenced by **Bytes.Bytes()**, **Bytes.copy_from()**, **BytesDataWriter.write()**, and **BytesDataWriter.write_w_↩ timestamp()**.

8.24 BytesDataReader Class Reference

<<***interface***>> *(p. 403)* Instantiates `DataReader` < com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes >.

Inheritance diagram for BytesDataReader:



Public Member Functions

- void **read** (**BytesSeq** received_data, **SampleInfoSeq** info_seq, int max_samples, int sample_states, int view↩ _states, int instance_states)

  *Access a collection of data samples from the **com.rti.dds.subscription.DataReader** (p. 707).*
- void **take** (**BytesSeq** received_data, **SampleInfoSeq** info_seq, int max_samples, int sample_states, int view↩ _states, int instance_states)

  *Access a collection of data-samples from the **com.rti.dds.subscription.DataReader** (p. 707).*
- void **read_w_condition** (**BytesSeq** received_data, **SampleInfoSeq** info_seq, int max_samples, **Read**↩ **Condition** condition)

  *Accesses via com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataReader.read the samples that match the criteria specified in the **com.rti.dds.subscription.ReadCondition** (p. 1816).*
- void **take_w_condition** (**BytesSeq** received_data, **SampleInfoSeq** info_seq, int max_samples, **Read**↩ **Condition** condition)

  Analogous to com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataReader.read_w_condition except it accesses samples via the com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataReader.take operation.
- void **read_next_sample** (**Bytes** received_data, **SampleInfo** sample_info)

  *Copies the next not-previously-accessed data value from the **com.rti.dds.subscription.DataReader** (p. 707).*
- void **take_next_sample** (**Bytes** received_data, **SampleInfo** sample_info)

  *Copies the next not-previously-accessed data value from the **com.rti.dds.subscription.DataReader** (p. 707).*
- void **return_loan** (**BytesSeq** received_data, **SampleInfoSeq** info_seq)

  *Indicates to the **com.rti.dds.subscription.DataReader** (p. 707) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of read or take on the **com.rti.dds.**↩ **subscription.DataReader** (p. 707).*

Additional Inherited Members

8.24.1 Detailed Description

<<***interface***>> *(p. 403)* Instantiates `DataReader` < com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes >.

com.rti.ndds.example.FooDataReader (p. 1359)

com.rti.dds.subscription.DataReader (p. 707)

8.24.2 Member Function Documentation

8.24.2.1 read()

```
void read (
             BytesSeq received_data,
             SampleInfoSeq info_seq,
            int max_samples,
            int sample_states,
            int view_states,
            int instance_states )
```

Access a collection of data samples from the **com.rti.dds.subscription.DataReader** (p. 707).

See also

com.rti.ndds.example.FooDataReader.read (p. 1361)

References **DataReader.read_untyped()**.

8.24.2.2 take()

```
void take (
             BytesSeq received_data,
             SampleInfoSeq info_seq,
            int max_samples,
            int sample_states,
            int view_states,
            int instance_states )
```

Access a collection of data-samples from the **com.rti.dds.subscription.DataReader** (p. 707).

See also

com.rti.ndds.example.FooDataReader.take (p. 1363)

References **DataReader.take_untyped()**.

8.24.2.3 read_w_condition()

```
void read_w_condition (
              BytesSeq received_data,
              SampleInfoSeq info_seq,
             int max_samples,
              ReadCondition condition )
```

Accesses via com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataReader.read the samples that match the criteria specified in the **com.rti.dds.subscription.ReadCondition** (p. 1816).

See also

com.rti.ndds.example.FooDataReader.read_w_condition (p. 1368)

References **DataReader.read_w_condition_untyped()**.

8.24.2.4 take_w_condition()

```
void take_w_condition (
              BytesSeq received_data,
              SampleInfoSeq info_seq,
             int max_samples,
              ReadCondition condition )
```

Analogous to com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataReader.read_w_condition except it accesses samples via the com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataReader.take operation.

See also

com.rti.ndds.example.FooDataReader.take_w_condition (p. 1369)

References **DataReader.take_w_condition_untyped()**.

8.24.2.5 read_next_sample()

```
void read_next_sample (
              Bytes received_data,
              SampleInfo sample_info )
```

Copies the next not-previously-accessed data value from the **com.rti.dds.subscription.DataReader** (p. 707).

See also

com.rti.ndds.example.FooDataReader.read_next_sample (p. 1370)

References **DataReader.read_next_sample_untyped()**.

8.24.2.6 take_next_sample()

```
void take_next_sample (
            Bytes received_data,
            SampleInfo sample_info )
```

Copies the next not-previously-accessed data value from the **com.rti.dds.subscription.DataReader** (p. 707).

See also

com.rti.ndds.example.FooDataReader.take_next_sample (p. 1371)

References **DataReader.take_next_sample_untyped()**.

8.24.2.7 return_loan()

```
void return_loan (
            BytesSeq received_data,
            SampleInfoSeq info_seq )
```

Indicates to the **com.rti.dds.subscription.DataReader** (p. 707) that the application is done accessing the collection of `received_data` and `info_seq` obtained by some earlier invocation of read or take on the **com.rti.dds.↩ subscription.DataReader** (p. 707).

8.25.2 Member Function Documentation

8.25.2.1 write() [1/3]

```
void write (
              Bytes instance_data,
              InstanceHandle_t handle )
```

Modifies the value of a com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes data instance.

See also

com.rti.ndds.example.FooDataWriter.write (p. 1397)

References **DataWriter.write_untyped()**.

8.25.2.2 write() [2/3]

```
void write (
            byte[] octets,
            int offset,
            int length,
             InstanceHandle_t handle )
```

<<***extension***>> *(*p. *403)* Modifies the value of a com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes data instance.

Parameters

octets	<<***in***>> *(*p. *404)* Array of bytes to be published.
offset	<<***in***>> *(*p. *404)* Offset from which to start publishing.
length	<<***in***>> *(*p. *404)* Number of bytes to be published.
handle	<<***in***>> *(*p. *404)* The special value **com.rti.dds.infrastructure.InstanceHandle_t.HANDLE_NIL** (p. 1447) should be used always.

See also

com.rti.ndds.example.FooDataWriter.write (p. 1397)

References **Bytes.length**, **Bytes.offset**, **Bytes.value**, and **DataWriter.write_untyped()**.

8.25.2.3 write() [3/3]

```
void write (
             ByteSeq octets,
             InstanceHandle_t handle )
```

<<***extension***>> *(*p. *403)* Modifies the value of a com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes data instance.

Parameters

octets	<<***in***>> *(*p. *404)* Sequence of bytes to be published.
handle	<<***in***>> *(*p. *404)* The special value **com.rti.dds.infrastructure.InstanceHandle_t.HANDLE_NIL** (p. 1447) should be used always.

See also

com.rti.ndds.example.FooDataWriter.write (p. 1397)

References **Bytes.length**, **Bytes.offset**, **AbstractPrimitiveSequence.size()**, **Bytes.value**, and **DataWriter.write_untyped()**.

8.25.2.4 write_w_timestamp() [1/3]

```
void write_w_timestamp (
              Bytes instance_data,
              InstanceHandle_t handle,
              Time_t source_timestamp )
```

Performs the same function as com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesDataWriter.write except that it also provides the value for the `source_timestamp`.

See also

com.rti.ndds.example.FooDataWriter.write_w_timestamp (p. 1401)

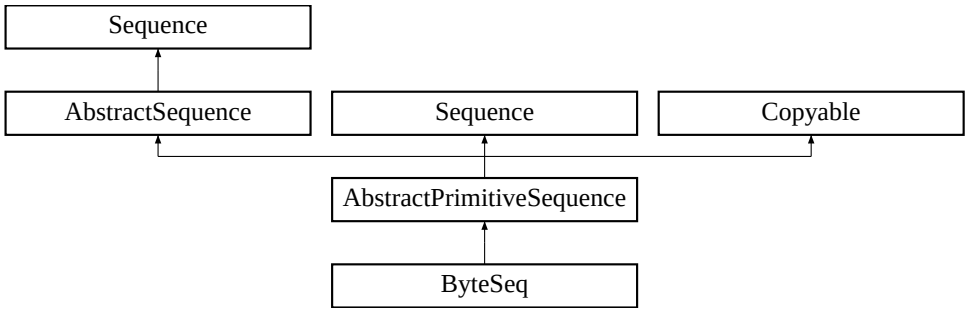
8.26 ByteSeq Class Reference

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < byte >

Inheritance diagram for ByteSeq:



Public Member Functions

- **ByteSeq** ()

  Constructs an empty sequence of bytes with an initial maximum of zero.
- **ByteSeq** (int initialMaximum)

  Constructs an empty sequence of bytes with the given initial maximum.
- **ByteSeq** (byte[ ] bytes)

  Construct a new sequence containing the given bytes.
- boolean **addAllByte** (byte[ ] elements, int offset, int length)

  Append `length` elements from the given array to this sequence, starting at index `offset` in that array.
- boolean **addAllByte** (byte[ ] elements)
- void **addByte** (byte element)

  Append the element to the end of the sequence.
- void **addByte** (int index, byte element)

  Shift all elements in the sequence starting from the given index and add the element to the given index.
- byte **getByte** (int index)

  Returns the byte at the given index.
- byte **setByte** (int index, byte element)

  Set the new byte at the given index and return the old byte.
- void **setByte** (int dstIndex, byte[ ] elements, int srcIndex, int length)

  Copy a portion of the given array into this sequence.
- byte[ ] **toArrayByte** (byte[ ] array)

  Return an array containing copy of the contents of this sequence.
- int **getMaximum** ()

  Get the current maximum number of elements that can be stored in this sequence.
- Object **get** (int index)

  *A wrapper for **getByte(int)** (p. 652) that returns a java.lang.Byte.*
- Object **set** (int index, Object element)

  *A wrapper for **setByte()** (p. 653).*
- void **add** (int index, Object element)

  A wrapper for addByte(int, int).

8.26.1 Detailed Description

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < byte >

Instantiates:

<<***generic***>> *(p. 403)* com.rti.dds.infrastructure.com.rti.dds.util.Sequence

byte

com.rti.dds.infrastructure.com.rti.dds.util.Sequence

8.26.2 Constructor & Destructor Documentation

8.26.2.1 ByteSeq() [1/3]

```
ByteSeq ( )
```

Constructs an empty sequence of bytes with an initial maximum of zero.

8.26.2.2 ByteSeq() [2/3]

```
ByteSeq (
            int initialMaximum )
```

Constructs an empty sequence of bytes with the given initial maximum.

8.26.2.3 ByteSeq() [3/3]

```
ByteSeq (
            byte[] bytes )
```

Construct a new sequence containing the given bytes.

Parameters

bytes	the initial contents of this sequence

Exceptions

NullPointerException	if the input array is null

References **ByteSeq.addAllByte()**.

8.26.3 Member Function Documentation

8.26.3.1 addAllByte() [1/2]

```
boolean addAllByte (
            byte[] elements,
            int offset,
            int length )
```

Append `length` elements from the given array to this sequence, starting at index `offset` in that array.

Exceptions

NullPointerException	if the given array is null.

Referenced by **ByteSeq.addAllByte()**, and **ByteSeq.ByteSeq()**.

8.26.3.2 addAllByte() [2/2]

```
boolean addAllByte (
            byte[] elements )
```

Exceptions

NullPointerException	if the given array is null

References **ByteSeq.addAllByte()**.

8.26.3.3 addByte() [1/2]

```
void addByte (
            byte element )
```

Append the element to the end of the sequence.

Referenced by **ByteSeq.add()**.

8.26.3.4 addByte() [2/2]

```
void addByte (
            int index,
            byte element )
```

Shift all elements in the sequence starting from the given index and add the element to the given index.

8.26.3.5 getByte()

```
byte getByte (
             int index )
```

Returns the byte at the given index.

Exceptions

IndexOutOfBoundsException	if the index is out of bounds.

Referenced by **ByteSeq.get()**, and **DynamicData.get_uint8_seq()**.

8.26.3.6 setByte() [1/2]

```
byte setByte (
             int index,
             byte element )
```

Set the new byte at the given index and return the old byte.

Exceptions

IndexOutOfBoundsException	if the index is out of bounds.

Referenced by **ByteSeq.set()**.

8.26.3.7 setByte() [2/2]

```
void setByte (
             int dstIndex,
             byte[] elements,
             int srcIndex,
             int length )
```

Copy a portion of the given array into this sequence.

Parameters

dstIndex	the index at which to start copying into this sequence.
elements	an array of primitive elements.
srcIndex	the index at which to start copying from the given array.
length	the number of elements to copy.

Exceptions

IndexOutOfBoundsException	if copying would cause access of data outside array bounds.

8.26.3.8 toArrayByte()

```
byte[] toArrayByte (
            byte[] array )
```

Return an array containing copy of the contents of this sequence.

Parameters

array	The array into which this sequence should be copied. It may be null. If it is, or if array length is too small, the array will be ignored, and a new array of the necessary length will be created and copied into instead.

Returns

A non-null array containing a copy of the contents of this sequence.

8.26.3.9 getMaximum()

```
int getMaximum ( )
```

Get the current maximum number of elements that can be stored in this sequence.

The `maximum` of the sequence represents the maximum number of elements that the underlying buffer can hold. It does not represent the current number of elements.

The `maximum` is a non-negative number. It is initialized when the sequence is first created.

The `maximum` can be changed implicitly by adding an element to the sequence with **`add()`** (p. 655), or explicitly by calling com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.setMaximum.

Returns

the current maximum of the sequence.

See also

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.size()

Implements **Sequence** (p. 1974).

Referenced by **DynamicData.get_byte_seq()**, **DynamicData.get_uint8_seq()**, **DynamicData.set_byte_seq()**, and **DynamicData.to_cdr_buffer()**.

8.26.3.10 get()

```
Object get (
            int index )
```

A wrapper for **getByte(int)** (p. 652) that returns a java.lang.Byte.

See also

java.util.List::get(int)

Reimplemented from **AbstractPrimitiveSequence** (p. 576).

References **ByteSeq.getByte()**.

8.26.3.11 set()

```
Object set (
            int index,
            Object element )
```

A wrapper for **setByte()** (p. 653).

Exceptions

ClassCastException	if the element is not of type Byte.

See also

java.util.List::set(int, java.lang.Object)

Reimplemented from **AbstractPrimitiveSequence** (p. 576).

References **ByteSeq.setByte()**.

Referenced by **DynamicData.set_uint8_seq()**.

8.26.3.12 add()

```
void add (
            int index,
            Object element )
```

A wrapper for addByte(int, int).

Exceptions

ClassCastException	if the element is not of type Byte.

See also

java.util.List::add(int, java.lang.Object)

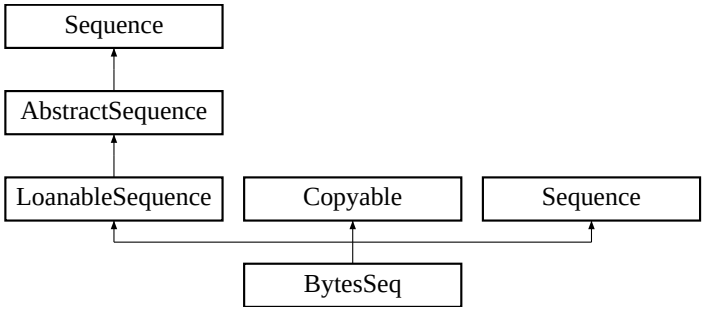
Reimplemented from **AbstractPrimitiveSequence** (p. 577).

References **ByteSeq.addByte()**.

8.27 BytesSeq Class Reference

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < com.rti.dds.type.↩ builtin.com.rti.dds.type.builtin.Bytes > .

Inheritance diagram for BytesSeq:



Public Member Functions

- **BytesSeq** ()

  Constructs an empty sequence of com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes objects with an initial maximum of zero.
- **BytesSeq** (int initialMaximum)

  Constructs an empty sequence of com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes objects with the given initial maximum.
- **BytesSeq** (Collection elements)

  Constructs a new sequence containing the given com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes objects.
- **Bytes get** (int index)

  Returns the element at the specified position in this sequence.
- Object **copy_from** (Object src)

8.27.1 Detailed Description

Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < com.rti.dds.type.↩ builtin.com.rti.dds.type.builtin.Bytes > .

Instantiates:

<<***generic***>> *(*p. *403)* com.rti.dds.infrastructure.com.rti.dds.util.Sequence

See also

com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes

8.27.2 Constructor & Destructor Documentation

8.27.2.1 BytesSeq() [1/3]

```
BytesSeq ( )
```

Constructs an empty sequence of com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes objects with an initial maximum of zero.

8.27.2.2 BytesSeq() [2/3]

```
BytesSeq (
            int initialMaximum )
```

Constructs an empty sequence of com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes objects with the given initial maximum.

8.27.2.3 BytesSeq() [3/3]

```
BytesSeq (
            Collection elements )
```

Constructs a new sequence containing the given com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes objects.

Parameters

elements	the initial contents of this sequence.

Exceptions

NullPointerException	if the input collection is null

8.27.3 Member Function Documentation

8.27.3.1 get()

```
Bytes get (
            int index )
```

Returns the element at the specified position in this sequence.

See also

java.util.List::get(int)

Reimplemented from **LoanableSequence** (p. 1545).

8.27.3.2 copy_from()

```
Object copy_from (
            Object src )
```

Copy data into `this` object from another. The result of this method is that both `this` and `src` will be the same size and contain the same data.

Parameters

src	The Object which contains the data to be copied

Returns

`this`

Exceptions

NullPointerException	If `src` is null.
ClassCastException	If `src` is not a `Sequence` OR if one of the objects contained in the `Sequence` is not of the expected type.

See also

com.rti.dds.infrastructure.Copyable::copy_from (p. 701)(java.lang.Object)

Implements **Copyable** (p. 701).

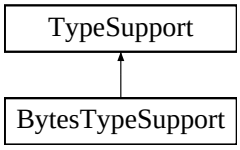
References **LoanableSequence.add()**, **BytesSeq.copy_from()**, **LoanableSequence.getMaximum()**, **Loanable↩ Sequence.setMaximum()**, and **LoanableSequence.size()**.

Referenced by **BytesSeq.copy_from()**.

8.28 BytesTypeSupport Class Reference

<<***interface***>> *(*p. *403)* com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type support.

Inheritance diagram for BytesTypeSupport:



Public Member Functions

- long **get_serialized_sample_max_size** (Object endpoint_data, boolean include_encapsulation, short final_↩ encapsulation_id, long currentAlignment)
- long **serialize_to_cdr_buffer** (byte[ ] buffer, long length, **Bytes** src)

  <<***extension***>> *(*p. *403) Serializes the input sample into a CDR buffer of octets.*
- long **serialize_to_cdr_buffer** (byte[ ] buffer, long length, **Bytes** src, short representation)

  <<***extension***>> *(*p. *403) Serializes the input sample into a buffer of octets.*
- String **data_to_string** (**Bytes** src, **PrintFormatProperty** property)

  <<***extension***>> *(*p. *403) Get the string representation of an input sample.*
- String **data_to_string** (**Bytes** src)

  <<***extension***>> *(*p. *403) Get the string representation of an input sample.*
- void **deserialize_from_cdr_buffer** (**Bytes** dst, byte[ ] buffer, long length)

  <<***extension***>> *(*p. *403) Deserializes a sample from a buffer of octets.*

Static Public Member Functions

- static void **register_type** (**DomainParticipant** participant, String type_name)

  Allows an application to communicate to RTI Connext the existence of the com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes data type.
- static void **unregister_type** (**DomainParticipant** participant, String type_name)

  Allows an application to unregister the com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes data type from RTI Connext. After calling unregister_type, no further communication using this type is possible.
- static String **get_type_name** ()

  Get the default name for the com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type.

8.28.1 Detailed Description

<<***interface***>> *(*p. *403)* com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type support.

8.28.2 Member Function Documentation

8.28.2.1 register_type()

```
static void register_type (
               DomainParticipant participant,
              String type_name )  [static]
```

Allows an application to communicate to RTI Connext the existence of the com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes data type.

By default, The com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes built-in type is automatically registered when a DomainParticipant is created using the type_name returned by com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesTypeSupport.get_type_name. Therefore, the usage of this function is optional and it is only required when the automatic built-in type registration is disabled using the participant property "dds.builtin_type.auto_register".

This method can also be used to register the same com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesTypeSupport with a **com.rti.dds.domain.DomainParticipant** (p. 948) using different values for the type_name.

If `register_type` is called multiple times with the same **com.rti.dds.domain.DomainParticipant** (p. 948) and `type_name`, the second (and subsequent) registrations are ignored by the operation.

Parameters

participant	<<***in***>> *(*p. *404)* the **com.rti.dds.domain.DomainParticipant** (p. 948) to register the data type com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes with. Cannot be null.
type_name	<<***in***>> *(*p. *404)* the type name under with the data type com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes is registered with the participant; this type name is used when creating a new **com.rti.dds.topic.Topic** (p. 2116). (See **com.rti.dds.domain.DomainParticipant.create_topic** (p. 984).) The name may not be null or longer than 255 characters.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903) or **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903).

MT Safety:

UNSAFE on the FIRST call. It is not safe for two threads to simultaneously make the first call to register a type. Subsequent calls are thread safe.

See also

com.rti.dds.domain.DomainParticipant.create_topic (p. 984)

8.28.2.2 unregister_type()

```
static void unregister_type (
              DomainParticipant participant,
             String type_name )  [static]
```

Allows an application to unregister the com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes data type from RTI Connext. After calling unregister_type, no further communication using this type is possible.

Precondition

The com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type with `type_name` is registered with the participant and all **com.rti.dds.topic.Topic** (p. 2116) objects referencing the type have been destroyed. If the type is not registered with the participant, or if any **com.rti.dds.topic.Topic** (p. 2116) is associated with the type, the operation will fail with **com.rti.dds.infrastructure.RETCODE_ERROR** (p. 1900).

Postcondition

All information about the type is removed from RTI Connext. No further communication using this type is possible.

Parameters

participant	*<<**in**>> (p. 404)* the **com.rti.dds.domain.DomainParticipant** (p. 948) to unregister the data type com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes from. Cannot be null.
type_name	*<<**in**>> (p. 404)* the type name under with the data type com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes is registered with the participant. The name should match a name that has been previously used to register a type with the participant. Cannot be null.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_BAD_PARAMETER** (p. 1899) or **com.rti.dds.infrastructure.RETCODE_ERROR** (p. 1900)

MT Safety:

SAFE.

See also

com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesTypeSupport.register_type

8.28.2.3 get_type_name()

```
static String get_type_name ( )  [static]
```

Get the default name for the com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type.

Can be used for calling com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesTypeSupport.register_type or creating **com.rti.dds.topic.Topic** (p. 2116).

Returns

default name for the com.rti.dds.type.builtin.com.rti.dds.type.builtin.Bytes type.

See also

com.rti.dds.type.builtin.com.rti.dds.type.builtin.BytesTypeSupport.register_type

com.rti.dds.domain.DomainParticipant.create_topic (p. 984)

8.28.2.4 get_serialized_sample_max_size()

```
long get_serialized_sample_max_size (
             Object endpoint_data,
             boolean include_encapsulation,
             short final_encapsulation_id,
             long currentAlignment )
```

Coverity is complaining about endpoint_data being null, because it is called from create_native_bufferI which is a performance test method. This method is just used against two types in our testers.

Coverity is complaining about a possible null dereference, but it is not possible. Adding a null check to avoid the report.

References **ExtensibilityKind.EXTENSIBLE_EXTENSIBILITY**.

8.28.2.5 serialize_to_cdr_buffer() [1/2]

```
long serialize_to_cdr_buffer (
            byte[] buffer,
            long length,
             Bytes src )
```

<<***extension***>> *(*p. *403)* Serializes the input sample into a CDR buffer of octets.

See also

com.rti.ndds.example.FooTypeSupport.serialize_to_cdr_buffer (p. 1413)

Referenced by **BytesTypeSupport.data_to_string()**.

8.28.2.6 serialize_to_cdr_buffer() [2/2]

```
long serialize_to_cdr_buffer (
            byte[] buffer,
            long length,
             Bytes src,
            short representation )
```

<<***extension***>> *(*p. *403)* Serializes the input sample into a buffer of octets.

See also

com.rti.ndds.example.FooTypeSupport.serialize_to_cdr_buffer (p. 1413)

8.28.2.7 data_to_string() [1/2]

```
String data_to_string (
             Bytes src,
             PrintFormatProperty property )
```

<<***extension***>> *(*p. *403)* Get the string representation of an input sample.

See also

com.rti.ndds.example.FooTypeSupport.data_to_string (p. 1416)

References **DynamicData.from_cdr_buffer()**, **DynamicData.PROPERTY_DEFAULT**, **BytesTypeSupport.↩ serialize_to_cdr_buffer()**, and **DynamicData.to_string()**.

Referenced by **BytesTypeSupport.data_to_string()**.

8.28.2.8 data_to_string() [2/2]

```
String data_to_string (
              Bytes src )
```

<<***extension***>> *(*p. *403)* Get the string representation of an input sample.

Use the default values for **com.rti.dds.topic.PrintFormatProperty** (p. 1686) to create the output string.

See also

com.rti.ndds.example.FooTypeSupport.data_to_string (p. 1416)

References **BytesTypeSupport.data_to_string()**.

8.28.2.9 deserialize_from_cdr_buffer()

```
void deserialize_from_cdr_buffer (
              Bytes dst,
             byte[] buffer,
             long length )
```

<<***extension***>> *(*p. *403)* Deserializes a sample from a buffer of octets.

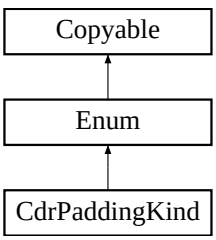
com.rti.ndds.example.FooTypeSupport.deserialize_from_cdr_buffer (p. 1415)

8.29 CdrPaddingKind Class Reference

The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization.

Inheritance diagram for CdrPaddingKind:



Static Public Attributes

- static final **CdrPaddingKind ZERO_CDR_PADDING**

  Padding bytes will be set to zeros during CDR serialization.
- static final **CdrPaddingKind NOT_SET_CDR_PADDING**

  Padding bytes will not be set to any value during CDR serialization.
- static final **CdrPaddingKind AUTO_CDR_PADDING**

  *When set on a **com.rti.dds.domain.DomainParticipant** (p. 948) the default behavior is com.rti.dds.infrastructure.Cdr↩ PaddingKind.CdrPaddingKind.NOT_SET_CDR_PADDING. When set on a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707) the behavior is to inherit the value from the **com.rti.dds.domain.↩ DomainParticipant** (p. 948).*

Additional Inherited Members

8.29.1 Detailed Description

The CDR padding kind determines whether or not the padding bytes will be set to zero during CDR serialization.

8.29.2 Member Data Documentation

8.29.2.1 ZERO_CDR_PADDING

```
final CdrPaddingKind ZERO_CDR_PADDING [static]
```

Initial value:

```
=
        new CdrPaddingKind("ZERO_CDR_PADDING", 0)
```

Padding bytes will be set to zeros during CDR serialization.

8.29.2.2 NOT_SET_CDR_PADDING

```
final CdrPaddingKind NOT_SET_CDR_PADDING [static]
```

Initial value:

```
=
        new CdrPaddingKind("NOT_SET_CDR_PADDING", 1)
```

Padding bytes will not be set to any value during CDR serialization.

8.29.2.3 AUTO_CDR_PADDING

```
final CdrPaddingKind AUTO_CDR_PADDING [static]
```

Initial value:

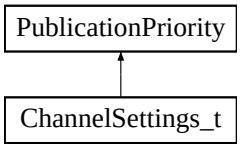
```
=
        new CdrPaddingKind("AUTO_CDR_PADDING", 2)
```

When set on a **com.rti.dds.domain.DomainParticipant** (p. 948) the default behavior is com.rti.dds.infrastructure.↩ CdrPaddingKind.CdrPaddingKind.NOT_SET_CDR_PADDING. When set on a **com.rti.dds.publication.DataWriter** (p. 818) or **com.rti.dds.subscription.DataReader** (p. 707) the behavior is to inherit the value from the **com.rti.dds.**↩ **domain.DomainParticipant** (p. 948).

8.30 ChannelSettings_t Class Reference

<<***extension***>> *(p. 138)* Type used to configure the properties of a channel.

Inheritance diagram for ChannelSettings_t:



Public Member Functions

- **ChannelSettings_t** ()

  Constructor.

com.rti.dds.infrastructure.MultiChannelQosPolicy (p. 1616)

8.30.2 Constructor & Destructor Documentation

8.30.2.1 ChannelSettings_t() [1/3]

```
ChannelSettings_t ( )
```

Constructor.

8.30.2.2 ChannelSettings_t() [2/3]

```
ChannelSettings_t (
            ChannelSettings_t src )
```

Constructor.

Parameters

src	<<***in***>> *(p. 404)* Settings used to initialized the new settings.

References **ChannelSettings_t.filter_expression**, **ChannelSettings_t.multicast_settings**, and **Channel↩ Settings_t.priority**.

8.30.2.3 ChannelSettings_t() [3/3]

```
ChannelSettings_t (
            TransportMulticastSettingsSeq multicast_settings,
           String filter_expression,
           int priority )
```

Constructor.

Parameters

multicast_settings	<<***in***>> *(p. 404)* Multicast settings.
filter_expression	<<***in***>> *(p. 404)* Filter expression.
priority	<<***in***>> *(p. 404)* Priority.

References **ChannelSettings_t.filter_expression**, **ChannelSettings_t.multicast_settings**, and **Channel↩ Settings_t.priority**.

8.30.3 Member Data Documentation

8.30.3.1 multicast_settings

```
TransportMulticastSettingsSeq multicast_settings
```

Initial value:

```
=
        new TransportMulticastSettingsSeq()
```

<<***extension***>> *(p. 138)* A sequence of **com.rti.dds.infrastructure.TransportMulticastSettings_t** (p. 2165) used to configure the multicast addresses associated with a channel.

The sequence cannot be empty.

The maximum number of multicast locators in a channel is limited to 16 (a locator is defined by a transport alias, a multicast address and a port). Note that this is a hard limit that cannot be increased. However, this limit can be decreased by configuring the 'dds.domain_participant.max_announced_locator_list_size' property in the **com.↩ rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) associated with the **com.rti.dds.domain.DomainParticipantQos** (p. 1073).

[default] Empty sequence (invalid value)

Categories

Immutable (p. 292), **Transports** (p. 285), **Content Filtering** (p. 198)

Referenced by **ChannelSettings_t.ChannelSettings_t()**.

8.30.3.2 filter_expression

```
String filter_expression
```

<<***extension***>> *(*p. *138)* A logical expression used to determine the data that will be published in the channel.

If the expression evaluates to TRUE, a sample will be published on the channel.

An empty string always evaluates the expression to TRUE.

A NULL value is not allowed.

The syntax of the expression will depend on the value of **com.rti.dds.infrastructure.MultiChannelQosPolicy.filter_name** (p. 1617)

The filter expression length (including NULL-terminated character) cannot be greater than **com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy.channel_filter_expression_max_length** (p. 1103).

See also

Queries and Filters Syntax (p. 108)

[default] NULL (invalid value)

Categories

Immutable (p. 292), **Content Filtering** (p. 198)

Referenced by **ChannelSettings_t.ChannelSettings_t()**.

8.30.3.3 priority

```
int priority =  UNDEFINED
```

<<***extension***>> *(*p. *138)* Publication priority

A positive integer value designating the relative priority of the **com.rti.dds.publication.DataWriter** (p. 818), used to determine the transmission order of pending writes.

Use of publication priorities requires the asynchronous publisher (com.rti.dds.infrastructure.PublishModeQosPolicyKind.PublishModeQosPolicyKind.ASYNCHRONOUS_PUBLISH_MODE_QOS) with **com.rti.dds.publication.FlowControllerProperty_t.scheduling_policy** (p. 1352) set to com.rti.dds.publication.FlowControllerSchedulingPolicy.FlowControllerSchedulingPolicy.HPF_FLOW_CONTROLLER_SCHED_POLICY.

Larger numbers have higher priority.

For multi-channel DataWriters, if the publication priority of any channel is set to any value other than com.rti.dds.infrastructure.PUBLICATION_PRIORITY_UNDEFINED, then the channel's priority will take precedence over that of the DataWriter.

For multi-channel DataWriters, if the publication priority of any channel is com.rti.dds.infrastructure.PUBLICATION_↩ PRIORITY_UNDEFINED, then the channel will inherit the publication priority of the DataWriter.

If the publicaton priority of the DataWriter, and of any channel of a multi-channel DataWriter, are com.rti.dds.↩ infrastructure.PUBLICATION_PRIORITY_UNDEFINED, then the priority of the DataWriter or DataWriter channel will be assigned the lowest priority value.

If the publication priority of the DataWriter is com.rti.dds.infrastructure.PUBLICATION_PRIORITY_AUTOMATIC, then the DataWriter will be assigned the priority of the largest publication priority of all samples in the DataWriter.

The publication priority of each sample can be set in the **com.rti.dds.infrastructure.WriteParams_t** (p. 2308) of the **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402) function.

For dispose and unregister samples, use the **com.rti.dds.infrastructure.WriteParams_t** (p. 2308) of **com.rti.ndds.↩ example.FooDataWriter.dispose_w_params** (p. 1406) and **com.rti.ndds.example.FooDataWriter.unregister_↩ instance_w_params** (p. 1396).

[default] com.rti.dds.infrastructure.PUBLICATION_PRIORITY_UNDEFINED

[range] [-1, MAX_INT]

Categories

Immutable (p. 292), **Flow Control** (p. 226)

Referenced by **ChannelSettings_t.ChannelSettings_t()**.

8.31 ChannelSettingsSeq Class Reference

Declares IDL `sequence<` **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) `>`

Inherits ArraySequence.

8.31.1 Detailed Description

Declares IDL `sequence<` **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) `>`

A sequence of **com.rti.dds.infrastructure.ChannelSettings_t** (p. 666) used to configure the channels' properties. If the length of the sequence is zero, the **com.rti.dds.infrastructure.MultiChannelQosPolicy** (p. 1616) has no effect.

Instantiates:

*<<**generic**>> (p. 403)* com.rti.dds.infrastructure.com.rti.dds.util.Sequence

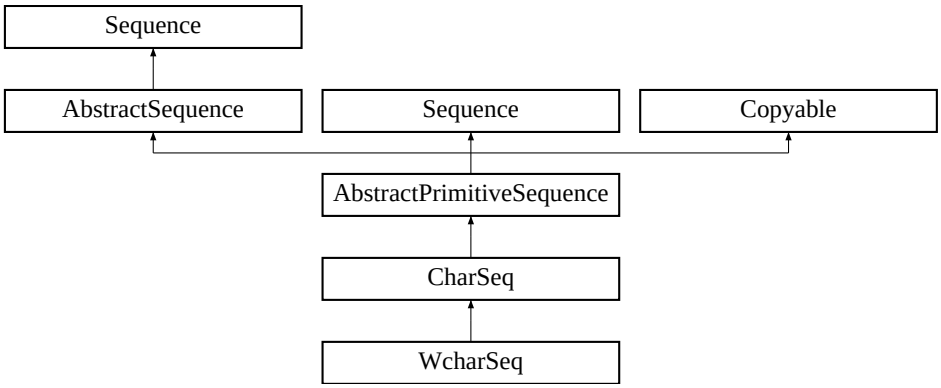
See also

com.rti.dds.infrastructure.ChannelSettings_t (p. 666)

8.32 CharSeq Class Reference

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < char >

Inheritance diagram for CharSeq:



Public Member Functions

- **CharSeq** ()

  Constructs an empty sequence of single-byte (serialized) characters with an initial maximum of zero.
- **CharSeq** (int initialMaximum)

  Constructs an empty sequence of single-byte (serialized) characters with the given initial maximum.
- **CharSeq** (char[ ] chars)

  Constructs a new sequence containing the given single-byte (serialized) characters.
- final boolean **addAllChar** (char[ ] elements, int offset, int length)

  Append `length` elements from the given array to this sequence, starting at index `offset` in that array.
- final boolean **addAllChar** (char[ ] elements)

  Append the elements of the given array into this sequence.
- final void **addChar** (char element)

  Append the element to the end of the sequence.
- final void **addChar** (int index, char element)

  Shift all elements in the sequence starting from the given index and add the element to the given index.
- final char **getChar** (int index)

  Returns the character at the given index.
- final char **setChar** (int index, char element)

  Set the new character at the given index and return the old character.
- final void **setChar** (int dstIndex, char[ ] elements, int srcIndex, int length)

  Copy a portion of the given array into this sequence.
- final char[ ] **toArrayChar** (char[ ] array)

  Return an array containing copy of the contents of this sequence.
- final int **getMaximum** ()

  Get the current maximum number of elements that can be stored in this sequence.
- final Object **get** (int index)

  *A wrapper for **getChar(int)** (p. 674) that returns a java.lang.Character.*
- final Object **set** (int index, Object element)

  *A wrapper for **setChar()** (p. 674).*
- final void **add** (int index, Object element)

  A wrapper for addChar(int, int).

8.32.1 Detailed Description

Instantiates com.rti.dds.infrastructure.com.rti.dds.util.Sequence < char >

Instantiates:

<<***generic***>> *(*p. *403)* com.rti.dds.infrastructure.com.rti.dds.util.Sequence

See also

char

com.rti.dds.infrastructure.com.rti.dds.util.Sequence

8.32.2 Constructor & Destructor Documentation

8.32.2.1 CharSeq() [1/3]

```
CharSeq ( )
```

Constructs an empty sequence of single-byte (serialized) characters with an initial maximum of zero.

8.32.2.2 CharSeq() [2/3]

```
CharSeq (
            int initialMaximum )
```

Constructs an empty sequence of single-byte (serialized) characters with the given initial maximum.

8.32.2.3 CharSeq() [3/3]

```
CharSeq (
            char[] chars )
```

Constructs a new sequence containing the given single-byte (serialized) characters.

Parameters

chars	the initial contents of this sequence

References **CharSeq.addAllChar()**.

8.32.3 Member Function Documentation

8.32.3.1 addAllChar() [1/2]

```
final boolean addAllChar (
            char[] elements,
            int offset,
            int length )
```

Append `length` elements from the given array to this sequence, starting at index `offset` in that array.

Exceptions

NullPointerException	if the given array is null.

Referenced by **CharSeq.addAllChar()**, and **CharSeq.CharSeq()**.

8.32.3.2 addAllChar() [2/2]

```
final boolean addAllChar (
            char[] elements )
```

Append the elements of the given array into this sequence.

Exceptions

NullPointerException	if the given array is null

References **CharSeq.addAllChar()**.

8.32.3.3 addChar() [1/2]

```
final void addChar (
            char element )
```

Append the element to the end of the sequence.

Referenced by **CharSeq.add()**.

8.32.3.4 addChar() [2/2]

```
final void addChar (
            int index,
            char element )
```

Shift all elements in the sequence starting from the given index and add the element to the given index.

8.32.3.5 getChar()

```
final char getChar (
            int index )
```

Returns the character at the given index.

Exceptions

IndexOutOfBoundsException	if the index is out of bounds.

Referenced by **CharSeq.get()**.

8.32.3.6 setChar() [1/2]

```
final char setChar (
            int index,
            char element )
```

Set the new character at the given index and return the old character.

Exceptions

IndexOutOfBoundsException	if the index is out of bounds.

Referenced by **CharSeq.set()**.

8.32.3.7 setChar() [2/2]

```
final void setChar (
            int dstIndex,
```

```
            char[] elements,
            int srcIndex,
            int length )
```

Copy a portion of the given array into this sequence.

Parameters

dstIndex	the index at which to start copying into this sequence.
elements	an array of primitive elements.
srcIndex	the index at which to start copying from the given array.
length	the number of elements to copy.

Exceptions

IndexOutOfBoundsException	if copying would cause access of data outside array bounds.

8.32.3.8 toArrayChar()

```
final char[] toArrayChar (
            char[] array )
```

Return an array containing copy of the contents of this sequence.

Parameters

array	The array into which this sequence should be copied. It may be null. If it is, or if array length is too small, the array will be ignored, and a new array of the necessary length will be created and copied into instead.

Returns

A non-null array containing a copy of the contents of this sequence.

8.32.3.9 getMaximum()

```
final int getMaximum ( )
```

Get the current maximum number of elements that can be stored in this sequence.

The `maximum` of the sequence represents the maximum number of elements that the underlying buffer can hold. It does not represent the current number of elements.

The `maximum` is a non-negative number. It is initialized when the sequence is first created.

The `maximum` can be changed implicitly by adding an element to the sequence with **`add()`** (p. 677), or explicitly by calling com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.setMaximum.

Returns

the current maximum of the sequence.

See also

com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.size()

Implements **Sequence** (p. 1974).

Referenced by **DynamicData.get_char_seq()**, and **DynamicData.set_char_seq()**.

8.32.3.10 get()

```
final Object get (
             int index )
```

A wrapper for **getChar(int)** (p. 674) that returns a java.lang.Character.

See also

java.util.List::get(int)

Reimplemented from **AbstractPrimitiveSequence** (p. 576).

References **CharSeq.getChar()**.

8.32.3.11 set()

```
final Object set (
             int index,
             Object element )
```

A wrapper for **setChar()** (p. 674).

Exceptions

ClassCastException	if the element is not of type Character.

See also

java.util.List::set(int, java.lang.Object)

Reimplemented from **AbstractPrimitiveSequence** (p. 576).

References **CharSeq.setChar()**.

8.32.3.12 add()

```
final void add (
             int index,
             Object element )
```

A wrapper for addChar(int, int).

Exceptions

ClassCastException	if the element is not of type Character.

See also

java.util.List::add(int, java.lang.Object)

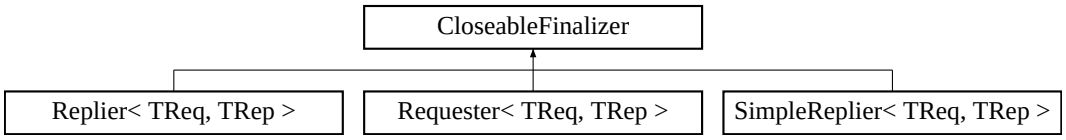
Reimplemented from **AbstractPrimitiveSequence** (p. 577).

References **CharSeq.addChar()**.

8.33 CloseableFinalizer Class Reference

Ensures that subclasses get automatically closed when they are garbage collected.

Inheritance diagram for CloseableFinalizer:



8.33.1 Detailed Description

Ensures that subclasses get automatically closed when they are garbage collected.

This class extends `java.io.Closeable` and subclasses implement `close()`

8.34 CoherentSetInfo_t Class Reference

<<***extension***>> *(*p. *403)* Type definition for a coherent set info.

Inherits Struct.

Public Attributes

- **GUID_t group_guid** = new **GUID_t**(**GUID_t.GUID_UNKNOWN**)

  The coherent set group GUID.
- **SequenceNumber_t coherent_set_sequence_number**

  Sequence number that identifies a sample as part of a ***com.rti.dds.publication.DataWriter*** *(*p. *818) coherent set.*
- **SequenceNumber_t group_coherent_set_sequence_number**

  Sequence number that identifies a sample as part of a group coherent set.
- boolean **incomplete_coherent_set** = true

  Indicates if a sample is part of an incomplete coherent set.

8.34.1 Detailed Description

<<***extension***>> *(*p. *403)* Type definition for a coherent set info.

A CoherentSetInfo provides information about the coherent set associated with a sample.

8.34.2 Member Data Documentation

8.34.2.1 group_guid

```
GUID_t group_guid = new  GUID_t( GUID_t.GUID_UNKNOWN)
```

The coherent set group GUID.

This GUID identifies the **com.rti.dds.publication.DataWriter** (p. 818) or the group of DataWriters publishing the coherent set, depending on the value of **com.rti.dds.infrastructure.PresentationQosPolicy.access_scope** (p. 1682) in the **com.rti.dds.subscription.Subscriber** (p. 2039).

8.34.2.2 coherent_set_sequence_number

```
SequenceNumber_t coherent_set_sequence_number
```

Initial value:

```
= 
            new SequenceNumber_t(SequenceNumber_t.SEQUENCE_NUMBER_UNKNOWN)
```

Sequence number that identifies a sample as part of a **com.rti.dds.publication.DataWriter** (p. 818) coherent set.

When **com.rti.dds.infrastructure.PresentationQosPolicy.access_scope** (p. 1682) in the **com.rti.dds.subscription.Subscriber** (p. 2039) is set to com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.INSTANCE_PRESENTATION_QOS or com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.TOPIC_PRESENTATION_QOS, the coherent set associated with a sample is identified by the pair (group_guid, coherent_set_sequence_number).

8.34.2.3 group_coherent_set_sequence_number

```
SequenceNumber_t group_coherent_set_sequence_number
```

Initial value:

```
= 
            new SequenceNumber_t(SequenceNumber_t.SEQUENCE_NUMBER_UNKNOWN)
```

Sequence number that identifies a sample as part of a group coherent set.

When **com.rti.dds.infrastructure.PresentationQosPolicy.access_scope** (p. 1682) in the **com.rti.dds.subscription.Subscriber** (p. 2039) is set to com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.GROUP_PRESENTATION_QOS, the coherent set associated with a sample is identified by the pair (group_guid, group_coherent_set_sequence_number).

8.34.2.4 incomplete_coherent_set

```
boolean incomplete_coherent_set = true
```

Indicates if a sample is part of an incomplete coherent set.

8.35 Compliance Class Reference

This class contains methods to configure the compliance masks.

Classes

- class **XTypesMask**

  XTypes compliance mask.

Static Public Member Functions

- static void **set_xtypes_mask** (**XTypesMask** mask)

  Sets the level of compliance of the application with the XTypes specification.
- static void **load_masks** ()

  Load the compliance masks from the environment variables.

8.35.1 Detailed Description

This class contains methods to configure the compliance masks.

8.35.2 Member Function Documentation

8.35.2.1 set_xtypes_mask()

```
static void set_xtypes_mask (
              XTypesMask mask )  [static]
```

Sets the level of compliance of the application with the XTypes specification.

The **com.rti.ndds.config.Compliance.XTypesMask** (p. 2327) configures different aspects of the Extended CDR encoding (XCDR and XCDR2) for the application.

Once you call this function the value of the mask will apply to all the entities created after the call. It won't apply to entities created before the call.

In general, applications should only set the mask once, before executing any other RTI Connext API. The mask can also be set using the environment variable **NDDS_XTYPES_COMPLIANCE_MASK**.

Parameters

mask	<<***in***>> *(p. 404)* **Compliance** (p. 679) mask.

See also

com.rti.ndds.config.Compliance.XTypesMask (p. 2327)

com.rti.ndds.config.Compliance.get_xtypes_mask

com.rti.ndds.config.Compliance.load_masks (p. 680)

References **Compliance.XTypesMask.get()**.

8.35.2.2 load_masks()

```
static void load_masks ( )  [static]
```

Load the compliance masks from the environment variables.

This function loads the XTypes and RPC compliance masks from the environment, which can be set using the environment variables **NDDS_XTYPES_COMPLIANCE_MASK** and **NDDS_RPC_COMPLIANCE_MASK**.

See also

com.rti.ndds.config.Compliance.XTypesMask (p. 2327)

com.rti.ndds.config.Compliance.set_xtypes_mask (p. 680)

com.rti.ndds.config.Compliance.get_xtypes_mask

com.rti.ndds.config.RpcComplianceMask

com.rti.ndds.config.RpcCompliance.set_rpc_compliance_mask

com.rti.ndds.config.RpcCompliance.get_rpc_compliance_mask

8.36 CompressionSettings_t Class Reference

<<***extension***>> *(*p. *138)* Settings related to compressing user data.

Inherits Struct.

Public Member Functions

- **CompressionSettings_t** ()

  Constructor with default values of ***com.rti.dds.infrastructure.CompressionSettings_t.compression_ids*** *(*p. *683),* ***com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_level*** *(*p. *684) and* ***com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_threshold*** *(*p. *685).*

- **CompressionSettings_t** (int **compression_ids**, int **writer_compression_level**, int **writer_compression_threshold**)

  Constructor with the given values for the ***com.rti.dds.infrastructure.CompressionSettings_t.compression_ids*** *(*p. *683),* ***com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_level*** *(*p. *684) and* ***com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_threshold*** *(*p. *685).*

Public Attributes

- int **compression_ids**

  <<***extension***>> *(*p. *138) Mask that represents the compression algorithms enabled.*

- int **writer_compression_level**

  <<***extension***>> *(*p. *138) The level of compression to use when compressing data.*

- int **writer_compression_threshold**

  <<***extension***>> *(*p. *138) The threshold, in bytes, above which a serialized sample will be eligible to be compressed.*

Static Public Attributes

- static final int **COMPRESSION_LEVEL_BEST_COMPRESSION** = 10

  The best compression ratio possible for a compression algorithm.
- static final int **COMPRESSION_LEVEL_BEST_SPEED** = 0

  The best compression speed possible for a compression algorithm.
- static final int **COMPRESSION_LEVEL_DEFAULT** = **COMPRESSION_LEVEL_BEST_COMPRESSION**

  Default level of compression.

8.36.1 Detailed Description

<<***extension***>> *(*p. *138)* Settings related to compressing user data.

QoS:

com.rti.dds.infrastructure.DataRepresentationQosPolicy (p. 810)

8.36.2 Constructor & Destructor Documentation

8.36.2.1 CompressionSettings_t() [1/2]

```
CompressionSettings_t ( )
```

Constructor with default values of **com.rti.dds.infrastructure.CompressionSettings_t.compression_ids** (p. 683), **com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_level** (p. 684) and **com.rti.dds.↩ infrastructure.CompressionSettings_t.writer_compression_threshold** (p. 685).

References **CompressionSettings_t.COMPRESSION_LEVEL_DEFAULT**.

8.36.2.2 CompressionSettings_t() [2/2]

```
CompressionSettings_t (
            int compression_ids,
            int writer_compression_level,
            int writer_compression_threshold )
```

Constructor with the given values for the **com.rti.dds.infrastructure.CompressionSettings_t.compression_ids** (p. 683), **com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_level** (p. 684) and **com.rti.dds.↩ infrastructure.CompressionSettings_t.writer_compression_threshold** (p. 685).

References **CompressionSettings_t.compression_ids**, **CompressionSettings_t.writer_compression_level**, and **CompressionSettings_t.writer_compression_threshold**.

8.36.3 Member Data Documentation

8.36.3.1 COMPRESSION_LEVEL_BEST_COMPRESSION

```
final int COMPRESSION_LEVEL_BEST_COMPRESSION = 10  [static]
```

The best compression ratio possible for a compression algorithm.

See also

com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_level (p. 684)

8.36.3.2 COMPRESSION_LEVEL_BEST_SPEED

```
final int COMPRESSION_LEVEL_BEST_SPEED = 0  [static]
```

The best compression speed possible for a compression algorithm.

See also

com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_level (p. 684)

8.36.3.3 COMPRESSION_LEVEL_DEFAULT

```
final int COMPRESSION_LEVEL_DEFAULT = COMPRESSION_LEVEL_BEST_COMPRESSION  [static]
```

Default level of compression.

See also

com.rti.dds.infrastructure.CompressionSettings_t.writer_compression_level (p. 684)

Referenced by **CompressionSettings_t.CompressionSettings_t()**.

8.36.3.4 compression_ids

```
int compression_ids
```

<<***extension***>> *(*p. *138)* Mask that represents the compression algorithms enabled.

A bitmap that represents the compression algorithm IDs (com.rti.dds.infrastructure.CompressionIdMask) that are supported by the endpoint. The **com.rti.dds.publication.DataWriter** (p. 818) creation will fail if more than one algorithm is provided.

If a **com.rti.dds.publication.DataWriter** (p. 818) inherits multiple compression IDs from a **com.rti.dds.topic.Topic** (p. 2116), only the least significant bit enabled will be inherited. This forces the following order of preference: com.↩ rti.dds.infrastructure.DDS_COMPRESSION_ID_ZLIB, com.rti.dds.infrastructure.DDS_COMPRESSION_ID_BZIP2, com.rti.dds.infrastructure.DDS_COMPRESSION_ID_LZ4.

Interactions with Security and Batching: Currently, the only algorithm that is supported when compression and batching are enabled on the same **com.rti.dds.publication.DataWriter** (p. 818) is com.rti.dds.infrastructure.DDS_↩ COMPRESSION_ID_ZLIB.

The combination of compression, batching, and data protection is supported. First, compression is applied to the entire batch. Then, data protection is applied to the compressed batch.

Note: When **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.serialize_key_with_dispose** (p. 864) is enabled and a dispose message is sent, the serialized key is not compressed.

[default] For **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.publication.DataWriter** (p. 818) a com.rti.dds.↩ infrastructure.CompressionIdMask mask set to com.rti.dds.infrastructure.CompressionIdMaskBits.MASK_NONE

[default] For **com.rti.dds.subscription.DataReader** (p. 707) a com.rti.dds.infrastructure.CompressionIdMask mask set to com.rti.dds.infrastructure.CompressionIdMaskBits.MASK_ALL.

Categories

Immutable (p. 292), **Matching** (p. 355), **Discovery Metadata** (p. 348), **Sending Large Data** (p. 237)

Referenced by **CompressionSettings_t.CompressionSettings_t()**.

8.36.3.5 writer_compression_level

```
int writer_compression_level
```

<<***extension***>> *(*p. *138)* The level of compression to use when compressing data.

Compression algorithms typically allow you to choose a level with which to compress the data. Each level has trade-offs between the resulting compression ratio and the speed of compression.

[range] [0, 10]

The value 1 represents the fastest compression time and the lowest compression ratio. The value 10 represents the slowest compression time but the highest compression ratio.

A value of 0 disables compression.

[default] com.rti.dds.infrastructure.COMPRESSION_LEVEL_BEST_COMPRESSION

Note

Only available for a **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.topic.Topic** (p. 2116).

Categories

Immutable (p. 292), **Sending Large Data** (p. 237)

Referenced by **CompressionSettings_t.CompressionSettings_t()**.

8.36.3.6 writer_compression_threshold

```
int writer_compression_threshold
```

<<***extension***>> *(p. 138)* The threshold, in bytes, above which a serialized sample will be eligible to be compressed.

Any sample with a serialized size greater than or equal to the threshold will be eligible to be compressed. All samples with an eligible serialized size will be compressed. Only if the compressed size is smaller than the serialized size will the sample be stored and sent compressed on the wire.

For batching we check the maximum serialized size of the batch, calculated as serialized_sample_max_size * **com.rti.dds.infrastructure.BatchQosPolicy.max_samples** (p. 609)

[range] [0, 2147483647] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511)

Setting the threshold to **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511) disables the compression.

[default] com.rti.dds.infrastructure.COMPRESSION_THRESHOLD_DEFAULT (8192)

Note

Only available for a **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.topic.Topic** (p. 2116).

Categories

Immutable (p. 292), **Sending Large Data** (p. 237)

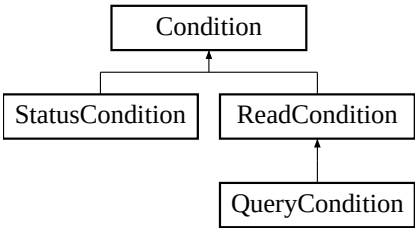
8.37 Condition Interface Reference

<<***interface***>> *(p. 403)* Root class for all the conditions that may be attached to a **com.rti.dds.infrastructure.WaitSet** (p. 2287).

Inheritance diagram for Condition:



Public Member Functions

- boolean **get_trigger_value** ()

  Retrieve the `trigger_value`*.*

8.37.1 Detailed Description

<<***interface***>> *(p. 403)* Root class for all the conditions that may be attached to a **com.rti.dds.infrastructure.WaitSet** (p. 2287).

This basic class is specialised in three classes:

com.rti.dds.infrastructure.GuardCondition (p. 1421), **com.rti.dds.infrastructure.StatusCondition** (p. 2008), and **com.rti.dds.subscription.ReadCondition** (p. 1816).

A **com.rti.dds.infrastructure.Condition** (p. 686) has a `trigger_value` that can be com.rti.dds.infrastructure.true or com.rti.dds.infrastructure.false and is set automatically by RTI Connext.

See also

com.rti.dds.infrastructure.WaitSet (p. 2287)

8.37.2 Member Function Documentation

8.37.2.1 get_trigger_value()

```
boolean get_trigger_value ( )
```

Retrieve the `trigger_value`.

Returns

the trigger value.

Implemented in **GuardCondition** (p. 1422).

8.38 ConditionSeq Class Reference

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.infrastructure.↩ Condition** (p. 686) >

Inherits AbstractNativeSequence.

Public Member Functions

- **ConditionSeq** (Collection conditions)

  *Create a **Condition** (p. 686) Sequence with the given contents. The size and the maximum of the new sequence will match the size of the given collection.*
- **ConditionSeq** ()

  *Create a empty **Condition** (p. 686) Sequence with a initial maximum of zero.*
- **ConditionSeq** (int initial_maximum)

  *Create a **Condition** (p. 686) Sequence with the specified initial maximum.*
- int **getMaximum** ()

  Get the current maximum number of elements that can be stored in this sequence.

8.38.1 Detailed Description

Instantiates `com.rti.dds.infrastructure.com.rti.dds.util.Sequence` < **com.rti.dds.infrastructure.↩ Condition** (p. 686) >

Instantiates:

<<***generic***>> *(p. 403)* com.rti.dds.infrastructure.com.rti.dds.util.Sequence

See also

com.rti.dds.infrastructure.WaitSet (p. 2287)

com.rti.dds.infrastructure.com.rti.dds.util.Sequence

8.38.2 Constructor & Destructor Documentation

8.38.2.1 ConditionSeq() [1/3]

```
ConditionSeq (
            Collection conditions )
```

Create a **Condition** (p. 686) Sequence with the given contents. The size and the maximum of the new sequence will match the size of the given collection.

Parameters

conditions	The initial contents of the sequence

Exceptions

NullPointerException	if the given collection is null

8.38.2.2 ConditionSeq() [2/3]

```
ConditionSeq ( )
```

Create a empty **Condition** (p. 686) Sequence with a initial maximum of zero.

8.38.2.3 ConditionSeq() [3/3]

```
ConditionSeq (
            int initial_maximum )
```

Create a **Condition** (p. 686) Sequence with the specified initial maximum.

Parameters

initial_maximum	The initial maximum of the sequence.

8.38.3 Member Function Documentation

8.38.3.1 getMaximum()

```
int getMaximum ( )
```

Get the current maximum number of elements that can be stored in this sequence.

The `maximum` of the sequence represents the maximum number of elements that the underlying buffer can hold. It does not represent the current number of elements.

The `maximum` is a non-negative number. It is initialized when the sequence is first created.

The `maximum` can be changed implicitly by adding an element to the sequence with **`add()`** (p. 583), or explicitly by calling com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.setMaximum.

Returns

the current maximum of the sequence.

See also

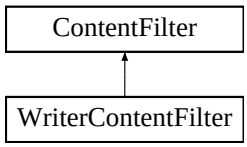
com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.size()

Implements **Sequence** (p. 1974).

8.39 ContentFilter Interface Reference

<<***interface***>> *(p. 403)* Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692)

Inheritance diagram for ContentFilter:



Public Member Functions

- void **compile** (**ObjectHolder** new_compile_data, String expression, **StringSeq** parameters, **TypeCode** type↩ _code, String type_class_name, Object old_compile_data)

  Compile an instance of the content filter according to the filter expression and parameters of the given data type.
- boolean **evaluate** (Object compile_data, Object sample, **FilterSampleInfo** meta_data)

  Evaluate whether the sample is passing the filter or not according to the sample content.
- void **finalize** (Object compile_data)

  A previously compiled instance of the content filter is no longer in use and resources can now be cleaned up.

8.39.1 Detailed Description

<<***interface***>> *(p. 403)* Interface to be used by a custom filter of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692)

Entity:

com.rti.dds.topic.ContentFilteredTopic (p. 692)

This interface can be implemented by an application-provided class and then registered with the **com.rti.dds.domain.↩ DomainParticipant** (p. 948) such that samples can be filtered for a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) with the given filter name.

Note: the API for using a custom content filter is subject to change in a future release.

See also

com.rti.dds.topic.ContentFilteredTopic (p. 692)

com.rti.dds.domain.DomainParticipant.register_contentfilter (p. 1018)

8.39.2 Member Function Documentation

8.39.2.1 compile()

```
void compile (
              ObjectHolder new_compile_data,
             String expression,
              StringSeq parameters,
              TypeCode type_code,
             String type_class_name,
             Object old_compile_data )
```

Compile an instance of the content filter according to the filter expression and parameters of the given data type.

This method is called when an instance of the locally registered content filter is created or when the expression parameter for the locally registered content filter instance is changed.

An instance of the locally registered content filter is created every time a local **com.rti.dds.topic.ContentFiltered↩ Topic** (p. 692) with the matching filter name is created, or when a **com.rti.dds.subscription.DataReader** (p. 707) with a matching filter name is discovered.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

Parameters

new_compile_data	*<<**out**>> (p. 404)* User specified opaque pointer of this instance of the content filter. This value is then passed to the **com.rti.dds.topic.ContentFilter.evaluate** (p. 691) and **com.rti.dds.topic.ContentFilter.finalize** (p. 692) functions for this instance of the content filter. Can be set to null .
expression	*<<**in**>> (p. 404)* An ASCIIZ string with the filter expression. The memory used by this string is owned by RTI Connext and **must** not be freed. If you want to manipulate this string, you **must** first make a copy of it.
parameters	*<<**in**>> (p. 404)* A string sequence with the expression parameters the **com.rti.dds.topic.ContentFilteredTopic** (p. 692) was created with. The string sequence is **equal** (but **not** identical) to the string sequence passed to **com.rti.dds.domain.DomainParticipant.create_contentfilteredtopic** (p. 988). Note that the sequence passed to the compile function is **owned** by RTI Connext and **must not** be referenced outside the compile function.
type_code	*<<**in**>> (p. 404)* A pointer to the type code for the related **com.rti.dds.topic.Topic** (p. 2116) of the **com.rti.dds.topic.ContentFilteredTopic** (p. 692). A type_code is a description of a type in terms of which types it contains (int32, string, etc.) and the corresponding member field names in the data type structure. The type code can be used to write custom content filters that can be used with any type. This parameter is always null in Java.
type_class_name	*<<**in**>> (p. 404)* Fully qualified class name of the related **com.rti.dds.topic.Topic** (p. 2116).
old_compile_data	*<<**in**>> (p. 404)* The previous new_compile_data value from a previous call to this instance of a content filter. If the compile function is called more than once for an instance of a **com.rti.dds.topic.ContentFilteredTopic** (p. 692), e.g., if the expression parameters are changed, then the new_compile_data value returned by the previous invocation is passed in the old_compile_data parameter (which can be null). If this is a new instance of the filter, NULL is passed. This parameter is useful for freeing or reusing previously allocated resources.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.39.2.2 evaluate()

```
boolean evaluate (
             Object compile_data,
             Object sample,
              FilterSampleInfo meta_data )
```

Evaluate whether the sample is passing the filter or not according to the sample content.

This method is called when a sample for a locally created **com.rti.dds.subscription.DataReader** (p. 707) associated with the filter is received, or when a sample for a discovered **com.rti.dds.subscription.DataReader** (p. 707) assocated with the filter needs to be sent.

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

Parameters

compile_data	<<***in***>> *(p. 404)* The last return value of the **com.rti.dds.topic.ContentFilter.compile** (p. 690) function for this instance of the content filter. Can be null .
sample	<<***in***>> *(p. 404)* Pointer to a deserialized sample to be filtered
meta_data	<<***in***>> *(p. 404)* Pointer to meta data associated with the sample.

Returns

The function must return 0 if the sample should be filtered out, non zero otherwise

8.39.2.3 finalize()

```
void finalize (
             Object compile_data )
```

A previously compiled instance of the content filter is no longer in use and resources can now be cleaned up.

This method is called when an instance of the locally registered content filter is deleted.

An instance of the locally registered content filter is deleted every time a local **com.rti.dds.topic.ContentFiltered↩ Topic** (p. 692) with the matching filter name is deleted, or when a **com.rti.dds.subscription.DataReader** (p. 707) with a matching filter name is removed due to discovery.

This method is also called on all instances of the discovered **com.rti.dds.subscription.DataReader** (p. 707) with a matching filter name if the filter is unregistered with **com.rti.dds.domain.DomainParticipant.unregister_contentfilter** (p. 1019).

It is possible for multiple threads to be calling into this function at the same time. However, this function will never be called on a content filter that has been unregistered.

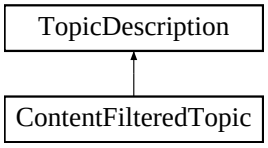
Parameters

compile_data	<<***in***>> *(p. 404)* The last return value of the **com.rti.dds.topic.ContentFilter.compile** (p. 690) function for this instance of the content filter. Can be null

8.40 ContentFilteredTopic Interface Reference

<<***interface***>> *(p. 403)* Specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows for content-based subscriptions.

Inheritance diagram for ContentFilteredTopic:



Public Member Functions

- String **get_filter_expression** ()

  Get the `filter_expression`*.*
- void **get_expression_parameters** (**StringSeq** parameters)

  Get the `expression_parameters`*.*
- void **set_expression_parameters** (**StringSeq** parameters)

  Set the `expression_parameters`*.*
- void **set_expression** (String expression, **StringSeq** parameters)

  Set the `filter_expression` *and* `expression_parameters`*.*
- **Topic get_related_topic** ()

  Get the `related_topic`*.*
- void **append_to_expression_parameter** (int index, String val)

  *<<**extension**>> (p. 403) Appends a string term to the specified parameter string.*
- void **remove_from_expression_parameter** (int index, String val)

  *<<**extension**>> (p. 403) Removes a string term from the specified parameter string.*

8.40.1 Detailed Description

*<<**interface**>> (p. 403)* Specialization of **com.rti.dds.topic.TopicDescription** (p. 2129) that allows for content-based subscriptions.

It describes a more sophisticated subscription that indicates a **com.rti.dds.subscription.DataReader** (p. 707) does not want to necessarily see all values of each instance published under the **com.rti.dds.topic.Topic** (p. 2116). Rather, it wants to see only the values whose contents satisfy certain criteria. This class therefore can be used to request content-based subscriptions.

The selection of the content is done using the `filter_expression` with parameters `expression_↩parameters`.

- The `filter_expression` attribute is a string that specifies the criteria to select the data samples of interest. It is similar to the WHERE part of an SQL clause.

- The `expression_parameters` attribute is a sequence of strings that give values to the 'parameters' (i.e. "%n" tokens) in the `filter_expression`. The number of supplied parameters must fit with the requested values in the `filter_expression` (i.e. the number of n tokens).

Queries and Filters Syntax (p. 108) describes the syntax of `filter_expression` and `expression_↩parameters`.

8.40.2 Member Function Documentation

8.40.2.1 get_filter_expression()

```
String get_filter_expression ( )
```

Get the `filter_expression`.

Return the `filter_expression` associated with the **com.rti.dds.topic.ContentFilteredTopic** (p. 692). `filter_expression` is either specified on the last successful call to **com.rti.dds.topic.ContentFilteredTopic.set_expression** (p. 695) or, if that method is never called, the expression specified when the **com.rti.dds.topic.ContentFilteredTopic** (p. 692) was created.

Returns

the `filter_expression`.

8.40.2.2 get_expression_parameters()

```
void get_expression_parameters (
               StringSeq parameters )
```

Get the `expression_parameters`.

Return the `expression_parameters` associated with the **com.rti.dds.topic.ContentFilteredTopic** (p. 692). `expression_parameters` is either specified on the last successful call to **com.rti.dds.topic.ContentFilteredTopic.set_expression_parameters** (p. 695), **com.rti.dds.topic.ContentFilteredTopic.set_expression** (p. 695) or, if that method is never called, the parameters specified when the **com.rti.dds.topic.ContentFilteredTopic** (p. 692) was created.

Parameters

parameters	<<***inout***>> *(p. 404)* the filter expression parameters. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

See also

com.rti.dds.domain.DomainParticipant.create_contentfilteredtopic (p. 988)

com.rti.dds.topic.ContentFilteredTopic.set_expression_parameters (p. 695)

8.40.2.3 set_expression_parameters()

```
void set_expression_parameters (
             StringSeq parameters )
```

Set the `expression_parameters`.

Change the `expression_parameters` associated with the **com.rti.dds.topic.ContentFilteredTopic** (p. 692).

Parameters

parameters	<<***in***>> *(p. 404)* the filter expression parameters Cannot be NULL. Length of sequence cannot be greater than 100.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.40.2.4 set_expression()

```
void set_expression (
            String expression,
             StringSeq parameters )
```

Set the `filter_expression` and `expression_parameters`.

Changes the `filter_expression` and `expression_parameters` associated with the **com.rti.dds.topic.↩ ContentFilteredTopic** (p. 692).

Parameters

expression	<<***in***>> *(p. 404)* the filter expression. Cannot be NULL.
parameters	<<***in***>> *(p. 404)* the filter expression parameters Cannot be NULL. Length of sequence cannot be greater than 100.

8.40.2.5 get_related_topic()

```
Topic get_related_topic ( )
```

Get the `related_topic`.

Return the **com.rti.dds.topic.Topic** (p. 2116) specified when the **com.rti.dds.topic.ContentFilteredTopic** (p. 692) was created.

Returns

The **com.rti.dds.topic.Topic** (p. 2116) assocated with the **com.rti.dds.topic.ContentFilteredTopic** (p. 692).

8.40.2.6 append_to_expression_parameter()

```
void append_to_expression_parameter (
             int index,
             String val )
```

<<***extension***>> *(p. 403)* Appends a string term to the specified parameter string.

Appends the input string to the end of the specified parameter string, separated by a comma. If the original parameter string is enclosed in quotation marks (''), the resultant string will also be enclosed in quotation marks.

This method can be used in expression parameters associated with MATCH operators in order to add a pattern to the match pattern list. For example, if the filter expression parameter value is:

'IBM'

Then append_to_expression_parameter(0, "MSFT") would generate the new value:

'IBM,MSFT'

Parameters

index	<<***in***>> *(p. 404)* The index of the parameter string to be modified. The first index is index 0. When using the **com.rti.dds.domain.DomainParticipant.STRINGMATCHFILTER_NAME** (p. 52) filter, `index` *must* be 0.
val	<<***in***>> *(p. 404)* The string term to be appended to the parameter string.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.40.2.7 remove_from_expression_parameter()

```
void remove_from_expression_parameter (
             int index,
             String val )
```

<<***extension***>> *(p. 403)* Removes a string term from the specified parameter string.

Removes the input string from the specified parameter string. To be found and removed, the input string must exist as a complete term, bounded by comma separators or the strong boundary. If the original parameter string is enclosed in quotation marks ("), the resultant string will also be enclosed in quotation marks. If the removed term was the last entry in the string, the result will be a string of empty quotation marks.

This method can be used in expression parameters associated with MATCH operators in order to remove a pattern from the match pattern list. For example, if the filter expression paremeter value is:

'IBM,MSFT'

Then remove_from_expression_parameter(0, "IBM") would generate the expression:

'MSFT'

Parameters

index	<<***in***>> *(p. 404)* The index of the parameter string to be modified. The first index is index 0. When using the **com.rti.dds.domain.DomainParticipant.STRINGMATCHFILTER_NAME** (p. 52) filter, `index` *must* be 0.
val	<<***in***>> *(p. 404)* The string term to be removed from the parameter string.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.41 ContentFilterProperty_t Class Reference

<<***extension***>> *(p. 403)* Type used to provide all the required information to enable content filtering.

Inherits Struct.

Public Member Functions

- **ContentFilterProperty_t** ()

  Constructor.

Public Attributes

- String **content_filter_topic_name**

  Name of the Content-filtered Topic associated with the Reader.
- String **related_topic_name**

  Name of the Topic related to the Content-filtered Topic.
- String **filter_class_name**

Identifies the filter class this filter belongs to. RTPS can support multiple filter classes (SQL, regular expressions, custom filters, etc).

- String **filter_expression**

  The actual filter expression. Must be a valid expression for the filter class specified using filterClassName.

- final **StringSeq expression_parameters**

  Defines the value for each parameter in the filter expression.

8.41.1 Detailed Description

<<***extension***>> *(*p. *403)* Type used to provide all the required information to enable content filtering.

8.41.2 Constructor & Destructor Documentation

8.41.2.1 ContentFilterProperty_t()

```
ContentFilterProperty_t ( )
```

Constructor.

8.41.3 Member Data Documentation

8.41.3.1 content_filter_topic_name

```
String content_filter_topic_name
```

Name of the Content-filtered Topic associated with the Reader.

8.41.3.2 related_topic_name

```
String related_topic_name
```

Name of the Topic related to the Content-filtered Topic.

8.41.3.3 filter_class_name

```
String filter_class_name
```

Identifies the filter class this filter belongs to. RTPS can support multiple filter classes (SQL, regular expressions, custom filters, etc).

8.41.3.4 filter_expression

```
String filter_expression
```

The actual filter expression. Must be a valid expression for the filter class specified using filterClassName.

8.41.3.5 expression_parameters

```
final  StringSeq expression_parameters
```

Defines the value for each parameter in the filter expression.

8.42 Cookie_t Class Reference

<<***extension***>> *(*p. *403)* Sequence of bytes.

Inherits Struct.

Public Attributes

- final **ByteSeq value**
  a sequence of octets

8.42.1 Detailed Description

<<***extension***>> *(*p. *403)* Sequence of bytes.

8.42.2 Member Data Documentation

8.42.2.1 value

```
final  ByteSeq value
```

a sequence of octets

[default] Empty (zero-sized)

Referenced by **WriteParams_t.copy_from()**, and **WriteParams_t.WriteParams_t()**.

8.43 CookieSeq Class Reference

Declares IDL `sequence` < **com.rti.dds.infrastructure.Cookie_t** (p. 699) > .

Inherits ArraySequence.

8.43.1 Detailed Description

Declares IDL `sequence` < **com.rti.dds.infrastructure.Cookie_t** (p. 699) > .

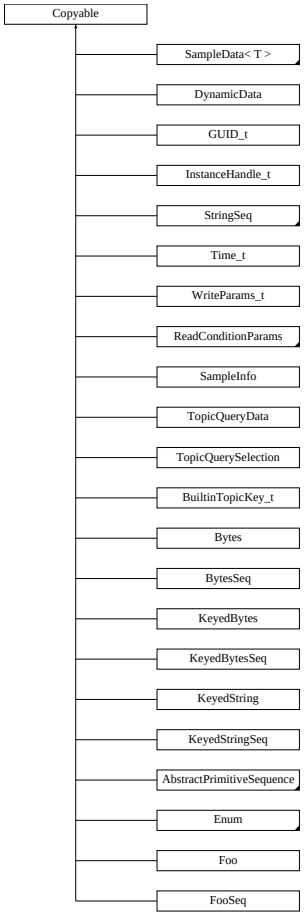
com.rti.dds.infrastructure.com.rti.dds.util.Sequence

8.44 Copyable Interface Reference

<<***extension***>> *(p. 403)* <<***interface***>> *(p. 403)* Interface for all the user-defined data type classes that support copy.

Inheritance diagram for Copyable:



Public Member Functions

- Object **copy_from** (Object src)

  Copy value of a data type from source.

8.44.1 Detailed Description

<<***extension***>> *(p. 403)* <<***interface***>> *(p. 403)* Interface for all the user-defined data type classes that support copy.

A class implements the **com.rti.dds.infrastructure.Copyable** (p. 700) interface to indicate that it allows its entire state to be replaced with the state of another object. This state copy is a deep copy, such that subsequent changes to any part of one object will not be observed in the other.

Therefore, in general, object references in this object cannot simply be reassigned to those in the source object. (Strings are an exception to this rule, because they are immutable.)

8.44.2 Member Function Documentation

8.44.2.1 copy_from()

```
Object copy_from (
             Object src )
```

Copy value of a data type from source.

Copy data into *this* object from another. This copy is intended to be a deep copy, so that all data members (recursively) are copied (not just resetting Object references).

This operation returns the object that is copied if copy is successful.

Parameters

src	<<***in***>> *(*p. *404)* The Object which contains the data to be copied.

Returns

Generally, return *this* but special cases (such as Enum) exist.

Exceptions

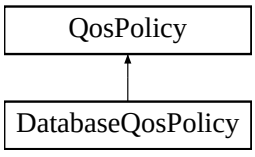
NullPointerException	If *src* is null.
ClassCastException	If *src* is not the same type as *this*.

Implemented in **SampleInfo** (p. 1948), **DynamicData** (p. 1148), **GUID_t** (p. 1425), **InstanceHandle_t** (p. 1445), **StringSeq** (p. 2029), **Time_t** (p. 2111), **WriteParams_t** (p. 2310), **QueryConditionParams** (p. 1815), **Read↩ ConditionParams** (p. 1820), **TopicQueryData** (p. 2140), **TopicQuerySelection** (p. 2146), **BuiltinTopicKey_↩ t** (p. 625), **Bytes** (p. 640), **BytesSeq** (p. 658), **KeyedBytes** (p. 1465), **KeyedBytesSeq** (p. 1488), **KeyedString** (p. 1496), **KeyedStringSeq** (p. 1517), **AbstractPrimitiveSequence** (p. 581), **Enum** (p. 1332), **Foo** (p. 1358), and **FooSeq** (p. 1409).

8.45 DatabaseQosPolicy Class Reference

<<***extension***>> *(*p. *138)* Various threads and resource limits settings used by RTI Connext to control its internal database.

Inheritance diagram for DatabaseQosPolicy:



Public Attributes

- final **ThreadSettings_t thread**

  *<<**extension**>> (p. 138) Database thread settings.*
- final **Duration_t shutdown_timeout**

  ***[DEPRECATED]** (p. **358**) <<**extension**>> (p. 138) The maximum wait time during a shutdown.*
- final **Duration_t cleanup_period**

  ***[DEPRECATED]** (p. **358**) <<**extension**>> (p. 138) The period at which the database thread wakes up to remove deleted records.*
- final **Duration_t shutdown_cleanup_period**

  ***[DEPRECATED]** (p. **358**) <<**extension**>> (p. 138) The clean-up period used during database shut-down.*
- int **initial_records**

  *<<**extension**>> (p. 138) The initial number of total records.*
- int **max_skiplist_level**

  ***[DEPRECATED]** (p. **358**) <<**extension**>> (p. 138) The maximum level of the skiplist.*
- int **initial_weak_references**

  *<<**extension**>> (p. 138) The initial number of weak references.*
- int **max_weak_references**

  *<<**extension**>> (p. 138) The maximum number of weak references.*

8.45.1 Detailed Description

*<<**extension**>> (p. 138)* Various threads and resource limits settings used by RTI Connext to control its internal database.

RTI uses an internal in-memory "database" to store information about entities created locally as well as remote entities found during the discovery process. This database uses a background thread to garbage-collect records related to deleted entities. When the **com.rti.dds.domain.DomainParticipant** (p. 948) that maintains this database is deleted, it shuts down this thread.

The Database QoS policy is used to configure how RTI Connext manages its database, including how often it cleans up, the priority of the database thread, and limits on resources that may be allocated by the database.

You may be interested in modifying the **com.rti.dds.infrastructure.DatabaseQosPolicy.shutdown_timeout** (p. 704) and **com.rti.dds.infrastructure.DatabaseQosPolicy.shutdown_cleanup_period** (p. 705) parameters to decrease the time it takes to delete a **com.rti.dds.domain.DomainParticipant** (p. 948) when your application is shutting down.

The **com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy** (p. 1081) controls the memory allocation for elements stored in the database.

This QoS policy is an extension to the DDS standard.

Entity:

com.rti.dds.domain.DomainParticipant (p. 948)

Properties:

RxO (p. 506) = N/A
Changeable (p. 507) **NO** (p. 507)

8.45.2 Member Data Documentation

8.45.2.1 thread

```
final ThreadSettings_t thread
```

<<***extension***>> *(p. 138)* Database thread settings.

There is only one database thread: the clean-up thread.

[default] Priority: LOW.
The actual value depends on your architecture:

For Windows: -3
For Linux: OS default priority
For a complete list of platform specific values, please refer to `Platform Notes`.

[default] Stack Size: The actual value depends on your architecture:

For Windows: OS default stack size
For Linux: OS default stack size
For a complete list of platform specific values, please refer to `Platform Notes`.

[default] Mask: **com.rti.dds.infrastructure.ThreadSettingsKind.THREAD_SETTINGS_STDIO** (p. 2106)

Categories

Immutable (p. 292), **Concurrency** (p. 195)

8.45.2.2 shutdown_timeout

```
final Duration_t shutdown_timeout
```

[DEPRECATED] (p. 358) <<***extension***>> *(p. 138)* The maximum wait time during a shutdown.

The domain participant will exit after the timeout, even if the database has not been fully cleaned up.

[default] 15 seconds

[range] [0,**com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133)]

Categories

Immutable (p. 292)

8.45.2.3 cleanup_period

```
final  Duration_t cleanup_period
```

[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* The period at which the database thread wakes up to remove deleted records.

[default] 61 seconds

[range] [0,1 year]

Categories

Immutable (p. 292)

8.45.2.4 shutdown_cleanup_period

```
final  Duration_t shutdown_cleanup_period
```

[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* The clean-up period used during database shut-down.

If you would like to shorten the time taken for a DomainParticipant to shutdown, you can decrease this value.

It is recommended to set this value to something other than 0 if running in an RTOS environment, to avoid CPU starvation.

[default] 10 milliseconds

[range] [0,1 year]

Categories

Immutable (p. 292)

8.45.2.5 initial_records

```
int initial_records
```

<<***extension***>> *(p. 138)* The initial number of total records.

[default] 1024

[range] [1,10 million]

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.45.2.6 max_skiplist_level

```
int max_skiplist_level
```

[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* The maximum level of the skiplist.

The skiplist is used to keep records in the database. Usually, the search time is log2(N), where N is the total number of records in one skiplist. However, once N exceeds 2^n, where n is the maximum skiplist level, the search time will become more and more linear. Therefore, the maximum level should be set such that 2^n is larger than the maximum(N among all skiplists). Usually, the maximum N is the maximum number of remote and local writers or readers.

[default] 7

[range] [1,31]

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.45.2.7 initial_weak_references

```
int initial_weak_references
```

<<***extension***>> *(p. 138)* The initial number of weak references.

See **com.rti.dds.infrastructure.DatabaseQosPolicy.max_weak_references** (p. 706) for more information about what a weak reference is.

If the QoS set contains an initial_weak_references value that is too small to ever grow to **com.rti.dds.infrastructure.↩ DatabaseQosPolicy.max_weak_references** (p. 706) using RTI Connext' internal algorithm, this value will be adjusted upwards as necessary. Subsequent accesses of this value will reveal the actual initial value used.

Changing the value of this field is an advanced feature; it is recommended that you consult with RTI support personnel before doing so.

[default] 2049, which is the minimum initial value imposed by RTI Connext when the maximum is unlimited. If a lower value is specified, it will simply be increased to 2049 automatically.

[range] [1, 100 million], <= max_weak_references

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.45.2.8 max_weak_references

```
int max_weak_references
```

<<***extension***>> *(*p. *138)* The maximum number of weak references.

A weak reference is an internal data structure that refers to a record within RTI Connext' internal database. This field configures the maximum number of such references that RTI Connext may create.

The actual number of weak references is permitted to grow from an initial value (indicated by **com.rti.dds.infrastructure.DatabaseQosPolicy.initial_weak_references** (p. 706)) to this maximum. To prevent RTI Connext from allocating any weak references after the system has reached a steady state, set the initial and maximum values equal to one another. To indicate that the number of weak references should continue to grow as needed indefinitely, set this field to **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511). Be aware that although a single weak reference occupies very little memory, allocating a very large number of them can have a significant impact on your overall memory usage.

Tuning this value precisely is difficult without intimate knowledge of the structure of RTI Connext' database; doing so is an advanced feature not required by most applications. The default value has been chosen to be sufficient for reasonably large systems. If you believe you may need to modify this value, please consult with RTI support personnel for assistance.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 100 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_weak_references

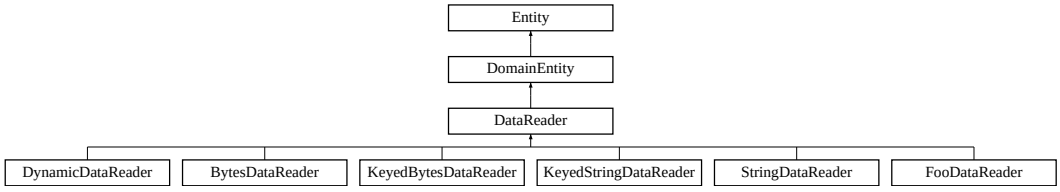
8.46 DataReader Interface Reference

<<***interface***>> *(*p. *403)* Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **com.rti.dds.subscription.Subscriber** (p. 2039).

Inheritance diagram for DataReader:



Public Member Functions

- **ReadCondition create_readcondition** (int sample_states, int view_states, int instance_states)

  *Creates a **com.rti.dds.subscription.ReadCondition*** (p. *1816).*
- **ReadCondition create_readcondition_w_params** (**ReadConditionParams** params)

  *<<**extension**>>* (p. *403) Creates a **com.rti.dds.subscription.ReadCondition*** (p. *1816) with parameters.*
- **QueryCondition create_querycondition** (int sample_states, int view_states, int instance_states, String query_expression, **StringSeq** query_parameters)

  *Creates a **com.rti.dds.subscription.QueryCondition*** (p. *1812).*
- **QueryCondition create_querycondition_w_params** (**QueryConditionParams** params)

  *<<**extension**>>* (p. *403) Creates a **com.rti.dds.subscription.QueryCondition*** (p. *1812) with parameters.*
- void **delete_readcondition** (**ReadCondition** condition)

  *Deletes a **com.rti.dds.subscription.ReadCondition*** (p. *1816) or **com.rti.dds.subscription.QueryCondition*** (p. *1812) attached to the **com.rti.dds.subscription.DataReader*** (p. *707).*
- void **set_qos** (**DataReaderQos** qos)

  Sets the reader QoS.
- void **set_qos_with_profile** (String library_name, String profile_name)

  *<<**extension**>>* (p. *403) Changes the QoS of this reader using the input XML QoS profile.*
- void **get_qos** (**DataReaderQos** qos)

  Gets the reader QoS.
- void **set_listener** (**DataReaderListener** l, int mask)

  Sets the reader listener.
- **DataReaderListener get_listener** ()

  Gets the reader listener.
- void **call_listenerT** (int mask)

  Calls the reader listener.
- void **get_sample_rejected_status** (**SampleRejectedStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS communication status.
- void **get_liveliness_changed_status** (**LivelinessChangedStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS communication status.
- void **get_requested_deadline_missed_status** (**RequestedDeadlineMissedStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS communication status.
- void **get_requested_incompatible_qos_status** (**RequestedIncompatibleQosStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS communication status.
- void **get_sample_lost_status** (**SampleLostStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS communication status.
- void **get_subscription_matched_status** (**SubscriptionMatchedStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS communication status.
- void **get_datareader_cache_status** (**DataReaderCacheStatus** status)

  *<<**extension**>>* (p. *403) Gets the datareader cache status for this reader.*
- void **get_datareader_protocol_status** (**DataReaderProtocolStatus** status)

  *<<**extension**>>* (p. *403) Gets the datareader protocol status for this reader.*
- void **get_matched_publication_datareader_protocol_status** (**DataReaderProtocolStatus** status, **InstanceHandle_t** publication_handle)

  *<<**extension**>>* (p. *403) Gets the datareader protocol status for this reader, per matched publication identified by the publication_handle.*

- void **get_matched_publications** (**InstanceHandleSeq** publication_handles)

  *Retrieves the list of publications currently "associated" with this **com.rti.dds.subscription.DataReader** (p. 707).*
- void **get_matched_publication_data** (**PublicationBuiltinTopicData** publication_data, **InstanceHandle_t** publication_handle)

  *Retrieves the information on a publication that is currently "associated" with the **com.rti.dds.subscription.DataReader** (p. 707).*
- boolean **is_matched_publication_alive** (**InstanceHandle_t** publication_handle)

  *Check if a publication currently matched with a **DataReader** (p. 707) is alive.*
- void **get_matched_publication_participant_data** (**ParticipantBuiltinTopicData** participant_data, **InstanceHandle_t** publication_handle)

  *<<**extension**>> (p. 403) Retrieves the information on the discovered **com.rti.dds.domain.DomainParticipant** (p. 948) associated with the publication that is currently matching with the **com.rti.dds.subscription.DataReader** (p. 707).*
- **TopicDescription get_topicdescription** ()

  *Returns the **com.rti.dds.topic.TopicDescription** (p. 2129) associated with the **com.rti.dds.subscription.DataReader** (p. 707).*
- **Subscriber get_subscriber** ()

  *Returns the **com.rti.dds.subscription.Subscriber** (p. 2039) to which the **com.rti.dds.subscription.DataReader** (p. 707) belongs.*
- void **delete_contained_entities** ()

  *Deletes all the entities that were created by means of the "create" operations on the **com.rti.dds.subscription.DataReader** (p. 707).*
- void **wait_for_historical_data** (**Duration_t** max_wait)

  *Waits until all "historical" data is received for **com.rti.dds.subscription.DataReader** (p. 707) entities that have a non-VOLATILE Durability Qos kind.*
- void **acknowledge_sample** (**SampleInfo** sample_info)

  *<<**extension**>> (p. 403) Acknowledges a single sample explicitly.*
- void **acknowledge_all** ()

  *<<**extension**>> (p. 403) Acknowledges all previously accessed samples.*
- void **acknowledge_sample** (**SampleInfo** sample_info, **AckResponseData_t** response_data)

  *<<**extension**>> (p. 403) Acknowledges a single sample explicitly.*
- void **acknowledge_all** (**AckResponseData_t** response_data)

  *<<**extension**>> (p. 403) Acknowledges all previously accessed samples.*
- **TopicQuery create_topic_query** (**TopicQuerySelection** selection)

  *Creates a **com.rti.dds.subscription.TopicQuery** (p. 2139).*
- void **delete_topic_query** (**TopicQuery** query)

  *Deletes a **com.rti.dds.subscription.TopicQuery** (p. 2139).*
- **TopicQuery lookup_topic_query** (**GUID_t** guid)

  *Retrieves an existing **com.rti.dds.subscription.TopicQuery** (p. 2139).*
- void **read_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, int sample_states, int view_states, int instance_states)

  Reads data samples, if any are available.
- void **take_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, int sample_states, int view_states, int instance_states)

  Takes data samples, if any are available.
- void **read_w_condition_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **ReadCondition** read_condition)

  Reads data samples, if any are available.
- void **take_w_condition_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **ReadCondition** read_condition)

Takes data samples, if any are available.

- void **read_next_sample_untyped** (Object received_data, **SampleInfo** sample_info)

  Reads data samples, if any are available.

- void **take_next_sample_untyped** (Object received_data, **SampleInfo** sample_info)

  Takes data samples, if any are available.

- void **read_instance_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, int sample_states, int view_states, int instance_states)

  Reads data samples, if any are available.

- void **take_instance_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, int sample_states, int view_states, int instance_states)

  Takes data samples, if any are available.

- void **read_instance_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, **GUID_t** topic_query_guid, int sample_states, int view_states, int instance_↩ states)

  Reads data samples, if any are available.

- void **take_instance_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, **GUID_t** topic_query_guid, int sample_states, int view_states, int instance_↩ states)

  Takes data samples, if any are available.

- void **read_instance_w_condition_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_↩ samples, **InstanceHandle_t** a_handle, **ReadCondition** read_condition)

  Reads data samples, if any are available.

- void **take_instance_w_condition_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_↩ samples, **InstanceHandle_t** a_handle, **ReadCondition** read_condition)

  Takes data samples, if any are available.

- void **read_next_instance_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, int sample_states, int view_states, int instance_states)

  Reads data samples, if any are available.

- void **take_next_instance_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, int sample_states, int view_states, int instance_states)

  Takes data samples, if any are available.

- void **read_next_instance_w_condition_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, **ReadCondition** read_condition)

  Reads data samples, if any are available.

- void **take_next_instance_w_condition_untyped** (List<?> received_data, **SampleInfoSeq** info_seq, int max_samples, **InstanceHandle_t** a_handle, **ReadCondition** read_condition)

  Takes data samples, if any are available.

- void **return_loan_untyped** (List<?> received_data, **SampleInfoSeq** info_seq)

  Returns loaned sample data and meta-data.

- void **get_key_value_untyped** (Object key_holder, **InstanceHandle_t** handle)

  Fills in the key fields of the given data sample.

- **InstanceHandle_t** **lookup_instance_untyped** (Object key_value)
- void **take_discovery_snapshot** ()

  Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

- void **take_discovery_snapshot** (String file_name)

  Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

Static Public Attributes

- static final **TopicQuerySelection TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER**

  *Special value for creating a **com.rti.dds.subscription.TopicQuery** (p. 2139) that applies the same filter as the **Data↩ Reader** (p. 707)'s **com.rti.dds.topic.ContentFilteredTopic** (p. 692).*
- static final **TopicQuerySelection TOPIC_QUERY_SELECTION_SELECT_ALL**

  *Special value for creating a **com.rti.dds.subscription.TopicQuery** (p. 2139) that selects all the samples in a **com.rti.↩ dds.publication.DataWriter** (p. 818) cache.*

8.46.1 Detailed Description

<<***interface***>> *(p. 403)* Allows the application to: (1) declare the data it wishes to receive (i.e. make a subscription) and (2) access the data received by the attached **com.rti.dds.subscription.Subscriber** (p. 2039).

QoS:

com.rti.dds.subscription.DataReaderQos (p. 777)

Status:

com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS;
com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS, **com.rti.dds.subscription.↩ LivelinessChangedStatus** (p. 1531);
com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS, **com.rti.dds.↩ subscription.RequestedDeadlineMissedStatus** (p. 1864);
com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS, **com.rti.dds.↩ subscription.RequestedIncompatibleQosStatus** (p. 1865);
com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS, **com.rti.dds.subscription.↩ SampleLostStatus** (p. 1958);
com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS, **com.rti.dds.subscription.↩ SampleRejectedStatus** (p. 1966);
com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS, **com.rti.dds.subscription.↩ SubscriptionMatchedStatus** (p. 2081);

Listener:

com.rti.dds.subscription.DataReaderListener (p. 757)

A **com.rti.dds.subscription.DataReader** (p. 707) refers to exactly one **com.rti.dds.topic.TopicDescription** (p. 2129) (either a **com.rti.dds.topic.Topic** (p. 2116), a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) or a **com.rti.dds.↩ topic.MultiTopic** (p. 1618)) that identifies the data to be read.

The subscription has a unique resulting type. The data-reader may give access to several instances of the resulting type, which can be distinguished from each other by their `key`.

com.rti.dds.subscription.DataReader (p. 707) is an abstract class. It must be specialised for each particular application data-type (see **USER_DATA** (p. 530)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **`com.rti.ndds.example.Foo`** (p. 1358) are specified in the generic type **com.rti.ndds.example.FooDataReader** (p. 1359).

The following operations may be called even if the **com.rti.dds.subscription.DataReader** (p. 707) is not enabled. Other operations will fail with the value **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902) if called on a disabled **com.rti.dds.subscription.DataReader** (p. 707):

- The base-class operations **com.rti.dds.subscription.DataReader.set_qos** (p. 715), **com.rti.dds.subscription.↩ DataReader.get_qos** (p. 716), **com.rti.dds.subscription.DataReader.set_listener** (p. 717), **com.rti.dds.↩ subscription.DataReader.get_listener** (p. 717), **com.rti.dds.infrastructure.Entity.enable** (p. 1323), **com.↩ rti.dds.infrastructure.Entity.get_statuscondition** (p. 1325), **com.rti.dds.infrastructure.Entity.get_status_↩ changes** (p. 1325),
- **com.rti.dds.subscription.DataReader.get_liveliness_changed_status** (p. 718), **com.rti.dds.subscription.↩ DataReader.get_requested_deadline_missed_status** (p. 719), **com.rti.dds.subscription.DataReader.get↩ _requested_incompatible_qos_status** (p. 719), **com.rti.dds.subscription.DataReader.get_sample_lost_↩ status** (p. 721), **com.rti.dds.subscription.DataReader.get_sample_rejected_status** (p. 718), **com.rti.dds.↩ subscription.DataReader.get_subscription_matched_status** (p. 721)

All sample-accessing operations, namely: **com.rti.ndds.example.FooDataReader.read** (p. 1361), **com.rti.ndds.↩ example.FooDataReader.take** (p. 1363), **com.rti.ndds.example.FooDataReader.read_w_condition** (p. 1368), and **com.rti.ndds.example.FooDataReader.take_w_condition** (p. 1369) may fail with the error **com.rti.dds.↩ infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903) as described in **com.rti.dds.subscription.↩ Subscriber.begin_access** (p. 2058).

Operations Allowed in Listener Callbacks (p. 1530)

Access to data samples (p. 80)

8.46.2 Member Function Documentation

8.46.2.1 create_readcondition()

```
ReadCondition create_readcondition (
            int sample_states,
            int view_states,
            int instance_states )
```

Creates a **com.rti.dds.subscription.ReadCondition** (p. 1816).

The returned **com.rti.dds.subscription.ReadCondition** (p. 1816) will be attached and belong to the **com.rti.dds.↩ subscription.DataReader** (p. 707).

Parameters

sample_states	<<***in***>> *(p. 404)* sample state of the data samples that are of interest
view_states	<<***in***>> *(p. 404)* view state of the data samples that are of interest
instance_states	<<***in***>> *(p. 404)* instance state of the data samples that are of interest

Returns

return **com.rti.dds.subscription.ReadCondition** (p. 1816) created. Returns NULL in case of failure.

8.46.2.2 create_readcondition_w_params()

```
ReadCondition create_readcondition_w_params (
            ReadConditionParams params )
```

<<***extension***>> *(p. 403)* Creates a **com.rti.dds.subscription.ReadCondition** (p. 1816) with parameters.

The returned **com.rti.dds.subscription.ReadCondition** (p. 1816) will be attached and belong to the **com.rti.dds.subscription.DataReader** (p. 707).

Parameters

params	<<***in***>> *(p. 404)* creation parameters.

Returns

return **com.rti.dds.subscription.ReadCondition** (p. 1816) created. Returns NULL in case of failure.

8.46.2.3 create_querycondition()

```
QueryCondition create_querycondition (
            int sample_states,
            int view_states,
            int instance_states,
            String query_expression,
             StringSeq query_parameters )
```

Creates a **com.rti.dds.subscription.QueryCondition** (p. 1812).

The returned **com.rti.dds.subscription.QueryCondition** (p. 1812) will be attached and belong to the **com.rti.dds.subscription.DataReader** (p. 707).

Queries and Filters Syntax (p. 108) describes the syntax of `query_expression` and `query_parameters`.

Parameters

sample_states	<<***in***>> *(p. 404)* sample state of the data samples that are of interest
view_states	<<***in***>> *(p. 404)* view state of the data samples that are of interest
instance_states	<<***in***>> *(p. 404)* instance state of the data samples that are of interest
query_expression	<<***in***>> *(p. 404)* Expression for the query. Cannot be NULL.
query_parameters	<<***in***>> *(p. 404)* Parameters for the query expression. Cannot be NULL.

Returns

return **com.rti.dds.subscription.QueryCondition** (p. 1812) created. Returns NULL in case of failure.

8.46.2.4 create_querycondition_w_params()

```
QueryCondition create_querycondition_w_params (
            QueryConditionParams params )
```

<<***extension***>> *(p. 403)* Creates a **com.rti.dds.subscription.QueryCondition** (p. 1812) with parameters.

The returned **com.rti.dds.subscription.QueryCondition** (p. 1812) will be attached and belong to the **com.rti.dds.subscription.DataReader** (p. 707).

Parameters

params	<<***in***>> *(p. 404)* creation parameters.

Returns

return **com.rti.dds.subscription.QueryCondition** (p. 1812) created. Returns NULL in case of failure.

8.46.2.5 delete_readcondition()

```
void delete_readcondition (
            ReadCondition condition )
```

Deletes a **com.rti.dds.subscription.ReadCondition** (p. 1816) or **com.rti.dds.subscription.QueryCondition** (p. 1812) attached to the **com.rti.dds.subscription.DataReader** (p. 707).

Since **com.rti.dds.subscription.QueryCondition** (p. 1812) specializes **com.rti.dds.subscription.ReadCondition** (p. 1816), it can also be used to delete a **com.rti.dds.subscription.QueryCondition** (p. 1812).

Precondition

The **com.rti.dds.subscription.ReadCondition** (p. 1816) must be attached to the **com.rti.dds.subscription.DataReader** (p. 707), or the operation will fail with the error **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Parameters

condition	<<***in***>> *(p. 404)* Condition to be deleted.

Exceptions

One	of the **Standard Return Codes** (p. 513), or **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903)

8.46.2.6 set_qos()

```
void set_qos (
              DataReaderQos qos )
```

Sets the reader QoS.

Modifies the QoS of the **com.rti.dds.subscription.DataReader** (p. 707).

The **com.rti.dds.subscription.DataReaderQos.user_data** (p. 783), **com.rti.dds.subscription.DataReaderQos.deadline** (p. 782), **com.rti.dds.subscription.DataReaderQos.latency_budget** (p. 782), **com.rti.dds.subscription.DataReaderQos.time_based_filter** (p. 783), **com.rti.dds.subscription.DataReaderQos.reader_data_lifecycle** (p. 784) can be changed. The other policies are immutable.

Parameters

qos	<<***in***>> *(p. 404)* The **com.rti.dds.subscription.DataReaderQos** (p. 777) to be set to. Policies must be consistent. Immutable policies cannot be changed after **com.rti.dds.subscription.DataReader** (p. 707) is enabled. The special value **com.rti.dds.subscription.Subscriber.DATAREADER_QOS_DEFAULT** (p. 82) can be used to indicate that the QoS of the **com.rti.dds.subscription.DataReader** (p. 707) should be changed to match the current default **com.rti.dds.subscription.DataReaderQos** (p. 777) set in the **com.rti.dds.subscription.Subscriber** (p. 2039). Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_IMMUTABLE_POLICY** (p. 1901), or **com.rti.dds.infrastructure.RETCODE_INCONSISTENT_POLICY** (p. 1901).

set_qos (abstract) (p. 1321)

com.rti.dds.subscription.DataReader.set_qos (p. 715)

Operations Allowed in Listener Callbacks (p. 1530)

8.46.2.7 set_qos_with_profile()

```
void set_qos_with_profile (
            String library_name,
            String profile_name )
```

<<***extension***>> *(p. 403)* Changes the QoS of this reader using the input XML QoS profile.

This operation modifies the QoS of the **com.rti.dds.subscription.DataReader** (p. 707).

The **com.rti.dds.subscription.DataReaderQos.user_data** (p. 783), **com.rti.dds.subscription.DataReaderQos.↩ deadline** (p. 782), **com.rti.dds.subscription.DataReaderQos.latency_budget** (p. 782), **com.rti.dds.subscription.↩ DataReaderQos.time_based_filter** (p. 783), **com.rti.dds.subscription.DataReaderQos.reader_data_lifecycle** (p. 784) can be changed. The other policies are immutable.

Parameters

library_name	<<***in***>> *(p. 404)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **com.rti.dds.subscription.Subscriber.set_default_library** (p. 2055)).
profile_name	<<***in***>> *(p. 404)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **com.rti.dds.subscription.Subscriber.set_default_profile** (p. 2056)).

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_IMMUTABLE_POLICY** (p. 1901), or **com.rti.dds.infrastructure.RETCODE_INCONSISTENT_POLICY** (p. 1901).

See also

com.rti.dds.subscription.DataReaderQos (p. 777) for rules on consistency among QoS

com.rti.dds.subscription.DataReader.set_qos (p. 715)

Operations Allowed in Listener Callbacks (p. 1530)

8.46.2.8 get_qos()

```
void get_qos (
             DataReaderQos qos )
```

Gets the reader QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

qos	<<***inout***>> *(*p. *404)* The **com.rti.dds.subscription.DataReaderQos** (p. 777) to be filled up. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

See also

get_qos (abstract) (p. 1322)

8.46.2.9 set_listener()

```
void set_listener (
              DataReaderListener l,
             int mask )
```

Sets the reader listener.

Parameters

l	<<***in***>> *(*p. *404)* **com.rti.dds.subscription.DataReaderListener** (p. 757) to set to
mask	<<***in***>> *(*p. *404)* com.rti.dds.infrastructure.StatusMask associated with the **com.rti.dds.subscription.DataReaderListener** (p. 757).

Exceptions

One	of the **Standard Return Codes** (p. 513)

See also

set_listener (abstract) (p. 1322)

8.46.2.10 get_listener()

```
DataReaderListener get_listener ( )
```

Gets the reader listener.

Returns

com.rti.dds.subscription.DataReaderListener (p. 757) of the **com.rti.dds.subscription.DataReader** (p. 707).

See also

get_listener (abstract) (p. 1323)

8.46.2.11 call_listenerT()

```
void call_listenerT (
             int mask )
```

Calls the reader listener.

See also

get_listener (abstract) (p. 1323)

8.46.2.12 get_sample_rejected_status()

```
void get_sample_rejected_status (
              SampleRejectedStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.SampleRejectedStatus** (p. 1966) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.13 get_liveliness_changed_status()

```
void get_liveliness_changed_status (
```

```
            LivelinessChangedStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.LivelinessChangedStatus** (p. 1531) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.14 get_requested_deadline_missed_status()

```
void get_requested_deadline_missed_status (
            RequestedDeadlineMissedStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.RequestedDeadlineMissedStatus** (p. 1864) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.15 get_requested_incompatible_qos_status()

```
void get_requested_incompatible_qos_status (
            RequestedIncompatibleQosStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.RequestedIncompatibleQosStatus** (p. 1865) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.16 get_sample_lost_status()

```
void get_sample_lost_status (
              SampleLostStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.SampleLostStatus** (p. 1958) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.17 get_subscription_matched_status()

```
void get_subscription_matched_status (
              SubscriptionMatchedStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS communication status.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.SubscriptionMatchedStatus** (p. 2081) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.18 get_datareader_cache_status()

```
void get_datareader_cache_status (
            DataReaderCacheStatus status )
```

<<***extension***>> *(p. 403)* Gets the datareader cache status for this reader.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.DataReaderCacheStatus** (p. 748) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.46.2.19 get_datareader_protocol_status()

```
void get_datareader_protocol_status (
            DataReaderProtocolStatus status )
```

<<***extension***>> *(p. 403)* Gets the datareader protocol status for this reader.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.subscription.DataReaderProtocolStatus** (p. 765) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.46.2.20 get_matched_publication_datareader_protocol_status()

```
void get_matched_publication_datareader_protocol_status (
              DataReaderProtocolStatus status,
              InstanceHandle_t publication_handle )
```

*<<**extension**>> (p. 403)* Gets the datareader protocol status for this reader, per matched publication identified by the publication_handle.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

Parameters

status	*<<**inout**>> (p. 404)*. The information to be filled in on the associated publication. Cannot be NULL.
publication_handle	*<<**in**>> (p. 404)*. Handle to a specific publication associated with the **com.rti.dds.publication.DataWriter** (p. 818). Cannot be NULL. . Must correspond to a publication currently associated with the **com.rti.dds.subscription.DataReader** (p. 707).

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

8.46.2.21 get_matched_publications()

```
void get_matched_publications (
              InstanceHandleSeq publication_handles )
```

Retrieves the list of publications currently "associated" with this **com.rti.dds.subscription.DataReader** (p. 707).

A publication is considered to be matching if all of the following criteria are true:

- The publication is within the same domain as this subscription.
- The publication has a matching **com.rti.dds.topic.Topic** (p. 2116).
- The publication has compatible QoS.
- If the applications are using partitions, the publication shares a common partition with this subscription.
- The **com.rti.dds.domain.DomainParticipant** (p. 948) has not indicated that the publication's **com.rti.dds.domain.DomainParticipant** (p. 948) should be "ignored" by means of the **com.rti.dds.domain.DomainParticipant.ignore_publication** (p. 1003) API.

- If the subscription is using a **com.rti.dds.topic.ContentFilteredTopic** (p. 692) and the publication is using the **com.rti.dds.infrastructure.MultiChannelQosPolicy** (p. 1616), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the reader has completed the key exchange with the writer.

The handles returned in the `publication_handles` list are the ones that are used by the RTI Connext implementation to locally identify the corresponding matched **com.rti.dds.publication.DataWriter** (p. 818) entities. These handles match the ones that appear in the `instance_handle` field of the **com.rti.dds.subscription.SampleInfo** (p. 1944) when reading the **com.rti.dds.publication.builtin.PublicationBuiltinTopicDataTypeSupport.PUBLICATION_↩ TOPIC_NAME** (p. 411) builtin topic.

This API may return the publication handles of publications that are not alive. **com.rti.dds.subscription.DataReader.↩ is_matched_publication_alive** (p. 726) can be used to check the liveliness of the remote publication.

Parameters

publication_handles	*<<**inout**>> (p. 404).* The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this method will fail with **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903). The maximum number of matches possible is configured with **com.rti.dds.infrastructure.DomainParticipantResourceLimitsQosPolicy** (p. 1081). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513), or **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903) if the sequence is too small and the system cannot resize it, or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

8.46.2.22 get_matched_publication_data()

```
void get_matched_publication_data (
               PublicationBuiltinTopicData publication_data,
               InstanceHandle_t publication_handle )
```

Retrieves the information on a publication that is currently "associated" with the **com.rti.dds.subscription.DataReader** (p. 707).

The `publication_handle` must correspond to a publication currently associated with the **com.rti.dds.↩ subscription.DataReader** (p. 707). Otherwise, the operation will fail with **com.rti.dds.infrastructure.RETCODE_↩ BAD_PARAMETER** (p. 1899). Use the operation **com.rti.dds.subscription.DataReader.get_matched_publications** (p. 723) to find the publications that are currently matched with the **com.rti.dds.subscription.DataReader** (p. 707).

Note: This operation does not retrieve the **builtin.PublicationBuiltinTopicData.type_code** (p. 1759). This information is available through **com.rti.dds.subscription.DataReaderListener::on_data_available()** (p. 760) (if a reader listener is installed on the builtin.PublicationBuiltinTopicDataDataReader).

Parameters

publication_data	*<<**inout**>> (p. 404).* The information to be filled in on the associated publication. Cannot be NULL.
publication_handle	*<<**in**>> (p. 404).* Handle to a specific publication associated with the **com.rti.dds.publication.DataWriter** (p. 818). Must correspond to a publication currently associated with the **com.rti.dds.subscription.DataReader** (p. 707). Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

8.46.2.23 is_matched_publication_alive()

```
boolean is_matched_publication_alive (
              InstanceHandle_t publication_handle )
```

Check if a publication currently matched with a **DataReader** (p. 707) is alive.

This API is used for querying the endpoint liveliness of a matched publication. A matched publication will be marked as not alive if the liveliness that it committed to through its **LIVELINESS** (p. 489) QoS policy was not respected. Note that if the participant associated with the matched publication loses liveliness, the **com.rti.dds.infrastructure.InstanceHandle_t** (p. 1443) will become invalid and this function will fail with **com.rti.dds.infrastructure.RETCODE_BAD_PARAMETER** (p. 1899).

Parameters

publication_handle	*<<**in**>> (p. 404)* The **com.rti.dds.infrastructure.InstanceHandle_t** (p. 1443) of the matched publication. See **com.rti.dds.subscription.DataReader.get_matched_publications** (p. 723) for a description of what is considered a matched publication.

Returns

A boolean indicating whether or not the matched publication is active.

8.46.2.24 get_matched_publication_participant_data()

```
void get_matched_publication_participant_data (
              ParticipantBuiltinTopicData participant_data,
              InstanceHandle_t publication_handle )
```

<<***extension***>> *(p. 403)* Retrieves the information on the discovered **com.rti.dds.domain.DomainParticipant** (p. 948) associated with the publication that is currently matching with the **com.rti.dds.subscription.DataReader** (p. 707).

The `publication_handle` must correspond to a publication currently associated with the **com.rti.dds.↩ subscription.DataReader** (p. 707). Otherwise, the operation will fail with **com.rti.dds.infrastructure.RETCODE↩ _BAD_PARAMETER** (p. 1899). The operation may also fail with **com.rti.dds.infrastructure.RETCODE_↩ PRECONDITION_NOT_MET** (p. 1903) if the publication corresponds to the same **com.rti.dds.domain.Domain↩ Participant** (p. 948) that the **DataReader** (p. 707) belongs to. Use the operation **com.rti.dds.subscription.Data↩ Reader.get_matched_publications** (p. 723) to find the publications that are currently matched with the **com.rti.dds.↩ subscription.DataReader** (p. 707).

Parameters

participant_data	<<***inout***>> *(p. 404)*. The information to be filled in on the associated participant. Cannot be NULL.
publication_handle	<<***in***>> *(p. 404)*. Handle to a specific publication associated with a **com.rti.dds.publication.DataWriter** (p. 818). Must correspond to a publication currently associated with the **com.rti.dds.subscription.DataReader** (p. 707). Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

8.46.2.25 get_topicdescription()

```
TopicDescription get_topicdescription ( )
```

Returns the **com.rti.dds.topic.TopicDescription** (p. 2129) associated with the **com.rti.dds.subscription.DataReader** (p. 707).

Returns that same **com.rti.dds.topic.TopicDescription** (p. 2129) that was used to create the **com.rti.dds.↩ subscription.DataReader** (p. 707).

Returns

com.rti.dds.topic.TopicDescription (p. 2129) associated with the **com.rti.dds.subscription.DataReader** (p. 707).

8.46.2.26 get_subscriber()

```
Subscriber get_subscriber ( )
```

Returns the **com.rti.dds.subscription.Subscriber** (p. 2039) to which the **com.rti.dds.subscription.DataReader** (p. 707) belongs.

Returns

com.rti.dds.subscription.Subscriber (p. 2039) to which the **com.rti.dds.subscription.DataReader** (p. 707) belongs.

8.46.2.27 delete_contained_entities()

```
void delete_contained_entities ( )
```

Deletes all the entities that were created by means of the "create" operations on the **com.rti.dds.subscription.DataReader** (p. 707).

Deletes all contained **com.rti.dds.subscription.ReadCondition** (p. 1816), **com.rti.dds.subscription.QueryCondition** (p. 1812), and **com.rti.dds.subscription.TopicQuery** (p. 2139) objects.

The operation will fail with **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903) if the any of the contained entities is in a state where it cannot be deleted.

Once **com.rti.dds.subscription.DataReader.delete_contained_entities** (p. 728) completes successfully, the application may delete the **com.rti.dds.subscription.DataReader** (p. 707).

MT Safety:

UNSAFE. It is not safe to delete an entity while another thread may be simultaneously calling an API that uses the entity.

Exceptions

One	of the **Standard Return Codes** (p. 513), or **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903)

8.46.2.28 wait_for_historical_data()

```
void wait_for_historical_data (
             Duration_t max_wait )
```

Waits until all "historical" data is received for **com.rti.dds.subscription.DataReader** (p. 707) entities that have a non-↩ VOLATILE Durability Qos kind.

This operation is intended only for **com.rti.dds.subscription.DataReader** (p. 707) entities that have a non-VOLATILE Durability QoS kind.

As soon as an application enables a non-VOLATILE **com.rti.dds.subscription.DataReader** (p. 707), it will start receiving both "historical" data (i.e., the data that was written prior to the time the **com.rti.dds.subscription.DataReader** (p. 707) joined the domain) as well as any new data written by the **com.rti.dds.publication.DataWriter** (p. 818) entities. There are situations where the application logic may require the application to wait until all "historical" data is received. This is the purpose of the **com.rti.dds.subscription.DataReader.wait_for_historical_data** (p. 728) operations.

com.rti.dds.subscription.DataReader.wait_for_historical_data() (p. 728) blocks the calling thread until either all "historical" data is received, or until the duration specified by the max_wait parameter elapses, whichever happens first. It will return immediately if no DataWriters have been discovered at the time the operation is called; therefore it is advisable to make sure at least one **com.rti.dds.publication.DataWriter** (p. 818) has been discovered before calling this operation. (One way to do this is by using **com.rti.dds.subscription.DataReader.get_subscription_matched_status** (p. 721).)

A successful completion indicates that all the "historical" data was "received"; timing out indicates that max_wait elapsed before all the data was received.

Parameters

max_wait	*<<**in**>> (p. 404)* Timeout value. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_TIMEOUT** (p. 1904) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.46.2.29 acknowledge_sample() [1/2]

```
void acknowledge_sample (
            SampleInfo sample_info )
```

*<<**extension**>> (p. 403)* Acknowledges a single sample explicitly.

Applicable only when **com.rti.dds.infrastructure.ReliabilityQosPolicy.acknowledgment_kind** (p. 1832) = **com.rti.↩ dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_EXPLICIT_ACKNOWLEDGMENT↩ _MODE** (p. 1835)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the **Data↩ Reader** (p. 707) to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **com.rti.dds.infrastructure.RtpsReliableReaderProtocol_t.samples_per_app_ack** (p. 1910) and **com.rti.↩ dds.infrastructure.RtpsReliableReaderProtocol_t.app_ack_period** (p. 1909).

Parameters

sample_info	<<***in***>> *(p. 404)* **com.rti.dds.subscription.SampleInfo** (p. 1944) identifying the sample being acknowledged.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.30 acknowledge_all() [1/2]

```
void acknowledge_all ( )
```

<<***extension***>> *(p. 403)* Acknowledges all previously accessed samples.

Applicable only when **com.rti.dds.infrastructure.ReliabilityQosPolicy.acknowledgment_kind** (p. 1832) = **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1835)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the **DataReader** (p. 707) to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **com.rti.dds.infrastructure.RtpsReliableReaderProtocol_t.samples_per_app_ack** (p. 1910) and **com.rti.dds.infrastructure.RtpsReliableReaderProtocol_t.app_ack_period** (p. 1909).

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.31 acknowledge_sample() [2/2]

```
void acknowledge_sample (
            SampleInfo sample_info,
            AckResponseData_t response_data )
```

<<***extension***>> *(p. 403)* Acknowledges a single sample explicitly.

Applicable only when **com.rti.dds.infrastructure.ReliabilityQosPolicy.acknowledgment_kind** (p. 1832) = **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1835)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the **DataReader** (p. 707) to the DataWriter. How and when AppAck messages are sent can be configured using the QoS

values **com.rti.dds.infrastructure.RtpsReliableReaderProtocol_t.samples_per_app_ack** (p. 1910) and **com.rti.↩ dds.infrastructure.RtpsReliableReaderProtocol_t.app_ack_period** (p. 1909).

The maximum length of the response is configured using **com.rti.dds.infrastructure.DataReaderResourceLimits↩ QosPolicy.max_app_ack_response_length** (p. 803)

Parameters

sample_info	<<***in***>> *(*p. *404)* **com.rti.dds.subscription.SampleInfo** (p. 1944) identifying the sample being acknowledged.
response_data	<<***in***>> *(*p. *404)* Response data sent to **com.rti.dds.publication.DataWriter** (p. 818) upon acknowledgment (via **com.rti.dds.publication.DataWriterListener.on_application_acknowledgment** (p. 859))

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.32 acknowledge_all() [2/2]

```
void acknowledge_all (
            AckResponseData_t response_data )
```

<<***extension***>> *(*p. *403)* Acknowledges all previously accessed samples.

Applicable only when **com.rti.dds.infrastructure.ReliabilityQosPolicy.acknowledgment_kind** (p. 1832) = **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1835)

A call to this method does not necessarily trigger the sending of an AppAck RTPS message from the **DataReader** (p. 707) to the DataWriter. How and when AppAck messages are sent can be configured using the QoS values **com.rti.dds.infrastructure.RtpsReliableReaderProtocol_t.samples_per_app_ack** (p. 1910) and **com.rti.dds.infrastructure.RtpsReliableReaderProtocol_t.app_ack_period** (p. 1909).

The maximum length of the response is configured using **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.max_app_ack_response_length** (p. 803).

Parameters

response_data	<<***in***>> *(*p. *404)* Response data sent to **com.rti.dds.publication.DataWriter** (p. 818) upon acknowledgment

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.33 create_topic_query()

```
TopicQuery create_topic_query (
            TopicQuerySelection selection )
```

Creates a **com.rti.dds.subscription.TopicQuery** (p. 2139).

The returned **com.rti.dds.subscription.TopicQuery** (p. 2139) will have been issued if the **com.rti.dds.subscription.DataReader** (p. 707) is enabled. Otherwise, the **com.rti.dds.subscription.TopicQuery** (p. 2139) will be issued once the **com.rti.dds.subscription.DataReader** (p. 707) is enabled

Parameters

selection	*<<**in**>> (p. 404)* The selection with which to create the **com.rti.dds.subscription.TopicQuery** (p. 2139). The special values **com.rti.dds.subscription.DataReader.TOPIC_QUERY_SELECTION_SELECT_ALL** (p. 90) and **com.rti.dds.subscription.DataReader.TOPIC_QUERY_SELECTION_USE_READER_CONTENT_FILTER** (p. 90) can be used. The expression can start with the special condition "@instance_state = ALIVE AND" followed by the rest of the expression. This restricts the selection to samples of alive instances. Cannot be NULL.

Returns

return Created **com.rti.dds.subscription.TopicQuery** (p. 2139). Returns NULL in case of failure.

8.46.2.34 delete_topic_query()

```
void delete_topic_query (
            TopicQuery query )
```

Deletes a **com.rti.dds.subscription.TopicQuery** (p. 2139).

Cancels an active **com.rti.dds.subscription.TopicQuery** (p. 2139). After deleting a **TopicQuery** (p. 2139), new DataWriters won't discover it and existing DataWriters currently publishing cached samples may stop before delivering all of them.

Parameters

query	*<<**in**>> (p. 404)* The **com.rti.dds.subscription.TopicQuery** (p. 2139) to delete. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.46.2.35 lookup_topic_query()

```
TopicQuery lookup_topic_query (
            GUID_t guid )
```

Retrieves an existing **com.rti.dds.subscription.TopicQuery** (p. 2139).

Retrieves the **com.rti.dds.subscription.TopicQuery** (p. 2139) that corresponds to the input **com.rti.dds.infrastructure.GUID_t** (p. 1423).

If no **TopicQuery** (p. 2139) is found for the specified GUID or the **TopicQuery** (p. 2139) is marked for deletion, this returns NULL.

To get the **com.rti.dds.infrastructure.GUID_t** (p. 1423) associated with a **com.rti.dds.subscription.TopicQuery** (p. 2139), use the method **com.rti.dds.subscription.TopicQuery.get_guid** (p. 2139).

Parameters

guid	*<<**in**>> (p. 404)* The **com.rti.dds.subscription.TopicQuery** (p. 2139) GUID. Cannot be NULL.

8.46.2.36 read_untyped()

```
void read_untyped (
            List<?> received_data,
             SampleInfoSeq info_seq,
            int max_samples,
            int sample_states,
            int view_states,
            int instance_states )
```

Reads data samples, if any are available.

This method allows type-independent code to work with a variety of concrete **com.rti.ndds.example.FooDataReader** (p. 1359) classes in a consistent way.

Statically type-safe code should use the appropriate **com.rti.ndds.example.FooDataReader.read** (p. 1361) method instead of this one. See that method for detailed documentation.

8.46.2.37 take_untyped()

```
void take_untyped (
            List<?> received_data,
             SampleInfoSeq info_seq,
            int max_samples,
            int sample_states,
            int view_states,
            int instance_states )
```

Takes data samples, if any are available.

This method allows type-independent code to work with a variety of concrete **com.rti.ndds.example.FooDataReader** (p. 1359) classes in a consistent way.

Statically type-safe code should use the appropriate **com.rti.ndds.example.FooDataReader.take** (p. 1363) method instead of this one. See that method for detailed documentation.

8.46.2.55 take_discovery_snapshot() [1/2]

```
void take_discovery_snapshot ( )
```

Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

The snapshot will be printed through the **com.rti.ndds.config.Logger** (p. 1560). A possible output may be the following:

```
Remote writers that match the local reader domain=0 name="readerTestName"

guid="0x0101542A,0x2C59B595,0xA1693BDF:0x80000004"

topic="FooTopic" type="FooType"

------------------------------------------------------------------------

Compatible writers:

1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003 name="writer1TestName"

kind="unkeyed user datareader"
```

```
unicastLocators="udpv4://192.168.1.170:7411"

liveliness="ALIVE"

Incompatible writers:

1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000103 name="writer2TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

reason="Inconsistent QoS"

---------------------------------------------------------------------------
```

Exceptions

One	of the **Standard Return Codes** (p. 513).

8.46.2.56 take_discovery_snapshot() [2/2]

```
void take_discovery_snapshot (
            String file_name )
```

Take a snapshot of the compatible and incompatible remote writers matched by a local reader.

The snapshot will be printed in the file specified by file_name. A possible output may be the following:

```
Remote writers that match the local reader domain=0 name="readerTestName"

guid="0x0101542A,0x2C59B595,0xA1693BDF:0x80000004"

topic="FooTopic" type="FooType"

---------------------------------------------------------------------------

Compatible writers:

1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003 name="writer1TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

liveliness="ALIVE"

Incompatible writers:

1. 0x0101D8D1,0x20B83C0D,0x4495246E:0x80000103 name="writer2TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

reason="Inconsistent QoS"

---------------------------------------------------------------------------
```

Parameters

file_name	<<***in***>> *(p. 404)* Name of the file where snapshot should be printed.

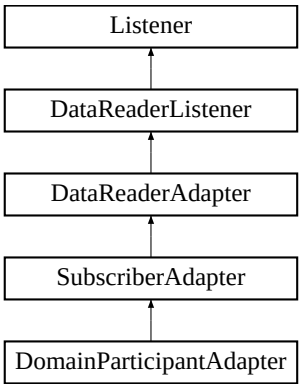
Exceptions

One	of the **Standard Return Codes** (p. 513).

8.47 DataReaderAdapter Class Reference

*<<**extension**>> (p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)

Inheritance diagram for DataReaderAdapter:



Public Member Functions

- void **on_requested_deadline_missed** (**DataReader** reader, **RequestedDeadlineMissedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS communication status.
- void **on_requested_incompatible_qos** (**DataReader** reader, **RequestedIncompatibleQosStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS communication status.
- void **on_sample_rejected** (**DataReader** reader, **SampleRejectedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS communication status.
- void **on_liveliness_changed** (**DataReader** reader, **LivelinessChangedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS communication status.
- void **on_data_available** (**DataReader** reader)

  Handle the com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS communication status.
- void **on_sample_lost** (**DataReader** reader, **SampleLostStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS communication status.
- void **on_subscription_matched** (**DataReader** reader, **SubscriptionMatchedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS communication status.

8.47.1 Detailed Description

<<***extension***>> *(p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods)

Clients who do not wish to implement all listener methods can subclass this class and override only the methods of interest.

8.47.2 Member Function Documentation

8.47.2.1 on_requested_deadline_missed()

```
void on_requested_deadline_missed (
              DataReader reader,
              RequestedDeadlineMissedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS communication status.

Implements **DataReaderListener** (p. 759).

8.47.2.2 on_requested_incompatible_qos()

```
void on_requested_incompatible_qos (
              DataReader reader,
              RequestedIncompatibleQosStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS communication status.

Implements **DataReaderListener** (p. 759).

8.47.2.3 on_sample_rejected()

```
void on_sample_rejected (
              DataReader reader,
              SampleRejectedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS communication status.

Implements **DataReaderListener** (p. 759).

8.47.2.4 on_liveliness_changed()

```
void on_liveliness_changed (
              DataReader reader,
              LivelinessChangedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS communication status.

Implements **DataReaderListener** (p. 759).

8.47.2.5 on_data_available()

```
void on_data_available (
              DataReader reader )
```

Handle the com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS communication status.

Implements **DataReaderListener** (p. 760).

8.47.2.6 on_sample_lost()

```
void on_sample_lost (
              DataReader reader,
              SampleLostStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS communication status.

Implements **DataReaderListener** (p. 760).

8.47.2.7 on_subscription_matched()

```
void on_subscription_matched (
              DataReader reader,
              SubscriptionMatchedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS communication status.

Implements **DataReaderListener** (p. 760).

8.48 DataReaderCacheStatus Class Reference

<<***extension***>> *(*p. *403)* The status of the reader's cache.

Inherits Status.

Public Attributes

- long **sample_count_peak**

  The highest number of samples in the reader's queue over the lifetime of the reader.
- long **sample_count**

  The number of samples in the reader's queue.
- long **old_source_timestamp_dropped_sample_count**

  The number of samples dropped as a result of receiving a sample older than the last one, using com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS.
- long **tolerance_source_timestamp_dropped_sample_count**

  The number of samples dropped as a result of receiving a sample in the future, using com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS.
- long **ownership_dropped_sample_count**

  The number of samples dropped as a result of receiving a sample from a DataWriter with a lower strength, using Exclusive Ownership.
- long **content_filter_dropped_sample_count**

  The number of user samples filtered by the ***DataReader*** *(*p. *707) due to Content-Filtered Topics.*
- long **time_based_filter_dropped_sample_count**

  The number of user samples filtered by the ***DataReader*** *(*p. *707) due to* ***com.rti.dds.infrastructure.TimeBasedFilterQosPolicy*** *(*p. *2113).*
- long **expired_dropped_sample_count**

  The number of samples expired by the ***DataReader*** *(*p. *707) due to* ***com.rti.dds.infrastructure.LifespanQosPolicy*** *(*p. *1526) or the autopurge sample delays.*
- long **virtual_duplicate_dropped_sample_count**

  The number of virtual duplicate samples dropped by the ***DataReader*** *(*p. *707). A sample is a virtual duplicate if it has the same identity (Virtual Writer GUID and Virtual Sequence Number) as a previously received sample.*
- long **replaced_dropped_sample_count**

  The number of samples replaced by the ***DataReader*** *(*p. *707) due to com.rti.dds.infrastructure.HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_QOS replacement.*
- long **writer_removed_batch_sample_dropped_sample_count**

  The number of batch samples received by the ***DataReader*** *(*p. *707) that were marked as removed by the DataWriter.*
- long **total_samples_dropped_by_instance_replacement**

  The number of samples with sample state com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ_SAMPLE_STATE that were dropped when removing an instance due to instance replacement. See ***com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.instance_replacement*** *(*p. *805) for more details about when instances are replaced.*
- long **alive_instance_count**

  The number of instances in the ***DataReader*** *(*p. *707)'s queue with an instance state equal to* ***com.rti.dds.subscription.InstanceStateKind.ALIVE_INSTANCE_STATE*** *(*p. *1452).*
- long **alive_instance_count_peak**

The highest value of ***com.rti.dds.subscription.DataReaderCacheStatus.alive_instance_count*** *(*p. *752) over the lifetime of the* ***DataReader*** *(*p. *707).*

- long **no_writers_instance_count**

  The number of instances in the ***DataReader*** *(*p. *707)'s queue with an instance state equal to* ***com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_NO_WRITERS_INSTANCE_STATE*** *(*p. *1452).*

- long **no_writers_instance_count_peak**

  The highest value of ***com.rti.dds.subscription.DataReaderCacheStatus.no_writers_instance_count*** *(*p. *753) over the lifetime of the* ***DataReader*** *(*p. *707).*

- long **disposed_instance_count**

  The number of instances in the ***DataReader*** *(*p. *707)'s queue with an instance state equal to* ***com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE*** *(*p. *1452).*

- long **disposed_instance_count_peak**

  The highest value of ***com.rti.dds.subscription.DataReaderCacheStatus.disposed_instance_count*** *(*p. *753) over the lifetime of the* ***DataReader*** *(*p. *707).*

- long **detached_instance_count**

  The number of minimal instance states currently being maintained in the ***DataReader*** *(*p. *707)'s queue.*

- long **detached_instance_count_peak**

  The highest value of ***com.rti.dds.subscription.DataReaderCacheStatus.detached_instance_count*** *(*p. *754) over the lifetime of the* ***DataReader*** *(*p. *707).*

- long **compressed_sample_count**

  The number of received samples compressed by a DataWriter.

8.48.1 Detailed Description

<<***extension***>> *(*p. *403)* The status of the reader's cache.

Entity:

com.rti.dds.subscription.DataReader (p. 707)

8.48.2 Member Data Documentation

8.48.2.1 sample_count_peak

```
long sample_count_peak
```

The highest number of samples in the reader's queue over the lifetime of the reader.

8.48.2.2 sample_count

```
long sample_count
```

The number of samples in the reader's queue.

includes samples that may not yet be available to be read or taken by the user, due to samples being received out of order or **PRESENTATION** (p. 497)

8.48.2.3 old_source_timestamp_dropped_sample_count

```
long old_source_timestamp_dropped_sample_count
```

The number of samples dropped as a result of receiving a sample older than the last one, using com.rti.↩ dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_↩ DESTINATIONORDER_QOS.

When the **DataReader** (p. 707) is using com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrder↩ QosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS:

- If the **DataReader** (p. 707) receives a sample for an instance with a source timestamp that is older than the last source timestamp received for the instance, the sample is dropped.
- If the **DataReader** (p. 707) receives a sample for an instance with a source timestamp that is equal to the last source timestamp received for the instance and the writer has a higher virtual GUID, the sample is dropped.

8.48.2.4 tolerance_source_timestamp_dropped_sample_count

```
long tolerance_source_timestamp_dropped_sample_count
```

The number of samples dropped as a result of receiving a sample in the future, using com.rti.dds.infrastructure.↩ DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER↩ _QOS.

When the **DataReader** (p. 707) is using com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrder↩ QosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS: the **DataReader** (p. 707) will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than the source_timestamp_↩ tolerance. Otherwise, the sample is dropped.

8.48.2.5 ownership_dropped_sample_count

```
long ownership_dropped_sample_count
```

The number of samples dropped as a result of receiving a sample from a DataWriter with a lower strength, using Exclusive Ownership.

When using Exclusive Ownership, the **DataReader** (p. 707) receives data from multiple DataWriters. Each instance can only be owned by one DataWriter.

If other DataWriters write samples on this instance, the samples will be dropped.

8.48.2.6 content_filter_dropped_sample_count

```
long content_filter_dropped_sample_count
```

The number of user samples filtered by the **DataReader** (p. 707) due to Content-Filtered Topics.

When using a content filter on the **DataReader** (p. 707) side, if the sample received by the **DataReader** (p. 707) does not pass the filter, it will be dropped.

8.48.2.7 time_based_filter_dropped_sample_count

```
long time_based_filter_dropped_sample_count
```

The number of user samples filtered by the **DataReader** (p. 707) due to **com.rti.dds.infrastructure.TimeBasedFilter↩ QosPolicy** (p. 2113).

When using **TIME_BASED_FILTER** (p. 519) on the **DataReader** (p. 707) side, if the sample received by the **DataReader** (p. 707) does not pass the minimum_separation filter, it will be dropped.

8.48.2.8 expired_dropped_sample_count

```
long expired_dropped_sample_count
```

The number of samples expired by the **DataReader** (p. 707) due to **com.rti.dds.infrastructure.LifespanQosPolicy** (p. 1526) or the autopurge sample delays.

- **com.rti.dds.infrastructure.LifespanQosPolicy** (p. 1526)
  When a sample expires due to **com.rti.dds.infrastructure.LifespanQosPolicy** (p. 1526), the data is removed from the **DataReader** (p. 707) caches. This sample will be considered dropped if its **com.rti.dds.subscription.↩ SampleStateKind** (p. 1972) was com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ_↩ SAMPLE_STATE.
- **com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy.autopurge_nowriter_samples_delay** (p. 1824)
  When a sample expires due to **com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy.autopurge_↩ nowriter_samples_delay** (p. 1824), this sample will be considered dropped if its **com.rti.dds.subscription.↩ SampleStateKind** (p. 1972) was com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ_↩ SAMPLE_STATE.
- **com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy.autopurge_disposed_samples_delay** (p. 1824)
  When a sample expires due to **com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy.autopurge_↩ disposed_samples_delay** (p. 1824), this sample will be considered dropped if its **com.rti.dds.subscription.↩ SampleStateKind** (p. 1972) was com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ_↩ SAMPLE_STATE.

8.48.2.9 virtual_duplicate_dropped_sample_count

```
long virtual_duplicate_dropped_sample_count
```

The number of virtual duplicate samples dropped by the **DataReader** (p. 707). A sample is a virtual duplicate if it has the same identity (Virtual Writer GUID and Virtual Sequence Number) as a previously received sample.

When two DataWriters with the same logical data source publish a sample with the same sequence_number, one sample will be dropped and the other will be received by the **DataReader** (p. 707).

This can happen when multiple writers are writing on behalf of the same original DataWriter: for example, in systems with redundant Routing Services or when a **DataReader** (p. 707) is receiving samples both directly from the original DataWriter and from an instance of Persistence Service.

8.48.2.10 replaced_dropped_sample_count

```
long replaced_dropped_sample_count
```

The number of samples replaced by the **DataReader** (p. 707) due to com.rti.dds.infrastructure.HistoryQosPolicyKind.↩ HistoryQosPolicyKind.KEEP_LAST_HISTORY_QOS replacement.

When the number of samples for an instance in the queue reaches the **com.rti.dds.infrastructure.HistoryQos**↩ **Policy.depth** (p. 1438) value, a new sample for the instance will replace the oldest sample for the instance in the queue.

The new sample will be accepted and the old sample will be dropped.

This counter will only be updated if the replaced sample's **com.rti.dds.subscription.SampleStateKind** (p. 1972) was com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ_SAMPLE_STATE.

8.48.2.11 writer_removed_batch_sample_dropped_sample_count

```
long writer_removed_batch_sample_dropped_sample_count
```

The number of batch samples received by the **DataReader** (p. 707) that were marked as removed by the DataWriter.

When the **DataReader** (p. 707) receives a batch, the batch can contain samples marked as removed by the DataWriter. Examples of removed samples in a batch could be because of sample replacement due to com.rti.dds.infrastructure.↩ HistoryQosPolicyKind.HistoryQosPolicyKind.KEEP_LAST_HISTORY_QOS **com.rti.dds.infrastructure.HistoryQos**↩ **Policy** (p. 1435) QoS on the DataWriter or because the duration in **com.rti.dds.infrastructure.LifespanQosPolicy** (p. 1526) was reached. By default, any sample marked as removed from a batch is dropped (unless you set the dds.↩ data_reader.accept_writer_removed_batch_samples property in the **com.rti.dds.infrastructure.PropertyQosPolicy** (p. 1739) to true). Note: Historical data with removed batch samples written before the **DataReader** (p. 707) joined the DDS domain will also be included in the count.

8.48.2.12 total_samples_dropped_by_instance_replacement

```
long total_samples_dropped_by_instance_replacement
```

The number of samples with sample state com.rti.dds.subscription.SampleStateKind.SampleStateKind.NOT_READ↩ _SAMPLE_STATE that were dropped when removing an instance due to instance replacement. See **com.rti.dds.**↩ **infrastructure.DataReaderResourceLimitsQosPolicy.instance_replacement** (p. 805) for more details about when instances are replaced.

8.48.2.13 alive_instance_count

```
long alive_instance_count
```

The number of instances in the **DataReader** (p. 707)'s queue with an instance state equal to **com.rti.dds.↩ subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452).

8.48.2.14 alive_instance_count_peak

```
long alive_instance_count_peak
```

The highest value of **com.rti.dds.subscription.DataReaderCacheStatus.alive_instance_count** (p. 752) over the lifetime of the **DataReader** (p. 707).

See also

com.rti.dds.subscription.DataReaderCacheStatus.alive_instance_count (p. 752)

8.48.2.15 no_writers_instance_count

```
long no_writers_instance_count
```

The number of instances in the **DataReader** (p. 707)'s queue with an instance state equal to **com.rti.dds.↩ subscription.InstanceStateKind.NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 1452).

8.48.2.16 no_writers_instance_count_peak

```
long no_writers_instance_count_peak
```

The highest value of **com.rti.dds.subscription.DataReaderCacheStatus.no_writers_instance_count** (p. 753) over the lifetime of the **DataReader** (p. 707).

See also

com.rti.dds.subscription.DataReaderCacheStatus.no_writers_instance_count (p. 753)

8.48.2.17 disposed_instance_count

```
long disposed_instance_count
```

The number of instances in the **DataReader** (p. 707)'s queue with an instance state equal to **com.rti.dds.↩ subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452).

8.48.2.18 disposed_instance_count_peak

```
long disposed_instance_count_peak
```

The highest value of **com.rti.dds.subscription.DataReaderCacheStatus.disposed_instance_count** (p. 753) over the lifetime of the **DataReader** (p. 707).

See also

com.rti.dds.subscription.DataReaderCacheStatus.disposed_instance_count (p. 753)

8.48.2.19 detached_instance_count

```
long detached_instance_count
```

The number of minimal instance states currently being maintained in the **DataReader** (p. 707)'s queue.

If **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.keep_minimum_state_for_instances** (p. 804) is true, the **DataReader** (p. 707) will keep up to a maximum of **com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy.max_total_instances** (p. 799) detached instances in its queue. For a more in-depth description of detached instances, refer to **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.max_total_instances** (p. 799).

8.48.2.20 detached_instance_count_peak

```
long detached_instance_count_peak
```

The highest value of **com.rti.dds.subscription.DataReaderCacheStatus.detached_instance_count** (p. 754) over the lifetime of the **DataReader** (p. 707).

See also

com.rti.dds.subscription.DataReaderCacheStatus.detached_instance_count (p. 754)

8.48.2.21 compressed_sample_count

```
long compressed_sample_count
```

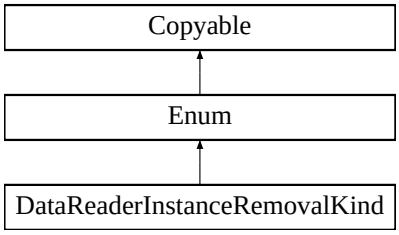
The number of received samples compressed by a DataWriter.

These include data, dispose, and unregister samples sent by a DataWriter.

8.49 DataReaderInstanceRemovalKind Class Reference

Sets the kinds of instances that can be replaced when instance resource limits (**com.rti.dds.infrastructure.Resource↩ LimitsQosPolicy.max_instances** (p. 1896)) are reached.

Inheritance diagram for DataReaderInstanceRemovalKind:



Static Public Attributes

- static final **DataReaderInstanceRemovalKind NO_INSTANCE_REMOVAL**

  No instance can be removed.
- static final **DataReaderInstanceRemovalKind EMPTY_INSTANCE_REMOVAL**

  Only empty instances can be removed.
- static final **DataReaderInstanceRemovalKind FULLY_PROCESSED_INSTANCE_REMOVAL**

  Only fully-processed instances can be removed.
- static final **DataReaderInstanceRemovalKind ANY_INSTANCE_REMOVAL**

  Any instance can be removed.

Additional Inherited Members

8.49.1 Detailed Description

Sets the kinds of instances that can be replaced when instance resource limits (**com.rti.dds.infrastructure.Resource↩ LimitsQosPolicy.max_instances** (p. 1896)) are reached.

See also

com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.instance_replacement (p. 805)

8.49.2 Member Data Documentation

8.49.2.1 NO_INSTANCE_REMOVAL

```
final DataReaderInstanceRemovalKind NO_INSTANCE_REMOVAL [static]
```

Initial value:

```
=
            new DataReaderInstanceRemovalKind("NO_INSTANCE_REMOVAL", 0)
```

No instance can be removed.

If an instance resource is required because **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896) is reached, this setting will disallow instances from being replaced. Samples for new instances will be dropped and reported as lost with reason **com.rti.dds.subscription.SampleLostStatusKind.LOST_BY_INSTANCES_LIMIT** (p. 1961).

8.49.2.2 EMPTY_INSTANCE_REMOVAL

```
final DataReaderInstanceRemovalKind EMPTY_INSTANCE_REMOVAL [static]
```

Initial value:

```
=
            new DataReaderInstanceRemovalKind("EMPTY_INSTANCE_REMOVAL", 1)
```

Only empty instances can be removed.

Instances can be replaced only if they are empty. An instance is considered empty when all samples have been taken or removed from the DataReader queue due to the **com.rti.dds.infrastructure.LifespanQosPolicy** (p. 1526) or sample purging due to the **com.rti.dds.infrastructure.ReaderDataLifecycleQosPolicy** (p. 1822), and there are no outstanding loans on any of the instance's samples.

8.49.2.3 FULLY_PROCESSED_INSTANCE_REMOVAL

```
final DataReaderInstanceRemovalKind FULLY_PROCESSED_INSTANCE_REMOVAL [static]
```

Initial value:

```
=
            new DataReaderInstanceRemovalKind(
                    "FULLY_PROCESSED_INSTANCE_REMOVAL",
                    2)
```

Only fully-processed instances can be removed.

An instance is considered fully processed if every sample for the instance has been processed by the application. A sample is considered processed by the application depending on the **com.rti.dds.infrastructure.ReliabilityQos↩ Policy.kind** (p. 1831):

- **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836) (depends on the **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind** (p. 1834)):
  - **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.PROTOCOL_ACKNOWLEDGMENT_MODE** (p. 1834) or **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_AUTO_ACKNOWLEDGMENT_MODE** (p. 1834): The sample is considered processed when it has been read or taken by the application and return_loan has been called.
  - **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1835): The sample is considered processed when the subscribing application has explicitly acknowledged the DDS sample, the AppAckConf has been received, and the application has called return_loan.
- **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.BEST_EFFORT_RELIABILITY_QOS** (p. 1836): All samples are considered processed when they have been read or taken by the application and return_loan has been called.

8.49.2.4 ANY_INSTANCE_REMOVAL

```
final DataReaderInstanceRemovalKind ANY_INSTANCE_REMOVAL [static]
```

Initial value:

```
=
            new DataReaderInstanceRemovalKind("ANY_INSTANCE_REMOVAL", 3)
```

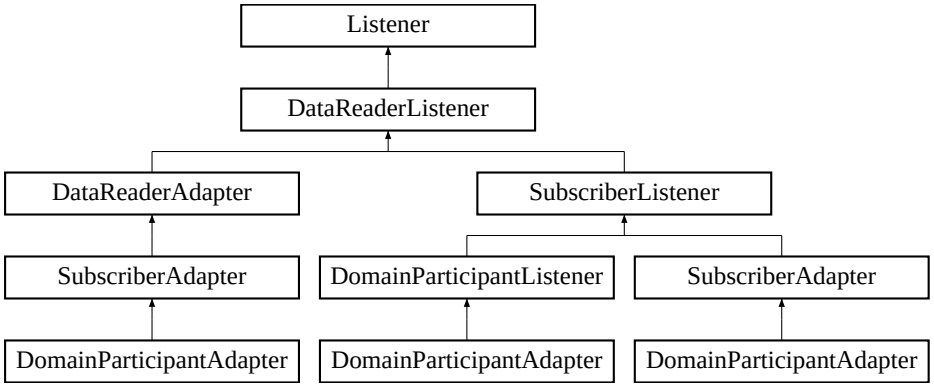
Any instance can be removed.

Instances can be replaced regardless of whether the subscribing application has processed all of the samples. Samples that have not been processed will be removed.

8.50 DataReaderListener Interface Reference

*<<**interface**>>* *(p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for reader status.

Inheritance diagram for DataReaderListener:



Public Member Functions

- void **on_requested_deadline_missed** (**DataReader** reader, **RequestedDeadlineMissedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS communication status.
- void **on_requested_incompatible_qos** (**DataReader** reader, **RequestedIncompatibleQosStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS communication status.
- void **on_sample_rejected** (**DataReader** reader, **SampleRejectedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS communication status.
- void **on_liveliness_changed** (**DataReader** reader, **LivelinessChangedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS communication status.
- void **on_data_available** (**DataReader** reader)

  Handle the com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS communication status.
- void **on_sample_lost** (**DataReader** reader, **SampleLostStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS communication status.
- void **on_subscription_matched** (**DataReader** reader, **SubscriptionMatchedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS communication status.

8.50.1 Detailed Description

<<***interface***>> *(*p. *403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for reader status.

Entity:

com.rti.dds.subscription.DataReader (p. 707)

Status:

com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS;
com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS, **com.rti.dds.subscription.**↩**LivelinessChangedStatus** (p. 1531);
com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS, **com.rti.dds.**↩**subscription.RequestedDeadlineMissedStatus** (p. 1864);
com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS, **com.rti.dds.**↩**subscription.RequestedIncompatibleQosStatus** (p. 1865);
com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS, **com.rti.dds.subscription.**↩**SampleLostStatus** (p. 1958);
com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS, **com.rti.dds.subscription.**↩**SampleRejectedStatus** (p. 1966);
com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS, **com.rti.dds.subscription.**↩**SubscriptionMatchedStatus** (p. 2081);

8.50.2 Member Function Documentation

8.50.2.1 on_requested_deadline_missed()

```
void on_requested_deadline_missed (
              DataReader reader,
              RequestedDeadlineMissedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS communication status.

Implemented in **DataReaderAdapter** (p. 746).

8.50.2.2 on_requested_incompatible_qos()

```
void on_requested_incompatible_qos (
              DataReader reader,
              RequestedIncompatibleQosStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS communication status.

Implemented in **DataReaderAdapter** (p. 746).

8.50.2.3 on_sample_rejected()

```
void on_sample_rejected (
              DataReader reader,
              SampleRejectedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_REJECTED_STATUS communication status.

Implemented in **DataReaderAdapter** (p. 746).

8.50.2.4 on_liveliness_changed()

```
void on_liveliness_changed (
              DataReader reader,
              LivelinessChangedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_CHANGED_STATUS communication status.

Implemented in **DataReaderAdapter** (p. 746).

8.50.2.5 on_data_available()

```
void on_data_available (
              DataReader reader )
```

Handle the com.rti.dds.infrastructure.StatusKind.StatusKind.DATA_AVAILABLE_STATUS communication status.

Implemented in **DataReaderAdapter** (p. 747).

8.50.2.6 on_sample_lost()

```
void on_sample_lost (
              DataReader reader,
              SampleLostStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SAMPLE_LOST_STATUS_STATUS communication status.

Implemented in **DataReaderAdapter** (p. 747).

8.50.2.7 on_subscription_matched()

```
void on_subscription_matched (
              DataReader reader,
              SubscriptionMatchedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.SUBSCRIPTION_MATCHED_STATUS communication status.

Implemented in **DataReaderAdapter** (p. 747).

8.51 DataReaderProtocolQosPolicy Class Reference

8.51.1 Detailed Description

<<***extension***>> *(*p. *138)* Along with **com.rti.dds.infrastructure.WireProtocolQosPolicy** (p. 2299) and **com.rti.↩ dds.infrastructure.DataWriterProtocolQosPolicy** (p. 860), this QoS policy configures the DDS on-the-network protocol (RTPS).

DDS has a standard protocol for packet (user and meta data) exchange between applications using DDS for communications. This QoS policy and **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy** (p. 761) give you control

over configurable portions of the protocol, including the configuration of the reliable data delivery mechanism of the protocol on a per DataWriter or DataReader basis.

These configuration parameters control timing, timeouts, and give you the ability to tradeoff between speed of data loss detection and repair versus network and CPU bandwidth used to maintain reliability.

It is important to tune the reliability protocol (on a per **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.↩ subscription.DataReader** (p. 707) basis) to meet the requirements of the end-user application so that data can be sent between DataWriters and DataReaders in an efficient and optimal manner in the presence of data loss.

You can also use this QoS policy to control how RTI Connext responds to "slow" reliable DataReaders or ones that disconnect or are otherwise lost. See **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829) for more information on the per-DataReader/DataWriter reliability configuration. **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435) and **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894) also play an important role in the DDS reliable protocol.

This QoS policy is an extension to the DDS standard.

Entity:

com.rti.dds.subscription.DataReader (p. 707)

Properties:

RxO (p. 506) = N/A
Changeable (p. 507) = **NO** (p. 507)

8.51.2 Member Data Documentation

8.51.2.1 virtual_guid

```
GUID_t virtual_guid
```

<<***extension***>> *(p. 138)* The virtual GUID (Global Unique Identifier).

The virtual GUID is used to uniquely identify different incarnations of the same **com.rti.dds.subscription.DataReader** (p. 707).

The association between a **com.rti.dds.subscription.DataReader** (p. 707) and its persisted state is done using the virtual GUID.

[default] com.rti.dds.infrastructure.GUID_t.GUID_AUTO (p. 1426)

Categories

Immutable (p. 292), **Discovery Metadata** (p. 348)

8.51.2.2 rtps_object_id

```
int rtps_object_id
```

<<***extension***>> *(*p. *138)* The RTPS Object ID.

This value is used to determine the RTPS object ID of a data reader according to the DDS-RTPS Interoperability Wire Protocol.

Only the last 3 bytes are used; the most significant byte is ignored.

If the default value is specified, RTI Connext will automatically assign the object ID based on a counter value (per participant) starting at 0x00800000. That value is incremented for each new data reader.

A rtps_object_id value in the interval [0x00800000,0x00ffffff] may collide with the automatic values assigned by RTI Connext. In those cases, the recomendation is not to use automatic object ID assigment.

[default] com.rti.dds.infrastructure.WireProtocolQosPolicy.RTPS_AUTO_ID (p. 2303)

[range] [0,0x00ffffff]

Categories

Immutable (p. 292)

8.51.2.3 expects_inline_qos

```
boolean expects_inline_qos
```

[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* Specifies whether this DataReader expects inline QoS with every sample.

RTI Connext DataWriters do not match with DataReaders that set this field to com.rti.dds.infrastructure.true (because RTI Connext DataWriters do not support sending inline QoS), but here is how the field is meant to be used:

In RTI Connext, a **com.rti.dds.subscription.DataReader** (p. 707) nominally relies on Discovery to propagate QoS on a matched **com.rti.dds.publication.DataWriter** (p. 818).

Alternatively, a **com.rti.dds.subscription.DataReader** (p. 707) may get information on a matched **com.rti.dds.↩ publication.DataWriter** (p. 818) through QoS sent inline with a sample.

Asserting **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.expects_inline_qos** (p. 763) indicates to a matching **com.rti.dds.publication.DataWriter** (p. 818) that this **com.rti.dds.subscription.DataReader** (p. 707) expects to receive inline QoS with every sample. The complete set of inline QoS that a **com.rti.dds.publication.↩ DataWriter** (p. 818) may send inline is specified by the Real-Time Publish-Subscribe (RTPS) Wire Interoperability Protocol.

Because RTI Connext **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) cache Discovery information, inline QoS are largely redundant and thus unecessary. Only for other stateless implementations whose **com.rti.dds.subscription.DataReader** (p. 707) does not cache Discovery information is inline QoS necessary.

Also note that inline QoS are additional wire-payload that consume additional bandwidth and serialization and deserialization time.

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Discovery Metadata** (p. 348)

8.51.2.4 disable_positive_acks

```
boolean disable_positive_acks
```

<<***extension***>> *(*p. *138)* Whether the reader sends positive acknowledgements to writers.

If set to com.rti.dds.infrastructure.true, the reader does not send positive acknowledgments (ACKs) in response to Heartbeat messages. The reader will send negative acknowledgements (NACKs) when a Heartbeat advertises samples that it has not received.

Otherwise, if set to com.rti.dds.infrastructure.false (the default), the reader will send ACKs to writers that expect ACKs (**com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.disable_positive_acks** (p. 863) = com.rti.dds.↩ infrastructure.false) and it will not send ACKs to writers that disable ACKs (**com.rti.dds.infrastructure.DataWriter**↩ **ProtocolQosPolicy.disable_positive_acks** (p. 863) = com.rti.dds.infrastructure.true)

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Discovery Metadata** (p. 348), **Reliability** (p. 266)

8.51.2.5 propagate_dispose_of_unregistered_instances

```
boolean propagate_dispose_of_unregistered_instances
```

<<***extension***>> *(*p. *138)* Indicates whether or not an instance can move to the **com.rti.dds.subscription.**↩ **InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452) state without being in the **com.rti.dds.**↩ **subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452) state.

This field only applies to keyed readers.

When the field is set to com.rti.dds.infrastructure.true, the DataReader will receive dispose notifications even if the instance is not alive.

To guarantee the key availability through the usage of the API **com.rti.ndds.example.FooDataReader.get_key_value** (p. 1387), this option should be used in combination with setting **com.rti.dds.infrastructure.DataWriterProtocolQos**↩ **Policy.serialize_key_with_dispose** (p. 864) on the DataWriter to com.rti.dds.infrastructure.true.

[default] com.rti.dds.infrastructure.false

  *The number of times a sample is rejected because it cannot be accepted by a reliable **DataReader** (p. 707).*

- long **rejected_sample_count_change**

  *The change in **com.rti.dds.subscription.DataReaderProtocolStatus.rejected_sample_count** (p. 774) since the last time the status was read.*

- **SequenceNumber_t first_available_sample_sequence_number**

  Sequence number of the first available sample in a matched DataWriters reliability queue.

- **SequenceNumber_t last_available_sample_sequence_number**

  Sequence number of the last available sample in a matched Datawriter's reliability queue.

- **SequenceNumber_t last_committed_sample_sequence_number**

  *Sequence number of the newest sample received from the matched DataWriter committed to the **DataReader** (p. 707)'s queue.*

- int **uncommitted_sample_count**

  Number of received samples that are not yet available to be read or taken, due to being received out of order.

- long **out_of_range_rejected_sample_count**

  *The number of samples dropped by the **DataReader** (p. 707) due to received window is full and the sample is out-of-order.*

- long **received_fragment_count**

  *The number of DATA_FRAG messages that have been received by this **DataReader** (p. 707).*

- long **dropped_fragment_count**

  *The number of DATA_FRAG messages that have been dropped by a **DataReader** (p. 707).*

- long **reassembled_sample_count**

  *The number of fragmented samples that have been reassembled by a **DataReader** (p. 707).*

- long **sent_nack_fragment_count**

  *The number of NACK fragments that have been sent from a **DataReader** (p. 707) to a DataWriter.*

- long **sent_nack_fragment_bytes**

  *The number of NACK fragment bytes that have been sent from a **DataReader** (p. 707) to a DataWriter.*

8.52.1 Detailed Description

<<***extension***>> *(p. 403)* The status of a reader's internal protocol related metrics, like the number of samples received, filtered, rejected; and status of wire protocol traffic.

Entity:

com.rti.dds.subscription.DataReader (p. 707)

8.52.2 Member Data Documentation

8.52.2.1 received_sample_count

```
long received_sample_count
```

The number of samples received by a **DataReader** (p. 707).

Depending on how the **com.rti.dds.subscription.DataReaderProtocolStatus** (p. 765) was obtained this may count samples coming from a specific DataWriter or from all the DataWriters that are matched with the **DataReader** (p. 707).

If the **com.rti.dds.subscription.DataReaderProtocolStatus** (p. 765) is obtained using the **com.rti.dds.subscription.DataReader.get_datareader_protocol_status** (p. 722) operation then it will count samples from any DataWriter. If the **DataReaderProtocolStatus** (p. 765) is obtained using the **com.rti.dds.subscription.DataReader.get_matched_publication_datareader_protocol_status** (p. 722) then it will count the samples for the DataWriter specified as a parameter to the function.

Duplicate samples arriving from the DataWriter(s) (e.g. via multiple network paths) are detected prior to increasing this counter. The duplicate samples are counted by **com.rti.dds.subscription.DataReaderProtocolStatus.duplicate_sample_count** (p. 769).

If the **DataReader** (p. 707) has specified a ContentFilter the received samples that do not pass the filter are part of this counter. The filtered samples are counted by **com.rti.dds.subscription.DataReaderProtocolStatus.filtered_sample_count** (p. 770).

Samples rejected because they do not fit on the **DataReader** (p. 707) Queue are also part of this counter.

Note the received_sample_count counts samples received from all DataWriters and it does not necessarily match the number of samples accepted into the **DataReader** (p. 707) Queue. This is because:

- Samples can also be inserted into the **DataReader** (p. 707) Queue by lifecycle events that are locally detected like an instance becoming not alive as a result of DataWriters leaving the network.
- Samples can be filtered out due to ContentFilter or TimeFilter
- Samples can be rejected because there is no space in **DataReader** (p. 707) Queue

Note that when data is fragmented, this statistic is updated when all of the fragments required to reassemble a sample are received, not when individual fragments are received.

8.52.2.2 received_sample_count_change

```
long received_sample_count_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.received_sample_count** (p. 768) since the last time the status was read.

See also

com.rti.dds.subscription.DataReaderProtocolStatus.received_sample_count (p. 768)

Note that when data is fragmented, this statistic is updated when all of the fragments required to reassemble a sample are received, not when individual fragments are received.

8.52.2.3 received_sample_bytes

```
long received_sample_bytes
```

The number of bytes received by a **DataReader** (p. 707).

See also

com.rti.dds.subscription.DataReaderProtocolStatus.received_sample_count (p. 768)

Note that when data is fragmented, this statistic is updated upon the receipt of each fragment, not when a sample is reassembled.

8.52.2.4 received_sample_bytes_change

```
long received_sample_bytes_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.received_sample_bytes** (p. 769) since the last time the status was read.

See also

com.rti.dds.subscription.DataReaderProtocolStatus.received_sample_count_change (p. 768)

Note that when data is fragmented, this statistic is updated upon the receipt of each fragment, not when a sample is reassembled.

8.52.2.5 duplicate_sample_count

```
long duplicate_sample_count
```

The number of samples from a remote DataWriter received, not for the first time, by a local **DataReader** (p. 707).

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

8.52.2.6 duplicate_sample_count_change

```
long duplicate_sample_count_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.duplicate_sample_count** (p. 769) since the last time the status was read.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

8.52.2.7 duplicate_sample_bytes

```
long duplicate_sample_bytes
```

The number of bytes of samples from a remote DataWriter received, not for the first time, by a local **DataReader** (p. 707).

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

8.52.2.8 duplicate_sample_bytes_change

```
long duplicate_sample_bytes_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.duplicate_sample_bytes** (p. 770) since the last time the status was read.

Such samples can be redundant, out-of-order, etc. and are not stored in the reader's queue.

8.52.2.9 filtered_sample_count

```
long filtered_sample_count
```

[DEPRECATED]. See: **com.rti.dds.subscription.DataReaderCacheStatus.time_based_filter_dropped_sample_count** (p. 751) **com.rti.dds.subscription.DataReaderCacheStatus.content_filter_dropped_sample_count** (p. 750)

8.52.2.10 filtered_sample_count_change

```
long filtered_sample_count_change
```

[DEPRECATED]. See: **com.rti.dds.subscription.DataReaderCacheStatus.time_based_filter_dropped_sample_count** (p. 751) **com.rti.dds.subscription.DataReaderCacheStatus.content_filter_dropped_sample_count** (p. 750)

8.52.2.11 filtered_sample_bytes

```
long filtered_sample_bytes
```

[DEPRECATED]. See: **com.rti.dds.subscription.DataReaderCacheStatus.time_based_filter_dropped_sample_count** (p. 751) **com.rti.dds.subscription.DataReaderCacheStatus.content_filter_dropped_sample_count** (p. 750)

8.52.2.12 filtered_sample_bytes_change

```
long filtered_sample_bytes_change
```

[DEPRECATED]. See: **com.rti.dds.subscription.DataReaderCacheStatus.time_based_filter_dropped_sample_count** (p. 751) **com.rti.dds.subscription.DataReaderCacheStatus.content_filter_dropped_sample_count** (p. 750)

8.52.2.13 received_heartbeat_count

```
long received_heartbeat_count
```

The number of Heartbeats from a remote DataWriter received by a local **DataReader** (p. 707).

8.52.2.14 received_heartbeat_count_change

```
long received_heartbeat_count_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.received_heartbeat_count** (p. 771) since the last time the status was read.

8.52.2.15 received_heartbeat_bytes

```
long received_heartbeat_bytes
```

The number of bytes of Heartbeats from a remote DataWriter received by a local **DataReader** (p. 707).

8.52.2.16 received_heartbeat_bytes_change

```
long received_heartbeat_bytes_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.received_heartbeat_bytes** (p. 771) since the last time the status was read.

8.52.2.17 sent_ack_count

```
long sent_ack_count
```

The number of ACKs sent from a local **DataReader** (p. 707) to a matching remote DataWriter.

8.52.2.18 sent_ack_count_change

```
long sent_ack_count_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.sent_ack_count** (p. 772) since the last time the status was read.

8.52.2.19 sent_ack_bytes

```
long sent_ack_bytes
```

The number of bytes of ACKs sent from a local **DataReader** (p. 707) to a matching remote DataWriter.

8.52.2.20 sent_ack_bytes_change

```
long sent_ack_bytes_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.sent_ack_bytes** (p. 772) since the last time the status was read.

8.52.2.21 sent_nack_count

```
long sent_nack_count
```

The number of NACKs sent from a local **DataReader** (p. 707) to a matching remote DataWriter.

8.52.2.22 sent_nack_count_change

```
long sent_nack_count_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.sent_nack_count** (p. 772) since the last time the status was read.

8.52.2.23 sent_nack_bytes

```
long sent_nack_bytes
```

The number of bytes of NACKs sent from a local **DataReader** (p. 707) to a matching remote DataWriter.

8.52.2.24 sent_nack_bytes_change

```
long sent_nack_bytes_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.sent_nack_bytes** (p. 773) since the last time the status was read.

8.52.2.25 received_gap_count

```
long received_gap_count
```

The number of GAPs received from remote DataWriter to this **DataReader** (p. 707).

8.52.2.26 received_gap_count_change

```
long received_gap_count_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.received_gap_count** (p. 773) since the last time the status was read.

8.52.2.27 received_gap_bytes

```
long received_gap_bytes
```

The number of bytes of GAPs received from remote DataWriter to this **DataReader** (p. 707).

8.52.2.28 received_gap_bytes_change

```
long received_gap_bytes_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.received_gap_bytes** (p. 774) since the last time the status was read.

8.52.2.29 rejected_sample_count

```
long rejected_sample_count
```

The number of times a sample is rejected because it cannot be accepted by a reliable **DataReader** (p. 707).

Samples rejected by a reliable **DataReader** (p. 707) will be NACKed, and they will have to be resent by the DataWriter if they are still available in the DataWriter queue.

This counter will always be 0 when using **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.BEST_EFFORT_↩ RELIABILITY_QOS** (p. 1836).

8.52.2.30 rejected_sample_count_change

```
long rejected_sample_count_change
```

The change in **com.rti.dds.subscription.DataReaderProtocolStatus.rejected_sample_count** (p. 774) since the last time the status was read.

This counter will always be 0 when using **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.BEST_EFFORT_↩ RELIABILITY_QOS** (p. 1836).

8.52.2.31 first_available_sample_sequence_number

```
SequenceNumber_t first_available_sample_sequence_number
```

Sequence number of the first available sample in a matched DataWriters reliability queue.

Applicable only for reliable DataReaders, and when retrieving matched DataWriter statuses.

Updated upon receiving Heartbeat submessages from a matched reliable DataWriter.

8.52.2.32 last_available_sample_sequence_number

```
SequenceNumber_t last_available_sample_sequence_number
```

Sequence number of the last available sample in a matched Datawriter's reliability queue.

Applicable only for reliable DataReaders, and when retrieving matched DataWriter statuses.

Updated upon receiving Heartbeat submessages from a matched reliable DataWriter.

8.52.2.33 last_committed_sample_sequence_number

```
SequenceNumber_t last_committed_sample_sequence_number
```

Sequence number of the newest sample received from the matched DataWriter committed to the **DataReader** (p. 707)'s queue.

Applicable only when retrieving matched DataWriter statuses.

For best-effort DataReaders, this is the sequence number of the latest sample received.

For reliable DataReaders, this is the sequence number of the latest sample that is available to be read or taken from the **DataReader** (p. 707)'s queue.

8.52.2.34 uncommitted_sample_count

```
int uncommitted_sample_count
```

Number of received samples that are not yet available to be read or taken, due to being received out of order.

Applicable only when retrieving matched DataWriter statuses.

8.52.2.35 out_of_range_rejected_sample_count

```
long out_of_range_rejected_sample_count
```

The number of samples dropped by the **DataReader** (p. 707) due to received window is full and the sample is out-of-order.

When using **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836); if the **DataReader** (p. 707) received samples out-of-order, they are stored internally until the missing samples are received. The number of out-of-order samples that the **DataReader** (p. 707) can keep is set by **com.rti.dds.infrastructure.↩ RtpsReliableReaderProtocol_t.receive_window_size** (p. 1908). When the received window is full any out-of-order sample received will be dropped.

8.52.2.36 received_fragment_count

```
long received_fragment_count
```

The number of DATA_FRAG messages that have been received by this **DataReader** (p. 707).

This statistic is incremented upon the receipt of each DATA_FRAG message. Fragments from duplicate samples do not count towards this statistic. Applicable only when data is fragmented.

8.52.2.37 dropped_fragment_count

```
long dropped_fragment_count
```

The number of DATA_FRAG messages that have been dropped by a **DataReader** (p. 707).

This statistic does not include malformed fragments. Applicable only when data is fragmented.

8.52.2.38 reassembled_sample_count

```
long reassembled_sample_count
```

The number of fragmented samples that have been reassembled by a **DataReader** (p. 707).

This statistic is incremented when all of the fragments which are required to reassemble an entire sample have been received. Applicable only when data is fragmented.

8.52.2.39 sent_nack_fragment_count

```
long sent_nack_fragment_count
```

The number of NACK fragments that have been sent from a **DataReader** (p. 707) to a DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

8.52.2.40 sent_nack_fragment_bytes

```
long sent_nack_fragment_bytes
```

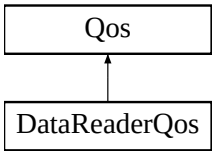
The number of NACK fragment bytes that have been sent from a **DataReader** (p. 707) to a DataWriter.

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

8.53 DataReaderQos Class Reference

QoS policies supported by a **com.rti.dds.subscription.DataReader** (p. 707) entity.

Inheritance diagram for DataReaderQos:



Public Member Functions

- String **toString** ()

  Overrides the builtin Object.toString method.
- String **toString** (**DataReaderQos** baseQos, **QosPrintFormat** format)

  *Obtains a string representation of a **DataReaderQos** (p. 777) object.*
- String **toString** (**QosPrintFormat** format)

  *Obtains a string representation of a **DataReaderQos** (p. 777) object.*
- String **toString** (**DataReaderQos** baseQos)

  *Obtains a string representation of a **DataReaderQos** (p. 777) object.*

8.53.1 Detailed Description

QoS policies supported by a **com.rti.dds.subscription.DataReader** (p. 707) entity.

You must set certain members in a consistent manner:

com.rti.dds.subscription.DataReaderQos.deadline (p. 782) .period >= **com.rti.dds.subscription.DataReader↩ Qos.time_based_filter** (p. 783) .minimum_separation

com.rti.dds.subscription.DataReaderQos.history (p. 783) .depth <= **com.rti.dds.subscription.DataReaderQos.↩ resource_limits** (p. 783) .max_samples_per_instance

com.rti.dds.subscription.DataReaderQos.resource_limits (p. 783) .max_samples_per_instance <= **com.rti.dds.↩ subscription.DataReaderQos.resource_limits** (p. 783) .max_samples **com.rti.dds.subscription.DataReader↩ Qos.resource_limits** (p. 783) .initial_samples <= **com.rti.dds.subscription.DataReaderQos.resource_limits** (p. 783) .max_samples

com.rti.dds.subscription.DataReaderQos.resource_limits (p. 783) .initial_instances <= **com.rti.dds.subscription.↩ DataReaderQos.resource_limits** (p. 783) .max_instances

com.rti.dds.subscription.DataReaderQos.reader_resource_limits (p. 784) .initial_remote_writers_per_instance <= **com.rti.dds.subscription.DataReaderQos.reader_resource_limits** (p. 784) .max_remote_writers_per_instance

com.rti.dds.subscription.DataReaderQos.reader_resource_limits (p. 784) .initial_infos <= **com.rti.dds.↩ subscription.DataReaderQos.reader_resource_limits** (p. 784) .max_infos

com.rti.dds.subscription.DataReaderQos.reader_resource_limits (p. 784) .max_remote_writers_per_instance <= **com.rti.dds.subscription.DataReaderQos.reader_resource_limits** (p. 784) .max_remote_writers

com.rti.dds.subscription.DataReaderQos.reader_resource_limits (p. 784) .max_samples_per_remote_writer <= **com.rti.dds.subscription.DataReaderQos.resource_limits** (p. 783) .max_samples

length of **com.rti.dds.subscription.DataReaderQos.user_data** (p. 783) .value <= **com.rti.dds.domain.Domain↩ ParticipantQos.resource_limits** (p. 1078) .reader_user_data_max_length

If any of the above are not true, **com.rti.dds.subscription.DataReader.set_qos** (p. 715) and **com.rti.dds.↩ subscription.DataReader.set_qos_with_profile** (p. 715) will fail with **com.rti.dds.infrastructure.RETCODE_↩ INCONSISTENT_POLICY** (p. 1901) and **com.rti.dds.subscription.Subscriber.create_datareader** (p. 2045) will return NULL.

8.53.2 Member Function Documentation

8.53.2.1 toString() [1/4]

```
String toString ( )
```

Overrides the builtin Object.toString method.

The various **toString()** (p. 779) overloads allow formatting the output and printing only the differences with respect to another **DataReaderQos** (p. 777) object.

```
DataReaderQos qos = new DataReaderQos();
String theString = new String();
// The most basic version of the API simply overrides the builtin
// Object.toString method. Only the differences with respect to the
// documented default are printed to the string. The string is formatted
// according to the default values for QosPrintFormat.
theString = qos.toString();
// This overload allows us to specify a base profile. Only the differences
// with respect to this base profile are printed to the string. If the two
// Qos objects are equal, the resultant string will be empty.
DataReaderQos baseQos = new DataReaderQos(); // ...;
theString = qos.toString(baseQos);
// It is also possible to supply a custom format at this point
QosPrintFormat printFormat = new QosPrintFormat(); // ...;
theString = qos.toString(baseQos, format);
// The sentinel value DATAREADER_QOS_PRINT_ALL can be used as
// the base in order to print the entire qos object
theString = qos.toString(DATAREADER_QOS_PRINT_ALL);
```

This overload uses the default print format and only prints the differences between the supplied **DataReaderQos** (p. 777) and the documented default.

Returns

The string representation of the Qos.

References **DataReaderQos.toString()**.

Referenced by **DataReaderQos.toString()**.

8.53.2.2 toString() [2/4]

```
String toString (
            DataReaderQos baseQos,
            QosPrintFormat format )
```

Obtains a string representation of a **DataReaderQos** (p. 777) object.

Parameters

format	The print format used to format the output.
baseQos	Only the differences between baseQos and the Qos object are included in the output string. If you want to print everything within the Qos, use the **com.rti.dds.subscription.Subscriber.DATAREADER_QOS_PRINT_ALL** (p. 83) sentinel value.

This overload prints the differences between the qos and the supplied baseQos. The output string is formatted using the supplied **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809).

Returns

The string representation of the Qos.

References **Subscriber.DATAREADER_QOS_PRINT_ALL**.

8.53.2.3 toString() [3/4]

```
String toString (
              QosPrintFormat format )
```

Obtains a string representation of a **DataReaderQos** (p. 777) object.

Parameters

format	The print format used to format the output.

This overload prints the differences between the qos and the documented. default. The output string is formatted using the supplied **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809).

Returns

The string representation of the Qos.

References **DataReaderQos.toString()**.

8.53.2.4 toString() [4/4]

```
String toString (
              DataReaderQos baseQos )
```

Obtains a string representation of a **DataReaderQos** (p. 777) object.

Parameters

baseQos	Only the differences between baseQos and the Qos object are included in the output string. If you want to print everything within the Qos, use the **com.rti.dds.subscription.Subscriber.DATAREADER_QOS_PRINT_ALL** (p. 83) sentinel value.

This overload prints the differences between the qos and the supplied baseQos. The output string is formatted using the default value for **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809).

Returns

The string representation of the Qos.

References **DataReaderQos.toString()**.

8.53.3 Member Data Documentation

8.53.3.1 durability

```
final DurabilityQosPolicy durability
```

Durability policy, **DURABILITY** (p. 481).

8.53.3.2 deadline

```
final DeadlineQosPolicy deadline
```

<<***basic***>> *(p. 123)* Deadline policy, **DEADLINE** (p. 467).

8.53.3.3 latency_budget

```
final LatencyBudgetQosPolicy latency_budget
```

Latency budget policy, **LATENCY_BUDGET** (p. 488).

8.53.3.4 liveliness

```
final LivelinessQosPolicy liveliness
```

Liveliness policy, **LIVELINESS** (p. 489).

8.53.3.5 reliability

```
final ReliabilityQosPolicy reliability
```

Reliability policy, **RELIABILITY** (p. 510).

8.53.3.6 destination_order

```
final DestinationOrderQosPolicy destination_order
```

Destination order policy, **DESTINATION_ORDER** (p. 468).

8.53.3.7 history

```
final HistoryQosPolicy history
```

<<***basic***>> *(p. 123)* History policy, **HISTORY** (p. 487).

8.53.3.8 resource_limits

```
final ResourceLimitsQosPolicy resource_limits
```

Resource limits policy, **RESOURCE_LIMITS** (p. 511).

8.53.3.9 user_data

```
final UserDataQosPolicy user_data
```

User data policy, **USER_DATA** (p. 530).

8.53.3.10 ownership

```
final OwnershipQosPolicy ownership
```

<<***basic***>> *(p. 123)* Ownership policy, **OWNERSHIP** (p. 494).

8.53.3.11 time_based_filter

```
final TimeBasedFilterQosPolicy time_based_filter
```

<<***basic***>> *(p. 123)* Time-based filter policy, **TIME_BASED_FILTER** (p. 519)

8.53.3.12 reader_data_lifecycle

```
final ReaderDataLifecycleQosPolicy reader_data_lifecycle
```

Reader data lifecycle policy, **READER_DATA_LIFECYCLE** (p. 508).

8.53.3.13 reader_resource_limits

```
final DataReaderResourceLimitsQosPolicy reader_resource_limits
```

<<***extension***>> *(p. 403)* **com.rti.dds.subscription.DataReader** (p. 707) resource limits policy, **DATA_READER_↩ RESOURCE_LIMITS** (p. 461). This policy is an extension to the DDS standard.

8.53.3.14 protocol

```
final DataReaderProtocolQosPolicy protocol
```

<<***extension***>> *(p. 403)* **com.rti.dds.subscription.DataReader** (p. 707) protocol policy, **DATA_READER_↩ PROTOCOL** (p. 460)

8.53.3.15 transport_selection

```
final TransportSelectionQosPolicy transport_selection
```

<<***extension***>> *(p. 403)* Transport selection policy, **TRANSPORT_SELECTION** (p. 527).

Specifies the transports available for use by the **com.rti.dds.subscription.DataReader** (p. 707).

8.53.3.16 unicast

```
final TransportUnicastQosPolicy unicast
```

<<***extension***>> *(p. 403)* Unicast transport policy, **TRANSPORT_UNICAST** (p. 528).

Specifies the unicast transport interfaces and ports on which **messages** can be received.

The unicast interfaces are used to receive messages from **com.rti.dds.publication.DataWriter** (p. 818) entities in the domain.

8.53.3.17 multicast

```
final TransportMulticastQosPolicy multicast
```

<<***extension***>> *(p. 403)* Multicast transport policy, **TRANSPORT_MULTICAST** (p. 524).

Specifies the multicast group addresses and ports on which **messages** can be received.

The multicast addresses are used to receive messages from **com.rti.dds.publication.DataWriter** (p. 818) entities in the domain.

8.53.3.18 property

```
final PropertyQosPolicy property
```

<<***basic***>> *(p. 123)* <<***extension***>> *(p. 403)* Property policy, **PROPERTY** (p. 499). See also `Property Reference Guide`.

8.53.3.19 data_tags

```
final DataTagQosPolicy data_tags
```

DataTag policy, **DATA_TAG** (p. 464).

8.53.3.20 service

```
final ServiceQosPolicy service
```

<<***extension***>> *(p. 403)* Service policy, **SERVICE** (p. 514).

8.53.3.21 availability

```
final  AvailabilityQosPolicy availability
```

<<***extension***>> *(*p. *403)* Availability policy, **AVAILABILITY** (p. 416).

8.53.3.22 subscription_name

```
final  EntityNameQosPolicy subscription_name
```

<<***extension***>> *(*p. *403)* EntityName policy, **ENTITY_NAME** (p. 485).

8.53.3.23 transport_priority

```
final  TransportPriorityQosPolicy transport_priority
```

Transport priority policy, **TRANSPORT_PRIORITY** (p. 526).

8.53.3.24 type_consistency

```
final  TypeConsistencyEnforcementQosPolicy type_consistency
```

Type consistency enforcement policy, **TYPE_CONSISTENCY_ENFORCEMENT** (p. 528).

8.53.3.25 representation

```
final  DataRepresentationQosPolicy representation
```

Data representation policy, **DATA_REPRESENTATION** (p. 462).

8.53.3.26 type_support

```
final  TypeSupportQosPolicy type_support
```

<<***extension***>> *(*p. *403)* type support data, **TYPESUPPORT** (p. 529).

Optional value that is passed to a type plugin's on_endpoint_attached and deserialization functions.

8.54 DataReaderResourceLimitsInstanceReplacementSettings Class Reference

Instance replacement kind applied to each instance state.

Inherits Struct.

Public Member Functions

- **DataReaderResourceLimitsInstanceReplacementSettings** ()

  Default constructor creates the policy with the default values.
- **DataReaderResourceLimitsInstanceReplacementSettings** (**DataReaderInstanceRemovalKind** aliveInstanceRemovalKind, **DataReaderInstanceRemovalKind** disposedInstanceRemovalKind, **DataReaderInstanceRemovalKind** noWritersInstanceRemovalKind)

  Constructor with the given alive_instance_removal, disposed_instance_removal and no_writers_instance_removal values.

Public Attributes

- **DataReaderInstanceRemovalKind alive_instance_removal**

  *Removal kind applied to alive (**com.rti.dds.subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452)) instances.*
- **DataReaderInstanceRemovalKind disposed_instance_removal**

  *Removal kind applied to disposed (**com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452)) instances.*
- **DataReaderInstanceRemovalKind no_writers_instance_removal**

  *Removal kind applied to fully-unregistered (**com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_NO_WRITERS_INSTANCE_STATE** (p. 1452)) instances.*

8.54.1 Detailed Description

Instance replacement kind applied to each instance state.

[default]

- **com.rti.dds.infrastructure.DataReaderResourceLimitsInstanceReplacementSettings.alive_instance_removal** (p. 788) = **com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.NO_INSTANCE_REMOVAL** (p. 756)
- **com.rti.dds.infrastructure.DataReaderResourceLimitsInstanceReplacementSettings.disposed_instance_removal** (p. 788) = **com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL** (p. 756)
- **com.rti.dds.infrastructure.DataReaderResourceLimitsInstanceReplacementSettings.no_writers_instance_removal** (p. 789) = **com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL** (p. 756)

8.54.2 Constructor & Destructor Documentation

8.54.2.1 DataReaderResourceLimitsInstanceReplacementSettings() [1/2]

```
DataReaderResourceLimitsInstanceReplacementSettings ( )
```

Default constructor creates the policy with the default values.

8.54.2.2 DataReaderResourceLimitsInstanceReplacementSettings() [2/2]

```
DataReaderResourceLimitsInstanceReplacementSettings (
            DataReaderInstanceRemovalKind aliveInstanceRemovalKind,
            DataReaderInstanceRemovalKind disposedInstanceRemovalKind,
            DataReaderInstanceRemovalKind noWritersInstanceRemovalKind )
```

Constructor with the given alive_instance_removal, disposed_instance_removal and no_writers_instance_removal values.

References **DataReaderResourceLimitsInstanceReplacementSettings.alive_instance_removal**, **DataReader↩ ResourceLimitsInstanceReplacementSettings.disposed_instance_removal**, and **DataReaderResourceLimits↩ InstanceReplacementSettings.no_writers_instance_removal**.

8.54.3 Member Data Documentation

8.54.3.1 alive_instance_removal

```
DataReaderInstanceRemovalKind alive_instance_removal
```

Initial value:

```
=
            DataReaderInstanceRemovalKind.NO_INSTANCE_REMOVAL
```

Removal kind applied to alive (**com.rti.dds.subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452)) instances.

[default] com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.NO_INSTANCE_REMOVAL (p. 756)

Referenced by **DataReaderResourceLimitsInstanceReplacementSettings.DataReaderResourceLimitsInstance↩ ReplacementSettings()**.

8.54.3.2 disposed_instance_removal

```
DataReaderInstanceRemovalKind disposed_instance_removal
```

Initial value:

```
= 
        DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL
```

Removal kind applied to disposed (**com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_↩ INSTANCE_STATE** (p. 1452)) instances.

[default] com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL (p. 756)

Referenced by **DataReaderResourceLimitsInstanceReplacementSettings.DataReaderResourceLimitsInstance↩ ReplacementSettings()**.

8.54.3.3 no_writers_instance_removal

```
DataReaderInstanceRemovalKind no_writers_instance_removal
```

Initial value:

```
= 
        DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL
```

Removal kind applied to fully-unregistered (**com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_NO_↩ WRITERS_INSTANCE_STATE** (p. 1452)) instances.

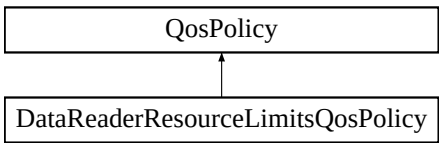
[default] com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL (p. 756)

Referenced by **DataReaderResourceLimitsInstanceReplacementSettings.DataReaderResourceLimitsInstance↩ ReplacementSettings()**.

8.55 DataReaderResourceLimitsQosPolicy Class Reference

*<<**extension**>> (p. 138)* Various settings that configure how a **com.rti.dds.subscription.DataReader** (p. 707) allocates and uses physical memory for internal resources.

Inheritance diagram for DataReaderResourceLimitsQosPolicy:



Public Attributes

- int **max_remote_writers**

  *<<**extension**>> (p. 138) The maximum number of remote writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read, including all instances.*
- int **max_remote_writers_per_instance**

  *<<**extension**>> (p. 138) The maximum number of remote writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read a single instance.*
- int **max_samples_per_remote_writer**

  *<<**extension**>> (p. 138) The maximum number of out-of-order samples from a given remote **com.rti.dds.publication.DataWriter** (p. 818) that a **com.rti.dds.subscription.DataReader** (p. 707) may store when maintaining a reliable connection to the **com.rti.dds.publication.DataWriter** (p. 818).*
- int **max_infos**

  *<<**extension**>> (p. 138) The maximum number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can use to store **com.rti.dds.subscription.SampleInfo** (p. 1944).*
- int **initial_remote_writers**

  *<<**extension**>> (p. 138) The initial number of remote writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read, including all instances.*
- int **initial_remote_writers_per_instance**

  *<<**extension**>> (p. 138) Maximum number of fragments for a single sample.*
- boolean **dynamically_allocate_fragmented_samples**

*<<**extension**>> (p. 138) Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.*

- int **max_total_instances**

  *<<**extension**>> (p. 138) Maximum number of instances for which a DataReader will keep state.*

- int **max_remote_virtual_writers**

  *<<**extension**>> (p. 138) The maximum number of remote virtual writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read, including all instances.*

- int **initial_remote_virtual_writers**

  *<<**extension**>> (p. 138) The initial number of remote virtual writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read, including all instances.*

- int **max_remote_virtual_writers_per_instance**

  *<<**extension**>> (p. 138) The maximum number of virtual remote writers that can be associated with an instance.*

- int **initial_remote_virtual_writers_per_instance**

  *<<**extension**>> (p. 138) The initial number of virtual remote writers per instance.*

- int **max_remote_writers_per_sample**

  *<<**extension**>> (p. 138) The maximum number of remote writers allowed to write the same sample.*

- int **max_query_condition_filters**

  *<<**extension**>> (p. 138) The maximum number of query condition filters a reader is allowed.*

- int **max_app_ack_response_length**

  *<<**extension**>> (p. 138) Maximum length of application-level acknowledgment response data*

- boolean **keep_minimum_state_for_instances**

  *<<**extension**>> (p. 138) Whether or not keep a minimum instance state for up to **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.max_total_instances** (p. 799).*

- int **initial_topic_queries**

  *<<**extension**>> (p. 138) The initial number of TopicQueries allocated by a **com.rti.dds.subscription.DataReader** (p. 707).*

- int **max_topic_queries**

  *<<**extension**>> (p. 138) The maximum number of active TopicQueries that a **com.rti.dds.subscription.DataReader** (p. 707) can create.*

- **DataReaderResourceLimitsInstanceReplacementSettings instance_replacement**

  *<<**extension**>> (p. 138) Sets the kind of instances allowed to be replaced for each instance state (**com.rti.dds.subscription.InstanceStateKind** (p. 1451)) when a DataReader reaches **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896).*

- **Duration_t autopurge_remote_not_alive_writer_delay**

  *<<**extension**>> (p. 138) Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a **com.rti.dds.publication.DataWriter** (p. 818) once the **com.rti.dds.publication.DataWriter** (p. 818) has become not alive.*

- **Duration_t autopurge_remote_virtual_writer_delay**

  *Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a virtual **com.rti.dds.publication.DataWriter** (p. 818) once the **com.rti.dds.publication.DataWriter** (p. 818) has become detached.*

- boolean **lazily_allocate_batch_resources**

  *<<**extension**>> (p. 138) Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.*

Static Public Attributes

- static final int **AUTO_MAX_TOTAL_INSTANCES**

  *<<**extension**>> (p. 138) This value is used to make **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.max_total_instances** (p. 799) equal to **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896).*

8.55.1 Detailed Description

<<***extension***>> *(p. 138)* Various settings that configure how a **com.rti.dds.subscription.DataReader** (p. 707) allocates and uses physical memory for internal resources.

DataReaders must allocate internal structures to handle the maximum number of DataWriters that may connect to it, whether or not a **com.rti.dds.subscription.DataReader** (p. 707) handles data fragmentation and how many data fragments that it may handle (for data samples larger than the MTU of the underlying network transport), how many simultaneous outstanding loans of internal memory holding data samples can be provided to user code, as well as others.

Most of these internal structures start at an initial size and, by default, will grow as needed by dynamically allocating additional memory. You may set fixed, maximum sizes for these internal structures if you want to bound the amount of memory that can be used by a **com.rti.dds.subscription.DataReader** (p. 707). By setting the initial size to the maximum size, you will prevent RTI Connext from dynamically allocating any memory after the creation of the **com.↩ rti.dds.subscription.DataReader** (p. 707).

This QoS policy is an extension to the DDS standard.

Entity:

com.rti.dds.subscription.DataReader (p. 707)

Properties:

RxO (p. 506) = N/A
Changeable (p. 507) = **NO** (p. 507)

8.55.2 Member Data Documentation

8.55.2.1 max_remote_writers

```
int max_remote_writers
```

<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.Data↩ Reader** (p. 707) may read, including all instances.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)
[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_remote_writers, >= max_remote_writers_per_instance

For unkeyed types, this value has to be equal to max_remote_writers_per_instance if max_remote_writers_per_instance is not equal to **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511).

Note: For efficiency, set `max_remote_writers` >= **com.rti.dds.infrastructure.DataReaderResourceLimits↩ QosPolicy.max_remote_writers_per_instance** (p. 792).

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.2 max_remote_writers_per_instance

```
int max_remote_writers_per_instance
```

<<***extension***>> *(p. 138)* The maximum number of remote writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read a single instance.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 1024] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), <= max_remote_writers or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_remote_writers_per_instance

For unkeyed types, this value has to be equal to max_remote_writers if it is not **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511).

Note: For efficiency, set `max_remote_writers_per_instance` <= **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.max_remote_writers** (p. 792)

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.3 max_samples_per_remote_writer

```
int max_samples_per_remote_writer
```

<<***extension***>> *(p. 138)* The maximum number of out-of-order samples from a given remote **com.rti.dds.publication.DataWriter** (p. 818) that a **com.rti.dds.subscription.DataReader** (p. 707) may store when maintaining a reliable connection to the **com.rti.dds.publication.DataWriter** (p. 818).

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 100 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), <= **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_samples** (p. 1896)

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.4 max_infos

```
int max_infos
```

<<***extension***>> *(*p. *138)* The maximum number of info units that a **com.rti.dds.subscription.DataReader** (p. 707) can use to store **com.rti.dds.subscription.SampleInfo** (p. 1944).

When read/take is called on a DataReader, the DataReader passes a sequence of data samples and an associated sample info sequence. The sample info sequence contains additional information for each data sample.

max_infos determines the resources allocated for storing sample info. This memory is loaned to the application when passing a sample info sequence.

Note that sample info is a snapshot, generated when read/take is called.

max_infos should not be less than max_samples.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_infos

8.55.2.9 max_outstanding_reads

```
int max_outstanding_reads
```

<<***extension***>> *(p. 138)* The maximum number of outstanding read/take calls (or one of their variants) on the same **com.rti.dds.subscription.DataReader** (p. 707) for which memory has not been returned by calling **com.rti.ndds.↩ example.FooDataReader.return_loan** (p. 1386).

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 65536] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_outstanding_reads

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.10 max_samples_per_read

```
int max_samples_per_read
```

<<***extension***>> *(p. 138)* The maximum number of data samples that the application can receive from the middleware in a single call to **com.rti.ndds.example.FooDataReader.read** (p. 1361) or **com.rti.ndds.example.FooDataReader.↩ take** (p. 1363). If more data exists in the middleware, the application will need to issue multiple read/take calls.

When reading data using listeners, the expected number of samples available for delivery in a single `take` call is typically small: usually just one, in the case of unbatched data, or the number of samples in a single batch, in the case of batched data. (See **com.rti.dds.infrastructure.BatchQosPolicy** (p. 607) for more information about this feature.) When polling for data or using a **com.rti.dds.infrastructure.WaitSet** (p. 2287), however, multiple samples (or batches) could be retrieved at once, depending on the data rate.

A larger value for this parameter makes the API simpler to use at the expense of some additional memory consumption.

[default] 1024

[range] [1,65536]

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.11 disable_fragmentation_support

```
boolean disable_fragmentation_support
```

[DEPRECATED] (p. **358**) <<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) can receive fragmented samples.

When fragmentation support is not needed, disabling fragmentation support will save some memory resources.

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

8.55.2.12 max_fragmented_samples

```
int max_fragmented_samples
```

<<***extension***>> *(p. 138)* The maximum number of samples for which the **com.rti.dds.subscription.DataReader** (p. 707) may store fragments at a given point in time.

At any given time, a **com.rti.dds.subscription.DataReader** (p. 707) may store fragments for up to `max_fragmented_samples` samples while waiting for the remaining fragments. These samples need not have consecutive sequence numbers and may have been sent by different **com.rti.dds.publication.DataWriter** (p. 818) instances.

Once all fragments of a sample have been received, the sample is treated as a regular sample and becomes subject to standard QoS settings such as **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_samples** (p. 1896).

The middleware will drop fragments if the `max_fragmented_samples` limit has been reached. For best-effort communication, the middleware will accept a fragment for a new sample, but drop the oldest fragmented sample from the same remote writer. For reliable communication, the middleware will drop fragments for any new samples until all fragments for at least one older sample from that writer have been received.

Only applies if **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.disable_fragmentation_support** (p. 796) is com.rti.dds.infrastructure.false.

8.55.2.16 dynamically_allocate_fragmented_samples

```
boolean dynamically_allocate_fragmented_samples
```

<<***extension***>> *(*p. *138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates storage for storing fragmented samples.

By default, the middleware does not allocate memory upfront, but instead allocates memory from the heap upon receiving the first fragment of a new sample. The amount of memory allocated equals the amount of memory needed to store all fragments in the sample. Once all fragments of a sample have been received, the sample is deserialized and stored in the regular receive queue. At that time, the dynamically allocated memory is freed again.

This QoS setting is useful for large, but variable-sized data types where upfront memory allocation for multiple samples based on the maximum possible sample size may be expensive. The main disadvantage of not pre-allocating memory is that one can no longer guarantee the middleware will have sufficient resources at runtime.

If `dynamically_allocate_fragmented_samples` is set to com.rti.dds.infrastructure.false, the middleware will allocate memory upfront for storing fragments for up to **com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy.initial_fragmented_samples** (p. 797) samples. This memory may grow up to **com.rti.dds.↩ infrastructure.DataReaderResourceLimitsQosPolicy.max_fragmented_samples** (p. 797) if needed.

Only applies if **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.disable_fragmentation_support** (p. 796) is com.rti.dds.infrastructure.false.

[default] com.rti.dds.infrastructure.true

Categories

Immutable (p. 292), **Sample Memory Management** (p. 276), **Middleware Memory Management** (p. 244), **Fragmentation** (p. 229), **Sending Large Data** (p. 237)

8.55.2.17 max_total_instances

```
int max_total_instances
```

<<***extension***>> *(*p. *138)* Maximum number of instances for which a DataReader will keep state.

The maximum number of instances actively managed by a DataReader is determined by **com.rti.dds.infrastructure.↩ ResourceLimitsQosPolicy.max_instances** (p. 1896).

These instances have associated DataWriters or samples in the DataReader's queue and are visible to the user through operations such as **com.rti.ndds.example.FooDataReader.take** (p. 1363), **com.rti.ndds.example.FooDataReader.↩ read** (p. 1361), and **com.rti.ndds.example.FooDataReader.get_key_value** (p. 1387).

The features Durable Reader State, MultiChannel DataWriters and RTI Persistence Service require RTI Connext to keep some internal state even for instances without DataWriters or samples in the DataReader's queue. The additional state is used to filter duplicate samples that could be coming from different DataWriter channels or from multiple executions of RTI Persistence Service.

The total maximum number of instances that will be managed by the middleware, including instances without associated DataWriters or samples, is determined by max_total_instances.

When a new instance is received, RTI Connext will check the resource limit **com.rti.dds.infrastructure.Resource↩ LimitsQosPolicy.max_instances** (p. 1896). If the limit is exceeded, RTI Connext will drop the sample with the reason LOST_BY_INSTANCES_LIMIT. If the limit is not exceeded, RTI Connext will check max_total_instances. If max_total↩ _instances is exceeded, RTI Connext will replace an existing instance without DataWriters and samples with the new one. The application could receive duplicate samples for the replaced instance if it becomes alive again.

The max_total_instances limit is not used if **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.↩ keep_minimum_state_for_instances** (p. 804) is false, and in that case should be left at the default value.

[default] **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.AUTO_MAX_TOTAL_INSTANCES** (p. 462)

[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511) or **com.rti.dds.infrastructure.DataReaderResourceLimitsQosPolicy.AUTO_MAX_TOTAL_INSTANCES** (p. 462), >= **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896)

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Instance Lifecycle** (p. 232)

8.55.2.18 max_remote_virtual_writers

```
int max_remote_virtual_writers
```

<<***extension***>> *(*p. *138)* The maximum number of remote virtual writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read, including all instances.

When **com.rti.dds.infrastructure.PresentationQosPolicy.access_scope** (p. 1682) is set to com.rti.dds.infrastructure.PresentationQosPolicyAccessScopeKind.PresentationQosPolicyAccessScopeKind.GROUP_PRESENTATION_QOS, this value determines the maximum number of DataWriter groups that can be managed by the **com.rti.dds.subscription.Subscriber** (p. 2039) containing this **com.rti.dds.subscription.DataReader** (p. 707).

Since the **com.rti.dds.subscription.Subscriber** (p. 2039) may contain more than one **com.rti.dds.subscription.DataReader** (p. 707), only the setting of the first applies.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)
[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_remote_virtual_writers, >= max_remote_virtual_writers_per_instance

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.19 initial_remote_virtual_writers

```
int initial_remote_virtual_writers
```

<<***extension***>> *(*p. *138)* The initial number of remote virtual writers from which a **com.rti.dds.subscription.DataReader** (p. 707) may read, including all instances.

[default] 2
[range] [1, 1 million] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), <= max_remote_virtual_writers

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.20 max_remote_virtual_writers_per_instance

```
int max_remote_virtual_writers_per_instance
```

<<***extension***>> *(p. 138)* The maximum number of virtual remote writers that can be associated with an instance.

[default] com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED (p. 511)

[range] [1, 1024] or **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.LENGTH_UNLIMITED** (p. 511), >= initial_remote_virtual_writers_per_instance

For unkeyed types, this value is ignored.

The features of Durable Reader State and MultiChannel DataWriters, and RTI Persistence Service require RTI Connext to keep some internal state per virtual writer and instance that is used to filter duplicate samples. These duplicate samples could be coming from different DataWriter channels or from multiple executions of RTI Persistence Service.

Once an association between a remote virtual writer and an instance is established, it is permanent – it will not disappear even if the physical writer incarnating the virtual writer is destroyed.

If max_remote_virtual_writers_per_instance is exceeded for an instance, RTI Connext will not associate this instance with new virtual writers. Duplicates samples from these virtual writers will not be filtered on the reader.

If you are not using Durable Reader State, MultiChannel DataWriters or RTI Persistence Service in your system, you can set this property to 1 to optimize resources.

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.21 initial_remote_virtual_writers_per_instance

```
int initial_remote_virtual_writers_per_instance
```

<<***extension***>> *(p. 138)* The initial number of virtual remote writers per instance.

[default] 2

[range] [1, 1024], <= max_remote_virtual_writers_per_instance

For unkeyed types, this value is ignored.

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.22 max_remote_writers_per_sample

```
int max_remote_writers_per_sample
```

<<***extension***>> *(*p. *138)* The maximum number of remote writers allowed to write the same sample.

One scenario in which two DataWriters may write the same sample is Persistence Service. The DataReader may receive the same sample coming from the original DataWriter and from a Persistence Service DataWriter. **[default]** 3

[range] [1, 1024]

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244)

8.55.2.23 max_query_condition_filters

```
int max_query_condition_filters
```

<<***extension***>> *(*p. *138)* The maximum number of query condition filters a reader is allowed.

[default] 4

[range] [0, 32]

This value determines the maximum number of unique query condition content filters that a reader may create.

Each query condition content filter is comprised of both its `query_expression` and `query_parameters`. Two query conditions that have the same `query_expression` will require unique query condition filters if their `query_paramters` differ. Query conditions that differ only in their state masks will share the same query condition filter.

8.55.2.28 instance_replacement

```
DataReaderResourceLimitsInstanceReplacementSettings instance_replacement
```

<<***extension***>> *(p. 138)* Sets the kind of instances allowed to be replaced for each instance state (**com.rti.dds.subscription.InstanceStateKind** (p. 1451)) when a DataReader reaches **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896).

When **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896) is reached, a **com.rti.dds.subscription.DataReader** (p. 707) will try to make room for a new instance by attempting to reclaim an existing instance based on the instance replacement kinds specified by this field.

A DataReader can choose what kinds of instances can be replaced for each **com.rti.dds.subscription.InstanceStateKind** (p. 1451) separately. This means, for example, that a DataReader can choose to not allow replacing alive (**com.rti.dds.subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452)) instances but allow replacement of empty disposed (**com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452)) instances.

Only instances whose states match the specified kinds are eligible to be replaced. In addition, there must be no outstanding loans on any of the samples belonging to the instance for it to be considered for replacement.

For all kinds, a **com.rti.dds.subscription.DataReader** (p. 707) will replace the least-recently-updated instance satisfying that kind. An instance is considered 'updated' when a valid sample or dispose sample is received and accepted for that instance. When using **com.rti.dds.infrastructure.OwnershipQosPolicyKind.EXCLUSIVE_OWNERSHIP_QOS** (p. 1646), only samples that are received from the owner of the instance will cause the instance to be considered updated. An instance is not considered updated when an unregister sample is received because the unregister message simply indicates that there is one less writer that has updates for the instance, not that the instance itself was updated.

If no replaceable instance exists, the sample for the new instance will be considered lost with lost reason **com.rti.dds.subscription.SampleLostStatusKind.LOST_BY_INSTANCES_LIMIT** (p. 1961) and the instance will not be asserted into the DataReader queue.

[default]

- **com.rti.dds.infrastructure.DataReaderResourceLimitsInstanceReplacementSettings.alive_instance_removal** (p. 788) = **com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.NO_INSTANCE_REMOVAL** (p. 756)
- **com.rti.dds.infrastructure.DataReaderResourceLimitsInstanceReplacementSettings.disposed_instance_removal** (p. 788) = **com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL** (p. 756)
- **com.rti.dds.infrastructure.DataReaderResourceLimitsInstanceReplacementSettings.no_writers_instance_removal** (p. 789) = **com.rti.dds.infrastructure.DataReaderInstanceRemovalKind.EMPTY_INSTANCE_REMOVAL** (p. 756)

8.55.2.29 autopurge_remote_not_alive_writer_delay

```
Duration_t autopurge_remote_not_alive_writer_delay
```

Initial value:

```
= new Duration_t(
        Duration_t.DURATION_AUTO_SEC, Duration_t.DURATION_AUTO_NSEC)
```

<<***extension***>> *(*p. *138)* Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a **com.rti.dds.publication.DataWriter** (p. 818) once the **com.rti.dds.publication.Data↩ Writer** (p. 818) has become not alive.

After this time elapses, the **com.rti.dds.subscription.DataReader** (p. 707) will purge all internal information regarding the not alive **com.rti.dds.publication.DataWriter** (p. 818).

See also

com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535) for more information on when a **com.rti.dds.↩ publication.DataWriter** (p. 818) is considered not alive.

When set to com.rti.dds.infrastructure.Duration_t.AUTO, this parameter is set to 10 times the value of **com.rti.dds.↩ infrastructure.DiscoveryConfigQosPolicy.participant_liveliness_lease_duration** (p. 918).

This QoS only applies when the **com.rti.dds.subscription.DataReader** (p. 707) is using **com.rti.dds.infrastructure.↩ InstanceStateConsistencyKind.RECOVER_INSTANCE_STATE_CONSISTENCY** (p. 1450) for the **com.rti.dds.↩ infrastructure.ReliabilityQosPolicy.instance_state_consistency_kind** (p. 1832) QoS. When using **com.rti.dds.↩ infrastructure.InstanceStateConsistencyKind.RECOVER_INSTANCE_STATE_CONSISTENCY** (p. 1450), a **com.↩ rti.dds.subscription.DataReader** (p. 707) keeps state about all **com.rti.dds.publication.DataWriter** (p. 818) entities and the instances they were writing in order to be able to transition those instances back to their correct state if liveliness with the **com.rti.dds.publication.DataWriter** (p. 818) is recovered. This can cause unbounded memory growth if that state is never purged and **com.rti.dds.publication.DataWriter** (p. 818) entities continuously come and go in a system. This QoS avoids that unbounded memory growth by setting a time at which that state will be purged.

This QoS should be set such that it is longer than the longest period of time for which a **com.rti.dds.publication.↩ DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) are expected to be disconnected and then reconnected in your system.

An alternative to using this QoS to purge the state is to set the **com.rti.dds.infrastructure.DataReaderResource↩ LimitsQosPolicy.max_remote_writers** (p. 792) QoS to a finite value. If that QoS is set to a finite value and the number of alive + not alive **com.rti.dds.publication.DataWriter** (p. 818) entities reaches the limit when a new **com.rti.dds.↩ publication.DataWriter** (p. 818) is discovered, the oldest not alive **com.rti.dds.publication.DataWriter** (p. 818) will be replaced.

[default] com.rti.dds.infrastructure.Duration_t.AUTO

[range] $>$ 0 or com.rti.dds.infrastructure.Duration_t.AUTO

Categories

Immutable (p. 292), **Middleware Memory Management** (p. 244), **Instance Lifecycle** (p. 232), **Liveliness** (p. 239)

8.55.2.30 autopurge_remote_virtual_writer_delay

```
Duration_t autopurge_remote_virtual_writer_delay
```

Initial value:

```
= new Duration_t(
        Duration_t.DURATION_INFINITE_SEC, Duration_t.DURATION_INFINITE_NSEC)
```

Maximum duration for which the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a virtual **com.rti.dds.publication.DataWriter** (p. 818) once the **com.rti.dds.publication.DataWriter** (p. 818) has become detached.

Determines how long the **com.rti.dds.subscription.DataReader** (p. 707) will maintain information regarding a virtual **com.rti.dds.publication.DataWriter** (p. 818) that has has become detached.

After this time elapses, the **com.rti.dds.subscription.DataReader** (p. 707) will purge all internal information regarding the **com.rti.dds.publication.DataWriter** (p. 818).

[default] com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE (p. 1133)

[range] >= 0 or **com.rti.dds.infrastructure.Duration_t.DURATION_INFINITE** (p. 1133)

8.55.2.31 lazily_allocate_batch_resources

```
boolean lazily_allocate_batch_resources
```

<<***extension***>> *(p. 138)* Determines whether the **com.rti.dds.subscription.DataReader** (p. 707) pre-allocates resources for receiving batches of samples or lazily allocates them when needed.

By default, the middleware does not allocate memory up front to manage the batches of samples received, but instead allocates memory from the heap upon receiving the first batch of samples.

Lazily allocating batching resources helps reduce memory consumption when batches are not used, but it may introduce some latency when receiving the first batch of samples, since memory needs to be allocated from the heap. If you know that your application will be using batches, you may set this value to com.rti.dds.infrastructure.false if you are concerned about that latency.

[default] com.rti.dds.infrastructure.true

8.56 DataReaderSeq Class Reference

Declares IDL `sequence` < **com.rti.dds.subscription.DataReader** (p. 707) > .

Inherits AbstractNativeSequence.

Public Member Functions

- **DataReaderSeq** (Collection readers)
- int **getMaximum** ()

  Get the current maximum number of elements that can be stored in this sequence.

8.56.1 Detailed Description

Declares IDL `sequence` < **com.rti.dds.subscription.DataReader** (p. 707) > .

See also

com.rti.dds.infrastructure.com.rti.dds.util.Sequence

8.56.2 Constructor & Destructor Documentation

8.56.2.1 DataReaderSeq()

```
DataReaderSeq (
            Collection readers )
```

Exceptions

NullPointerException	if the given collection is null

8.56.3 Member Function Documentation

8.56.3.1 getMaximum()

```
int getMaximum ( )
```

Get the current maximum number of elements that can be stored in this sequence.

The `maximum` of the sequence represents the maximum number of elements that the underlying buffer can hold. It does not represent the current number of elements.

The `maximum` is a non-negative number. It is initialized when the sequence is first created.

The `maximum` can be changed implicitly by adding an element to the sequence with **`add()`** (p. 583), or explicitly by calling com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.setMaximum.

Returns

the current maximum of the sequence.

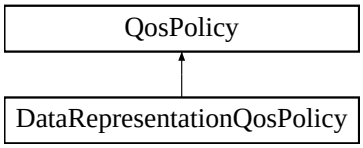
com.rti.dds.infrastructure.com.rti.dds.util.Sequence.Sequence.size()

Implements **Sequence** (p. 1974).

8.57 DataRepresentationQosPolicy Class Reference

*<<**spec**>> (p. 132)* This QoS policy contains a list of representation identifiers and compression settings used by **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) entities to negotiate which data representation and compression settings to use.

Inheritance diagram for DataRepresentationQosPolicy:



Public Attributes

- final **ShortSeq** **value** = new **ShortSeq**()

  *<<**spec**>> (p. 132) Sequence of representation identifiers.*
- **CompressionSettings_t** **compression_settings** = new **CompressionSettings_t**()

  *<<**basic**>> (p. 123) <<**extension**>> (p. 138) Structure that contains the compression settings.*

Static Public Attributes

- static final short **XCDR_DATA_REPRESENTATION** = 0

  Corresponds to the Extended Common Data Representation encoding version 1.
- static final short **XML_DATA_REPRESENTATION** = 1

  Corresponds to the XML Data Representation (unsupported).
- static final short **XCDR2_DATA_REPRESENTATION** = 2

  Corresponds to the Extended Common Data Representation encoding version 2.
- static final short **AUTO_DATA_REPRESENTATION** = -1

  Representation is automatically chosen based on the type.

8.57.1 Detailed Description

<<***spec***>> *(p. 132)* This QoS policy contains a list of representation identifiers and compression settings used by **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) entities to negotiate which data representation and compression settings to use.

Entity:

com.rti.dds.topic.Topic (p. 2116), **com.rti.dds.subscription.DataReader** (p. 707), **com.rti.dds.publication.↩ DataWriter** (p. 818)

Status:

com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS, com.rti.dds.↩ infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS

Properties:

RxO (p. 506) = YES
Changeable (p. 507) = **UNTIL ENABLE** (p. 507)

See also

DATA_REPRESENTATION (p. 462)

This policy has request-offer semantics for both representation and compression. For representation, a **com.rti.dds.↩ publication.DataWriter** (p. 818) may only offer a single representation. Attempting to put multiple representations in a **com.rti.dds.publication.DataWriter** (p. 818) will result in **com.rti.dds.infrastructure.RETCODE_INCONSISTENT↩ _POLICY** (p. 1901). A **com.rti.dds.publication.DataWriter** (p. 818) will use its offered policy to communicate with its matched **com.rti.dds.subscription.DataReader** (p. 707) entities. A **com.rti.dds.subscription.DataReader** (p. 707) requests one or more representations. If a **com.rti.dds.publication.DataWriter** (p. 818) offers a representation that is contained within the sequence of the **com.rti.dds.subscription.DataReader** (p. 707), the offer satisfies the request and the policies are compatible. Otherwise, they are incompatible.

When representations are specified in the **com.rti.dds.topic.TopicQos** (p. 2133), **com.rti.dds.publication.↩ Publisher.copy_from_topic_qos** (p. 1785) copies the first element of the sequence, and **com.rti.dds.subscription.↩ Subscriber.copy_from_topic_qos** (p. 2060) copies the whole sequence.

For Compression, only the **com.rti.dds.infrastructure.CompressionSettings_t.compression_ids** (p. 683) is propagated and a **com.rti.dds.publication.DataWriter** (p. 818) may only offer a single compression id. Attempting to put multiple compression_ids in a **com.rti.dds.publication.DataWriter** (p. 818) will result in **com.rti.dds.infrastructure.↩ RETCODE_INCONSISTENT_POLICY** (p. 1901).

A **com.rti.dds.publication.DataWriter** (p. 818) will use its offered compression algorithm to compress data that it sends to its matched **com.rti.dds.subscription.DataReader** (p. 707) entities. A **com.rti.dds.subscription.Data↩ Reader** (p. 707) requests zero or more compression algorithms. If a **com.rti.dds.publication.DataWriter** (p. 818) offers a representation that is contained within the algorithms requested by the **com.rti.dds.subscription.DataReader** (p. 707), the offer satisfies the request and the policies are compatible. Otherwise, they are incompatible.

When compression IDs are specified in the **com.rti.dds.topic.TopicQos** (p. 2133), **com.rti.dds.publication.↩ Publisher.copy_from_topic_qos** (p. 1785) copies a single compression ID (see **com.rti.dds.infrastructure.↩ CompressionSettings_t.compression_ids** (p. 683)), and **com.rti.dds.subscription.Subscriber.copy_from_topic↩ _qos** (p. 2060) copies all of the compression_ids.

8.57.2 Member Data Documentation

8.57.2.1 value

```
final ShortSeq value = new ShortSeq()
```

<<***spec***>> *(*p. *132)* Sequence of representation identifiers.

[default] For **com.rti.dds.topic.Topic** (p. 2116), **com.rti.dds.publication.DataWriter** (p. 818), and **com.rti.dds.subscription.DataReader** (p. 707), a list with one element: **com.rti.dds.infrastructure.DataRepresentationQosPolicy.AUTO_DATA_REPRESENTATION** (p. 464).

Note

An empty sequence is equivalent to a list with one element: **com.rti.dds.infrastructure.DataRepresentationQosPolicy.XCDR_DATA_REPRESENTATION** (p. 463).

Categories

Immutable (p. 292), **Matching** (p. 355), **Discovery Metadata** (p. 348), **Type System** (p. 289)

8.57.2.2 compression_settings

```
CompressionSettings_t compression_settings = new CompressionSettings_t()
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* Structure that contains the compression settings.

compression_ids:
[default] The value depends on the entity
com.rti.dds.publication.DataWriter (p. 818) and **com.rti.dds.topic.Topic** (p. 2116) are set to com.rti.dds.infrastructure.CompressionIdMaskBits.MASK_NONE
com.rti.dds.subscription.DataReader (p. 707) com.rti.dds.infrastructure.CompressionIdMaskBits.MASK_ALL

writer_compression_level:
[default] The value depends on the entity
com.rti.dds.publication.DataWriter (p. 818) and **com.rti.dds.topic.Topic** (p. 2116) are set to com.rti.dds.infrastructure.COMPRESSION_LEVEL_DEFAULT
com.rti.dds.subscription.DataReader (p. 707) NOT SUPPORTED

writer_compression_threshold:
[default] The value depends on the entity
com.rti.dds.publication.DataWriter (p. 818) and **com.rti.dds.topic.Topic** (p. 2116) are set to com.rti.dds.infrastructure.COMPRESSION_THRESHOLD_DEFAULT
com.rti.dds.subscription.DataReader (p. 707) NOT SUPPORTED

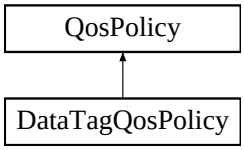
8.58 DataTagQosPolicy Class Reference

<<***spec***>> *(*p. *132)* Stores (name, value) pairs that can be used to determine access permissions.

Inheritance diagram for DataTagQosPolicy:



Public Attributes

- final **TagSeq tags** = new **TagSeq**()
  <<***spec***>> *(*p. *132) Sequence of data tags.*

8.58.1 Detailed Description

<<***spec***>> *(*p. *132)* Stores (name, value) pairs that can be used to determine access permissions.

Entity:

com.rti.dds.subscription.DataReader (p. 707) **com.rti.dds.publication.DataWriter** (p. 818)

Properties:

RxO (p. 506) = N/A;
Changeable (p. 507) = **NO** (p. 507)

8.58.2 Usage

The DATA_TAG QoS policy can be used to associate a set of tags in the form of (name, value) pairs with a **com.rti.↩ dds.subscription.DataReader** (p. 707) or **com.rti.dds.publication.DataWriter** (p. 818). This is similar to the **com.↩ rti.dds.infrastructure.PropertyQosPolicy** (p. 1739), except for the following differences:

- Data tags are always propagated. You cannot select whether or not a particular pair should be propagated.
- Data tags are not exposed to API functions, such as **com.rti.dds.publication.DataWriter.get_matched↩ _subscription_data** (p. 832), that receive **com.rti.dds.publication.builtin.PublicationBuiltinTopicData** (p. 1753) or **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopicData** (p. 2070) as a parameter.
- Connext passes data tags to the Access Control Security Plugin, which may use them to decide whether to allow or deny the corresponding entities.

There are helper functions to facilitate working with data tags. See the **DATA_TAG** (p. 464) page.

8.58.3 Member Data Documentation

8.58.3.1 tags

```
final TagSeq tags = new TagSeq()
```

<<***spec***>> *(*p. *132)* Sequence of data tags.

[default] An empty list.

Categories

Immutable (p. 292), **Discovery Metadata** (p. 348), **Security** (p. 283)

Referenced by **DataTagQosPolicyHelper.add_tag()**, **DataTagQosPolicyHelper.assert_tag()**, **DataTagQosPolicyHelper.get_number_of_tags()**, **DataTagQosPolicyHelper.lookup_tag()**, and **DataTagQosPolicyHelper.remove_tag()**.

8.59 DataTagQosPolicyHelper Class Reference

Policy helpers that facilitate management of the data tags in the input policy.

Static Public Member Functions

- static int **get_number_of_tags** (**DataTagQosPolicy** policy)
  Gets the number of data tags in the input policy.
- static void **assert_tag** (**DataTagQosPolicy** policy, String name, String value)
  Asserts the tag identified by name in the input policy.
- static void **add_tag** (**DataTagQosPolicy** policy, String name, String value)
  Adds a new tag to the input policy.
- static **Tag** **lookup_tag** (**DataTagQosPolicy** policy, String name)
  Searches by tag name for a tag in the input policy.
- static void **remove_tag** (**DataTagQosPolicy** policy, String name)
  Removes a tag from the input policy.

8.59.1 Detailed Description

Policy helpers that facilitate management of the data tags in the input policy.

8.59.2 Member Function Documentation

8.59.2.1 get_number_of_tags()

```
static int get_number_of_tags (
              DataTagQosPolicy policy )  [static]
```

Gets the number of data tags in the input policy.

Precondition

policy cannot be null.

Parameters

policy	<<***in***>> *(*p. *404)* Input policy.

Returns

Number of data tags.

References **DataTagQosPolicy.tags**.

8.59.2.2 assert_tag()

```
static void assert_tag (
              DataTagQosPolicy policy,
             String name,
             String value )  [static]
```

Asserts the tag identified by name in the input policy.

If the tag already exists, this function replaces its current value with the new one.

If the tag identified by name does not exist, this function adds it to the tag set.

This function increases the maximum number of elements of the policy sequence by 10 when this number is not enough to store the new tag.

Precondition

policy, name and value cannot be null.

Parameters

policy	<<***in***>> *(*p. *404)* Input policy.
name	<<***in***>> *(*p. *404)* **Tag** (p. 2092) name.
value	<<***in***>> *(*p. *404)* **Tag** (p. 2092) value.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903)

References **DataTagQosPolicyHelper.lookup_tag()**, **DataTagQosPolicy.tags**, and **Tag.value**.

8.59.2.3 add_tag()

```
static void add_tag (
             DataTagQosPolicy policy,
            String name,
            String value )  [static]
```

Adds a new tag to the input policy.

This function will allocate memory to store the (name, value) pair. The memory allocated is owned by RTI Connext.

If the maximum number of elements of the policy sequence is not enough to store the new tag, this function will increase it by 10.

If the tag already exists, the function will fail with **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903).

Precondition

policy, name and value cannot be null.

The tag is not in the policy.

Parameters

policy	<<***in***>> *(*p. *404)* Input policy.
name	<<***in***>> *(*p. *404)* **Tag** (p. 2092) name.
value	<<***in***>> *(*p. *404)* **Tag** (p. 2092) value.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903), **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903)

References **DataTagQosPolicyHelper.lookup_tag()**, and **DataTagQosPolicy.tags**.

8.59.2.4 lookup_tag()

```
static  Tag lookup_tag (
              DataTagQosPolicy policy,
             String name )  [static]
```

Searches by tag name for a tag in the input policy.

Precondition

policy, name and value cannot be null.

Parameters

policy	<<***in***>> *(*p. *404)* Input policy.
name	<<***in***>> *(*p. *404)* **Tag** (p. 2092) name.

Returns

The function returns the first tag with the given name. If such a tag does not exist, the function returns NULL.

References **Tag.name**, and **DataTagQosPolicy.tags**.

Referenced by **DataTagQosPolicyHelper.add_tag()**, **DataTagQosPolicyHelper.assert_tag()**, and **DataTagQos↩ PolicyHelper.remove_tag()**.

8.59.2.5 remove_tag()

```
static void remove_tag (
              DataTagQosPolicy policy,
             String name )  [static]
```

Removes a tag from the input policy.

If the tag does not exist, the function fails with **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903).

Precondition

policy and name cannot be null.

The tag is in the policy.

Parameters

policy	<<***in***>> *(*p. *404)* Input policy.
name	<<***in***>> *(*p. *404)* **Tag** (p. 2092) name.

Exceptions

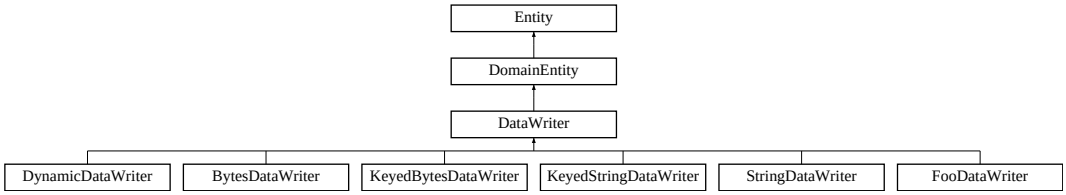
One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_PRECONDITION_NOT_MET** (p. 1903)

References **DataTagQosPolicyHelper.lookup_tag()**, and **DataTagQosPolicy.tags**.

8.60 DataWriter Interface Reference

<<***interface***>> *(*p. *403)* Allows an application to set the value of the data to be published under a given **com.rti.dds.topic.Topic** (p. 2116).

Inheritance diagram for DataWriter:



Public Member Functions

- void **set_qos** (**DataWriterQos** qos)

  Sets the writer QoS.
- void **set_qos_with_profile** (String library_name, String profile_name)

  <<***extension***>> *(*p. *403) Change the QoS of this writer using the input XML QoS profile.*
- void **get_qos** (**DataWriterQos** qos)

  Gets the writer QoS.
- void **set_listener** (**DataWriterListener** l, int mask)

  Sets the writer listener.
- **DataWriterListener** **get_listener** ()

  Get the writer listener.
- void **get_liveliness_lost_status** (**LivelinessLostStatus** status)

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS communication status.

- void **get_offered_deadline_missed_status** (**OfferedDeadlineMissedStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS communication status.

- void **get_offered_incompatible_qos_status** (**OfferedIncompatibleQosStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS communication status.

- void **get_publication_matched_status** (**PublicationMatchedStatus** status)

  Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS communication status.

- void **get_reliable_writer_cache_changed_status** (**ReliableWriterCacheChangedStatus** status)

  *<<**extension**>> (p. 403) Get the reliable cache status for this writer.*

- void **get_reliable_reader_activity_changed_status** (**ReliableReaderActivityChangedStatus** status)

  *<<**extension**>> (p. 403) Get the reliable reader activity changed status for this writer.*

- void **get_datawriter_cache_status** (**DataWriterCacheStatus** status)

  *<<**extension**>> (p. 403) Get the datawriter cache status for this writer.*

- void **get_datawriter_protocol_status** (**DataWriterProtocolStatus** status)

  *<<**extension**>> (p. 403) Get the datawriter protocol status for this writer.*

- void **get_matched_subscription_datawriter_protocol_status** (**DataWriterProtocolStatus** status, **InstanceHandle_t** subscription_handle)

  *<<**extension**>> (p. 403) Get the datawriter protocol status for this writer, per matched subscription identified by the subscription_handle.*

- void **get_matched_subscription_datawriter_protocol_status_by_locator** (**DataWriterProtocolStatus** status, **Locator_t** locator)

  *<<**extension**>> (p. 403) Get the datawriter protocol status for this writer, per matched subscription identified by the locator.*

- void **get_service_request_accepted_status** (**ServiceRequestAcceptedStatus** status)

  *Accesses the **com.rti.dds.infrastructure.StatusKind.SERVICE_REQUEST_ACCEPTED_STATUS** (p. 2018) communication status.*

- void **get_matched_subscription_locators** (**LocatorSeq** locators)

  *<<**extension**>> (p. 403) Retrieve the list of locators for subscriptions currently "associated" with this **com.rti.dds.publication.DataWriter** (p. 818).*

- void **get_matched_subscriptions** (**InstanceHandleSeq** subscription_handles)

  *Retrieve the list of subscriptions currently "associated" with this **com.rti.dds.publication.DataWriter** (p. 818).*

- boolean **is_matched_subscription_active** (**InstanceHandle_t** subscription_handle)

  *Check if a subscription currently matched with a **DataWriter** (p. 818) is active.*

- void **get_matched_subscription_data** (**SubscriptionBuiltinTopicData** subscription_data, **InstanceHandle_t** subscription_handle)

  *This operation retrieves the information on a subscription that is currently "associated" with the **com.rti.dds.publication.DataWriter** (p. 818).*

- void **get_matched_subscription_participant_data** (**ParticipantBuiltinTopicData** participant_data, **InstanceHandle_t** subscription_handle)

  *This operation retrieves the information on the discovered **com.rti.dds.domain.DomainParticipant** (p. 948) associated with the subscription that is currently matching with the **com.rti.dds.publication.DataWriter** (p. 818).*

- **Topic get_topic** ()

  *This operation returns the **com.rti.dds.topic.Topic** (p. 2116) associated with the **com.rti.dds.publication.DataWriter** (p. 818).*

- **Publisher get_publisher** ()

  *This operation returns the **com.rti.dds.publication.Publisher** (p. 1767) to which the **com.rti.dds.publication.DataWriter** (p. 818) belongs.*

- void **wait_for_acknowledgments** (**Duration_t** max_wait)

  *Blocks the calling thread until all data written by reliable **com.rti.dds.publication.DataWriter** (p. 818) entity is acknowledged, or until timeout expires.*
- boolean **is_sample_app_acknowledged** (**SampleIdentity_t** identity)

  This method can be used to see if a sample has been application acknowledged.
- void **wait_for_asynchronous_publishing** (**Duration_t** max_wait)

  *<<**extension**>> (p. 403) Blocks the calling thread until asynchronous sending is complete.*
- void **assert_liveliness** ()

  *This operation manually asserts the liveliness of this **com.rti.dds.publication.DataWriter** (p. 818).*
- void **flush** ()

  *<<**extension**>> (p. 403) Flushes the batch in progress in the context of the calling thread.*
- **InstanceHandle_t** **register_instance_untyped** (Object instance_data)

  Register a new instance with this writer.
- **InstanceHandle_t** **register_instance_w_timestamp_untyped** (Object instance_data, **Time_t** source_timestamp)

  Register a new instance with this writer using the given time instead of the current time.
- void **unregister_instance_untyped** (Object instance_data, **InstanceHandle_t** handle)

  Unregister a new instance from this writer.
- void **unregister_instance_w_timestamp_untyped** (Object instance_data, **InstanceHandle_t** handle, **Time_t** source_timestamp)

  Unregister a new instance from this writer using the given time instead of the current time.
- void **write_untyped** (Object instance_data, **InstanceHandle_t** handle)

  Publish a data sample.
- void **write_w_timestamp_untyped** (Object instance_data, **InstanceHandle_t** handle, **Time_t** source_timestamp)

  Publish a data sample using the given time instead of the current time.
- void **dispose_untyped** (Object instance_data, **InstanceHandle_t** handle)

  Dispose a data sample.
- void **dispose_w_timestamp_untyped** (Object instance_data, **InstanceHandle_t** handle, **Time_t** source_timestamp)

  Dispose a data sample using the given time instead of the current time.
- void **get_key_value_untyped** (Object key_holder, **InstanceHandle_t** handle)

  Fill in the key fields of the given data sample.
- **InstanceHandle_t** **lookup_instance_untyped** (Object key_value)

  Given a sample with the given key field values, return the handle corresponding to its instance.
- void **take_discovery_snapshot** ()

  Take a snapshot of the compatible and incompatible remote readers matched by a local writer.
- void **take_discovery_snapshot** (String file_name)

  Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

8.60.1 Detailed Description

*<<**interface**>> (p. 403)* Allows an application to set the value of the data to be published under a given **com.rti.dds.topic.Topic** (p. 2116).

QoS:

com.rti.dds.publication.DataWriterQos (p. 878)

Status:

com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS, **com.rti.dds.publication.LivelinessLostStatus** (p. 1534);
com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS, **com.rti.dds.publication.OfferedDeadlineMissedStatus** (p. 1637);
com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS, **com.rti.dds.publication.OfferedIncompatibleQosStatus** (p. 1638);
com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS, **com.rti.dds.publication.PublicationMatchedStatus** (p. 1764);
com.rti.dds.infrastructure.StatusKind.StatusKind.RELIABLE_READER_ACTIVITY_CHANGED_STATUS, **com.rti.dds.publication.ReliableReaderActivityChangedStatus** (p. 1836);
com.rti.dds.infrastructure.StatusKind.StatusKind.RELIABLE_WRITER_CACHE_CHANGED_STATUS, **com.rti.dds.publication.ReliableWriterCacheChangedStatus** (p. 1839).

Listener:

com.rti.dds.publication.DataWriterListener (p. 853)

A **com.rti.dds.publication.DataWriter** (p. 818) is attached to exactly one **com.rti.dds.publication.Publisher** (p. 1767), that acts as a factory for it.

A **com.rti.dds.publication.DataWriter** (p. 818) is bound to exactly one **com.rti.dds.topic.Topic** (p. 2116) and therefore to exactly one data type. The **com.rti.dds.topic.Topic** (p. 2116) must exist prior to the **com.rti.dds.publication.DataWriter** (p. 818)'s creation.

com.rti.dds.publication.DataWriter (p. 818) is an abstract class. It must be specialized for each particular application data-type (see **USER_DATA** (p. 530)). The additional methods or functions that must be defined in the auto-generated class for a hypothetical application type **`com.rti.ndds.example.Foo`** (p. 1358) are specified in the example type **com.rti.dds.publication.DataWriter** (p. 818).

The following operations may be called even if the **com.rti.dds.publication.DataWriter** (p. 818) is not enabled. Other operations will fail with **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902) if called on a disabled **com.rti.dds.publication.DataWriter** (p. 818):

- The base-class operations **com.rti.dds.publication.DataWriter.set_qos** (p. 822), **com.rti.dds.publication.DataWriter.get_qos** (p. 823), **com.rti.dds.publication.DataWriter.set_listener** (p. 824), **com.rti.dds.publication.DataWriter.get_listener** (p. 824), **com.rti.dds.infrastructure.Entity.enable** (p. 1323), **com.rti.dds.infrastructure.Entity.get_statuscondition** (p. 1325) and **com.rti.dds.infrastructure.Entity.get_status_changes** (p. 1325)
- **com.rti.dds.publication.DataWriter.get_liveliness_lost_status** (p. 824), **com.rti.dds.publication.DataWriter.get_offered_deadline_missed_status** (p. 825), **com.rti.dds.publication.DataWriter.get_offered_incompatible_qos_status** (p. 825), **com.rti.dds.publication.DataWriter.get_publication_matched_status** (p. 826), **com.rti.dds.publication.DataWriter.get_reliable_writer_cache_changed_status** (p. 826), **com.rti.dds.publication.DataWriter.get_reliable_reader_activity_changed_status** (p. 827) **com.rti.dds.publication.DataWriter.get_service_request_accepted_status** (p. 829)

Several **com.rti.dds.publication.DataWriter** (p. 818) may operate in different threads. If they share the same **com.rti.dds.publication.Publisher** (p. 1767), the middleware guarantees that its operations are thread-safe.

com.rti.ndds.example.FooDataWriter (p. 1389)

Operations Allowed in Listener Callbacks (p. 1530)

8.60.2 Member Function Documentation

8.60.2.1 set_qos()

```
void set_qos (
            DataWriterQos qos )
```

Sets the writer QoS.

This operation modifies the QoS of the **com.rti.dds.publication.DataWriter** (p. 818).

The **com.rti.dds.publication.DataWriterQos.user_data** (p. 885), **com.rti.dds.publication.DataWriterQos.deadline** (p. 883), **com.rti.dds.publication.DataWriterQos.latency_budget** (p. 884), **com.rti.dds.publication.DataWriterQos.ownership_strength** (p. 885), **com.rti.dds.publication.DataWriterQos.transport_priority** (p. 885), **com.rti.dds.publication.DataWriterQos.lifespan** (p. 885) and **com.rti.dds.publication.DataWriterQos.writer_data_lifecycle** (p. 885) can be changed. The other policies are immutable.

Parameters

qos	*<<**in**>> (p. 404)* The **com.rti.dds.publication.DataWriterQos** (p. 878) to be set to. Policies must be consistent. Immutable policies cannot be changed after **com.rti.dds.publication.DataWriter** (p. 818) is enabled. The special value **com.rti.dds.publication.Publisher.DATAWRITER_QOS_DEFAULT** (p. 72) can be used to indicate that the QoS of the **com.rti.dds.publication.DataWriter** (p. 818) should be changed to match the current default **com.rti.dds.publication.DataWriterQos** (p. 878) set in the **com.rti.dds.publication.Publisher** (p. 1767). Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_IMMUTABLE_POLICY** (p. 1901) or **com.rti.dds.infrastructure.RETCODE_INCONSISTENT_POLICY** (p. 1901)

See also

com.rti.dds.publication.DataWriterQos (p. 878) for rules on consistency among QoS

set_qos (abstract) (p. 1321)

Operations Allowed in Listener Callbacks (p. 1530)

8.60.2.2 set_qos_with_profile()

```
void set_qos_with_profile (
             String library_name,
             String profile_name )
```

<<***extension***>> *(p. 403)* Change the QoS of this writer using the input XML QoS profile.

This operation modifies the QoS of the **com.rti.dds.publication.DataWriter** (p. 818).

The **com.rti.dds.publication.DataWriterQos.user_data** (p. 885), **com.rti.dds.publication.DataWriterQos.deadline** (p. 883), **com.rti.dds.publication.DataWriterQos.latency_budget** (p. 884), **com.rti.dds.publication.DataWriterQos.ownership_strength** (p. 885), **com.rti.dds.publication.DataWriterQos.transport_priority** (p. 885), **com.rti.dds.publication.DataWriterQos.lifespan** (p. 885) and **com.rti.dds.publication.DataWriterQos.writer_data_lifecycle** (p. 885) can be changed. The other policies are immutable.

Parameters

library_name	<<***in***>> *(p. 404)* Library name containing the XML QoS profile. If library_name is null RTI Connext will use the default library (see **com.rti.dds.publication.Publisher.set_default_library** (p. 1779)).
profile_name	<<***in***>> *(p. 404)* XML QoS Profile name. If profile_name is null RTI Connext will use the default profile (see **com.rti.dds.publication.Publisher.set_default_profile** (p. 1780)).

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_IMMUTABLE_POLICY** (p. 1901) or **com.rti.dds.infrastructure.RETCODE_INCONSISTENT_POLICY** (p. 1901)

See also

com.rti.dds.publication.DataWriterQos (p. 878) for rules on consistency among QoS

Operations Allowed in Listener Callbacks (p. 1530)

8.60.2.3 get_qos()

```
void get_qos (
              DataWriterQos qos )
```

Gets the writer QoS.

This method may potentially allocate memory depending on the sequences contained in some QoS policies.

Parameters

qos	<<***inout***>> *(p. 404)* The **com.rti.dds.publication.DataWriterQos** (p. 878) to be filled up. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

See also

get_qos (abstract) (p. 1322)

8.60.2.4 set_listener()

```
void set_listener (
            DataWriterListener l,
            int mask )
```

Sets the writer listener.

Parameters

l	<<***in***>> *(*p. *404)* **com.rti.dds.publication.DataWriterListener** (p. 853) to set to
mask	<<***in***>> *(*p. *404)* com.rti.dds.infrastructure.StatusMask associated with the **com.rti.dds.publication.DataWriterListener** (p. 853).

Exceptions

One	of the **Standard Return Codes** (p. 513)

See also

set_listener (abstract) (p. 1322)

8.60.2.5 get_listener()

```
DataWriterListener get_listener ( )
```

Get the writer listener.

Returns

com.rti.dds.publication.DataWriterListener (p. 853) of the **com.rti.dds.publication.DataWriter** (p. 818).

See also

get_listener (abstract) (p. 1323)

8.60.2.6 get_liveliness_lost_status()

```
void get_liveliness_lost_status (
            LivelinessLostStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(*p. *404)* **com.rti.dds.publication.LivelinessLostStatus** (p. 1534) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.60.2.7 get_offered_deadline_missed_status()

```
void get_offered_deadline_missed_status (
            OfferedDeadlineMissedStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(*p. *404)* **com.rti.dds.publication.OfferedDeadlineMissedStatus** (p. 1637) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.60.2.8 get_offered_incompatible_qos_status()

```
void get_offered_incompatible_qos_status (
            OfferedIncompatibleQosStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.OfferedIncompatibleQosStatus** (p. 1638) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.60.2.9 get_publication_matched_status()

```
void get_publication_matched_status (
            PublicationMatchedStatus status )
```

Accesses the com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.PublicationMatchedStatus** (p. 1764) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.60.2.10 get_reliable_writer_cache_changed_status()

```
void get_reliable_writer_cache_changed_status (
            ReliableWriterCacheChangedStatus status )
```

<<***extension***>> *(p. 403)* Get the reliable cache status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.ReliableWriterCacheChangedStatus** (p. 1839) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.60.2.11 get_reliable_reader_activity_changed_status()

```
void get_reliable_reader_activity_changed_status (
            ReliableReaderActivityChangedStatus status )
```

<<***extension***>> *(p. 403)* Get the reliable reader activity changed status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.ReliableReaderActivityChangedStatus** (p. 1836) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.60.2.12 get_datawriter_cache_status()

```
void get_datawriter_cache_status (
            DataWriterCacheStatus status )
```

<<***extension***>> *(p. 403)* Get the datawriter cache status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.DataWriterCacheStatus** (p. 851) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.60.2.13 get_datawriter_protocol_status()

```
void get_datawriter_protocol_status (
             DataWriterProtocolStatus status )
```

<<***extension***>> *(p. 403)* Get the datawriter protocol status for this writer.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.DataWriterProtocolStatus** (p. 867) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.60.2.14 get_matched_subscription_datawriter_protocol_status()

```
void get_matched_subscription_datawriter_protocol_status (
             DataWriterProtocolStatus status,
             InstanceHandle_t subscription_handle )
```

<<***extension***>> *(p. 403)* Get the datawriter protocol status for this writer, per matched subscription identified by the subscription_handle.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.DataWriterProtocolStatus** (p. 867) to be filled in. Cannot be NULL.
subscription_handle	<<***in***>> *(p. 404)* Handle to a specific subscription associated with the **com.rti.dds.subscription.DataReader** (p. 707). Cannot be NULL. Must correspond to a subscription currently associated with the **com.rti.dds.publication.DataWriter** (p. 818).

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.60.2.15 get_matched_subscription_datawriter_protocol_status_by_locator()

```
void get_matched_subscription_datawriter_protocol_status_by_locator (
              DataWriterProtocolStatus status,
              Locator_t locator )
```

*<<**extension**>> (p. 403)* Get the datawriter protocol status for this writer, per matched subscription identified by the locator.

This also resets the status so that it is no longer considered changed.

Note: Status for a remote entity is only kept while the entity is alive. Once a remote entity is no longer alive, its status is deleted.

Parameters

status	*<<**inout**>> (p. 404)* **com.rti.dds.publication.DataWriterProtocolStatus** (p. 867) to be filled in Cannot be NULL.
locator	*<<**in**>> (p. 404)* Locator to a specific locator associated with the **com.rti.dds.subscription.DataReader** (p. 707). Cannot be NULL. Must correspond to a locator of one or more subscriptions currently associated with the **com.rti.dds.publication.DataWriter** (p. 818).

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.60.2.16 get_service_request_accepted_status()

```
void get_service_request_accepted_status (
              ServiceRequestAcceptedStatus status )
```

Accesses the **com.rti.dds.infrastructure.StatusKind.SERVICE_REQUEST_ACCEPTED_STATUS** (p. 2018) communication status.

This also resets the status so that it is no longer considered changed.

Parameters

status	<<***inout***>> *(p. 404)* **com.rti.dds.publication.ServiceRequestAcceptedStatus** (p. 1986) to be filled in. Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513)

8.60.2.17 get_matched_subscription_locators()

```
void get_matched_subscription_locators (
            LocatorSeq locators )
```

<<***extension***>> *(p. 403)* Retrieve the list of locators for subscriptions currently "associated" with this **com.rti.dds.publication.DataWriter** (p. 818).

The locators returned in the `locators` list are the ones that are used by the DDS implementation to communicate with the corresponding matched **com.rti.dds.subscription.DataReader** (p. 707) entities.

Parameters

locators	<<***inout***>> *(p. 404)*. Handles of all the matched subscription locators.

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all the matches and the system can not resize the sequence, this method will fail with **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903). Cannot be NULL. .

Exceptions

One	of the **Standard Return Codes** (p. 513), or **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903) if the sequence is too small and the system can not resize it, or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

8.60.2.18 get_matched_subscriptions()

```
void get_matched_subscriptions (
            InstanceHandleSeq subscription_handles )
```

Retrieve the list of subscriptions currently "associated" with this **com.rti.dds.publication.DataWriter** (p. 818).

A subscription is considered to be matching if all of the following criteria are true:

- The subscription is within the same domain as this publication.
- The subscription has a matching **com.rti.dds.topic.Topic** (p. 2116).
- The subscription has compatible QoS.
- If the applications are using partitions, the subscription shares a common partition with this publication.
- The **com.rti.dds.domain.DomainParticipant** (p. 948) has not indicated that the subscription's **com.rti.dds.↩ domain.DomainParticipant** (p. 948) should be "ignored" by means of the **com.rti.dds.domain.Domain↩ Participant.ignore_publication** (p. 1003) API.
- If the publication is using the **com.rti.dds.infrastructure.MultiChannelQosPolicy** (p. 1616) and the subscription is using a **com.rti.dds.topic.ContentFilteredTopic** (p. 692), there is an intersection between at least one of the associated filters.
- If the endpoints need to exchange key material to communicate (i.e., they are securing their communications), the writer has completed the key exchange with reader.

The handles returned in the `subscription_handles` list are the ones that RTI Connext uses to locally identify the corresponding matched **com.rti.dds.subscription.DataReader** (p. 707) entities. These handles match the ones that appear in the **com.rti.dds.subscription.SampleInfo.instance_handle** (p. 1949) field of the **com.rti.dds.↩ subscription.SampleInfo** (p. 1944) when reading the **com.rti.dds.subscription.builtin.SubscriptionBuiltinTopic↩ DataTypeSupport.SUBSCRIPTION_TOPIC_NAME** (p. 412) builtin topic.

This API may return the subscription handles of subscriptions that are inactive. **com.rti.dds.publication.DataWriter.↩ is_matched_subscription_active** (p. 831) can be used to check this.

Parameters

subscription_handles	<<***inout***>> *(p. 404).* The handles of all the matched subscriptions.

The sequence will be grown if the sequence has ownership and the system has the corresponding resources. Use a sequence without ownership to avoid dynamic memory allocation. If the sequence is too small to store all of the matches and the system cannot resize the sequence, this method will fail with **com.rti.dds.infrastructure.RETCODE_OUT_↩ OF_RESOURCES** (p. 1903).

The maximum number of matches possible is configured with **com.rti.dds.infrastructure.DomainParticipant↩ ResourceLimitsQosPolicy** (p. 1081). You can use a zero-maximum sequence without ownership to quickly check whether there are any matches without allocating any memory. Cannot be NULL. .

Exceptions

One	of the **Standard Return Codes** (p. 513), or **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903) if the sequence is too small and the system cannot resize it, or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

8.60.2.19 is_matched_subscription_active()

```
boolean is_matched_subscription_active (
              InstanceHandle_t subscription_handle )
```

Check if a subscription currently matched with a **DataWriter** (p. 818) is active.

This API is used for querying the endpoint liveliness of a matched subscription. A matched subscription will be marked as inactive when it becomes nonprogessing (e.g., not responding to a **DataWriter** (p. 818)'s heartbeats, or letting its internal queue fill up without taking the available data). Note that if the participant associated with the matched subscription loses liveliness, the **com.rti.dds.infrastructure.InstanceHandle_t** (p. 1443) will become invalid and this function will fail with **com.rti.dds.infrastructure.RETCODE_BAD_PARAMETER** (p. 1899).

Parameters

subscription_handle	*<<**in**>> (p. 404)* The **com.rti.dds.infrastructure.InstanceHandle_t** (p. 1443) of the matched subscription. See **com.rti.dds.publication.DataWriter.get_matched_subscriptions** (p. 830) for a description of what is considered a matched subscription.

Returns

A boolean indicating whether or not the matched subscription is active.

8.60.2.20 get_matched_subscription_data()

```
void get_matched_subscription_data (
               SubscriptionBuiltinTopicData subscription_data,
               InstanceHandle_t subscription_handle )
```

This operation retrieves the information on a subscription that is currently "associated" with the **com.rti.dds.↩ publication.DataWriter** (p. 818).

The `subscription_handle` must correspond to a subscription currently associated with the **com.rti.dds.↩ publication.DataWriter** (p. 818). Otherwise, the operation will fail and fail with **com.rti.dds.infrastructure.↩ RETCODE_BAD_PARAMETER** (p. 1899). Use **com.rti.dds.publication.DataWriter.get_matched_subscriptions** (p. 830) to find the subscriptions that are currently matched with the **com.rti.dds.publication.DataWriter** (p. 818).

The above information is also available through **com.rti.dds.subscription.DataReaderListener::on_data_available()** (p. 760) (if a reader listener is installed on the builtin.SubscriptionBuiltinTopicDataDataReader).

When the subscription data is updated, for example when the content filter property changes, there is a small window of time in between when the **DataWriter** (p. 818) is made aware of these changes and when they actually take effect. Taking effect in this example means that the **DataWriter** (p. 818) will perform writer-side filtering using the new filter property values (filter expression and/or parameters).

When the **DataWriter** (p. 818) is made aware of the changes they will first be seen in the **com.rti.dds.subscription.↩ DataReaderListener::on_data_available()** (p. 760) of the builtin.SubscriptionBuiltinTopicDataDataReader. When these changes are applied, they will be seen in the output of this API because this API blocks until the most recent changes known to the **DataWriter** (p. 818) have taken effect. This API will only block when called outside of a listener callback, in order to not block the internal threads from making progress.

If application behavior depends on being made aware of information about a subscription only after it has taken effect on the **DataWriter** (p. 818), the recommended pattern for usage of this API is to wait for subscription data to be received

either through polling this API or by installing a listener on the builtin.SubscriptionBuiltinTopicDataDataReader. When a new sample is received by the builtin DataReader, this API may be called in a separate thread and will return the expected matched subscription data once it has been applied to the **DataWriter** (p. 818).

Because this API blocks, it is possible for this API to time out while waiting for the changes to be applied. A timeout may happen if the DataReader's subscription data is changing rapidly, preventing the **DataWriter** (p. 818) from returning valid information before newer data has been received, or if an application is performing a task in a listener callback, thereby preventing the middleware's threads from executing events in a timely manner.

Note: This operation does not retrieve the builtin.SubscriptionBuiltinTopicData.type_code. This information is available through **com.rti.dds.subscription.DataReaderListener::on_data_available()** (p. 760) (if a reader listener is installed on the builtin.SubscriptionBuiltinTopicDataDataReader).

Parameters

subscription_data	*<<**inout**>> (p. 404).* The information to be filled in on the associated subscription. Cannot be NULL.
subscription_handle	*<<**in**>> (p. 404).* Handle to a specific subscription associated with the **com.rti.dds.subscription.DataReader** (p. 707). Must correspond to a subscription currently associated with the **com.rti.dds.publication.DataWriter** (p. 818). Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902), or **com.rti.dds.infrastructure.RETCODE_TIMEOUT** (p. 1904)

8.60.2.21 get_matched_subscription_participant_data()

```
void get_matched_subscription_participant_data (
               ParticipantBuiltinTopicData participant_data,
               InstanceHandle_t subscription_handle )
```

This operation retrieves the information on the discovered **com.rti.dds.domain.DomainParticipant** (p. 948) associated with the subscription that is currently matching with the **com.rti.dds.publication.DataWriter** (p. 818).

The `subscription_handle` must correspond to a subscription currently associated with the **com.rti.dds.↩ publication.DataWriter** (p. 818). Otherwise, the operation will fail with **com.rti.dds.infrastructure.RETCODE_BAD↩ _PARAMETER** (p. 1899). The operation may also fail with **com.rti.dds.infrastructure.RETCODE_PRECONDITION↩ _NOT_MET** (p. 1903) if the subscription corresponds to the same **com.rti.dds.domain.DomainParticipant** (p. 948) that the **DataWriter** (p. 818) belongs to. Use **com.rti.dds.publication.DataWriter.get_matched_subscriptions** (p. 830) to find the subscriptions that are currently matched with the **com.rti.dds.publication.DataWriter** (p. 818).

Parameters

participant_data	*<<**inout**>> (p. 404).* The information to be filled in on the associated participant Cannot be NULL.
subscription_handle	*<<**in**>> (p. 404).* Handle to a specific subscription associated with the **com.rti.dds.subscription.DataReader** (p. 707). Must correspond to a subscription currently associated with the **com.rti.dds.publication.DataWriter** (p. 818).

Cannot be NULL.

Exceptions

One	of the **Standard Return Codes** (p. 513), or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

8.60.2.22 get_topic()

```
Topic get_topic ( )
```

This operation returns the **com.rti.dds.topic.Topic** (p. 2116) associated with the **com.rti.dds.publication.DataWriter** (p. 818).

This is the same **com.rti.dds.topic.Topic** (p. 2116) that was used to create the **com.rti.dds.publication.DataWriter** (p. 818).

Returns

com.rti.dds.topic.Topic (p. 2116) that was used to create the **com.rti.dds.publication.DataWriter** (p. 818).

8.60.2.23 get_publisher()

```
Publisher get_publisher ( )
```

This operation returns the **com.rti.dds.publication.Publisher** (p. 1767) to which the **com.rti.dds.publication.DataWriter** (p. 818) belongs.

Returns

com.rti.dds.publication.Publisher (p. 1767) to which the **com.rti.dds.publication.DataWriter** (p. 818) belongs.

8.60.2.24 wait_for_acknowledgments()

```
void wait_for_acknowledgments (
            Duration_t max_wait )
```

Blocks the calling thread until all data written by reliable **com.rti.dds.publication.DataWriter** (p. 818) entity is acknowledged, or until timeout expires.

This operation blocks the calling thread until either all data written by the reliable **com.rti.dds.publication.DataWriter** (p. 818) entity is acknowledged by (a) all reliable **com.rti.dds.subscription.DataReader** (p. 707) entities that are matched and alive and (b) by all required subscriptions, or until the duration specified by the `max_wait` parameter elapses, whichever happens first. A successful completion indicates that all the samples written have been acknowledged by all reliable matched data readers and by all required subscriptions; a timeout indicates that max_wait elapsed before all the data was acknowledged.

Note that if a thread is blocked in the call to wait_for_acknowledgments on a **DataWriter** (p. 818) and a different thread writes new samples on the same **DataWriter** (p. 818), the new samples must be acknowledged before unblocking the thread waiting on wait_for_acknowledgments.

If the **com.rti.dds.publication.DataWriter** (p. 818) does not have **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829) kind set to RELIABLE, this operation will succeed immediately.

Parameters

max_wait	<<***in***>> *(*p. *404)* Specifies maximum time to wait for acknowledgements **com.rti.dds.infrastructure.Duration_t** (p. 1126) .

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902), **com.rti.dds.infrastructure.RETCODE_TIMEOUT** (p. 1904)

8.60.2.25 is_sample_app_acknowledged()

```
boolean is_sample_app_acknowledged (
              SampleIdentity_t identity )
```

This method can be used to see if a sample has been application acknowledged.

This method can be used to see if a sample has been application acknowledged by all the matching DataReaders that were alive when the sample was written.

Parameters

identity	<<***in***>> *(*p. *404)* Cannot be NULL. Sample identity.

Returns

true when the sample has been application acknowledged. Otherwise, false.

Exceptions

One	of the **Standard Return Codes** (p. 513)

Note

If the **DataWriter** (p. 818) does not match with any DataReader that enables application acknowledgments (that is, a DataReader with **com.rti.dds.infrastructure.ReliabilityQosPolicy.acknowledgment_kind** (p. 1832) set to a value other than **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.PROTOCOL_↩ ACKNOWLEDGMENT_MODE** (p. 1834)), this method returns false.

8.60.2.26 wait_for_asynchronous_publishing()

```
void wait_for_asynchronous_publishing (
            Duration_t max_wait )
```

<<***extension***>> *(*p. *403)* Blocks the calling thread until asynchronous sending is complete.

This operation blocks the calling thread (up to `max_wait`) until all data written by the asynchronous **com.rti.dds.publication.DataWriter** (p. 818) is sent and acknowledged (if reliable) by all matched **com.rti.dds.subscription.DataReader** (p. 707) entities. A successful completion indicates that all the samples written have been sent and acknowledged where applicable; a time out indicates that `max_wait` elapsed before all the data was sent and/or acknowledged.

In other words, this guarantees that sending to best effort **com.rti.dds.subscription.DataReader** (p. 707) is complete in addition to what **com.rti.dds.publication.DataWriter.wait_for_acknowledgments** (p. 834) provides.

If the **com.rti.dds.publication.DataWriter** (p. 818) does not have **com.rti.dds.infrastructure.PublishModeQosPolicy** (p. 1797) kind set to com.rti.dds.infrastructure.PublishModeQosPolicyKind.PublishModeQosPolicyKind.ASYNCHRONOUS_PUBLISH_MODE_QOS the operation will complete immediately , with com.rti.dds.infrastructure.RETCODE_OK.

Parameters

max_wait	<<***in***>> *(*p. *404)* Specifies maximum time to wait for acknowledgements.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902), **com.rti.dds.infrastructure.RETCODE_TIMEOUT** (p. 1904)

8.60.2.27 assert_liveliness()

```
void assert_liveliness ( )
```

This operation manually asserts the liveliness of this **com.rti.dds.publication.DataWriter** (p. 818).

This is used in combination with the **LIVELINESS** (p. 489) policy to indicate to RTI Connext that the **com.rti.dds.publication.DataWriter** (p. 818) remains active.

You only need to use this operation if the **LIVELINESS** (p. 489) setting is either com.rti.dds.infrastructure.LivelinessQosPolicyKind.LivelinessQosPolicyKind.MANUAL_BY_PARTICIPANT_LIVELINESS_QOS or com.rti.dds.infrastructure.LivelinessQosPolicyKind.LivelinessQosPolicyKind.MANUAL_BY_TOPIC_LIVELINESS_QOS. Otherwise, it has no effect.

Note: writing data via the **com.rti.ndds.example.FooDataWriter.write** (p. 1397) or **com.rti.ndds.example.FooDataWriter.write_w_timestamp** (p. 1401) operation asserts liveliness on the **com.rti.dds.publication.DataWriter** (p. 818) itself, and its **com.rti.dds.domain.DomainParticipant** (p. 948). Consequently the use of **assert_liveliness()** (p. 836) is only needed if the application is not writing data regularly.

Exceptions

One	of the **Standard Return Codes** (p. 513) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902)

See also

com.rti.dds.infrastructure.LivelinessQosPolicy (p. 1535)

8.60.2.28 flush()

```
void flush ( )
```

<<***extension***>> *(p. 403)* Flushes the batch in progress in the context of the calling thread.

After being flushed, the batch is available to be sent on the network.

If the **com.rti.dds.publication.DataWriter** (p. 818) does not have **com.rti.dds.infrastructure.PublishModeQos↩ Policy** (p. 1797) kind set to com.rti.dds.infrastructure.PublishModeQosPolicyKind.PublishModeQosPolicyKind.↩ ASYNCHRONOUS_PUBLISH_MODE_QOS, the batch will be sent on the network immediately (in the context of the calling thread).

If the **com.rti.dds.publication.DataWriter** (p. 818) does have **com.rti.dds.infrastructure.PublishModeQos↩ Policy** (p. 1797) kind set to com.rti.dds.infrastructure.PublishModeQosPolicyKind.PublishModeQosPolicyKind.↩ ASYNCHRONOUS_PUBLISH_MODE_QOS, the batch will be sent in the context of the asynchronous publishing thread.

This operation may block in the same conditions as **com.rti.ndds.example.FooDataWriter.write** (p. 1397).

If this operation does block, the RELIABILITY max_blocking_time configures the maximum time the write operation may block (waiting for space to become available). If max_blocking_time elapses before the DDS_DataWriter is able to store the modification without exceeding the limits, the operation will fail with DDS_RETCODE_TIMEOUT.

MT Safety:

flush() (p. 837) is only thread-safe with batching if **com.rti.dds.infrastructure.BatchQosPolicy.thread_safe_↩ write** (p. 611) is TRUE.

Exceptions

One	of the **Standard Return Codes** (p. 513), **com.rti.dds.infrastructure.RETCODE_TIMEOUT** (p. 1904), **com.rti.dds.infrastructure.RETCODE_OUT_OF_RESOURCES** (p. 1903) or **com.rti.dds.infrastructure.RETCODE_NOT_ENABLED** (p. 1902).

8.60.2.29 register_instance_untyped()

```
InstanceHandle_t register_instance_untyped (
            Object instance_data )
```

Register a new instance with this writer.

This method allows type-independent code to work with a variety of concrete **com.rti.ndds.example.FooDataWriter** (p. 1389) classes in a consistent way.

Statically type-safe code should use the appropriate **com.rti.ndds.example.FooDataWriter.register_instance** (p. 1390) method instead of this one. See that method for detailed documentation.

See also

com.rti.dds.publication.DataWriter.unregister_instance_untyped (p. 838)

com.rti.ndds.example.FooDataWriter.register_instance (p. 1390)

Implemented in **DynamicDataWriter** (p. 1296).

Referenced by **FooDataWriter.register_instance()**, **KeyedBytesDataWriter.register_instance()**, and **Keyed↩ StringDataWriter.register_instance()**.

8.60.2.30 register_instance_w_timestamp_untyped()

```
InstanceHandle_t register_instance_w_timestamp_untyped (
            Object instance_data,
             Time_t source_timestamp )
```

Register a new instance with this writer using the given time instead of the current time.

This method allows type-independent code to work with a variety of concrete **com.rti.ndds.example.FooDataWriter** (p. 1389) classes in a consistent way.

Statically type-safe code should use the appropriate **com.rti.ndds.example.FooDataWriter.register_instance_w_↩ timestamp** (p. 1391) method instead of this one. See that method for detailed documentation.

8.60.2.37 get_key_value_untyped()

```
void get_key_value_untyped (
             Object key_holder,
              InstanceHandle_t handle )
```

Fill in the key fields of the given data sample.

This method allows type-independent code to work with a variety of concrete **com.rti.ndds.example.FooDataWriter** (p. 1389) classes in a consistent way.

Statically type-safe code should use the appropriate **com.rti.ndds.example.FooDataWriter.get_key_value** (p. 1406) method instead of this one. See that method for detailed documentation.

See also

com.rti.ndds.example.FooDataWriter.get_key_value (p. 1406)

Referenced by **FooDataWriter.get_key_value()**, **KeyedBytesDataWriter.get_key_value()**, and **KeyedStringDataWriter.get_key_value()**.

8.60.2.38 lookup_instance_untyped()

```
InstanceHandle_t lookup_instance_untyped (
             Object key_value )
```

Given a sample with the given key field values, return the handle corresponding to its instance.

This method allows type-independent code to work with a variety of concrete **com.rti.ndds.example.FooDataWriter** (p. 1389) classes in a consistent way.

Statically type-safe code should use the appropriate **com.rti.ndds.example.FooDataWriter.lookup_instance** (p. 1407) method instead of this one. See that method for detailed documentation.

See also

com.rti.ndds.example.FooDataWriter.lookup_instance (p. 1407)

Referenced by **FooDataWriter.lookup_instance()**, **KeyedBytesDataWriter.lookup_instance()**, and **KeyedStringDataWriter.lookup_instance()**.

8.60.2.39 take_discovery_snapshot() [1/2]

```
void take_discovery_snapshot ( )
```

Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

The snapshot will be printed through the **com.rti.ndds.config.Logger** (p. 1560). A possible output may be the following:

```
Remote readers that match the local writer domain=0 name="writerTestName"

guid="0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003"

topic="FooTopic" type="FooType"

------------------------------------------------------------------------

Compatible readers:

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000004 name="reader1TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

liveliness="ALIVE"

Incompatible readers:

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000104 name="reader2TestName"

kind="unkeyed user datareader"

unicastLocators="udpv4://192.168.1.170:7411"

reason="Inconsistent QoS"

------------------------------------------------------------------------
```

Exceptions

One	of the **Standard Return Codes** (p. 513).

8.60.2.40 take_discovery_snapshot() [2/2]

```
void take_discovery_snapshot (
             String file_name )
```

Take a snapshot of the compatible and incompatible remote readers matched by a local writer.

The snapshot will be printed in the file specified by file_name. A possible output may be the following:

```
Remote readers that match the local writer domain=0 name="writerTestName"

guid="0x0101D8D1,0x20B83C0D,0x4495246E:0x80000003"

topic="FooTopic" type="FooType"

------------------------------------------------------------------------

Compatible readers:

1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000004 name="reader1TestName"
```

```
kind="unkeyed user datareader"
unicastLocators="udpv4://192.168.1.170:7411"
liveliness="ALIVE"
Incompatible readers:
1. 0x0101542A,0x2C59B595,0xA1693BDF:0x80000104 name="reader2TestName"
kind="unkeyed user datareader"
unicastLocators="udpv4://192.168.1.170:7411"
reason="Inconsistent QoS"
------------------------------------------------------------------------
```

Parameters

file_name	<<***in***>> *(*p. *404)* Name of the file where snapshot should be printed.

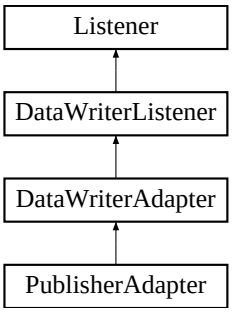
Exceptions

One	of the **Standard Return Codes** (p. 513).

8.61 DataWriterAdapter Class Reference

<<***extension***>> *(*p. *403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods or functions.)

Inheritance diagram for DataWriterAdapter:



Public Member Functions

- void **on_offered_deadline_missed** (**DataWriter** writer, **OfferedDeadlineMissedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS status.
- void **on_offered_incompatible_qos** (**DataWriter** writer, **OfferedIncompatibleQosStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS status.

- void **on_application_acknowledgment** (**DataWriter** writer, **AcknowledgmentInfo** ackInfo)

  <<***extension***>> *(p. 403) Called when a sample is application-acknowledged*
- void **on_service_request_accepted** (**DataWriter** writer, **ServiceRequestAcceptedStatus** status)

  <<***extension***>> *(p. 403) Called when a* ***com.rti.dds.topic.builtin.ServiceRequest*** *(p. 1985) for the* ***com.rti.dds.subscription.TopicQuery*** *(p. 2139) service is dispatched to this* ***com.rti.dds.publication.DataWriter*** *(p. 818) for processing.*

8.61.1 Detailed Description

<<***extension***>> *(p. 403)* A listener adapter in the spirit of the Java AWT listener adapters. (The Adapter provides empty implementations for the listener methods or functions.)

Clients who do not wish to implement all listener methods can subclass this class and override only the methods of interest.

8.61.2 Member Function Documentation

8.61.2.1 on_offered_deadline_missed()

```
void on_offered_deadline_missed (
              DataWriter writer,
              OfferedDeadlineMissedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS status.

This callback is called when the deadline that the **com.rti.dds.publication.DataWriter** (p. 818) has committed through its **DEADLINE** (p. 467) qos policy was not respected for a specific instance. This callback is called for each deadline period elapsed during which the **com.rti.dds.publication.DataWriter** (p. 818) failed to provide data for an instance.

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current deadline missed status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implements **DataWriterListener** (p. 855).

8.61.2.2 on_offered_incompatible_qos()

```
void on_offered_incompatible_qos (
            DataWriter writer,
            OfferedIncompatibleQosStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS status.

This callback is called when the **com.rti.dds.publication.DataWriterQos** (p. 878) of the **com.rti.dds.publication.DataWriter** (p. 818) was incompatible with what was requested by a **com.rti.dds.subscription.DataReader** (p. 707). This callback is called when a **com.rti.dds.publication.DataWriter** (p. 818) has discovered a **com.rti.dds.subscription.DataReader** (p. 707) for the same **com.rti.dds.topic.Topic** (p. 2116) and common partition, but with a requested QoS that is incompatible with that offered by the **com.rti.dds.publication.DataWriter** (p. 818).

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current incompatible qos status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implements **DataWriterListener** (p. 855).

8.61.2.3 on_liveliness_lost()

```
void on_liveliness_lost (
            DataWriter writer,
            LivelinessLostStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS status.

This callback is called when the liveliness that the **com.rti.dds.publication.DataWriter** (p. 818) has committed through its **LIVELINESS** (p. 489) qos policy was not respected; this **com.rti.dds.subscription.DataReader** (p. 707) entities will consider the **com.rti.dds.publication.DataWriter** (p. 818) as no longer "alive/active". This callback will not be called when an already not alive **com.rti.dds.publication.DataWriter** (p. 818) simply remains not alive for another liveliness period.

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current liveliness lost status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implements **DataWriterListener** (p. 856).

8.61.2.4 on_publication_matched()

```
void on_publication_matched (
              DataWriter writer,
              PublicationMatchedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS status.

This callback is called when the **com.rti.dds.publication.DataWriter** (p. 818) has found a **com.rti.dds.subscription.↩ DataReader** (p. 707) that matches the **com.rti.dds.topic.Topic** (p. 2116), has a common partition and compatible QoS, or has ceased to be matched with a **com.rti.dds.subscription.DataReader** (p. 707) that was previously considered to be matched.

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current publication match status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implements **DataWriterListener** (p. 856).

8.61.2.5 on_reliable_writer_cache_changed()

```
void on_reliable_writer_cache_changed (
              DataWriter writer,
              ReliableWriterCacheChangedStatus status )
```

<<***extension***>> *(p. 403)* A change has occurred in the writer's cache of unacknowledged samples.

This listener callback is triggered when:

- The cache is empty (contains no unacknowledged samples).
- The cache is full (the number of unacknowledged samples has reached the value specified in **com.rti.dds.↩ infrastructure.ResourceLimitsQosPolicy.max_samples** (p. 1896)).
- The number of unacknowledged samples has reached **com.rti.dds.infrastructure.RtpsReliableWriter↩ Protocol_t.high_watermark** (p. 1913) or **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.low_↩ watermark** (p. 1913).

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(*p. *404)* Current reliable writer cache changed status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implements **DataWriterListener** (p. 857).

8.61.2.6 on_reliable_reader_activity_changed()

```
void on_reliable_reader_activity_changed (
                DataWriter writer,
                ReliableReaderActivityChangedStatus status )
```

<<***extension***>> *(*p. *403)* A matched reliable reader has become active or become inactive.

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(*p. *404)* Current reliable reader activity changed status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implements **DataWriterListener** (p. 857).

8.61.2.7 on_sample_removed()

```
void on_sample_removed (
                DataWriter writer,
                Cookie_t cookie )
```

<<***extension***>> *(*p. *403)* Called when a sample is removed from the **DataWriter** (p. 818) queue.

This callback is called only if the sample was written with a **com.rti.dds.infrastructure.Cookie_t** (p. 699) with **com.↩ rti.ndds.example.FooDataWriter.write_w_params** (p. 1402), or if this writer uses **Zero Copy** (p. 58) transfer over shared memory" or **FlatData Topic-Types** (p. 57) "FlatData language binding".

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback

Parameters

cookie	<<***out***>> *(p. 404)* • If this sample was written with **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402), this field contains a copy of the cookie set in **com.rti.dds.infrastructure.WriteParams_t** (p. 2308). • If this writer uses **Zero Copy transfer over shared memory** (p. 58) or **FlatData language binding** (p. 57), this field contains the absolute address of the sample that is removed. The address of the sample can be obtained by using com.rti.dds.infrastructure.Cookie_t.to_pointer

See also

com.rti.ndds.example.FooDataWriter.get_loan

Implements **DataWriterListener** (p. 858).

8.61.2.8 on_instance_replaced()

```
void on_instance_replaced (
              DataWriter writer,
              InstanceHandle_t handle )
```

<<***extension***>> *(p. 403)* Notifies when an instance is replaced in **DataWriter** (p. 818) queue.

This callback is called when an instance is replaced by the **com.rti.dds.publication.DataWriter** (p. 818) due to instance resource limits being reached. This callback returns to the user the handle of the replaced instance, which can be used to get the key of the replaced instance using the **com.rti.ndds.example.FooDataWriter.get_key_value** (p. 1406) API.

Because this callback can be called within the context of an in-progress write, dispose, or unregister call, most APIs on the **DataWriter** (p. 818) must not be used. The only **DataWriter** (p. 818) APIs that are safe to call within this callback are:

- **com.rti.ndds.example.FooDataWriter.get_key_value** (p. 1406)
- com.rti.ndds.example.FooDataWriter.create_data
- com.rti.ndds.example.FooDataWriter.delete_data
- **com.rti.dds.publication.DataWriter.get_matched_subscriptions** (p. 830)
- **com.rti.dds.publication.DataWriter.is_matched_subscription_active** (p. 831)
- **com.rti.dds.publication.DataWriter.get_matched_subscription_participant_data** (p. 833)
- **com.rti.dds.publication.DataWriter.get_topic** (p. 834)
- **com.rti.dds.publication.DataWriter.get_publisher** (p. 834)
- **com.rti.dds.publication.DataWriter.is_sample_app_acknowledged** (p. 835)

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
handle	<<***out***>> *(*p. *404)* Handle of the replaced instance

Implements **DataWriterListener** (p. 858).

8.61.2.9 on_application_acknowledgment()

```
void on_application_acknowledgment (
            DataWriter writer,
            AcknowledgmentInfo info )
```

<<***extension***>> *(*p. *403)* Called when a sample is application-acknowledged

Applicable only when **com.rti.dds.infrastructure.ReliabilityQosPolicy.acknowledgment_kind** (p. 1832) = **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_AUTO_ACKNOWLEDGMENT_MODE** (p. 1834) or **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1835)

Called when a sample is application-level acknowledged. Provides identities of the sample and the acknowledging **com.rti.dds.subscription.DataReader** (p. 707). Also provides user-specified response data sent from the **com.rti.dds.subscription.DataReader** (p. 707) by the acknowledgment message.

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
info	<<***out***>> *(*p. *404)* **com.rti.dds.publication.AcknowledgmentInfo** (p. 584) of the acknowledged sample

Implements **DataWriterListener** (p. 859).

8.61.2.10 on_service_request_accepted()

```
void on_service_request_accepted (
            DataWriter writer,
            ServiceRequestAcceptedStatus status )
```

<<***extension***>> *(*p. *403)* Called when a **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) for the **com.rti.dds.subscription.TopicQuery** (p. 2139) service is dispatched to this **com.rti.dds.publication.DataWriter** (p. 818) for processing.

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current service request accepted status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Topic Queries (p. 86)

Implements **DataWriterListener** (p. 860).

8.62 DataWriterCacheStatus Class Reference

<<***extension***>> *(p. 403)* The status of the **DataWriter** (p. 818)'s cache. Provides information on cache related metrics such as the number of samples and instances in the **DataWriter** (p. 818) queue.

Inherits Status.

Public Attributes

- long **sample_count_peak**

  *The highest value of **com.rti.dds.publication.DataWriterCacheStatus.sample_count** (p. 852) over the lifetime of the **DataWriter** (p. 818).*
- long **sample_count**

  *The number of samples in the **DataWriter** (p. 818)'s queue. This statistic includes meta-samples that represent the unregistration or disposal of an instance.*
- long **alive_instance_count**

  *The number of instances currently in the **DataWriter** (p. 818)'s queue that have an instance_state equal to **com.rti.dds.subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452).*
- long **alive_instance_count_peak**

  *The highest value of **com.rti.dds.publication.DataWriterCacheStatus.alive_instance_count** (p. 852) over the lifetime of the **DataWriter** (p. 818).*
- long **disposed_instance_count**

  *The number of instances currently in the **DataWriter** (p. 818)'s queue that have an instance_state equal to **com.rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452) (due to, for example, being disposed via the **com.rti.ndds.example.FooDataWriter.dispose** (p. 1403) operation).*
- long **disposed_instance_count_peak**

  *The highest value of **com.rti.dds.publication.DataWriterCacheStatus.disposed_instance_count** (p. 852) over the lifetime of the **DataWriter** (p. 818).*
- long **unregistered_instance_count**

  *The number of instances currently in the **DataWriter** (p. 818)'s queue that the **DataWriter** (p. 818) has unregistered from via the **com.rti.ndds.example.FooDataWriter.unregister_instance** (p. 1392) operation.*
- long **unregistered_instance_count_peak**

  *The highest value of **com.rti.dds.publication.DataWriterCacheStatus.unregistered_instance_count** (p. 853) over the lifetime of the **DataWriter** (p. 818).*

8.62.1 Detailed Description

<<***extension***>> *(p. 403)* The status of the **DataWriter** (p. 818)'s cache. Provides information on cache related metrics such as the number of samples and instances in the **DataWriter** (p. 818) queue.

Entity:

com.rti.dds.publication.DataWriter (p. 818)

8.62.2 Member Data Documentation

8.62.2.1 sample_count_peak

```
long sample_count_peak
```

The highest value of **com.rti.dds.publication.DataWriterCacheStatus.sample_count** (p. 852) over the lifetime of the **DataWriter** (p. 818).

8.62.2.2 sample_count

```
long sample_count
```

The number of samples in the **DataWriter** (p. 818)'s queue. This statistic includes meta-samples that represent the unregistration or disposal of an instance.

8.62.2.3 alive_instance_count

```
long alive_instance_count
```

The number of instances currently in the **DataWriter** (p. 818)'s queue that have an instance_state equal to **com.rti.↩ dds.subscription.InstanceStateKind.ALIVE_INSTANCE_STATE** (p. 1452).

8.62.2.4 alive_instance_count_peak

```
long alive_instance_count_peak
```

The highest value of **com.rti.dds.publication.DataWriterCacheStatus.alive_instance_count** (p. 852) over the lifetime of the **DataWriter** (p. 818).

8.62.2.5 disposed_instance_count

```
long disposed_instance_count
```

The number of instances currently in the **DataWriter** (p. 818)'s queue that have an instance_state equal to **com.↩ rti.dds.subscription.InstanceStateKind.NOT_ALIVE_DISPOSED_INSTANCE_STATE** (p. 1452) (due to, for example, being disposed via the **com.rti.ndds.example.FooDataWriter.dispose** (p. 1403) operation).

8.62.2.6 disposed_instance_count_peak

```
long disposed_instance_count_peak
```

The highest value of **com.rti.dds.publication.DataWriterCacheStatus.disposed_instance_count** (p. 852) over the lifetime of the **DataWriter** (p. 818).

8.62.2.7 unregistered_instance_count

```
long unregistered_instance_count
```

The number of instances currently in the **DataWriter** (p. 818)'s queue that the **DataWriter** (p. 818) has unregistered from via the **com.rti.ndds.example.FooDataWriter.unregister_instance** (p. 1392) operation.

8.62.2.8 unregistered_instance_count_peak

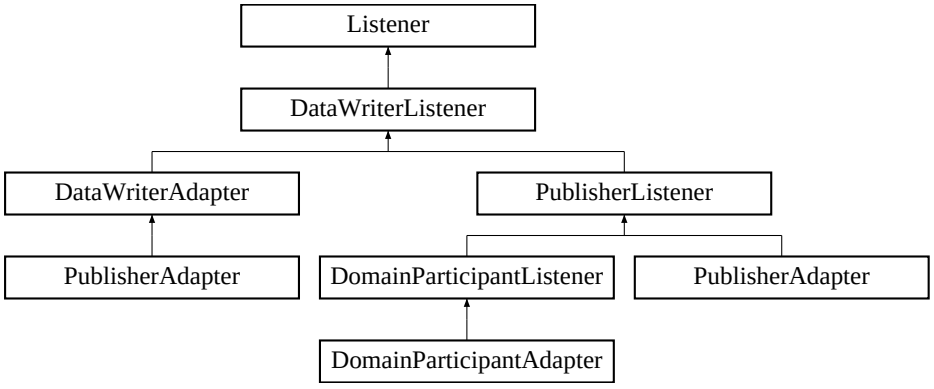
```
long unregistered_instance_count_peak
```

The highest value of **com.rti.dds.publication.DataWriterCacheStatus.unregistered_instance_count** (p. 853) over the lifetime of the **DataWriter** (p. 818).

8.63 DataWriterListener Interface Reference

*<<**interface**>> (p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for writer status.

Inheritance diagram for DataWriterListener:



Public Member Functions

- void **on_offered_deadline_missed** (**DataWriter** writer, **OfferedDeadlineMissedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS status.
- void **on_offered_incompatible_qos** (**DataWriter** writer, **OfferedIncompatibleQosStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS status.
- void **on_liveliness_lost** (**DataWriter** writer, **LivelinessLostStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS status.
- void **on_publication_matched** (**DataWriter** writer, **PublicationMatchedStatus** status)

  Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS status.
- void **on_reliable_writer_cache_changed** (**DataWriter** writer, **ReliableWriterCacheChangedStatus** status)

  *<<**extension**>> (p. 403) A change has occurred in the writer's cache of unacknowledged samples.*
- void **on_reliable_reader_activity_changed** (**DataWriter** writer, **ReliableReaderActivityChangedStatus** status)

  *<<**extension**>> (p. 403) A matched reliable reader has become active or become inactive.*
- void **on_sample_removed** (**DataWriter** writer, **Cookie_t** cookie)

  *<<**extension**>> (p. 403) Called when a sample is removed from the **DataWriter** (p. 818) queue.*
- void **on_instance_replaced** (**DataWriter** writer, **InstanceHandle_t** handle)

  *<<**extension**>> (p. 403) Notifies when an instance is replaced in **DataWriter** (p. 818) queue.*
- void **on_application_acknowledgment** (**DataWriter** writer, **AcknowledgmentInfo** info)

  *<<**extension**>> (p. 403) Called when a sample is application-acknowledged*
- void **on_service_request_accepted** (**DataWriter** writer, **ServiceRequestAcceptedStatus** status)

  *<<**extension**>> (p. 403) Called when a **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) for the **com.rti.dds.subscription.TopicQuery** (p. 2139) service is dispatched to this **com.rti.dds.publication.DataWriter** (p. 818) for processing.*

8.63.1 Detailed Description

*<<**interface**>> (p. 403)* **com.rti.dds.infrastructure.Listener** (p. 1528) for writer status.

Entity:

com.rti.dds.publication.DataWriter (p. 818)

Status:

com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS, **com.rti.dds.publication.LivelinessLostStatus** (p. 1534);
com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS, **com.rti.dds.publication.OfferedDeadlineMissedStatus** (p. 1637);
com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS, **com.rti.dds.publication.OfferedIncompatibleQosStatus** (p. 1638);
com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS, **com.rti.dds.publication.PublicationMatchedStatus** (p. 1764);
com.rti.dds.infrastructure.StatusKind.StatusKind.RELIABLE_READER_ACTIVITY_CHANGED_STATUS, **com.rti.dds.publication.ReliableReaderActivityChangedStatus** (p. 1836);
com.rti.dds.infrastructure.StatusKind.StatusKind.RELIABLE_WRITER_CACHE_CHANGED_STATUS, **com.rti.dds.publication.ReliableWriterCacheChangedStatus** (p. 1839);

See also

com.rti.dds.infrastructure.Listener (p. 1528)

Status Kinds (p. 514)

Operations Allowed in Listener Callbacks (p. 1530)

8.63.2 Member Function Documentation

8.63.2.1 on_offered_deadline_missed()

```
void on_offered_deadline_missed (
            DataWriter writer,
            OfferedDeadlineMissedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS status.

This callback is called when the deadline that the **com.rti.dds.publication.DataWriter** (p. 818) has committed through its **DEADLINE** (p. 467) qos policy was not respected for a specific instance. This callback is called for each deadline period elapsed during which the **com.rti.dds.publication.DataWriter** (p. 818) failed to provide data for an instance.

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current deadline missed status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implemented in **DomainParticipantAdapter** (p. 1030), and **DataWriterAdapter** (p. 845).

8.63.2.2 on_offered_incompatible_qos()

```
void on_offered_incompatible_qos (
            DataWriter writer,
            OfferedIncompatibleQosStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS status.

This callback is called when the **com.rti.dds.publication.DataWriterQos** (p. 878) of the **com.rti.dds.publication.↩ DataWriter** (p. 818) was incompatible with what was requested by a **com.rti.dds.subscription.DataReader** (p. 707). This callback is called when a **com.rti.dds.publication.DataWriter** (p. 818) has discovered a **com.rti.dds.↩ subscription.DataReader** (p. 707) for the same **com.rti.dds.topic.Topic** (p. 2116) and common partition, but with a requested QoS that is incompatible with that offered by the **com.rti.dds.publication.DataWriter** (p. 818).

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current incompatible qos status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implemented in **DomainParticipantAdapter** (p. 1030), and **DataWriterAdapter** (p. 846).

8.63.2.3 on_liveliness_lost()

```
void on_liveliness_lost (
            DataWriter writer,
            LivelinessLostStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.LIVELINESS_LOST_STATUS status.

This callback is called when the liveliness that the **com.rti.dds.publication.DataWriter** (p. 818) has committed through its **LIVELINESS** (p. 489) qos policy was not respected; this **com.rti.dds.subscription.DataReader** (p. 707) entities will consider the **com.rti.dds.publication.DataWriter** (p. 818) as no longer "alive/active". This callback will not be called when an already not alive **com.rti.dds.publication.DataWriter** (p. 818) simply remains not alive for another liveliness period.

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current liveliness lost status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implemented in **DomainParticipantAdapter** (p. 1031), and **DataWriterAdapter** (p. 846).

8.63.2.4 on_publication_matched()

```
void on_publication_matched (
            DataWriter writer,
            PublicationMatchedStatus status )
```

Handles the com.rti.dds.infrastructure.StatusKind.StatusKind.PUBLICATION_MATCHED_STATUS status.

This callback is called when the **com.rti.dds.publication.DataWriter** (p. 818) has found a **com.rti.dds.subscription.↩ DataReader** (p. 707) that matches the **com.rti.dds.topic.Topic** (p. 2116), has a common partition and compatible QoS, or has ceased to be matched with a **com.rti.dds.subscription.DataReader** (p. 707) that was previously considered to be matched.

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current publication match status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implemented in **DomainParticipantAdapter** (p. 1031), and **DataWriterAdapter** (p. 847).

8.63.2.5 on_reliable_writer_cache_changed()

```
void on_reliable_writer_cache_changed (
              DataWriter writer,
              ReliableWriterCacheChangedStatus status )
```

<<***extension***>> *(p. 403)* A change has occurred in the writer's cache of unacknowledged samples.

This listener callback is triggered when:

- The cache is empty (contains no unacknowledged samples).
- The cache is full (the number of unacknowledged samples has reached the value specified in **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_samples** (p. 1896)).
- The number of unacknowledged samples has reached **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.high_watermark** (p. 1913) or **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.low_watermark** (p. 1913).

Parameters

writer	<<***out***>> *(p. 404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(p. 404)* Current reliable writer cache changed status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implemented in **DomainParticipantAdapter** (p. 1032), and **DataWriterAdapter** (p. 847).

8.63.2.6 on_reliable_reader_activity_changed()

```
void on_reliable_reader_activity_changed (
              DataWriter writer,
              ReliableReaderActivityChangedStatus status )
```

<<***extension***>> *(p. 403)* A matched reliable reader has become active or become inactive.

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(*p. *404)* Current reliable reader activity changed status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

Implemented in **DomainParticipantAdapter** (p. 1032), and **DataWriterAdapter** (p. 848).

8.63.2.7 on_sample_removed()

```
void on_sample_removed (
              DataWriter writer,
              Cookie_t cookie )
```

<<***extension***>> *(*p. *403)* Called when a sample is removed from the **DataWriter** (p. 818) queue.

This callback is called only if the sample was written with a **com.rti.dds.infrastructure.Cookie_t** (p. 699) with **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402), or if this writer uses **Zero Copy** (p. 58) transfer over shared memory" or **FlatData Topic-Types** (p. 57) "FlatData language binding".

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
cookie	<<***out***>> *(*p. *404)* • If this sample was written with **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402), this field contains a copy of the cookie set in **com.rti.dds.infrastructure.WriteParams_t** (p. 2308). • If this writer uses **Zero Copy transfer over shared memory** (p. 58) or **FlatData language binding** (p. 57), this field contains the absolute address of the sample that is removed. The address of the sample can be obtained by using com.rti.dds.infrastructure.Cookie_t.to_pointer

See also

com.rti.ndds.example.FooDataWriter.get_loan

Implemented in **DomainParticipantAdapter** (p. 1033), and **DataWriterAdapter** (p. 848).

8.63.2.8 on_instance_replaced()

```
void on_instance_replaced (
              DataWriter writer,
              InstanceHandle_t handle )
```

<<***extension***>> *(*p. *403)* Notifies when an instance is replaced in **DataWriter** (p. 818) queue.

This callback is called when an instance is replaced by the **com.rti.dds.publication.DataWriter** (p. 818) due to instance resource limits being reached. This callback returns to the user the handle of the replaced instance, which can be used to get the key of the replaced instance using the **com.rti.ndds.example.FooDataWriter.get_key_value** (p. 1406) API.

Because this callback can be called within the context of an in-progress write, dispose, or unregister call, most APIs on the **DataWriter** (p. 818) must not be used. The only **DataWriter** (p. 818) APIs that are safe to call within this callback are:

- **com.rti.ndds.example.FooDataWriter.get_key_value** (p. 1406)
- com.rti.ndds.example.FooDataWriter.create_data
- com.rti.ndds.example.FooDataWriter.delete_data
- **com.rti.dds.publication.DataWriter.get_matched_subscriptions** (p. 830)
- **com.rti.dds.publication.DataWriter.is_matched_subscription_active** (p. 831)
- **com.rti.dds.publication.DataWriter.get_matched_subscription_participant_data** (p. 833)
- **com.rti.dds.publication.DataWriter.get_topic** (p. 834)
- **com.rti.dds.publication.DataWriter.get_publisher** (p. 834)
- **com.rti.dds.publication.DataWriter.is_sample_app_acknowledged** (p. 835)

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
handle	<<***out***>> *(*p. *404)* Handle of the replaced instance

Implemented in **DomainParticipantAdapter** (p. 1033), and **DataWriterAdapter** (p. 849).

8.63.2.9 on_application_acknowledgment()

```
void on_application_acknowledgment (
             DataWriter writer,
             AcknowledgmentInfo info )
```

<<***extension***>> *(*p. *403)* Called when a sample is application-acknowledged

Applicable only when **com.rti.dds.infrastructure.ReliabilityQosPolicy.acknowledgment_kind** (p. 1832) = **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_AUTO_ACKNOWLEDGMENT_MODE** (p. 1834) or **com.rti.dds.infrastructure.ReliabilityQosPolicyAcknowledgmentModeKind.APPLICATION_EXPLICIT_ACKNOWLEDGMENT_MODE** (p. 1835)

Called when a sample is application-level acknowledged. Provides identities of the sample and the acknowledging **com.rti.dds.subscription.DataReader** (p. 707). Also provides user-specified response data sent from the **com.rti.dds.subscription.DataReader** (p. 707) by the acknowledgment message.

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
info	<<***out***>> *(*p. *404)* **com.rti.dds.publication.AcknowledgmentInfo** (p. 584) of the acknowledged sample

Implemented in **DomainParticipantAdapter** (p. 1034), and **DataWriterAdapter** (p. 850).

8.63.2.10 on_service_request_accepted()

```
void on_service_request_accepted (
             DataWriter writer,
             ServiceRequestAcceptedStatus status )
```

<<***extension***>> *(*p. *403)* Called when a **com.rti.dds.topic.builtin.ServiceRequest** (p. 1985) for the **com.rti.dds.↩ subscription.TopicQuery** (p. 2139) service is dispatched to this **com.rti.dds.publication.DataWriter** (p. 818) for processing.

Parameters

writer	<<***out***>> *(*p. *404)* Locally created **com.rti.dds.publication.DataWriter** (p. 818) that triggers the listener callback
status	<<***out***>> *(*p. *404)* Current service request accepted status of locally created **com.rti.dds.publication.DataWriter** (p. 818)

See also

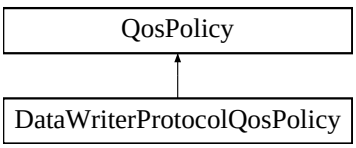
Topic Queries (p. 86)

Implemented in **DomainParticipantAdapter** (p. 1035), and **DataWriterAdapter** (p. 850).

8.64 DataWriterProtocolQosPolicy Class Reference

<<***extension***>> *(*p. *138)* Protocol that applies only to **com.rti.dds.publication.DataWriter** (p. 818) instances.

Inheritance diagram for DataWriterProtocolQosPolicy:



Public Attributes

- **GUID_t virtual_guid**

  <<***extension***>> *(p. 138) The virtual GUID (Global Unique Identifier).*
- int **rtps_object_id**

  <<***extension***>> *(p. 138) The RTPS Object ID.*
- boolean **push_on_write**

  <<***extension***>> *(p. 138) Whether to push sample out when write is called.*
- boolean **disable_positive_acks**

  <<***extension***>> *(p. 138) Controls whether or not the writer expects positive acknowledgements from matching readers.*
- boolean **disable_inline_keyhash**

  <<***extension***>> *(p. 138) Controls whether or not a keyhash is propagated on the wire with each sample.*
- boolean **serialize_key_with_dispose**

  <<***extension***>> *(p. 138) Controls whether or not the serialized key is propagated on the wire with dispose samples.*
- boolean **propagate_app_ack_with_no_response**

  <<***extension***>> *(p. 138) Controls whether or not a* ***com.rti.dds.publication.DataWriter*** *(p. 818) receives* ***com.rti.dds.publication.DataWriterListener.on_application_acknowledgment*** *(p. 859) notifications with an empty or invalid response.*
- final **RtpsReliableWriterProtocol_t rtps_reliable_writer**

  <<***extension***>> *(p. 138) RTPS protocol-related configuration settings for the RTPS reliable writer associated with a* ***com.rti.dds.publication.DataWriter*** *(p. 818). This parameter only has effect if both the writer and the matching reader are configured with* ***com.rti.dds.infrastructure.ReliabilityQosPolicyKind.RELIABLE_RELIABILITY_QOS*** *(p. 1836)* ***com.rti.dds.infrastructure.ReliabilityQosPolicyKind*** *(p. 1835).*
- **SequenceNumber_t initial_virtual_sequence_number**

  <<***extension***>> *(p. 138) Determines, the initial virtual sequence number for this DataWriter.*

8.64.1 Detailed Description

<<***extension***>> *(p. 138)* Protocol that applies only to **com.rti.dds.publication.DataWriter** (p. 818) instances.

DDS has a standard protocol for packet (user and meta data) exchange between applications using DDS for communications. This QoS policy and **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy** (p. 860) give you control over configurable portions of the protocol, including the configuration of the reliable data delivery mechanism of the protocol on a per DataWriter or DataReader basis.

These configuration parameters control timing, timeouts, and give you the ability to tradeoff between speed of data loss detection and repair versus network and CPU bandwidth used to maintain reliability.

It is important to tune the reliability protocol (on a per **com.rti.dds.publication.DataWriter** (p. 818) and **com.rti.dds.subscription.DataReader** (p. 707) basis) to meet the requirements of the end-user application so that data can be sent between DataWriters and DataReaders in an efficient and optimal manner in the presence of data loss.

You can also use this QoS policy to control how RTI Connext responds to "slow" reliable DataReaders or ones that disconnect or are otherwise lost. See **com.rti.dds.infrastructure.ReliabilityQosPolicy** (p. 1829) for more information on the per-DataReader/DataWriter reliability configuration. **com.rti.dds.infrastructure.HistoryQosPolicy** (p. 1435) and **com.rti.dds.infrastructure.ResourceLimitsQosPolicy** (p. 1894) also play an important role in the DDS reliable protocol.

This QoS policy is an extension to the DDS standard.

Entity:

com.rti.dds.publication.DataWriter (p. 818)

Properties:

RxO (p. 506) = N/A
Changeable (p. 507) = **NO** (p. 507)

8.64.2 Member Data Documentation

8.64.2.1 virtual_guid

```
GUID_t virtual_guid
```

<<***extension***>> *(p. 138)* The virtual GUID (Global Unique Identifier).

The virtual GUID is used to uniquely identify different incarnations of the same **com.rti.dds.publication.DataWriter** (p. 818).

RTI Connext uses the virtual GUID to associate a persisted writer history to a specific **com.rti.dds.publication.Data↩ Writer** (p. 818).

The RTI Connext Persistence Service uses the virtual GUID to send samples on behalf of the original **com.rti.dds.↩ publication.DataWriter** (p. 818).

[default] com.rti.dds.infrastructure.GUID_t.GUID_AUTO (p. 1426)

Categories

Immutable (p. 292), **Discovery Metadata** (p. 348), **Data Availability** (p. 200)

8.64.2.2 rtps_object_id

```
int rtps_object_id
```

<<***extension***>> *(*p. *138)* The RTPS Object ID.

This value is used to determine the RTPS object ID of a data writer according to the DDS-RTPS Interoperability Wire Protocol.

Only the last 3 bytes are used; the most significant byte is ignored.

If the default value is specified, RTI Connext will automatically assign the object ID based on a counter value (per participant) starting at 0x00800000. That value is incremented for each new data writer.

A rtps_object_id value in the interval [0x00800000,0x00ffffff] may collide with the automatic values assigned by RTI Connext. In those cases, the recomendation is not to use automatic object ID assigment.

[default] com.rti.dds.infrastructure.WireProtocolQosPolicy.RTPS_AUTO_ID (p. 2303)

[range] [0,0x00ffffff]

Categories

Immutable (p. 292)

8.64.2.3 push_on_write

```
boolean push_on_write
```

<<***extension***>> *(*p. *138)* Whether to push sample out when write is called.

If set to com.rti.dds.infrastructure.true (the default), the writer will send a sample every time write is called. Otherwise, the sample is put into the queue waiting for a NACK from remote reader(s) to be sent out.

[default] com.rti.dds.infrastructure.true

Categories

Immutable (p. 292), **Reliability** (p. 266), **Data Availability** (p. 200)

8.64.2.4 disable_positive_acks

```
boolean disable_positive_acks
```

<<***extension***>> *(*p. *138)* Controls whether or not the writer expects positive acknowledgements from matching readers.

If set to com.rti.dds.infrastructure.true, the writer does not expect readers to send send positive acknowledgments to the writer. Consequently, instead of keeping a sample queued until all readers have positively acknowledged it, the writer will keep a sample for at least **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.disable_positive_acks_↩ min_sample_keep_duration** (p. 1921), after which the sample is logically considered as positively acknowledged.

If set to com.rti.dds.infrastructure.false (the default), the writer expects to receive positive acknowledgements from its acknowledging readers (**com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.disable_positive_acks** (p. 763) = com.rti.dds.infrastructure.false) and it applies the keep-duration to its non-acknowledging readers (**com.rti.dds.↩ infrastructure.DataReaderProtocolQosPolicy.disable_positive_acks** (p. 763) = com.rti.dds.infrastructure.true).

A writer with both acknowledging and non-acknowledging readers keeps a sample queued until acknowledgements have been received from all acknowledging readers and the keep-duration has elapsed for non-acknowledging readers.

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Discovery Metadata** (p. 348), **Reliability** (p. 266)

8.64.2.5 disable_inline_keyhash

```
boolean disable_inline_keyhash
```

<<***extension***>> *(*p. *138)* Controls whether or not a keyhash is propagated on the wire with each sample.

This field only applies to keyed writers.

With each key, RTI Connext associates an internal 16-byte representation, called a keyhash.

When this field is com.rti.dds.infrastructure.false, the keyhash is sent on the wire with every data instance.

When this field is com.rti.dds.infrastructure.true, the keyhash is not sent on the wire and the readers must compute the value using the received data.

If the *reader* is CPU bound, sending the keyhash on the wire may increase performance, because the reader does not have to get the keyhash from the data.

If the *writer* is CPU bound, sending the keyhash on the wire may decrease performance, because it requires more bandwidth (16 more bytes per sample).

Note: Setting disable_inline_keyhash to com.rti.dds.infrastructure.true is not compatible with using RTI Real-Time Connect or RTI Recorder.

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Instance Lifecycle** (p. 232)

8.64.2.6 serialize_key_with_dispose

```
boolean serialize_key_with_dispose
```

<<***extension***>> *(p. 138)* Controls whether or not the serialized key is propagated on the wire with dispose samples.

This field only applies to keyed writers.

We recommend setting this field to com.rti.dds.infrastructure.true if there are DataReaders where **com.rti.dds.infrastructure.DataReaderProtocolQosPolicy.propagate_dispose_of_unregistered_instances** (p. 764) is also com.rti.dds.infrastructure.true.

When setting serialize_key_with_dispose to FALSE, only a key hash is included in the dispose meta-sample sent by a DataWriter for a dispose action. If a dispose meta-sample only includes the key hash, then DataReaders must have previously received an actual data sample for the instance being disposed, in order for a DataReader to map a key hash/instance handle to actual key values.

If an actual data sample was never received for an instance and serialize_key_with_dispose is set to FALSE, then the DataReader application will not be able to determine the value of the key that was disposed, since **com.rti.ndds.example.FooDataReader.get_key_value** (p. 1387) will not be able to map an instance handle to actual key values.

By setting serialize_key_with_dispose to TRUE, the values of the key members of a data type will be sent in the dispose meta-sample for a dispose action by the DataWriter. This allows the DataReader to map an instance handle to the values of the key members even when receiving a dispose meta-sample without previously having received a data sample for the instance.

Important: When this field is com.rti.dds.infrastructure.true, batching will not be compatible with RTI Connext 4.3e, 4.4b, or 4.4c. The **com.rti.dds.subscription.DataReader** (p. 707) entities will receive incorrect data and/or encounter deserialization errors.

[default] com.rti.dds.infrastructure.false

Categories

Immutable (p. 292), **Instance Lifecycle** (p. 232)

8.64.2.7 propagate_app_ack_with_no_response

```
boolean propagate_app_ack_with_no_response
```

<<***extension***>> *(p. 138)* Controls whether or not a **com.rti.dds.publication.DataWriter** (p. 818) receives **com.rti.dds.publication.DataWriterListener.on_application_acknowledgment** (p. 859) notifications with an empty or invalid response.

When this field is set to com.rti.dds.infrastructure.false, the callback **com.rti.dds.publication.DataWriterListener.on_application_acknowledgment** (p. 859) will not be invoked if the sample being acknowledged has an empty or invalid response.

[default] com.rti.dds.infrastructure.true

Categories

8.64.2.8 rtps_reliable_writer

```
final  RtpsReliableWriterProtocol_t rtps_reliable_writer
```

<<***extension***>> *(*p. *138)* RTPS protocol-related configuration settings for the RTPS reliable writer associated with a **com.rti.dds.publication.DataWriter** (p. 818). This parameter only has effect if both the writer and the matching reader are configured with **com.rti.dds.infrastructure.ReliabilityQosPolicyKind.RELIABLE_RELIABILITY_QOS** (p. 1836) **com.rti.dds.infrastructure.ReliabilityQosPolicyKind** (p. 1835).

For details, refer to the **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t** (p. 1911)

[default] [default] See **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t** (p. 1911)

Categories

Immutable (p. 292), **Reliability** (p. 266)

8.64.2.9 initial_virtual_sequence_number

```
SequenceNumber_t initial_virtual_sequence_number
```

<<***extension***>> *(*p. *138)* Determines, the initial virtual sequence number for this DataWriter.

By default, the virtual sequence number of the first sample published by a DataWriter will be 1 for DataWriters that do not use durable writer history. For durable writers, the default virtual sequence number will be the last sequence number they published in a previous execution, plus one. So, when a non-durable DataWriter is restarted and must continue communicating with the same DataReaders, its samples start over with sequence number 1. Durable DataWriters start over where the last sequence number left off, plus one.

This QoS setting allows overwriting the default initial virtual sequence number.

Normally, this parameter is not expected to be modified; however, in some scenarios when continuing communication after restarting, applications may require the DataWriter's virtual sequence number to start at something other than the value described above. An example would be to enable non-durable DataWriters to start at the last sequence number published, plus one, similar to the durable DataWriter. This property enables you to make such a configuration, if desired.

The virtual sequence number can be overwritten as well on a per sample basis by updating **com.rti.dds.↩ infrastructure.WriteParams_t.identity** (p. 2311) in the **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402).

[default] com.rti.dds.infrastructure.SequenceNumber_t.AUTO

8.65 DataWriterProtocolStatus Class Reference

<<***extension***>> *(*p. *403)* The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.

Inherits Status.

Public Attributes

- long **pushed_sample_count**

  The number of user samples pushed on write from a local ***DataWriter*** *(*p. *818) to a matching remote DataReader.*
- long **pushed_sample_count_change**

  The change in ***com.rti.dds.publication.DataWriterProtocolStatus.pushed_sample_count*** *(*p. *869) since the last time the status was read.*
- long **pushed_sample_bytes**

  The number of bytes of user samples pushed on write from a local ***DataWriter*** *(*p. *818) to a matching remote DataReader.*
- long **pushed_sample_bytes_change**

  The change in ***com.rti.dds.publication.DataWriterProtocolStatus.pushed_sample_bytes*** *(*p. *870) since the last time the status was read.*
- long **filtered_sample_count**

  [Not supported.] *The number of user samples preemptively filtered by a local* ***DataWriter*** *(*p. *818) due to Content-Filtered Topics.*
- long **filtered_sample_count_change**

  [Not supported.] *The incremental change in the number of user samples preemptively filtered by a local* ***DataWriter*** *(*p. *818) due to Content-Filtered Topics since the last time the status was read.*
- long **filtered_sample_bytes**

  [Not supported.] *The number of user samples preemptively filtered by a local* ***DataWriter*** *(*p. *818) due to Content-Filtered Topics.*
- long **filtered_sample_bytes_change**

  [Not supported.] *The incremental change in the number of user samples preemptively filtered by a local* ***DataWriter*** *(*p. *818) due to Content-Filtered Topics since the last time the status was read.*
- long **sent_heartbeat_count**

  The number of Heartbeats sent between a local ***DataWriter*** *(*p. *818) and matching remote DataReader.*
- long **sent_heartbeat_count_change**

  The change in ***com.rti.dds.publication.DataWriterProtocolStatus.sent_heartbeat_count*** *(*p. *871) since the last time the status was read.*
- long **sent_heartbeat_bytes**

  The number of bytes of Heartbeats sent between a local ***DataWriter*** *(*p. *818) and matching remote DataReader.*
- long **sent_heartbeat_bytes_change**

  The change in ***com.rti.dds.publication.DataWriterProtocolStatus.sent_heartbeat_bytes*** *(*p. *871) since the last time the status was read.*
- long **pulled_sample_count**

  The number of user samples pulled from local ***DataWriter*** *(*p. *818) by matching DataReaders.*
- long **pulled_sample_count_change**

  The change in ***com.rti.dds.publication.DataWriterProtocolStatus.pulled_sample_count*** *(*p. *872) since the last time the status was read.*
- long **pulled_sample_bytes**

  The number of bytes of user samples pulled from local ***DataWriter*** *(*p. *818) by matching DataReaders.*

- long **pulled_sample_bytes_change**

  *The change in **com.rti.dds.publication.DataWriterProtocolStatus.pulled_sample_bytes** (p. 872) since the last time the status was read.*
- long **received_ack_count**

  *The number of ACKs from a remote DataReader received by a local **DataWriter** (p. 818).*
- long **received_ack_count_change**

  *The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_ack_count** (p. 873) since the last time the status was read.*
- long **received_ack_bytes**

  *The number of bytes of ACKs from a remote DataReader received by a local **DataWriter** (p. 818).*
- long **received_ack_bytes_change**

  *The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_ack_bytes** (p. 873) since the last time the status was read.*
- long **received_nack_count**

  *The number of NACKs from a remote DataReader received by a local **DataWriter** (p. 818).*
- long **received_nack_count_change**

  *The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_nack_count** (p. 873) since the last time the status was read.*
- long **received_nack_bytes**

  *The number of bytes of NACKs from a remote DataReader received by a local **DataWriter** (p. 818).*
- long **received_nack_bytes_change**

  *The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_nack_bytes** (p. 874) since the last time the status was read.*
- long **sent_gap_count**

  *The number of GAPs sent from local **DataWriter** (p. 818) to matching remote DataReaders.*
- long **sent_gap_count_change**

  *The change in **com.rti.dds.publication.DataWriterProtocolStatus.sent_gap_count** (p. 874) since the last time the status was read.*
- long **sent_gap_bytes**

  *The number of bytes of GAPs sent from local **DataWriter** (p. 818) to matching remote DataReaders.*
- long **sent_gap_bytes_change**

  *The change in **com.rti.dds.publication.DataWriterProtocolStatus.sent_gap_bytes** (p. 875) since the last time the status was read.*
- long **rejected_sample_count**

  [Not supported.]
- long **rejected_sample_count_change**

  [Not supported.]
- int **send_window_size**

  *Current maximum number of outstanding samples allowed in the **DataWriter** (p. 818)'s queue.*
- **SequenceNumber_t first_available_sample_sequence_number**

  *The sequence number of the first available sample currently queued in the local **DataWriter** (p. 818).*
- **SequenceNumber_t last_available_sample_sequence_number**

  *The sequence number of the last available sample currently queued in the local **DataWriter** (p. 818).*
- **SequenceNumber_t first_unacknowledged_sample_sequence_number**

  *The sequence number of the first unacknowledged sample currently queued in the local **DataWriter** (p. 818).*
- **SequenceNumber_t first_available_sample_virtual_sequence_number**

  *The virtual sequence number of the first available sample currently queued in the local **DataWriter** (p. 818).*
- **SequenceNumber_t last_available_sample_virtual_sequence_number**

*The virtual sequence number of the last available sample currently queued in the local **DataWriter** (p. 818).*

- **SequenceNumber_t first_unacknowledged_sample_virtual_sequence_number**

  *The virtual sequence number of the first unacknowledged sample currently queued in the local **DataWriter** (p. 818).*
- **InstanceHandle_t first_unacknowledged_sample_subscription_handle**

  *The handle of a remote DataReader that has not acknowledged the first unacknowledged sample of the local **DataWriter** (p. 818).*
- **SequenceNumber_t first_unelapsed_keep_duration_sample_sequence_number**

  The sequence number of the first sample whose keep duration has not yet elapsed.
- long **pushed_fragment_count**

  *The number of DATA_FRAG messages that have been pushed by this **DataWriter** (p. 818).*
- long **pushed_fragment_bytes**

  *The number of bytes of DATA_FRAG messages that have been pushed by this **DataWriter** (p. 818).*
- long **pulled_fragment_count**

  *The number of DATA_FRAG messages that have been pulled from this **DataWriter** (p. 818).*
- long **pulled_fragment_bytes**

  *The number of bytes of DATA_FRAG messages that have been pulled from this **DataWriter** (p. 818).*
- long **received_nack_fragment_count**

  *The number of NACK_FRAG messages that have been received by this **DataWriter** (p. 818).*
- long **received_nack_fragment_bytes**

  *The number of bytes of NACK_FRAG messages that have been received by this **DataWriter** (p. 818).*

8.65.1 Detailed Description

<<***extension***>> *(p. 403)* The status of a writer's internal protocol related metrics, like the number of samples pushed, pulled, filtered; and status of wire protocol traffic.

Entity:

com.rti.dds.publication.DataWriter (p. 818)

8.65.2 Member Data Documentation

8.65.2.1 pushed_sample_count

```
long pushed_sample_count
```

The number of user samples pushed on write from a local **DataWriter** (p. 818) to a matching remote DataReader.

Counts protocol (RTPS) messages pushed by a **DataWriter** (p. 818) when writing, unregistering, and disposing. The count is the number of sends done internally, and it may be greater than the number of user writes.

For large data, counts whole samples, not fragments. The fragment count is tracked in the **com.rti.dds.publication.↩ DataWriterProtocolStatus.pushed_fragment_count** (p. 877) statistic.

8.65.2.2 pushed_sample_count_change

```
long pushed_sample_count_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.pushed_sample_count** (p. 869) since the last time the status was read.

Counts protocol (RTPS) messages pushed by a **DataWriter** (p. 818) when writing, unregistering, and disposing.

For large data, counts whole samples, not fragments.

8.65.2.3 pushed_sample_bytes

```
long pushed_sample_bytes
```

The number of bytes of user samples pushed on write from a local **DataWriter** (p. 818) to a matching remote Data↩ Reader.

Counts bytes of protocol (RTPS) messages pushed by a **DataWriter** (p. 818) when writing, unregistering, and disposing. The count of bytes corresponds to the number of sends done internally, and it may be greater than the number of user writes.

When data fragmentation is used, this statistic is incremented as fragments are written.

8.65.2.4 pushed_sample_bytes_change

```
long pushed_sample_bytes_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.pushed_sample_bytes** (p. 870) since the last time the status was read.

Counts bytes of protocol (RTPS) messages pushed by a **DataWriter** (p. 818) when writing, unregistering, and disposing.

When data fragmentation is used, this statistic is incremented as fragments are written.

8.65.2.5 filtered_sample_count

```
long filtered_sample_count
```

[Not supported.] The number of user samples preemptively filtered by a local **DataWriter** (p. 818) due to Content-↩ Filtered Topics.

8.65.2.6 filtered_sample_count_change

```
long filtered_sample_count_change
```

[Not supported.] The incremental change in the number of user samples preemptively filtered by a local **DataWriter** (p. 818) due to Content-Filtered Topics since the last time the status was read.

8.65.2.7 filtered_sample_bytes

```
long filtered_sample_bytes
```

[Not supported.] The number of user samples preemptively filtered by a local **DataWriter** (p. 818) due to Content-↩ Filtered Topics.

8.65.2.8 filtered_sample_bytes_change

```
long filtered_sample_bytes_change
```

[Not supported.] The incremental change in the number of user samples preemptively filtered by a local **DataWriter** (p. 818) due to Content-Filtered Topics since the last time the status was read.

8.65.2.9 sent_heartbeat_count

```
long sent_heartbeat_count
```

The number of Heartbeats sent between a local **DataWriter** (p. 818) and matching remote DataReader.

Because periodic and piggyback heartbeats are sent to remote readers and their locators differently in different situations, when a reader has more than one locator, this count may be larger than expected, to reflect the sending of Heartbeats to the multiple locators.

8.65.2.10 sent_heartbeat_count_change

```
long sent_heartbeat_count_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.sent_heartbeat_count** (p. 871) since the last time the status was read.

8.65.2.11 sent_heartbeat_bytes

```
long sent_heartbeat_bytes
```

The number of bytes of Heartbeats sent between a local **DataWriter** (p. 818) and matching remote DataReader.

Because periodic and piggyback heartbeats are sent to remote readers and their locators differently in different situations, when a reader has more than one locator, this count may be larger than expected, to reflect the sending of Heartbeats to the multiple locators.

8.65.2.12 sent_heartbeat_bytes_change

```
long sent_heartbeat_bytes_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.sent_heartbeat_bytes** (p. 871) since the last time the status was read.

8.65.2.13 pulled_sample_count

```
long pulled_sample_count
```

The number of user samples pulled from local **DataWriter** (p. 818) by matching DataReaders.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local **DataWriter** (p. 818) when **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.push_on_write** (p. 863) is com.rti.dds.infrastructure.false.

When data fragmentation is used, this statistic is incremented as fragments are written.

8.65.2.14 pulled_sample_count_change

```
long pulled_sample_count_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.pulled_sample_count** (p. 872) since the last time the status was read.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local **DataWriter** (p. 818) when **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.push_on_write** (p. 863) is com.rti.dds.infrastructure.false.

For large data, counts whole samples, not fragments.

8.65.2.15 pulled_sample_bytes

```
long pulled_sample_bytes
```

The number of bytes of user samples pulled from local **DataWriter** (p. 818) by matching DataReaders.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local **DataWriter** (p. 818) when **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.push_on_write** (p. 863) is com.rti.dds.infrastructure.false.

When data fragmentation is used, this statistic is incremented as fragments are written.

8.65.2.16 pulled_sample_bytes_change

```
long pulled_sample_bytes_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.pulled_sample_bytes** (p. 872) since the last time the status was read.

Pulled samples are samples sent for repairs, for late joiners, and all samples sent by the local **DataWriter** (p. 818) when **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.push_on_write** (p. 863) is com.rti.dds.infrastructure.false.

For large data, counts bytes of whole samples, not fragments.

8.65.2.17 received_ack_count

```
long received_ack_count
```

The number of ACKs from a remote DataReader received by a local **DataWriter** (p. 818).

8.65.2.18 received_ack_count_change

```
long received_ack_count_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_ack_count** (p. 873) since the last time the status was read.

8.65.2.19 received_ack_bytes

```
long received_ack_bytes
```

The number of bytes of ACKs from a remote DataReader received by a local **DataWriter** (p. 818).

8.65.2.20 received_ack_bytes_change

```
long received_ack_bytes_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_ack_bytes** (p. 873) since the last time the status was read.

8.65.2.21 received_nack_count

```
long received_nack_count
```

The number of NACKs from a remote DataReader received by a local **DataWriter** (p. 818).

8.65.2.22 received_nack_count_change

```
long received_nack_count_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_nack_count** (p. 873) since the last time the status was read.

8.65.2.23 received_nack_bytes

```
long received_nack_bytes
```

The number of bytes of NACKs from a remote DataReader received by a local **DataWriter** (p. 818).

8.65.2.24 received_nack_bytes_change

```
long received_nack_bytes_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.received_nack_bytes** (p. 874) since the last time the status was read.

8.65.2.25 sent_gap_count

```
long sent_gap_count
```

The number of GAPs sent from local **DataWriter** (p. 818) to matching remote DataReaders.

8.65.2.26 sent_gap_count_change

```
long sent_gap_count_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.sent_gap_count** (p. 874) since the last time the status was read.

8.65.2.27 sent_gap_bytes

```
long sent_gap_bytes
```

The number of bytes of GAPs sent from local **DataWriter** (p. 818) to matching remote DataReaders.

8.65.2.28 sent_gap_bytes_change

```
long sent_gap_bytes_change
```

The change in **com.rti.dds.publication.DataWriterProtocolStatus.sent_gap_bytes** (p. 875) since the last time the status was read.

8.65.2.29 rejected_sample_count

```
long rejected_sample_count
```

[Not supported.]

8.65.2.30 rejected_sample_count_change

```
long rejected_sample_count_change
```

[Not supported.]

8.65.2.31 send_window_size

```
int send_window_size
```

Current maximum number of outstanding samples allowed in the **DataWriter** (p. 818)'s queue.

Spans the range from **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.min_send_window_size** (p. 1924) to **com.rti.dds.infrastructure.RtpsReliableWriterProtocol_t.max_send_window_size** (p. 1924).

8.65.2.32 first_available_sample_sequence_number

```
SequenceNumber_t first_available_sample_sequence_number
```

The sequence number of the first available sample currently queued in the local **DataWriter** (p. 818).

Applies only for local **DataWriter** (p. 818) status.

8.65.2.33 last_available_sample_sequence_number

```
SequenceNumber_t last_available_sample_sequence_number
```

The sequence number of the last available sample currently queued in the local **DataWriter** (p. 818).

Applies only for local **DataWriter** (p. 818) status.

8.65.2.34 first_unacknowledged_sample_sequence_number

```
SequenceNumber_t first_unacknowledged_sample_sequence_number
```

The sequence number of the first unacknowledged sample currently queued in the local **DataWriter** (p. 818).

Applies only for local **DataWriter** (p. 818) status.

8.65.2.35 first_available_sample_virtual_sequence_number

```
SequenceNumber_t first_available_sample_virtual_sequence_number
```

The virtual sequence number of the first available sample currently queued in the local **DataWriter** (p. 818).

Applies only for local **DataWriter** (p. 818) status.

8.65.2.36 last_available_sample_virtual_sequence_number

```
SequenceNumber_t last_available_sample_virtual_sequence_number
```

The virtual sequence number of the last available sample currently queued in the local **DataWriter** (p. 818).

Applies only for local **DataWriter** (p. 818) status.

8.65.2.37 first_unacknowledged_sample_virtual_sequence_number

```
SequenceNumber_t first_unacknowledged_sample_virtual_sequence_number
```

The virtual sequence number of the first unacknowledged sample currently queued in the local **DataWriter** (p. 818).

Applies only for local **DataWriter** (p. 818) status.

8.65.2.38 first_unacknowledged_sample_subscription_handle

```
InstanceHandle_t first_unacknowledged_sample_subscription_handle
```

The handle of a remote DataReader that has not acknowledged the first unacknowledged sample of the local **DataWriter** (p. 818).

Applies only for local **DataWriter** (p. 818) status.

8.65.2.39 first_unelapsed_keep_duration_sample_sequence_number

```
SequenceNumber_t first_unelapsed_keep_duration_sample_sequence_number
```

The sequence number of the first sample whose keep duration has not yet elapsed.

Applicable only when **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.disable_positive_acks** (p. 863) is set.

Sequence number of the first sample kept in the **DataWriter** (p. 818)'s queue whose keep_duration (applied when **com.rti.dds.infrastructure.DataWriterProtocolQosPolicy.disable_positive_acks** (p. 863) is set) has not yet elapsed.

Applies only for local **DataWriter** (p. 818) status.

8.65.2.40 pushed_fragment_count

```
long pushed_fragment_count
```

The number of DATA_FRAG messages that have been pushed by this **DataWriter** (p. 818).

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

8.65.2.41 pushed_fragment_bytes

```
long pushed_fragment_bytes
```

The number of bytes of DATA_FRAG messages that have been pushed by this **DataWriter** (p. 818).

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

8.65.2.42 pulled_fragment_count

```
long pulled_fragment_count
```

The number of DATA_FRAG messages that have been pulled from this **DataWriter** (p. 818).

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

8.65.2.43 pulled_fragment_bytes

```
long pulled_fragment_bytes
```

The number of bytes of DATA_FRAG messages that have been pulled from this **DataWriter** (p. 818).

This statistic is incremented as each DATA_FRAG message is sent, not when the entire sample has been sent. Applicable only when data is fragmented.

8.65.2.44 received_nack_fragment_count

```
long received_nack_fragment_count
```

The number of NACK_FRAG messages that have been received by this **DataWriter** (p. 818).

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

8.65.2.45 received_nack_fragment_bytes

```
long received_nack_fragment_bytes
```

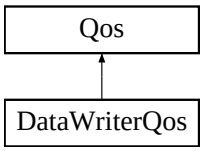
The number of bytes of NACK_FRAG messages that have been received by this **DataWriter** (p. 818).

NACK FRAG RTPS messages are sent when large data is used in conjunction with reliable communication. They have the same properties as NACK messages, but instead of applying to samples, they apply to fragments. Applicable only when data is fragmented.

8.66 DataWriterQos Class Reference

QoS policies supported by a **com.rti.dds.publication.DataWriter** (p. 818) entity.

Inheritance diagram for DataWriterQos:



Public Member Functions

- String **toString** ()

  Overrides the builtin Object.toString method.
- String **toString** (**DataWriterQos** baseQos, **QosPrintFormat** format)

  *Obtains a string representation of a **DataWriterQos*** (p. *878*) *object.*
- String **toString** (**QosPrintFormat** format)

  *Obtains a string representation of a **DataWriterQos*** (p. *878*) *object.*
- String **toString** (**DataWriterQos** baseQos)

  *Obtains a string representation of a **DataWriterQos*** (p. *878*) *object.*

8.66.1 Detailed Description

QoS policies supported by a **com.rti.dds.publication.DataWriter** (p. 818) entity.

You must set certain members in a consistent manner:

- **com.rti.dds.publication.DataWriterQos.history** (p. 884) .depth <= **com.rti.dds.publication.DataWriter↩ Qos.resource_limits** (p. 884) .max_samples_per_instance
- **com.rti.dds.publication.DataWriterQos.resource_limits** (p. 884) .max_samples_per_instance <= **com.rti.↩ dds.publication.DataWriterQos.resource_limits** (p. 884) .max_samples
- **com.rti.dds.publication.DataWriterQos.resource_limits** (p. 884) .initial_samples <= **com.rti.dds.↩ publication.DataWriterQos.resource_limits** (p. 884) .max_samples

- **com.rti.dds.publication.DataWriterQos.resource_limits** (p. 884) .initial_instances <= **com.rti.dds.publication.DataWriterQos.resource_limits** (p. 884) .max_instances

- length of **com.rti.dds.publication.DataWriterQos.user_data** (p. 885) .value <= **com.rti.dds.domain.DomainParticipantQos.resource_limits** (p. 1078) .writer_user_data_max_length

If any of the above are not true, **com.rti.dds.publication.DataWriter.set_qos** (p. 822) and **com.rti.dds.publication.DataWriter.set_qos_with_profile** (p. 822) and **com.rti.dds.publication.Publisher.set_default_datawriter_qos** (p. 1771) and **com.rti.dds.publication.Publisher.set_default_datawriter_qos_with_profile** (p. 1772) will fail with **com.rti.dds.infrastructure.RETCODE_INCONSISTENT_POLICY** (p. 1901) and **com.rti.dds.publication.Publisher.create_datawriter** (p. 1773) and **com.rti.dds.publication.Publisher.create_datawriter_with_profile** (p. 1774) and will return NULL.

Entity:

com.rti.dds.publication.DataWriter (p. 818)

All QoS Policies (p. 501) allowed ranges within each Qos.

8.66.2 Member Function Documentation

8.66.2.1 toString() [1/4]

```
String toString ( )
```

Overrides the builtin Object.toString method.

The various **toString()** (p. 881) overloads allow formatting the output and printing only the differences with respect to another **DataWriterQos** (p. 878) object.

```
DataWriterQos qos = new DataWriterQos();
String theString = new String();
// The most basic version of the API simply overrides the builtin
// Object.toString method. Only the differences with respect to the
// documented default are printed to the string. The string is formatted
// according to the default values for QosPrintFormat.
theString = qos.toString();
// This overload allows us to specify a base profile. Only the differences
// with respect to this base profile are printed to the string. If the two
// Qos objects are equal, the resultant string will be empty.
DataWriterQos baseQos = new DataWriterQos(); // ...;
theString = qos.toString(baseQos);
// It is also possible to supply a custom format at this point
QosPrintFormat printFormat = new QosPrintFormat(); // ...;
theString = qos.toString(baseQos, format);
// The sentinel value DATAWRITER_QOS_PRINT_ALL can be used as
// the base in order to print the entire qos object
theString = qos.toString(DATAWRITER_QOS_PRINT_ALL);
```

This overload uses the default print format and only prints the differences between the supplied **DataWriterQos** (p. 878) and the documented default.

Returns

The string representation of the Qos.

References **DataWriterQos.toString()**.

Referenced by **DataWriterQos.toString()**.

8.66.2.2 toString() [2/4]

```
String toString (
              DataWriterQos baseQos,
              QosPrintFormat format )
```

Obtains a string representation of a **DataWriterQos** (p. 878) object.

Parameters

format	The print format used to format the output.
baseQos	Only the differences between baseQos and the Qos object are included in the output string. If you want to print everything within the Qos, use the **com.rti.dds.publication.Publisher.DATAWRITER_QOS_PRINT_ALL** (p. 73) sentinel value.

This overload prints the differences between the qos and the supplied baseQos. The output string is formatted using the supplied **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809).

Returns

The string representation of the Qos.

References **Publisher.DATAWRITER_QOS_PRINT_ALL**.

8.66.2.3 toString() [3/4]

```
String toString (
              QosPrintFormat format )
```

Obtains a string representation of a **DataWriterQos** (p. 878) object.

Parameters

format	The print format used to format the output.

This overload prints the differences between the qos and the documented. default. The output string is formatted using the supplied **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809).

Returns

The string representation of the Qos.

References **DataWriterQos.toString()**.

8.66.2.4 toString() [4/4]

```
String toString (
              DataWriterQos baseQos )
```

Obtains a string representation of a **DataWriterQos** (p. 878) object.

Parameters

baseQos	Only the differences between baseQos and the Qos object are included in the output string. If you want to print everything within the Qos, use the **com.rti.dds.publication.Publisher.DATAWRITER_QOS_PRINT_ALL** (p. 73) sentinel value.

This overload prints the differences between the qos and the supplied baseQos. The output string is formatted using the default value for **com.rti.dds.infrastructure.QosPrintFormat** (p. 1809).

Returns

The string representation of the Qos.

References **DataWriterQos.toString()**.

```
final  DeadlineQosPolicy deadline
```

<<***basic***>> *(*p. *123)* Deadline policy, **DEADLINE** (p. 467).

8.66.3.4 latency_budget

```
final  LatencyBudgetQosPolicy latency_budget
```

Latency budget policy, **LATENCY_BUDGET** (p. 488).

8.66.3.5 liveliness

```
final  LivelinessQosPolicy liveliness
```

Liveliness policy, **LIVELINESS** (p. 489).

8.66.3.6 reliability

```
final  ReliabilityQosPolicy reliability
```

Reliability policy, **RELIABILITY** (p. 510).

8.66.3.7 destination_order

```
final  DestinationOrderQosPolicy destination_order
```

Destination order policy, **DESTINATION_ORDER** (p. 468).

8.66.3.8 history

```
final  HistoryQosPolicy history
```

<<***basic***>> *(*p. *123)* History policy, **HISTORY** (p. 487).

8.66.3.9 resource_limits

```
final ResourceLimitsQosPolicy resource_limits
```

Resource limits policy, **RESOURCE_LIMITS** (p. 511).

8.66.3.10 transport_priority

```
final TransportPriorityQosPolicy transport_priority
```

Transport priority policy, **TRANSPORT_PRIORITY** (p. 526).

8.66.3.11 lifespan

```
final LifespanQosPolicy lifespan
```

<<***basic***>> *(p. 123)* Lifespan policy, **LIFESPAN** (p. 489).

8.66.3.12 user_data

```
final UserDataQosPolicy user_data
```

User data policy, **USER_DATA** (p. 530).

8.66.3.13 ownership

```
final OwnershipQosPolicy ownership
```

<<***basic***>> *(p. 123)* Ownership policy, **OWNERSHIP** (p. 494).

8.66.3.14 ownership_strength

```
final OwnershipStrengthQosPolicy ownership_strength
```

<<***basic***>> *(p. 123)* Ownership strength policy, **OWNERSHIP_STRENGTH** (p. 495).

8.66.3.15 writer_data_lifecycle

```
final WriterDataLifecycleQosPolicy writer_data_lifecycle
```

Writer data lifecycle policy, **WRITER_DATA_LIFECYCLE** (p. 537).

8.66.3.16 writer_resource_limits

```
final DataWriterResourceLimitsQosPolicy writer_resource_limits
```

<<***extension***>> *(p. 403)* Writer resource limits policy, **DATA_WRITER_RESOURCE_LIMITS** (p. 466).

8.66.3.17 protocol

```
final DataWriterProtocolQosPolicy protocol
```

<<***extension***>> *(p. 403)* **com.rti.dds.publication.DataWriter** (p. 818) protocol policy, **DATA_WRITER_PROTOCOL** (p. 465)

8.66.3.18 transport_selection

```
final TransportSelectionQosPolicy transport_selection
```

<<***extension***>> *(p. 403)* Transport plugin selection policy, **TRANSPORT_SELECTION** (p. 527).

Specifies the transports available for use by the **com.rti.dds.publication.DataWriter** (p. 818).

8.66.3.19 unicast

```
final TransportUnicastQosPolicy unicast
```

<<***extension***>> *(p. 403)* Unicast transport policy, **TRANSPORT_UNICAST** (p. 528).

Specifies the unicast transport interfaces and ports on which **messages** can be received.

The unicast interfaces are used to receive messages from **com.rti.dds.subscription.DataReader** (p. 707) entities in the domain.

8.66.3.20 publish_mode

```
final PublishModeQosPolicy publish_mode
```

<<***extension***>> *(*p. *403)* Publish mode policy, **PUBLISH_MODE** (p. 499).

Determines whether the **com.rti.dds.publication.DataWriter** (p. 818) publishes data synchronously or asynchronously and how.

8.66.3.21 property

```
final PropertyQosPolicy property
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *403)* Property policy, **PROPERTY** (p. 499). See also `Property Reference Guide`.

8.66.3.22 data_tags

```
final DataTagQosPolicy data_tags
```

DataTag policy, **DATA_TAG** (p. 464).

8.66.3.23 service

```
final ServiceQosPolicy service
```

<<***extension***>> *(*p. *403)* Service policy, **SERVICE** (p. 514).

8.66.3.24 batch

```
final BatchQosPolicy batch
```

<<***extension***>> *(*p. *403)* Batch policy, **BATCH** (p. 417).

8.66.3.25 multi_channel

```
final  MultiChannelQosPolicy multi_channel
```

<<***extension***>> *(p. 403)* Multi channel policy, **MULTICHANNEL** (p. 493).

8.66.3.26 availability

```
final  AvailabilityQosPolicy availability
```

<<***extension***>> *(p. 403)* Availability policy, **AVAILABILITY** (p. 416).

8.66.3.27 publication_name

```
final  EntityNameQosPolicy publication_name
```

<<***extension***>> *(p. 403)* EntityName policy, **ENTITY_NAME** (p. 485).

8.66.3.28 topic_query_dispatch

```
final  TopicQueryDispatchQosPolicy topic_query_dispatch
```

<<***extension***>> *(p. 403)* Topic Query dispatch policy, **TOPIC_QUERY_DISPATCH** (p. 521).

8.66.3.29 representation

```
final  DataRepresentationQosPolicy representation
```

Data representation policy, **DATA_REPRESENTATION** (p. 462).

8.66.3.30 type_support

```
final  TypeSupportQosPolicy type_support
```

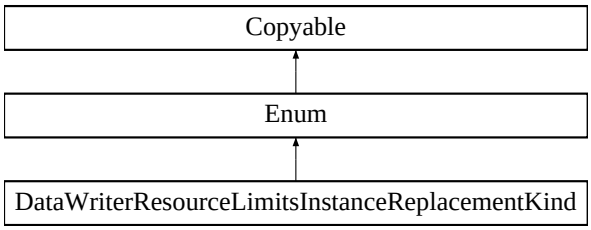
<<***extension***>> *(p. 403)* Type support data, **TYPESUPPORT** (p. 529).

Optional value that is passed to a type plugin's on_endpoint_attached and serialization functions.

8.67 DataWriterResourceLimitsInstanceReplacementKind Class Reference

Sets the kinds of instances that can be replaced when instance resource limits are reached.

Inheritance diagram for DataWriterResourceLimitsInstanceReplacementKind:



Static Public Attributes

- static final **DataWriterResourceLimitsInstanceReplacementKind UNREGISTERED_INSTANCE_↩ REPLACEMENT**

  *Allows a **com.rti.dds.publication.DataWriter*** (p. *818) to reclaim unregistered acknowledged instances.*
- static final **DataWriterResourceLimitsInstanceReplacementKind ALIVE_INSTANCE_REPLACEMENT**

  *Allows a **com.rti.dds.publication.DataWriter*** (p. *818) to reclaim alive, acknowledged instances.*
- static final **DataWriterResourceLimitsInstanceReplacementKind DISPOSED_INSTANCE_REPLACEMENT**

- static final **DataWriterResourceLimitsInstanceReplacementKind ALIVE_OR_DISPOSED_INSTANCE_↩ REPLACEMENT**

  *Allows a **com.rti.dds.publication.DataWriter*** (p. *818) to reclaim a either an alive acknowledged instance or a disposed acknowledged instance.*

Additional Inherited Members

8.67.1 Detailed Description

Sets the kinds of instances that can be replaced when instance resource limits are reached.

When **com.rti.dds.infrastructure.ResourceLimitsQosPolicy.max_instances** (p. 1896) is reached, a **com.rti.dds.↩ publication.DataWriter** (p. 818) will try to make room for a new instance by attempting to reclaim an existing instance based on the instance replacement kind specified by **com.rti.dds.infrastructure.DataWriterResourceLimitsQos↩ Policy.instance_replacement** (p. 896).

Only instances whose states match the specified kinds are eligible to be replaced. In addition, an instance must have had all of its samples fully acknowledged for it to be considered replaceable.

For all kinds, a **com.rti.dds.publication.DataWriter** (p. 818) will replace the oldest instance satisfying that kind. For example, when the kind is com.rti.dds.infrastructure.DataWriterResourceLimitsInstanceReplacementKind.Data↩ WriterResourceLimitsInstanceReplacementKind.UNREGISTERED_INSTANCE_REPLACEMENT, a **com.rti.dds.↩ publication.DataWriter** (p. 818) will remove the oldest, fully acknowledged, unregistered instance, if such an instance exists.

If no replaceable instance exists, the invoked function will either return with an appropriate out-of-resources return code, or in the case of a write, it may first block to wait for an instance to be acknowledged. Otherwise, the **com.↩ rti.dds.publication.DataWriter** (p. 818) will replace the old instance with the new instance, and invoke, if available, the **com.rti.dds.publication.DataWriterListener.on_instance_replaced** (p. 858) to notify the user about an instance being replaced.

A **com.rti.dds.publication.DataWriter** (p. 818) checks for replaceable instances in the following order, stopping once a replaceable instance is found:

- If **com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy.replace_empty_instances** (p. 896) is com.rti.dds.infrastructure.true, a **com.rti.dds.publication.DataWriter** (p. 818) first tries replacing instances that have no samples. These empty instances can be unregistered, disposed, or alive.
- Next, a **com.rti.dds.publication.DataWriter** (p. 818) tries replacing unregistered instances. Since an unregistered instance indicates that the **com.rti.dds.publication.DataWriter** (p. 818) is done modifying it, unregistered instances are replaced before instances of any other state (alive, disposed). This is the same as the com.↩ rti.dds.infrastructure.DataWriterResourceLimitsInstanceReplacementKind.DataWriterResourceLimitsInstance↩ ReplacementKind.UNREGISTERED_INSTANCE_REPLACEMENT kind.
- Then, a **com.rti.dds.publication.DataWriter** (p. 818) tries replacing what is specified by **com.rti.dds.↩ infrastructure.DataWriterResourceLimitsQosPolicy.instance_replacement** (p. 896). With unregistered instances already checked, this leaves alive and disposed instances. When both alive and disposed instances may be replaced, the kind specifies whether the particular order matters (e.g., DISPOSED_THEN_ALIVE, ALIVE_THEN_DISPOSED) or not (ALIVE_OR_DISPOSED).

QoS:

com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy (p. 892)

8.67.2 Member Data Documentation

8.67.2.1 UNREGISTERED_INSTANCE_REPLACEMENT

```
final DataWriterResourceLimitsInstanceReplacementKind UNREGISTERED_INSTANCE_REPLACEMENT [static]
```

Allows a **com.rti.dds.publication.DataWriter** (p. 818) to reclaim unregistered acknowledged instances.

By default, all instance replacement kinds first attempt to reclaim an unregistered, acknowledged instance. Used in **com.rti.dds.infrastructure.DataWriterResourceLimitsQosPolicy.instance_replacement** (p. 896) **[default]**

8.67.2.2 ALIVE_INSTANCE_REPLACEMENT

```
final DataWriterResourceLimitsInstanceReplacementKind ALIVE_INSTANCE_REPLACEMENT [static]
```

Allows a **com.rti.dds.publication.DataWriter** (p. 818) to reclaim alive, acknowledged instances.

When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **com.rti.dds.publication.↩ DataWriter** (p. 818) to reclaim an alive, acknowledged instance, where an alive instance is a registered, non-disposed instance. The least recently registered or written alive instance will be reclaimed.

8.67.2.3 DISPOSED_INSTANCE_REPLACEMENT

```
final DataWriterResourceLimitsInstanceReplacementKind DISPOSED_INSTANCE_REPLACEMENT [static]
```

Allows a **com.rti.dds.publication.DataWriter** (p. 818) to reclaim disposed acknowledged instances.

When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **com.rti.dds.publication.↩ DataWriter** (p. 818) to reclaim a disposed, acknowledged instance. The least recently disposed instance will be reclaimed.

8.67.2.4 ALIVE_THEN_DISPOSED_INSTANCE_REPLACEMENT

```
final DataWriterResourceLimitsInstanceReplacementKind ALIVE_THEN_DISPOSED_INSTANCE_REPLACEMENT
[static]
```

Allows a **com.rti.dds.publication.DataWriter** (p. 818) first to reclaim an alive, acknowledged instance, and then, if necessary, a disposed, acknowledged instance.

When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **com.rti.dds.publication.↩ DataWriter** (p. 818) to first try reclaiming an alive, acknowledged instance. If no instance is reclaimable, then it tries reclaiming a disposed, acknowledged instance. The least recently used (i.e., registered, written, or disposed) instance will be reclaimed.

8.67.2.5 DISPOSED_THEN_ALIVE_INSTANCE_REPLACEMENT

```
final DataWriterResourceLimitsInstanceReplacementKind DISPOSED_THEN_ALIVE_INSTANCE_REPLACEMENT
[static]
```

Allows a **com.rti.dds.publication.DataWriter** (p. 818) first to reclaim a disposed, acknowledged instance, and then, if necessary, an alive, acknowledged instance.

When an unregistered, acknowledged instance is not available to reclaim, this kind allows a **com.rti.dds.publication.↩ DataWriter** (p. 818) to first try reclaiming a disposed, acknowledged instance. If no instance is reclaimable, then it tries reclaiming an alive, acknowledged instance. The least recently used (i.e., disposed, registered, or written) instance will be reclaimed.

8.67.2.6 ALIVE_OR_DISPOSED_INSTANCE_REPLACEMENT

```
final DataWriterResourceLimitsInstanceReplacementKind ALIVE_OR_DISPOSED_INSTANCE_REPLACEMENT
[static]
```

Allows a **com.rti.dds.publication.DataWriter** (p. 818) to reclaim a either an alive acknowledged instance or a disposed acknowledged instance.

When an unregistered acknowledged instance is not available to reclaim, this kind allows a **com.rti.dds.publication.DataWriter** (p. 818) to reclaim either an alive, acknowledged instance or a disposed, acknowledged instance. If both instance kinds are available to reclaim, the **com.rti.dds.publication.DataWriter** (p. 818) will reclaim the least recently used (i.e. disposed, registered, or written) instance.

8.68.1 Detailed Description

*<<**extension**>> (p. 138)* Various settings that configure how a **com.rti.dds.publication.DataWriter** (p. 818) allocates and uses physical memory for internal resources.

DataWriters must allocate internal structures to handle the simultaneously blocking of threads trying to call **com.rti.ndds.example.FooDataWriter.write** (p. 1397) on the same **com.rti.dds.publication.DataWriter** (p. 818), for the storage used to batch small samples, and for content-based filters specified by DataReaders.

Most of these internal structures start at an initial size and, by default, will be grown as needed by dynamically allocating additional memory. You may set fixed, maximum sizes for these internal structures if you want to bound the amount of memory that can be used by a **com.rti.dds.publication.DataWriter** (p. 818). By setting the initial size to the maximum size, you will prevent RTI Connext from dynamically allocating any memory after the creation of the **com.rti.dds.publication.DataWriter** (p. 818).

This QoS policy is an extension to the DDS standard.

Entity:

com.rti.dds.publication.DataWriter (p. 818)

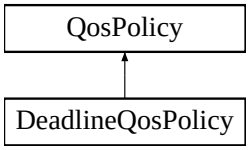
8.69 DeadlineQosPolicy Class Reference

<<***spec***>> *(p. 132)* Expresses the maximum duration (deadline) within which an instance is expected to be updated.

Inheritance diagram for DeadlineQosPolicy:



Public Attributes

- final **Duration_t period**

  <<***basic***>> *(p. 123)* <<***spec***>> *(p. 132) Duration of the deadline period.*

8.69.1 Detailed Description

<<***spec***>> *(p. 132)* Expresses the maximum duration (deadline) within which an instance is expected to be updated.

A **com.rti.dds.subscription.DataReader** (p. 707) expects a new sample updating the value of each instance at least once every `period`. That is, `period` specifies the maximum expected elapsed time between arriving data samples.

A **com.rti.dds.publication.DataWriter** (p. 818) indicates that the application commits to write a new value (using the **com.rti.dds.publication.DataWriter** (p. 818)) for each instance managed by the **com.rti.dds.publication.DataWriter** (p. 818) at least once every `period`.

This QoS can be used during system integration to ensure that applications have been coded to meet design specifications.

It can also be used during runtime to detect when systems are performing outside of design specifications. Receiving applications can take appropriate actions to prevent total system failure when data is not received in time. For topics on which data is not expected to be periodic, `period` should be set to an infinite value.

Entity:

com.rti.dds.topic.Topic (p. 2116), **com.rti.dds.subscription.DataReader** (p. 707), **com.rti.dds.publication.DataWriter** (p. 818)

Status:

com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_DEADLINE_MISSED_STATUS, com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_DEADLINE_MISSED_STATUS, com.rti.dds.infrastructure.StatusKind.StatusKind.OFFERED_INCOMPATIBLE_QOS_STATUS, com.rti.dds.infrastructure.StatusKind.StatusKind.REQUESTED_INCOMPATIBLE_QOS_STATUS

Properties:

RxO (p. 506) = YES
Changeable (p. 507) = **YES** (p. 507)

8.69.2 Usage

This policy is useful for cases where a **com.rti.dds.topic.Topic** (p. 2116) is expected to have each instance updated periodically. On the publishing side this setting establishes a contract that the application must meet. On the subscribing side the setting establishes a minimum requirement for the remote publishers that are expected to supply the data values.

When RTI Connext 'matches' a **com.rti.dds.publication.DataWriter** (p. 818) and a **com.rti.dds.subscription.DataReader** (p. 707) it checks whether the settings are compatible (i.e., *offered deadline <= requested deadline*); if they are not, the two entities are informed (via the **com.rti.dds.infrastructure.Listener** (p. 1528) or **com.rti.dds.infrastructure.Condition** (p. 686) mechanism) of the incompatibility of the QoS settings and communication will not occur.

Assuming that the reader and writer ends have compatible settings, the fulfilment of this contract is monitored by RTI Connext and the application is informed of any violations by means of the proper **com.rti.dds.infrastructure.Listener** (p. 1528) or **com.rti.dds.infrastructure.Condition** (p. 686).

8.69.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered period* <= *requested period* holds.

8.69.4 Consistency

The setting of the **DEADLINE** (p. 467) policy must be set consistently with that of the **TIME_BASED_FILTER** (p. 519).

For these two policies to be consistent the settings must be such that *deadline period* >= *minimum_separation*.

An attempt to set these policies in an inconsistent manner will result in **com.rti.dds.infrastructure.RETCODE_INCONSISTENT_POLICY** (p. 1901) in **set_qos (abstract)** (p. 1321), or the **com.rti.dds.infrastructure.Entity** (p. 1320) will not be created.

For a **com.rti.dds.subscription.DataReader** (p. 707), the **DEADLINE** (p. 467) policy and **com.rti.dds.infrastructure.TimeBasedFilterQosPolicy** (p. 2113) may interact such that even though the **com.rti.dds.publication.DataWriter** (p. 818) is writing samples fast enough to fulfill its commitment to its own deadline, the **com.rti.dds.subscription.DataReader** (p. 707) may see violations of its deadline. This happens because RTI Connext will drop any samples received within the **com.rti.dds.infrastructure.TimeBasedFilterQosPolicy.minimum_separation** (p. 2115). To avoid triggering the **com.rti.dds.subscription.DataReader** (p. 707)'s deadline, even though the matched **com.rti.dds.publication.DataWriter** (p. 818) is meeting its own deadline, set the two QoS parameters so that:

reader deadline >= *reader minimum_separation + writer deadline*

See **com.rti.dds.infrastructure.TimeBasedFilterQosPolicy** (p. 2113) for more information about the interactions between deadlines and time-based filters.

Changeable (p. 507) = **UNTIL ENABLE** (p. 507)

8.70.2 Usage

When multiple DataWriters send data for the same topic, the order in which data from different DataWriters are received by the applications of different DataReaders may be different. So different DataReaders may not receive the same "last" value when DataWriters stop sending data.

This QoS policy controls how each subscriber resolves the final value of a data instance that is written by multiple **com.rti.dds.publication.DataWriter** (p. 818) entities (which may be associated with different **com.rti.dds.publication.Publisher** (p. 1767) entities) running on different nodes.

This QoS can be used to create systems that have the property of "eventual consistency." Thus intermediate states across multiple applications may be inconsistent, but when DataWriters stop sending changes to the same topic, all applications will end up having the same state.

This QoS policy can be set for both DataWriters and DataReaders.

For the DataReader:

The default setting, com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS, indicates that (assuming the **OWNERSHIP_STRENGTH** (p. 495) policy allows it) the latest received value for the instance should be the one whose value is kept. That is, data will be delivered by a **com.rti.dds.subscription.DataReader** (p. 707) in the order in which it was *received* (which may lead to inconsistent final values).

For com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS, if the scope is set to com.rti.dds.infrastructure.DestinationOrderQosPolicyScopeKind.DestinationOrderQosPolicyScopeKind.INSTANCE_SCOPE_DESTINATIONORDER_QOS (default), within each instance, the sample's source timestamp shall be used to determine the most recent information. This is the only setting that, in the case of concurrent same-strength DataWriters updating the same instance, ensures that all DataReaders end up with the same final value for the instance. If a DataReader receives a sample for an instance with a source timestamp that is older than the last source timestamp received for the instance, the sample is dropped. The SAMPLE_REJECTED status or the SAMPLE_LOST status will not be updated.

If scope is set to com.rti.dds.infrastructure.DestinationOrderQosPolicyScopeKind.DestinationOrderQosPolicyScopeKind.TOPIC_SCOPE_DESTINATIONORDER_QOS, the ordering is enforced per topic across all instances.

In addition, a DataReader will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than source_timestamp_tolerance. Otherwise, the DDS sample is dropped. The SAMPLE_REJECTED status or the SAMPLE_LOST status will not be updated.

For the DataWriter:

For the default setting, com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS, the DataWriter will not enforce source timestamp ordering when writing samples using the **com.rti.ndds.example.FooDataWriter.write_w_params** (p. 1402) or **com.rti.ndds.example.FooDataWriter.write_w_timestamp** (p. 1401) API. The source timestamp of a new sample can be older than the source timestamp of the previous samples.

When using com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS, If scope is set to com.rti.dds.infrastructure.DestinationOrderQosPolicyScopeKind.DestinationOrderQosPolicyScopeKind.INSTANCE_SCOPE_DESTINATIONORDER_QOS (default), when writing a sample, the sample's timestamp must not be older than the timestamp of the previously written DDS sample for the same instance. If, however, the timestamp is older than the timestamp of the previously written DDS sample—but the difference is less than the source_timestamp_tolerance—the DDS sample will use the previously written DDS sample's timestamp as its timestamp. Otherwise, if the difference is greater than the tolerance, the write will fail with retcode **com.rti.dds.infrastructure.RETCODE_BAD_PARAMETER** (p. 1899).

If scope is set to com.rti.dds.infrastructure.DestinationOrderQosPolicyScopeKind.DestinationOrderQosPolicyScopeKind.TOPIC_SCOPE_DESTINATIONORDER_QOS, a new sample timestamp must not be older than the timestamp of the previously written DDS sample, across all instances. (The ordering is enforced across all instances.)

8.70.3 Compatibility

The value offered is considered compatible with the value requested if and only if the inequality *offered kind >= requested kind* evaluates to 'TRUE'. For the purposes of this inequality, the values of **com.rti.dds.infrastructure.DestinationOrderQosPolicy.kind** (p. 905) are considered ordered such that com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS < com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS

8.70.4 Member Data Documentation

8.70.4.1 kind

```
DestinationOrderQosPolicyKind kind
```

<<***basic***>> *(p. 123)* <<***spec***>> *(p. 132)* Specifies the desired kind of destination order.

[default] com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS,

Categories

Immutable (p. 292), **Matching** (p. 355), **Discovery Metadata** (p. 348), **Applied Per-Instance** (p. 346), **Sample Ordering** (p. 280)

8.70.4.2 scope

```
DestinationOrderQosPolicyScopeKind scope = DestinationOrderQosPolicyScopeKind.INSTANCE_SCOPE_DESTINATIONORDER_QOS
```

<<***spec***>> *(p. 132)* Specifies the desired scope of the source destination order.

Indicates if tolerance check and the current sample's timestamp is computed based on instance or topic basis.
[default] com.rti.dds.infrastructure.DestinationOrderQosPolicyScopeKind.DestinationOrderQosPolicyScopeKind.INSTANCE_SCOPE_DESTINATIONORDER_QOS

Categories

Immutable (p. 292), **Applied Per-Instance** (p. 346), **Sample Ordering** (p. 280)

8.70.4.3 source_timestamp_tolerance

```
final Duration_t source_timestamp_tolerance
```

<<***extension***>> *(*p. *138)* Allowed tolerance between source timestamps of consecutive samples.

When a **com.rti.dds.publication.DataWriter** (p. 818) sets **com.rti.dds.infrastructure.DestinationOrderQos↩ PolicyKind** (p. 906) to com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.↩ BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS, when writing a sample, its timestamp must not be less than the timestamp of the previously written sample. However, if it is less than the timestamp of the previously written sample but the difference is less than this tolerance, the sample will use the previously written sample's timestamp as its timestamp. Otherwise, if the difference is greater than this tolerance, the write will fail.

When a **com.rti.dds.subscription.DataReader** (p. 707) sets **com.rti.dds.infrastructure.DestinationOrderQos↩ PolicyKind** (p. 906) to com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrderQosPolicyKind.↩ BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS, the **com.rti.dds.subscription.DataReader** (p. 707) will accept a sample only if the source timestamp is no farther in the future from the reception timestamp than this tolerance. Otherwise, the sample is dropped.

[default] 100 milliseconds for **com.rti.dds.publication.DataWriter** (p. 818), 30 seconds for **com.rti.dds.↩ subscription.DataReader** (p. 707)

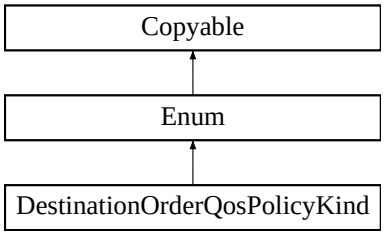
Categories

Immutable (p. 292), **Applied Per-Instance** (p. 346), **Sample Ordering** (p. 280)

8.71 DestinationOrderQosPolicyKind Class Reference

Kinds of destination order.

Inheritance diagram for DestinationOrderQosPolicyKind:



Static Public Attributes

- static final **DestinationOrderQosPolicyKind BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS**

  [default] *Indicates that data is ordered based on the reception time at each* ***com.rti.dds.subscription.Subscriber*** *(*p. *2039).*
- static final **DestinationOrderQosPolicyKind BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS**

  Indicates that data is ordered based on a time-stamp placed at the source (by RTI Connext or by the application).

Additional Inherited Members

8.71.1 Detailed Description

Kinds of destination order.

QoS:

com.rti.dds.infrastructure.DestinationOrderQosPolicy (p. 903)

8.71.2 Member Data Documentation

8.71.2.1 BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS

```
final DestinationOrderQosPolicyKind BY_RECEPTION_TIMESTAMP_DESTINATIONORDER_QOS [static]
```

[default] Indicates that data is ordered based on the reception time at each **com.rti.dds.subscription.Subscriber** (p. 2039).

Since each subscriber may receive the data at different times there is no guarantee that the changes will be seen in the same order. Consequently, it is possible for each subscriber to end up with a different final value for the data.

8.71.2.2 BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS

```
final DestinationOrderQosPolicyKind BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS [static]
```

Indicates that data is ordered based on a time-stamp placed at the source (by RTI Connext or by the application).

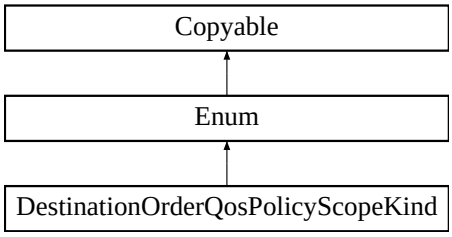
In any case this guarantees a consistent final value for the data in all subscribers.

Note: If Batching is needed along with com.rti.dds.infrastructure.DestinationOrderQosPolicyKind.DestinationOrder↩ QosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS and com.rti.dds.infrastructure.Destination↩ OrderQosPolicyScopeKind.DestinationOrderQosPolicyScopeKind.INSTANCE_SCOPE_DESTINATIONORDER_QOS, then the **com.rti.dds.infrastructure.BatchQosPolicy.source_timestamp_resolution** (p. 610) and **com.rti.dds.↩ infrastructure.BatchQosPolicy.thread_safe_write** (p. 611) setting of **com.rti.dds.infrastructure.BatchQosPolicy** (p. 607) should be set to com.rti.dds.infrastructure.Duration_t.ZERO and com.rti.dds.infrastructure.true respectively.

8.72 DestinationOrderQosPolicyScopeKind Class Reference

Scope of source destination order.

Inheritance diagram for DestinationOrderQosPolicyScopeKind:



Static Public Attributes

- static final **DestinationOrderQosPolicyScopeKind INSTANCE_SCOPE_DESTINATIONORDER_QOS**

  [default] *Indicates that data is ordered on a per instance basis if used along with com.rti.dds.infrastructure.Destination↩ OrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS.*
- static final **DestinationOrderQosPolicyScopeKind TOPIC_SCOPE_DESTINATIONORDER_QOS**

  Indicates that data is ordered on a per topic basis if used along with com.rti.dds.infrastructure.DestinationOrderQos↩ PolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS.

Additional Inherited Members

8.72.1 Detailed Description

Scope of source destination order.

QoS:

com.rti.dds.infrastructure.DestinationOrderQosPolicy (p. 903)

8.72.2 Member Data Documentation

8.72.2.1 INSTANCE_SCOPE_DESTINATIONORDER_QOS

```
final DestinationOrderQosPolicyScopeKind INSTANCE_SCOPE_DESTINATIONORDER_QOS [static]
```

[default] Indicates that data is ordered on a per instance basis if used along with com.rti.dds.infrastructure.Destination↩ OrderQosPolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS.

The source timestamp of the current sample is compared to the source timestamp of the previously received sample for the same instance. The tolerance check is also applied per instance.

8.72.2.2 TOPIC_SCOPE_DESTINATIONORDER_QOS

```
final DestinationOrderQosPolicyScopeKind TOPIC_SCOPE_DESTINATIONORDER_QOS [static]
```

Indicates that data is ordered on a per topic basis if used along with com.rti.dds.infrastructure.DestinationOrderQos↩ PolicyKind.DestinationOrderQosPolicyKind.BY_SOURCE_TIMESTAMP_DESTINATIONORDER_QOS.

The source timestamp of the current sample is compared to the source timestamp of the previously received sample for the same topic. The tolerance check is also applied per topic.

8.73 DiscoveryBuiltinReaderFragmentationResourceLimits_t Class Reference

Inherits Struct.

Public Member Functions

- **DiscoveryBuiltinReaderFragmentationResourceLimits_t** ()
- **DiscoveryBuiltinReaderFragmentationResourceLimits_t** (boolean **disable_fragmentation_support**, int **max_fragmented_samples**, int **initial_fragmented_samples**, int **max_fragmented_samples_per_remote↩ _writer**, int **max_fragments_per_sample**, boolean **dynamically_allocate_fragmented_samples**)

Public Attributes

8.74 DiscoveryConfigBuiltinChannelKind Class Reference

Built-in channels that can be enabled.

Static Public Attributes

- static final int **SERVICE_REQUEST_CHANNEL**

  [default] *Built-in ServiceRequest channel.*
- static final int **TYPE_LOOKUP_SERVICE_CHANNEL**

  [default] *Built-in Type Lookup Service channel.*
- static final int **TYPE_LOOKUP_SERVICE_REQUEST_CHANNEL**

  [default] *Built-in Type Lookup Service Request channel.*
- static final int **TYPE_LOOKUP_SERVICE_REPLY_CHANNEL**

  [default] *Built-in Type Lookup Service Reply channel.*
- static final int **MASK_NONE**

  No bits are set, indicating that all channels that can be disabled, are disabled. Not all builtin channels can be disabled by the user. Only builtin channels represented by ***com.rti.dds.infrastructure.DiscoveryConfigBuiltinChannelKind*** *(p. 911) are able to be enabled or disabled by the user.*
- static final int **MASK_ALL**

  All bits are set, indicating that all channels are enabled.
- static final int **MASK_DEFAULT**

  The default value of ***com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.enabled_builtin_channels*** *(p. 928).*

8.74.1 Detailed Description

Built-in channels that can be enabled.

See also

com.rti.dds.infrastructure.DiscoveryConfigBuiltinChannelKind (p. 911)

8.74.2 Member Data Documentation

8.74.2.1 SERVICE_REQUEST_CHANNEL

```
final int SERVICE_REQUEST_CHANNEL  [static]
```

[default] Built-in ServiceRequest channel.

Enables the ServiceRequest channel, which is required by the TopicQuery and locator reachability features. Disabling the ServiceRequest channel reduces resource consumption including network bandwidth, CPU utilization, and memory.

8.74.2.2 TYPE_LOOKUP_SERVICE_CHANNEL

```
final int TYPE_LOOKUP_SERVICE_CHANNEL  [static]
```

[default] Built-in Type Lookup Service channel.

Enables both the Type Lookup Service Request channel and Type Lookup Service Reply channel.

8.74.2.3 TYPE_LOOKUP_SERVICE_REQUEST_CHANNEL

```
final int TYPE_LOOKUP_SERVICE_REQUEST_CHANNEL  [static]
```

[default] Built-in Type Lookup Service Request channel.

Enables the Type Lookup Service Request channel.

8.74.2.4 TYPE_LOOKUP_SERVICE_REPLY_CHANNEL

```
final int TYPE_LOOKUP_SERVICE_REPLY_CHANNEL  [static]
```

[default] Built-in Type Lookup Service Reply channel.

Enables the Type Lookup Service Reply channel.

8.75 DiscoveryConfigBuiltinPluginKind Class Reference

Built-in discovery plugins that can be used.

Static Public Attributes

- static final int **SPDP**
  Simple Participant Discovery Protocol.
- static final int **SEDP**
  Simple Endpoint Discovery Protocol.
- static final int **SDP**
  ***[default]** Simple discovery plugin.*
- static final int **DPSE**
  Dynamic Participant discovery, Static Endpoint discovery.
- static final int **SPDP2**
  Simple Participant Discovery Protocol 2.0 (SPDP2)
- static final int **SDP2**
  Simple discovery plugin 2.0.
- static final int **MASK_NONE**
  No bits are set.
- static final int **MASK_DEFAULT**
  *The default value of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.builtin_discovery_plugins** (p. 927).*

8.75.1 Detailed Description

Built-in discovery plugins that can be used.

See also

com.rti.dds.infrastructure.DiscoveryConfigBuiltinPluginKind (p. 913)

8.75.2 Member Data Documentation

8.75.2.1 SPDP

```
final int SPDP  [static]
```

Simple Participant Discovery Protocol.

Enables the first phase of the Simple Discovery Protocol (SDP), in which DomainParticipant's details are communicated to all other DomainParticipants in the same DDS domain by sending participant declaration messages, also known as participant DATA submessages or participant announcements.

8.75.2.2 SEDP

```
final int SEDP  [static]
```

Simple Endpoint Discovery Protocol.

Enables the second phase of the Simple Discovery Protocol (SDP), in which the information (GUID, QoS, etc.) about your application's DataReaders and DataWriters is exchanged by sending publication/subscription declarations in DATA messages, also known as publication DATAs and subscription DATAs.

8.75.2.3 SDP

```
final int SDP  [static]
```

[default] Simple discovery plugin.

It is equivalent to SPDP + SEDP.

8.75.2.4 DPSE

```
final int DPSE  [static]
```

Dynamic Participant discovery, Static Endpoint discovery.

Enables static endpoint discovery for a DomainParticipant. In this type of discovery, information from remote endpoints is extracted from a local DDS-XML file instead of being received over the network, reducing the number of exchanged packets and consequently reducing bandwidth consumption used for discovery. Using this value in **com.↩ rti.dds.infrastructure.DiscoveryConfigBuiltinPluginKind** (p. 913) requires the 'librtilbedisc' library (included in the RTI Connext Professional bundles) to be reachable (PATH, LD_LIBRARY_PATH or DYLD_LIBRARY_PATH).

8.75.2.5 SPDP2

```
final int SPDP2  [static]
```

Simple Participant Discovery Protocol 2.0 (SPDP2)

Enables the Simple Participant Discovery Protocol 2.0, in which a DomainParticipant's details are communicated to all other DomainParticipants in the same DDS domain by sending participant bootstrap messages. These bootstrap messages contain only a subset of the information in the Simple Participant Discovery Protocol (SPDP) participant announcements that is required to match two participants and bootstrap the system. The DomainParticpant's full configuration is then sent reliably with participant configuration announcements. Two DomainParticipants that use SPDP2 will maintain liveliness using liveliness participant messages.

8.75.2.6 SDP2

```
final int SDP2  [static]
```

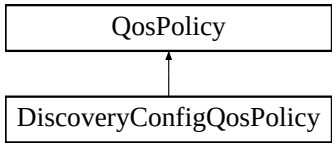
Simple discovery plugin 2.0.

It is equivalent to SPDP2 + SEDP.

8.76 DiscoveryConfigQosPolicy Class Reference

Settings for discovery configuration.

Inheritance diagram for DiscoveryConfigQosPolicy:



Public Attributes

- final **Duration_t participant_liveliness_lease_duration**

  <<***extension***>> *(*p. *138) Topic name pattern for requesting all types via Type Lookup Service.*

8.76.1 Detailed Description

Settings for discovery configuration.

<<***extension***>> *(*p. *138)* This QoS policy controls the amount of delay in discovering entities in the system and the amount of discovery traffic in the network.

The amount of network traffic required by the discovery process can vary widely, based on how your application has chosen to configure the middleware's network addressing (e.g., unicast vs. multicast, multicast TTL, etc.), the size of the system, whether all applications are started at the same time or whether start times are staggered, and other factors. Your application can use this policy to make tradeoffs between discovery completion time and network bandwidth utilization. In addition, you can introduce random back-off periods into the discovery process to decrease the probability of network contention when many applications start simultaneously.

Entity:

com.rti.dds.domain.DomainParticipant (p. 948)

Properties:

RxO (p. 506) = N/A
Changeable (p. 507) = **NO** (p. 507)

8.76.2 Member Data Documentation

8.76.2.1 participant_liveliness_lease_duration

```
final  Duration_t participant_liveliness_lease_duration
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The liveliness lease duration for the participant.

This is the same as the expiration time of the DomainParticipant as defined in the RTPS protocol.

If the participant has not refreshed its own liveliness to other participants at least once within this period, it may be considered as stale by other participants in the network.

Should be strictly greater than **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.participant_liveliness_↩ assert_period** (p. 919).

[default] 100 seconds

[range] [1 nanosec,1 year], > participant_liveliness_assert_period

Categories

Immutable (p. 292), **Discovery** (p. 212), **Liveliness** (p. 239), **Discovery Metadata** (p. 348)

8.76.2.2 participant_liveliness_assert_period

```
final  Duration_t participant_liveliness_assert_period
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The period to assert liveliness for the participant.

The period at which the participant will refresh its liveliness to all the peers.

Should be strictly less than **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.participant_liveliness_lease_↩ duration** (p. 918).

[default] 30 seconds

[range] [1 nanosec,1 year], < participant_liveliness_lease_duration

Categories

Immutable (p. 292), **Discovery** (p. 212), **Liveliness** (p. 239)

8.76.2.3 participant_announcement_period

```
final Duration_t participant_announcement_period
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The period at which a participant announces itself to potential peers when using the Simple Participant Discovery Protocol 2.0 (SPDP2).

The **com.rti.dds.infrastructure.DiscoveryQosPolicy.initial_peers** (p. 945) list **com.rti.dds.domain.DomainParticipant.add_peer** (p. 1007) API are used to configure a set of potential peers that a DomainParticipant may discover. The **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.participant_announcement_period** (p. 919) configures how frequently a DomainParticipant will announce itself to the subset of the configured potential peers that it has not matched with yet. Once a DomainParticipant matches with a DomainParticipant at one of configured potential peer locators, it will no longer announce itself to that locator at this period unless liveliness is lost.

This QoS policy is only supported when using the Simple Participant Discovery Protocol 2.0 (SPDP2). Setting this value when using the Simple Participant Discovery Protocol (SPDP) or other participant discovery protocols is not supported and will result in an error.

[default] com.rti.dds.infrastructure.Duration_t.AUTO (Takes the value of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.participant_liveliness_assert_period** (p. 919))

[range] [1 nanosec,1 year]

Categories

Immutable (p. 292), **Discovery** (p. 212)

8.76.2.4 remote_participant_purge_kind

```
RemoteParticipantPurgeKind remote_participant_purge_kind
```

[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* The participant's behavior for maintaining knowledge of remote participants (and their contained entities) with which discovery communication has been lost.

Most users will not need to change this value from its default, **com.rti.dds.infrastructure.RemoteParticipantPurgeKind.LIVELINESS_BASED_REMOTE_PARTICIPANT_PURGE** (p. 1845). However, **com.rti.dds.infrastructure.RemoteParticipantPurgeKind.NO_REMOTE_PARTICIPANT_PURGE** (p. 1845) may be a good choice if the following conditions apply:

1. Discovery communication with a remote participant may be lost while data communication remains intact. Such will not typically be the case if discovery takes place over the Simple Discovery Protocol, but may be the case if the RTI Enterprise Discovery Service is used.
2. Extensive and prolonged lack of discovery communication between participants is not expected to be common, either because participant loss itself is expected to be rare, or because participants may be lost sporadically but will typically return again.
3. Maintaining inter-participant liveliness is problematic, perhaps because a participant has no writers with the appropriate **com.rti.dds.infrastructure.LivelinessQosPolicyKind** (p. 1539).

[default] com.rti.dds.infrastructure.RemoteParticipantPurgeKind.LIVELINESS_BASED_REMOTE_PARTICIPANT_PURGE (p. 1845)

Categories

Immutable (p. 292), **Discovery** (p. 212), **Liveliness** (p. 239)

8.76.2.5 max_liveliness_loss_detection_period

```
final  Duration_t max_liveliness_loss_detection_period
```

[DEPRECATED] (p. **358)** <<***extension***>> *(*p. *138)* The maximum amount of time between when a remote entity stops maintaining its liveliness and when the matched local entity realizes that fact.

Notification of the loss of liveliness of a remote entity may come more quickly than this duration, depending on the liveliness contract between the local and remote entities and the capabilities of the discovery mechanism in use. For example, a **com.rti.dds.subscription.DataReader** (p. 707) will learn of the loss of liveliness of a matched **com.rti.dds.publication.DataWriter** (p. 818) within the reader's offered liveliness lease duration.

Shortening this duration will increase the responsiveness of entities to communication failures. However, it will also increase the CPU usage of the application, as the liveliness of remote entities will be examined more frequently.

[default] 60 seconds

[range] [1 nanosec, 1 year]

Categories

Immutable (p. 292), **Discovery** (p. 212), **Liveliness** (p. 239)

8.76.2.6 initial_participant_announcements

```
int initial_participant_announcements
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The number of initial announcements sent when a participant is first enabled.

[default] 5

[range] [1,1 million]

Categories

Immutable (p. 292), **Discovery** (p. 212)

8.76.2.7 new_remote_participant_announcements

```
int new_remote_participant_announcements
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The number of participant announcements sent when a remote participant is newly discovered.

These announcements are only sent to the newly discovered remote participant, they are not also broadcast to the initial_peers list.

[default] 2

[range] [0,1 million]

Categories

Immutable (p. 292), **Discovery** (p. 212)

8.76.2.8 min_initial_participant_announcement_period

```
final  Duration_t min_initial_participant_announcement_period
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The minimum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

A random delay between this and **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.max_initial_participant_announcement_period** (p. 922) is introduced in between initial announcements when a new remote participant is discovered.

The setting of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.min_initial_participant_announcement_period** (p. 922) must be consistent with **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.max_initial_participant_announcement_period** (p. 922). For these two values to be consistent, they must verify that:

com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.min_initial_participant_announcement_period (p. 922) <= **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.max_initial_participant_announcement_period** (p. 922).

[default] 10 milliseconds

[range] [1 nanosec,1 year]

Categories

Immutable (p. 292), **Discovery** (p. 212)

8.76.2.9 max_initial_participant_announcement_period

```
final Duration_t max_initial_participant_announcement_period
```

<<***basic***>> *(*p. *123)* <<***extension***>> *(*p. *138)* The maximum period between initial announcements when a participant is first enabled or when a remote participant is newly discovered.

A random delay between **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.min_initial_participant_announcement_period** (p. 922) and this is introduced in between initial announcements when a new remote participant is discovered.

The setting of **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.max_initial_participant_announcement_period** (p. 922) must be consistent with **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.min_initial_participant_announcement_period** (p. 922). For these two values to be consistent, they must verify that:

com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.min_initial_participant_announcement_period (p. 922) <= **com.rti.dds.infrastructure.DiscoveryConfigQosPolicy.max_initial_participant_announcement_period** (p. 922).

[default] 1 second

[range] [1 nanosec,1 year]
